Laws are partly framed for the sake of good men, in order to instruct them how they may live on friendly terms with one another, and partly for the sake of those who refuse to be instructed, whose spirit cannot be subdued, or softened, or hindered from plunging into evil. These are the persons who cause the word to be spoken which I am about to utter; for them the legislator legislates of necessity, and in the hope that there may be no need of his laws. He who shall dare to lay violent hands upon his father or mother, or any still older relative, having no fear either of the wrath of the Gods above, or of the punishments that are spoken of in the world below, but transgresses in contempt of ancient and universal traditions as though he were too wise to believe in them, requires some extreme measure of prevention. Now death is not the worst that can happen to men; far worse are the punishments which are said to pursue them in the world below. But although they are most true tales, they work on such souls no prevention; for if they had any effect there would be no slayers of mothers, or impious hands lifted up against parents; and therefore the punishments of this world which are inflicted during life ought not in such cases to fall short, if possible, of the terrors of the world below. Let our enactment then be as follows:—If a man dare to strike his father or his mother, or their fathers or mothers, he being at the time of sound mind, then let any one who is at hand come to the rescue as has been already said, and the metic or stranger who comes to the rescue shall be called to the first place in the games; but if he do not come he shall suffer the punishment of perpetual exile. He who is not a metic, if he comes to the rescue, shall have praise, and if he do not come, blame. And if a slave come to the rescue, let him be made free, but if he do not come to the rescue, let him receive 100 strokes of the whip, by order of the wardens of the agora, if the occurrence take place in the agora; or if somewhere in the city beyond the limits of the agora, any warden of the city who is in residence shall punish him; or if in the country, then the commanders of the wardens of the country. If those who are near at the time be inhabitants of the same place, whether they be youths, or men, or women, let them come to the rescue and denounce him as the impious one; and he who does not come to the rescue shall fall under the curse of Zeus, the God of kindred and of ancestors, according to law. And if any one is found guilty of assaulting a parent, let him in the first place be for ever banished from the city into the country, and let him abstain from the temples; and if he do not abstain, the wardens of the country shall punish him with blows, or in any way which they please, and if he return he shall be put to death. And if any freeman eat or drink, or have any other sort of intercourse with him, or only meeting him have voluntarily touched him, he shall not enter into any temple, nor into the agora, nor into the city, until he is purified; for he should consider that he has become tainted by a curse. And if he disobeys the law, and pollutes the city and the temples contrary to law, and one of the magistrates sees him and does not indict him, when he gives in his account this omission shall be a most serious charge.

If a slave strike a freeman, whether a stranger or a citizen, let any one who is present come to the rescue, or pay the penalty already mentioned; and let the bystanders bind him, and deliver him up to the injured person, and he receiving him shall put him in chains, and inflict on him as many stripes as he pleases; but having punished him he must surrender him to his master according to law, and not deprive him of his property. Let the law be as follows:—The slave who strikes a freeman, not at the command of the magistrates, his owner shall receive bound from the man whom he has stricken, and not release him until the slave has persuaded the man whom he has stricken that he ought to be released. And let there be the same laws about women in relation to women, and about men and women in relation to one another.

## Book 10.

Athenian Stranger:: And now having spoken of assaults, let us sum up all acts of violence under a single law, which shall be as follows:—No one shall take or carry away any of his neighbor’s goods, neither shall he use anything which is his neighbor’s without the consent of the owner; for these are the offences which are and have been, and will ever be, the source of all the aforesaid evils. The greatest of them are excesses and insolences of youth, and are offences against the greatest when they are done against religion; and especially great when in violation of public and holy rites, or of the partly-common rites in which tribes and phratries share; and in the second degree great when they are committed against private rites and sepulchers, and in the third degree (not to repeat the acts formerly mentioned), when insults are offered to parents; the fourth kind of violence is when any one, regardless of the authority of the rulers, takes or carries away or makes use of anything which belongs to them, not having their consent; and the fifth kind is when the violation of the civil rights of an individual demands reparation. There should be a common law embracing all these cases. For we have already said in general terms what shall be the punishment of sacrilege, whether fraudulent or violent, and now we have to determine what is to be the punishment of those who speak or act insolently toward the Gods. But first we must give them an admonition which may be in the following terms:—No one who in obedience to the laws believed that there were Gods, ever intentionally did any unholy act, or uttered any unlawful word; but he who did must have supposed one of three things,—either that they did not exist,—which is the first possibility, or secondly, that, if they did, they took no care of man, or thirdly, that they were easily appeased and turned aside from their purpose by sacrifices and prayers.

Clinias:: What shall we say or do to these persons?

Athenian Stranger:: My good friend, let us first hear the jests which I suspect that they in their superiority will utter against us.

Clinias:: What jests?

Athenian Stranger:: They will make some irreverent speech of this sort:—'O inhabitants of Athens, and Sparta, and Cnosus' they will reply, 'in that you speak truly; for some of us deny the very existence of the Gods, while others, as you say, are of opinion that they do not care about us; and others that they are turned from their course by gifts. Now we have a right to claim, as you yourself allowed, in the matter of laws, that before you are hard upon us and threaten us, you should argue with us and convince us—you should first attempt to teach and persuade us that there are Gods by reasonable evidences, and also that they are too good to be unrighteous, or to be propitiated, or turned from their course by gifts. For when we hear such things said of them by those who are esteemed to be the best of poets, and orators, and prophets, and priests, and by innumerable others, the thoughts of most of us are not set upon abstaining from unrighteous acts, but upon doing them and atoning for them. When lawgivers profess that they are gentle and not stern, we think that they should first of all use persuasion to us, and show us the existence of Gods, if not in a better manner than other men, at any rate in a truer; and who knows but that we shall hearken to you? If then our request is a fair one, please to accept our challenge'

Clinias:: But is there any difficulty in proving the existence of the Gods?

Athenian Stranger:: How would you prove it?

Clinias:: How? In the first place, the earth and the sun, and the stars and the universe, and the fair order of the seasons, and the division of them into years and months, furnish proofs of their existence; and also there is the fact that all Hellenes and barbarians believe in them.

Athenian Stranger:: I fear, my sweet friend, though I will not say that I much regard, the contempt with which the profane will be likely to assail us. For you do not understand the nature of their complaint, and you fancy that they rush into impiety only from a love of sensual pleasure.

Clinias:: Why, Stranger, what other reason is there?

Athenian Stranger:: One which you who live in a different atmosphere would never guess.

Clinias:: What is it?

Athenian Stranger:: A very grievous sort of ignorance which is imagined to be the greatest wisdom.

Clinias:: What do you mean?

Athenian Stranger:: At Athens there are tales preserved in writing which the virtue of your state, as I am informed, refuses to admit. They speak of the Gods in prose as well as verse, and the oldest of them tell of the origin of the heavens and of the world, and not far from the beginning of their story they proceed to narrate the birth of the Gods, and how after they were born they behaved to one another. Whether these stories have in other ways a good or a bad influence, I should not like to be severe upon them, because they are ancient; but, looking at them with reference to the duties of children to their parents, I cannot praise them, or think that they are useful, or at all true. Of the words of the ancients I have nothing more to say; and I should wish to say of them only what is pleasing to the

Gods. But as to our younger generation and their wisdom, I cannot let them off when they do mischief. For do but mark the effect of their words: when you and I argue for the existence of the Gods, and produce the sun, moon, stars, and earth, claiming for them a divine being, if we would listen to the aforesaid philosophers we should say that they are earth and stones only, which can have no care at all of human affairs, and that all religion is a cooking up of words and a make-believe.

Clinias:: One such teacher, O Stranger, would be bad enough, and you imply that there are many of them, which is worse.

Athenian Stranger:: Well, then; what shall we say or do?—Shall we assume that some one is accusing us among unholy men, who are trying to escape from the effect of our legislation; and that they say of us—How dreadful that you should legislate on the supposition that there are Gods! Shall we make a defense of ourselves? or shall we leave them and return to our laws, lest the prelude should become longer than the law? For the discourse will certainly extend to great length, if we are to treat the impiously disposed as they desire, partly demonstrating to them at some length the things of which they demand an explanation, partly making them afraid or dissatisfied, and then proceed to the requisite enactments.

Clinias:: Yes, Stranger; but then how often have we repeated already that on the present occasion there is no reason why brevity should be preferred to length; for who is ‘at our heels?’—as the saying goes, and it would be paltry and ridiculous to prefer the shorter to the better. It is a matter of no small consequence, in some way or other to prove that there are Gods, and that they are good, and regard justice more than men do. The demonstration of this would be the best and noblest prelude of all our laws.

And therefore, without impatience, and without hurry, let us unreservedly consider the whole matter, summoning up all the power of persuasion which we possess.

Athenian Stranger:: Seeing you thus in earnest, I would fain offer up a prayer that I may succeed:—but I must proceed at once. Who can be calm when he is called upon to prove the existence of the Gods? Who can avoid hating and abhorring the men who are and have been the cause of this argument; I speak of those who will not believe the tales which they have heard as babes and sucklings from their mothers and nurses, repeated by them both in jest and earnest, like charms, who have also heard them in the sacrificial prayers, and seen sights accompanying them,—sights and sounds delightful to children,—and their parents during the sacrifices showing an intense earnestness on behalf of their children and of themselves, and with eager interest talking to the Gods, and beseeching them, as though they were firmly convinced of their existence; who likewise see and hear the prostrations and invocations which are made by Hellenes and barbarians at the rising and setting of the sun and moon, in all the vicissitudes of life, not as if they thought that there were no Gods, but as if there could be no doubt of their existence, and no suspicion of their non-existence; when men, knowing all these things, despise them on no real grounds, as would be admitted by all who have any particle of intelligence, and when they force us to say what we are now saying, how can any one in gentle terms remonstrate with the like of them, when he has to begin by proving to them the very existence of the Gods? Yet the attempt must be made; for it would be unseemly that one half of mankind should go mad in their lust of pleasure, and the other half in their indignation at such persons. Our address to these lost and perverted natures should not be spoken in passion; let us suppose ourselves to select some one of them, and gently reason with him, smothering our anger:—O my son, we will say to him, you are young, and the advance of time will make you reverse many of the opinions which you now hold. Wait awhile, and do not attempt to judge at present of the highest things; and that is the highest of which you now think nothing—to know the Gods rightly and to live accordingly. And in the first place let me indicate to you one point which is of great importance, and about which I cannot be deceived:—You and your friends are not the first who have held this opinion about the Gods. There have always been persons more or less numerous who have had the same disorder. I have known many of them, and can tell you, that no one who had taken up in youth this opinion, that the Gods do not exist, ever continued in the same until he was old; the two other notions certainly do continue in some cases, but not in many; the notion, I mean, that the Gods exist, but take no heed of human things, and the other notion that they do take heed of them, but are easily propitiated with sacrifices and prayers. As to the opinion about the Gods which may some day become clear to you, I advise you to wait and consider if it be true or not; ask of others, and above all of the legislator. In the meantime take care that you do not offend against the Gods. For the duty of the legislator is and always will be to teach you the truth of these matters.

Clinias:: Our address, Stranger, thus far, is excellent.

Athenian Stranger:: Quite true, Megillus and Cleinias, but I am afraid that we have unconsciously lighted on a strange doctrine.

Clinias:: What doctrine do you mean?

Athenian Stranger:: The wisest of all doctrines, in the opinion of many.

Clinias:: I wish that you would speak plainer.

Athenian Stranger:: The doctrine that all things do become, have become, and will become, some by nature, some by art, and some by chance.

Clinias:: Is not that true?

Athenian Stranger:: Well, philosophers are probably right; at any rate we may as well follow in their track, and examine what is the meaning of them and their disciples.

Clinias:: By all means.

Athenian Stranger:: They say that the greatest and fairest things are the work of nature and of chance, the lesser of art, which, receiving from nature the greater and primeval creations, moulds and fashions all those lesser works which are generally termed artificial.

Clinias:: How is that?

Athenian Stranger:: I will explain my meaning still more clearly. They say that fire and water, and earth and air, all exist by nature and chance, and none of them by art, and that as to the bodies which come next in order,—earth, and sun, and moon, and stars,—they have been created by means of these absolutely inanimate existences. The elements are severally moved by chance and some inherent force according to certain affinities among them—of hot with cold, or of dry with moist, or of soft with hard, and according to all the other accidental admixtures of opposites which have been formed by necessity. After this fashion and in this manner the whole heaven has been created, and all that is in the heaven, as well as animals and all plants, and all the seasons come from these elements, not by the action of mind, as they say, or of any God, or from art, but as I was saying, by nature and chance only. Art sprang up afterwards and out of these, mortal and of mortal birth, and produced in play certain images and very partial imitations of the truth, having an affinity to one another, such as music and painting create and their companion arts. And there are other arts which have a serious purpose, and these co-operate with nature, such, for example, as medicine, and husbandry, and gymnastic. And they say that politics co-operate with nature, but in a less degree, and have more of art; also that legislation is entirely a work of art, and is based on assumptions which are not true.

Clinias:: How do you mean?

Athenian Stranger:: In the first place, my dear friend, these people would say that the Gods exist not by nature, but by art, and by the laws of states, which are different in different places, according to the agreement of those who make them; and that the honorable is one thing by nature and another thing by law, and that the principles of justice have no existence at all in nature, but that mankind are always disputing about them and altering them; and that the alterations which are made by art and by law have no basis in nature, but are of authority for the moment and at the time at which they are made.—These, my friends, are the sayings of wise men, poets and prose writers, which find a way into the minds of youth. They are told by them that the highest right is might, and in this way the young fall into impieties, under the idea that the Gods are not such as the law bids them imagine; and hence arise factions, these philosophers inviting them to lead a true life according to nature, that is, to live in real dominion over others, and not in legal subjection to them.

Clinias:: What a dreadful picture, Stranger, have you given, and how great is the injury which is thus inflicted on young men to the ruin both of states and families!

Athenian Stranger:: True, Cleinias; but then what should the lawgiver do when this evil is of long standing? should he only rise up in the state and threaten all mankind, proclaiming that if they will not say and think that the Gods are such as the law ordains (and this may be extended generally to the honorable, the just, and to all the highest things, and to all that relates to virtue and vice), and if they will not make their actions conform to the copy which the law gives them, then he who refuses to obey the law shall die, or suffer stripes and bonds, or privation of citizenship, or in some cases be punished by loss of property and exile? Should he not rather, when he is making laws for men, at the same time infuse the spirit of persuasion into his words, and mitigate the severity of them as far as he can?

Clinias:: Why, Stranger, if such persuasion be at all possible, then a legislator who has anything in him ought never to weary of persuading men; he ought to leave nothing unsaid in support of the ancient opinion that there are Gods, and of all those other truths which you were just now mentioning; he ought to support the law and also art, and acknowledge that both alike exist by nature, and no less than nature, if they are the creations of mind in accordance with right reason, as you appear to me to maintain, and I am disposed to agree with you in thinking.

Athenian Stranger:: Yes, my enthusiastic Cleinias; but are not these things when spoken to a multitude hard to be understood, not to mention that they take up a dismal length of time?

Clinias:: Why, Stranger, shall we, whose patience failed not when drinking or music were the themes of discourse, weary now of discoursing about the Gods, and about divine things? And the greatest help to rational legislation is that the laws when once written down are always at rest; they can be put to the test at any future time, and therefore, if on first hearing they seem difficult, there is no reason for apprehension about them, because any man however dull can stood, go over them and consider them again and again; nor if they are tedious but useful, is there any reason or religion, as it seems to me, in any man refusing to maintain the principles of them to the utmost of his power.

Megillus:: Stranger, I like what Cleinias is saying.

Athenian Stranger:: Yes, Megillus, and we should do as he proposes; for if impious discourses were not scattered, as I may say, throughout the world, there would have been no need for any vindication of the existence of the Gods—but seeing that they are spread far and wide, such arguments are needed; and who should come to the rescue of the greatest laws, when they are being undermined by bad men, but the legislator himself?

Megillus:: There is no more proper champion of them.

Athenian Stranger:: Well, then, tell me, Cleinias,—for I must ask you to be my partner,—does not he who talks in this way conceive fire and water and earth and air to be the first elements of all philosophers things? these he calls nature, and out of these he supposes the soul to be formed afterwards; and this is not a mere conjecture of ours about his meaning, but is what he really means.

Clinias:: Very true.

Athenian Stranger:: Then, by Heaven, we have discovered the source of this vain opinion of all those physical investigators; and I would have you examine their arguments with the utmost care, for their impiety is a very serious matter; they not only make a bad and mistaken use of argument, but they lead away the minds of others: that is my opinion of them.

Clinias:: You are right; but I should like to know how this happens.

Athenian Stranger:: I fear that the argument may seem singular.

Clinias:: Do not hesitate, Stranger; I see that you are afraid of such a discussion carrying you beyond the limits of legislation. But if there be no other way of showing our agreement in the belief that there are Gods, of whom the law is said now to approve, let us take this way, my good sir.

Athenian Stranger:: Then I suppose that I must repeat the singular argument of those who manufacture the soul according to their own impious notions; they affirm that which is the first cause of the generation and destruction of all things, to be not first, but last, and that which is last to be first, and hence they have fallen into error about the true nature of the Gods.

Clinias:: Still I do not understand you.

Athenian Stranger:: Nearly all of them, my friends, seem to be ignorant of the nature and power of the soul, especially in what relates to her origin: they do not know that she is among the first of things, and before all bodies, and is the chief author of their changes and transpositions. And if this is true, and if the soul is older than the body, must not the things which are of the soul's kindred be of necessity prior to those which appertain to the body?

Clinias:: Certainly.

Athenian Stranger:: Then thought and attention and mind and art and law will be prior to that which is hard and soft and heavy and light; and the great and primitive works and actions will be works of art; they will be the first, and after them will come nature and works of nature, which however is a wrong term for men to apply to them;

these will follow, and will be under the government of art and mind.

Clinias:: But why is the word ‘nature’ wrong?

Athenian Stranger:: Because those who use the term mean to say that nature is the first creative power; but if the soul turn out to be the primeval element, and not fire or air, then in the truest sense and beyond other things the soul may be said to exist by nature; and this would be true if you proved that the soul is older than the body, but not otherwise.

Clinias:: You are quite right.

Athenian Stranger:: Shall we, then, take this as the next point to which our attention should be directed?

Clinias:: By all means.

Athenian Stranger:: Let us be on our guard lest this most deceptive argument with its youthful looks, beguiling us old men, give us the slip and make a laughing-stock of us. Who knows but we may be aiming at the greater, and fail of attaining the lesser? Suppose that we three have to pass a rapid river, and I, being the youngest of the three and experienced in rivers, take upon me the duty of making the attempt first by myself; leaving you in safety on the bank, I am to examine whether the river is passable by older men like yourselves, and if such appears to be the case then I shall invite you to follow, and my experience will help to convey you across; but if the river is impassable by you, then there will have been no danger to anybody but myself,—would not that seem to be a very fair proposal? I mean to say that the argument in prospect is likely to be too much for you, out of your depth and beyond your strength, and I should be afraid that the stream of my questions might create in you who are not in the habit of answering, giddiness and confusion of mind, and hence a feeling of unpleasantness and unsuitableness might arise. I think therefore that I had better first ask the questions and then answer them myself while you listen in safety; in that way I can carry on the argument until I have completed the proof that the soul is prior to the body.

Clinias:: Excellent, Stranger, and I hope that you will do as you propose.

Athenian Stranger:: Come, then, and if ever we are to call upon the Gods' let us call upon them now in all seriousness to come to the demonstration of their own existence. And so holding fast to the rope we will venture upon the depths of the argument. When questions of this sort are asked of me, my safest answer would appear to be as follows:—Some one says to me, 'O Stranger, are all things at rest and nothing in motion, or is the exact opposite of this true, or are some things in motion and others at rest?'—To this I shall reply that some things are in motion and others at rest. 'And do not things which move move in a place, and are not the things which are at rest at rest in a place?' Certainly. 'And some move or rest in one place and some in more places than one?' You mean to say, we shall rejoin, that those things which rest at the centre move in one place, just as the circumference goes round of globes which are said to be at rest? 'Yes' And we observe that, in the revolution, the motion which carries round the larger and the lesser circle at the same time is proportionally distributed to greater and smaller, and is greater and smaller in a certain proportion. Here is a wonder which might be thought an impossibility, that the same motion should impart swiftness and slowness in due proportion to larger and lesser circles. 'Very true' And when you speak of bodies moving in many places, you seem to me to mean those which move from one place to another, and sometimes have one centre of motion and sometimes more than one because they turn upon their axis; and whenever they meet anything, if it be stationary, they are divided by it; but if they get in the midst between bodies which are approaching and moving towards the same spot from opposite directions, they unite with them. 'I admit the truth of what you are saying' Also when they unite they grow, and when they are divided they waste away,—that is, supposing the constitution of each to remain, or if that fails, then there is a second reason of their dissolution. 'And when are all things created and how?' Clearly, they are created when the first principle receives increase and attains to the second dimension, and from this arrives at the one which is neighbor to this, and after reaching the third becomes perceptible to sense. Everything which is thus changing and moving is in process of generation; only when at rest has it real existence, but when passing into another state it is destroyed utterly. Have we not mentioned all motions that there are, and comprehended them under their kinds and numbered them with the exception, my friends, of two?

Clinias:: Which are they?

Athenian Stranger:: Just the two, with which our present enquiry is concerned.

Clinias:: Speak plainer.

Athenian Stranger:: I suppose that our enquiry has reference to the soul?

Clinias:: Very true.

Athenian Stranger:: Let us assume that there is a motion able to move other things, but not to move itself;—that is one kind; and there is another kind which can move itself as well as other things, working in composition and decomposition, by increase and diminution and generation and destruction,—that is also one of the many kinds of motion.

Clinias:: Granted.

Athenian Stranger:: And we will assume that which moves other, and is changed by other, to be the ninth, and that which changes itself and others, and is co-incident with every action and every passion, and is the true principle of change and motion in all that is,—that we shall be inclined to call the tenth.

Clinias:: Certainly.

Athenian Stranger:: And which of these ten motions ought we to prefer as being the mightiest and most efficient?

Clinias:: I must say that the motion which is able to move itself is ten thousand times superior to all the others.

Athenian Stranger:: Very good; but may I make one or two corrections in what I have been saying?

Clinias:: What are they?

Athenian Stranger:: When I spoke of the tenth sort of motion, that was not quite correct.

Clinias:: What was the error?

Athenian Stranger:: According to the true order, the tenth was really the first in generation and power; then follows the second, which was strangely enough termed the ninth by us.

Clinias:: What do you mean?

Athenian Stranger:: I mean this: when one thing changes another, and that another, of such will there be any primary changing element? How can a thing which is moved by another ever be the beginning of change? Impossible. But when the self-moved changes other, and that again other, and thus thousands upon tens of thousands of bodies are set in motion, must not the beginning of all this motion be the change of the self-moving principle?

Clinias:: Very true, and I quite agree.

Athenian Stranger:: Or, to put the question in another way, making answer to ourselves:—If, as most of these philosophers have the audacity to affirm, all things were at rest in one mass, which of the above-mentioned principles of motion would first spring up among them?

Clinias:: Clearly the self-moving; for there could be no change in them arising out of any external cause; the change must first take place in themselves.

Athenian Stranger:: Then we must say that self-motion being the origin of all motions, and the first which arises among things at rest as well as among things in motion, is the eldest and mightiest principle of change, and that which is changed by another and yet moves other is second.

Clinias:: Quite true.

Athenian Stranger:: At this stage of the argument let us put a question.

Clinias:: What question?

Athenian Stranger:: If we were to see this power existing in any earthy, watery, or fiery substance, simple or compound—how should we describe it?

Clinias:: You mean to ask whether we should call such a self-moving power life?

Athenian Stranger:: I do.

Clinias:: Certainly we should.

Athenian Stranger:: And when we see soul in anything, must we not do the same—must we not admit that this is life?

Clinias:: We must.

Athenian Stranger:: And now, I beseech you, reflect;—you would admit that we have a threefold knowledge of things?

Clinias:: What do you mean?

Athenian Stranger:: I mean that we know the essence, and that we know the definition of the essence, and the name,—these are the three; and there are two questions which may be raised about anything.

Clinias:: How two?

Athenian Stranger:: Sometimes a person may give the name and ask the definition; or he may give the definition and ask the name. I may illustrate what I mean in this way.

Clinias:: How?

Athenian Stranger:: Number like some other things is capable of being divided into equal parts; when thus divided, number is named 'even' and the definition of the name 'even' is 'number divisible into two equal parts'?

Clinias:: True.

Athenian Stranger:: I mean, that when we are asked about the definition and give the name, or when we are asked about the name and give the definition—in either case, whether we give name or definition, we speak of the same thing, calling 'even' the number which is divided into two equal parts.

Clinias:: Quite true.

Athenian Stranger:: And what is the definition of that which is named 'soul'? Can we conceive of any other than that which has been already given—the motion which can move itself?

Clinias:: You mean to say that the essence which is defined as the self-moved is the same with that which has the name soul?

Athenian Stranger:: Yes; and if this is true, do we still maintain that there is anything wanting in the proof that the soul is the first origin and moving power of all that is, or has become, or will be, and their contraries, when she has been clearly shown to be the source of change and motion in all things?

Clinias:: Certainly not; the soul as being the source of motion, has been most satisfactorily shown to be the oldest of all things.

Athenian Stranger:: And is not that motion which is produced in another, by reason of another, but never has any self-moving power at all, being in truth the change of an inanimate body, to be reckoned second, or by any lower number which you may prefer?

Clinias:: Exactly.

Athenian Stranger:: Then we are right, and speak the most perfect and absolute truth, when we say that the soul is prior to the body, and that the body is second and comes afterwards, and is born to obey the soul, which is the ruler?

Clinias:: Nothing can be more true.

Athenian Stranger:: Do you remember our old admission, that if the soul was prior to the body the things of the soul were also prior to those of the body?

Clinias:: Certainly.

Athenian Stranger:: Then characters and manners, and wishes and reasonings, and true opinions, and reflections, and recollections are prior to length and breadth and depth and strength of bodies, if the soul is prior to the body.

Clinias:: To be sure.

Athenian Stranger:: In the next place, must we not of necessity admit that the soul is the cause of good and evil, base and honorable, just and unjust, and of all other opposites, if we suppose her to be the cause of all things?

Clinias:: We must.

Athenian Stranger:: And as the soul orders and inhabits all things that move, however moving, must we not say that she orders also the heavens?

Clinias:: Of course.

Athenian Stranger:: One soul or more? More than one—I will answer for you; at any rate, we must not suppose that there are less than two—one the author of good, and the other of evil.

Clinias:: Very true.

Athenian Stranger:: Yes, very true; the soul then directs all things in heaven, and earth, and sea by her movements, and these are described by the terms—will, consideration, attention, deliberation, opinion true and false, joy and sorrow, confidence, fear, hatred, love, and other primary motions akin to these; which again receive the secondary motions of corporeal substances, and guide all things to growth and decay, to composition and decomposition, and to the qualities which accompany them, such as heat and cold, heaviness and lightness, hardness and softness, blackness and whiteness, bitterness and sweetness, and all those other qualities which the soul uses, herself a goddess, when truly receiving the divine mind she disciplines all things rightly to their happiness; but when she is the companion of folly, she does the very contrary of all this. Shall we assume so much, or do we still entertain doubts?

Clinias:: There is no room at all for doubt.

Athenian Stranger:: Shall we say then that it is the soul which controls heaven and earth, and the whole world?—that it is a principle of wisdom and virtue, or a principle which has neither wisdom nor virtue? Suppose that we make answer as follows:—

Clinias:: How would you answer?

Athenian Stranger:: If, my friend, we say that the whole path and movement of heaven, and of all that is therein, is by nature akin to the movement and revolution and calculation of mind, and proceeds by kindred laws, then, as is plain, we must say that the best soul takes care of the world and guides it along the good path.

Clinias:: True.

Athenian Stranger:: But if the world moves wildly and irregularly, then the evil soul guides it.

Clinias:: True again.

Athenian Stranger:: Of what nature is the movement of mind?—To this question it is not easy to give an intelligent answer; and therefore I ought to assist you in framing one.

Clinias:: Very good.

Athenian Stranger:: Then let us not answer as if we would look straight at the sun, making ourselves darkness at midday, —I mean as if we were under the impression that we could see with mortal eyes, or know adequately the nature of mind;—it will be safer to look at the image only.

Clinias:: What do you mean?

Athenian Stranger:: Let us select of the ten motions the one which mind chiefly resembles; this I will bring to your recollection, and will then make the answer on behalf of us all.

Clinias:: That will be excellent.

Athenian Stranger:: You will surely remember our saying that all things were either at rest or in motion?

Clinias:: I do.

Athenian Stranger:: And that of things in motion some were moving in one place, and others in more than one?

Clinias:: Yes.

Athenian Stranger:: Of these two kinds of motion, that which moves in one place must move about a centre like globes made in a lathe, and is most entirely akin and similar to the circular movement of mind.

Clinias:: What do you mean?

Athenian Stranger:: In saying that both mind and the motion which is in one place move in the same and like manner, in and about the same, and in relation to the same, and according to one proportion and order, and are like the motion of a globe, we invented a fair image, which does no discredit to our ingenuity.

Clinias:: It does us great credit.

Athenian Stranger:: And the motion of the other sort which is not after the same manner, nor in the same, nor about the same, nor in relation to the same, nor in one place, nor in order, nor according to any rule or proportion, may be said to be akin to senselessness and folly?

Clinias:: That is most true.

Athenian Stranger:: Then, after what has been said, there is no difficulty in distinctly stating, that since soul carries all things round, either the best soul or the contrary must of necessity carry round and order and arrange the revolution of the heaven.

Clinias:: And judging from what has been said, Stranger, there would be impiety in asserting that any but the most perfect soul or souls carries round the heavens.

Athenian Stranger:: You have understood my meaning right well, Cleinias, and now let me ask you another question.

Clinias:: What are you going to ask?

Athenian Stranger:: If the soul carries round the sun and moon, and the other stars, does she not carry round each individual of them?

Clinias:: Certainly.

Athenian Stranger:: Then of one of them let us speak, and the same argument will apply to all.

Clinias:: Which will you take?

Athenian Stranger:: Every one sees the body of the sun, but no one sees his soul, nor the soul of any other body living or dead; and yet there is great reason to believe that this nature, unperceived by any of our senses, is circumfused around them all, but is perceived by mind; and therefore by mind and reflection only let us apprehend the following point.

Clinias:: What is that?

Athenian Stranger:: If the soul carries round the sun, we shall not be far wrong in supposing one of three alternatives.

Clinias:: What are they?

Athenian Stranger:: Either the soul which moves the sun this way and that, resides within the circular and visible body, like the soul which carries us about every way; or the soul provides herself with an external body of fire or air, as some affirm, and violently propels body by body; or thirdly, she is without such a body, but guides the sun by some extraordinary and wonderful power.

Clinias:: Yes, certainly; the soul can only order all things in one of these three ways.

Athenian Stranger:: And this soul of the sun, which is therefore better than the sun, whether taking the sun about in a chariot to give light to men, or acting from without, or in whatever way, ought by every man to be deemed a God.

Clinias:: Yes, by every man who has the least particle of sense.

Athenian Stranger:: And of the stars too, and of the moon, and of the years and months and seasons, must we not say in like manner, that since a soul or souls having every sort of excellence are the causes of all of them, those souls are Gods, whether they are living beings and reside in bodies, and in this way order the whole heaven, or whatever be the place and mode of their existence;—and will any one who admits all this venture to deny that all things are full of Gods?

Clinias:: No one, Stranger, would be such a madman.

Athenian Stranger:: And now, Megillus and Cleinias, let us offer terms to him who has hitherto denied the existence of the Gods, and leave him.

Clinias:: What terms?

Athenian Stranger:: Either he shall teach us that we were wrong in saying that the soul is the original of all things, and arguing accordingly; or, if he be not able to say anything better, then he must yield to us and live for the remainder of his life in the belief that there are Gods.—Let us see, then, whether we have said enough or not enough to those who deny that there are Gods.

Clinias:: Certainly,—quite enough, Stranger.

Athenian Stranger:: Then to them we will say no more. And now we are to address him who, believing that there are Gods, believes also that they take no heed of human affairs: To him we say,—O thou best of men, in believing that there are Gods you are led by some affinity to them, which attracts you towards your kindred and makes you honor and believe in them. But the fortunes of evil and unrighteous men in private as well as public life, which, though not really happy, are wrongly counted happy in the judgment of men, and are celebrated both by poets and prose writers—these draw you aside from your natural piety. Perhaps you have seen impious men growing old and leaving their children's children in high offices, and their prosperity shakes your faith—you have known or heard or been yourself an eyewitness of many monstrous impieties, and have beheld men by such criminal means from small beginnings attaining to sovereignty and the pinnacle of greatness; and considering all these things you do not like to accuse the Gods of them, because they are your relatives; and so from some want of reasoning power, and also from an unwillingness to find fault with them, you have come to believe that they exist indeed, but have no thought or care of human things. Now, that your present evil opinion may not grow to still greater impiety, and that we may if possible use arguments which may conjure away the evil before it arrives, we will add another argument to that originally addressed to him who utterly denied the existence of the Gods. And do you, Megillus and Cleinias, answer for the young man as you did before; and if any impediment comes in our way, I will take the word out of your mouths, and carry you over the river as I did just now.

Clinias:: Very good; do as you say, and we will help you as well as we can.

Athenian Stranger:: There will probably be no difficulty in proving to him that the Gods care about the small as well as about the great. For he was present and heard what was said, that they are perfectly good, and that the care of all things is most entirely natural to them.

Clinias:: No doubt he heard that.

Athenian Stranger:: Let us consider together in the next place what we mean by this virtue which we ascribe to them. Surely we should say that to be temperate and to possess mind belongs to virtue, and the contrary to vice?

Clinias:: Certainly.

Athenian Stranger:: Yes; and courage is a part of virtue, and cowardice of vice?

Clinias:: True.

Athenian Stranger:: And the one is honorable, and the other dishonorable?

Clinias:: To be sure.

Athenian Stranger:: And the one, like other meaner things, is a human quality, but the Gods have no part in anything of the sort?

Clinias:: That again is what everybody will admit.

Athenian Stranger:: But do we imagine carelessness and idleness and luxury to be virtues? What do you think?

Clinias:: Decidedly not.

Athenian Stranger:: They rank under the opposite class?

Clinias:: Yes.

Athenian Stranger:: And their opposites, therefore, would fall under the opposite class?

Clinias:: Yes.

Athenian Stranger:: But are we to suppose that one who possesses all these good qualities will be luxurious and heedless and idle, like those whom the poet compares to stingless drones?

Clinias:: And the comparison is a most just one.

Athenian Stranger:: Surely God must not be supposed to have a nature which He Himself hates?—he who dares to say this sort of thing must not be tolerated for a moment.

Clinias:: Of course not. How could He have?

Athenian Stranger:: Should we not on any principle be entirely mistaken in praising any one who has some special business entrusted to him, if he have a mind which takes care of great matters and no care of small ones? Reflect; he who acts in this way, whether he be God or man, must act from one of two principles.

Clinias:: What are they?

Athenian Stranger:: Either he must think that the neglect of the small matters is of no consequence to the whole, or if he knows that they are of consequence, and he neglects them, his neglect must be attributed to carelessness and indolence. Is there any other way in which his neglect can be explained? For surely, when it is impossible for him to take care of all, he is not negligent if he fails to attend to these things great or small, which a God or some inferior being might be wanting in strength or capacity to manage?

Clinias:: Certainly not.

Athenian Stranger:: Now, then, let us examine the offenders, who both alike confess that there are Gods, but with a difference,—the one saying that they may be appeased, and the other that they have no care of small matters: there are three of us and two of them, and we will say to them,—In the first place, you both acknowledge that the Gods hear and see and know all things, and that nothing can escape them which is matter of sense and knowledge:—do you admit this?

Clinias:: Yes.

Athenian Stranger:: And do you admit also that they have all power which mortals and immortals can have?

Clinias:: They will, of course, admit this also.

Athenian Stranger:: And surely we three and they two—five in all—have acknowledged that they are good and perfect?

Clinias:: Assuredly.

Athenian Stranger:: But, if they are such as we conceive them to be, can we possibly suppose that they ever act in the spirit of carelessness and indolence? For in us inactivity is the child of cowardice, and carelessness of inactivity and indolence.

Clinias:: Most true.

Athenian Stranger:: Then not from inactivity and carelessness is any God ever negligent; for there is no cowardice in them.

Clinias:: That is very true.

Athenian Stranger:: Then the alternative which remains is, that if the Gods neglect the lighter and lesser concerns of the universe, they neglect them because they know that they ought not to care about such matters—what other alternative is there but the opposite of their knowing?

Clinias:: There is none.

Athenian Stranger:: And, O most excellent and best of men, do I understand you to mean that they are careless because they are ignorant, and do not know that they ought to take care, or that they know, and yet like the meanest sort of men, knowing the better, choose the worse because they are overcome by pleasures and pains?

Clinias:: Impossible.

Athenian Stranger:: Do not all human things partake of the nature of soul? And is not man the most religious of all animals?

Clinias:: That is not to be denied.

Athenian Stranger:: And we acknowledge that all mortal creatures are the property of the Gods, to whom also the whole of heaven belongs?

Clinias:: Certainly.

Athenian Stranger:: And, therefore, whether a person says that these things are to the Gods great or small—in either case it would not be natural for the Gods who own us, and who are the most careful and the best of owners, to neglect us.—There is also a further consideration.

Clinias:: What is it? ‘

Athenian Stranger:: Sensation and power are in an inverse ratio to each other in respect to their ease and difficulty.

Clinias:: What do you mean?

Athenian Stranger:: I mean that there is greater difficulty in seeing and hearing the small than the great, but more facility in moving and controlling and taking care of small and unimportant things than of their opposites.

Clinias:: Far more.

Athenian Stranger:: Suppose the case of a physician who is willing and able to cure some living thing as a whole,—how will the whole fare at his hands if he takes care only of the greater and neglects the parts which are lesser?

Clinias:: Decidedly not well.

Athenian Stranger:: No better would be the result with pilots or generals, or householders or statesmen, or any other such class, if they neglected the small and regarded only the great;—as the builders say, the larger stones do not lie well without the lesser.

Clinias:: Of course not.

Athenian Stranger:: Let us not, then, deem God inferior to human workmen, who, in proportion to their skill, finish and perfect their works, small as well as great, by one and the same art; or that God, the wisest of beings, who is both willing and able to take care, is like a lazy good-for-nothing, or a coward, who turns his back upon labor and gives no thought to smaller and easier matters, but to the greater only.

Clinias:: Never, Stranger, let us admit a supposition about the Gods which is both impious and false.

Athenian Stranger:: I think that we have now argued enough with him who delights to accuse the Gods of neglect.

Clinias:: Yes.

Athenian Stranger:: He has been forced to acknowledge that he is in error, but he still seems to me to need some words of consolation.

Clinias:: What consolation will you offer him?

Athenian Stranger:: Let us say to the youth:—The ruler of the universe has ordered all things with a view to the excellence and preservation of the whole, and each part, as far as may be, has an action and passion appropriate to it. Over these, down to the least fraction of them, ministers have been appointed to preside, who have wrought out their perfection with infinitesimal exactness. And one of these portions of the universe is thine own, unhappy man, which, however little, contributes to the whole; and you do not seem to be aware that this and every other creation is for the sake of the whole, and in order that the life of the whole may be blessed; and that you are created for the sake of the whole, and not the whole for the sake of you. For every physician and every skilled artist does all things for the sake of the whole, directing his effort towards the common good, executing the part for the sake of the whole, and not the whole for the sake of the part. And you are annoyed because you are ignorant how what is best for you happens to you and to the universe, as far as the laws of the common creation admit. Now, as the soul combining first with one body and then with another undergoes all sorts of changes, either of herself, or through the influence of another soul, all that remains to the player of the game is that he should shift the pieces; sending the better nature to the better place, and the worse to the worse, and so assigning to them their proper portion.

Clinias:: In what way do you mean?

Athenian Stranger:: In a way which may be supposed to make the care of all things easy to the Gods. If any one were to form or fashion all things without any regard to the whole,—if, for example, he formed a living element of water out of fire, instead of forming many things out of one or one out of many in regular order attaining to a first or second or third birth, the transmutation would have been infinite; but now the ruler of the world has a wonderfully easy task.

Clinias:: How so?

Athenian Stranger:: I will explain:—When the king saw that our actions had life, and that there was much virtue in them and much vice, and that the soul and body, although not, like the Gods of popular opinion, eternal, yet having once come into existence, were indestructible (for if either of them had been destroyed, there would have been no generation of living beings); and when he observed that the good of the soul was ever by nature designed to profit men, and the evil to harm them—he, seeing all this, contrived so to place each of the parts that their position might in the easiest and best manner procure the victory of good and the defeat of evil in the whole. And he contrived a general plan by which a thing of a certain nature found a certain seat and room. But the formation The of qualities he left to the wills of individuals. For every one of us is made pretty much what he is by the bent of his desires and the nature of his soul.

Clinias:: Yes, that is probably true. themselves.

Athenian Stranger:: Then all things which have a soul change, and possess in themselves a principle of change, and in changing move according to law and to the order of destiny: natures which have undergone a lesser change move less and on the earth's surface, but those which have suffered more change and have become more criminal sink into the abyss, that is to say, into Hades and other places in the world below, of which the very names terrify men, and which they picture to themselves as in a dream, both while alive and when released from the body. And whenever the soul receives more of good or evil from her own energy and the strong influence of others—when she has communion with divine virtue and becomes divine, she is carried into another and better place, which is perfect in holiness; but when she has communion with evil, then she also changes the place of her life.

'This is the justice of the Gods who inhabit Olympus'

O youth or young man, who fancy that you are neglected by the Gods, know that if you become worse you shall go to the worse souls, or if better to the better, and in every succession of life and death you will do and suffer what like may fitly suffer at the hands of like. This is the justice of heaven, which neither you nor any other unfortunate will ever glory in escaping, and which the ordaining powers have specially ordained; take good heed thereof, for it will be sure to take heed of you. If you say:—I am small and will creep into the depths of the earth, or I am high and will fly up to heaven, you are not so small or so high but that you shall pay the fitting penalty, either here or in the world below or in some still more savage place whither you shall be conveyed. This is also the explanation of the fate of those whom you saw, who had done unholy and evil deeds, and from small beginnings had grown great, and you fancied that from being miserable they had become happy; and in their actions, as in a mirror, you seemed to see the universal neglect of the Gods, not knowing how they make all things work together and contribute to the great whole. And thinkest thou, bold man, that thou needest not to know this?—he who knows it not can never form any true idea of the happiness or unhappiness of life or hold any rational discourse respecting either.

If Cleinias and this our reverend company succeed in proving to you that you know not what you say of the Gods, then will God help you; but should you desire to hear more, listen' to what we say to the third opponent, if you have any understanding whatsoever. For I think that we have sufficiently proved the existence of the Gods, and that they care for men:—The other notion that they are appeased by the wicked, and take gifts, is what we must not concede to any one, and what every man should disprove to the utmost of his power.

Clinias:: Very good; let us do as you say.

Athenian Stranger:: Well, then, by the Gods themselves I conjure you to tell me,—if they are to be propitiated, how are they to be propitiated? Who are they, and what is their nature? Must they not be at least rulers who have to order unceasingly the whole heaven?

Clinias:: True.

Athenian Stranger:: And to what earthly rulers can they be compared, or who to them? How in the less can we find an image of the greater? Are they charioteers of contending pairs of steeds, or pilots of vessels? Perhaps they might be compared to the generals of armies, or they might be likened to physicians providing against the diseases which make war upon the body, or to husbandmen observing anxiously the effects of the seasons on the growth of plants; or perhaps to shepherds of flocks. For as we acknowledge the world to be full of many goods and also of evils, and of more evils than goods, there is, as we affirm, an immortal conflict going on among us, which requires marvelous watchfulness; and in that conflict the Gods and demigods are our allies, and we are their property. Injustice and insolence and folly are the destruction of us, and justice and temperance and wisdom are our salvation; and the place of these latter is in the life of the Gods, although some vestige of them may occasionally be discerned among mankind. But upon this earth we know that there dwell souls possessing an unjust spirit, who may be compared to brute animals, which fawn upon their keepers, whether dogs or shepherds, or the best and most perfect masters; for they in like manner, as the voices of the wicked declare, prevail by flattery and prayers and incantations, and are allowed to make their gains with impunity. And this sin, which is termed dishonesty, is an evil of the same kind as what is termed disease in living bodies or pestilence in years or seasons of the year, and in cities and governments has another name, which is injustice.

Clinias:: Quite true.

Athenian Stranger:: What else can he say who declares that the Gods are always lenient to the doers of unjust acts, if they divide the spoil with them? As if wolves were to toss a portion of their prey to the dogs, and they, mollified by the gift, suffered them to tear the flocks. Must not he who maintains that the Gods can be propitiated argue thus?

Clinias:: Precisely so.

Athenian Stranger:: And to which of the above-mentioned classes of guardians would any man compare the Gods without absurdity? Will he say that they are like pilots, who are themselves turned away from their duty by ‘libations of wine and the savor of fat’ and at last overturn both ship and sailors?

Clinias:: Assuredly not.

Athenian Stranger:: And surely they are not like charioteers who are bribed to give up the victory to other chariots?

Clinias:: That would be a fearful image of the Gods.

Athenian Stranger:: Nor are they like generals, or physicians, or husbandmen, or shepherds; and no one would compare them to dogs who have been silenced by wolves.

Clinias:: A thing not to be spoken of.

Athenian Stranger:: And are not all the Gods the chiefest of all guardians, and do they not guard our highest interests?

Clinias:: Yes; the chiefest.

Athenian Stranger:: And shall we say that those who guard our noblest interests, and are the best of guardians, are inferior in virtue to dogs, and to men even of moderate excellence, who would never betray justice for the sake of gifts which unjust men impiously offer them?

Clinias:: Certainly not; nor is such a notion to be endured, and he who holds this opinion may be fairly singled out and characterized as of all impious men the wickedest and most impious.

Athenian Stranger:: Then are the three assertions—that the Gods exist, and that they take care of men, and that they can never be persuaded to do injustice, now sufficiently demonstrated? May we say that they are?

Clinias:: You have our entire assent to your words.

Athenian Stranger:: I have spoken with vehemence because I am zealous against evil men; and I will tell you, dear Cleinias, why I am so. I would not have the wicked think that, having the superiority in argument, they may do as they please and act according to their various imaginations about the Gods; and this zeal has led me to speak too vehemently; but if we have at all succeeded in persuading the men to hate themselves and love their opposites, the prelude of our laws about impiety will not have been spoken in vain.

Clinias:: So let us hope; and even if we have failed, the style of our argument will not discredit the lawgiver.

Athenian Stranger:: After the prelude shall follow a discourse, which will be the interpreter of the law; this shall proclaim to all impious persons that they must depart from their ways and go over to the pious. And to those who disobey, let the law about impiety be as follows:—If a man is guilty of any impiety in word or deed, any one who happens to be present shall give information to the magistrates, in aid of the law; and let the magistrates who first receive the information bring him before the appointed court according to the law; and if a magistrate, after receiving information, refuses to act, he shall be tried for impiety at the instance of any one who is willing to vindicate the laws; and if any one be cast, the court shall estimate the punishment of each act of impiety; and let all such criminals be imprisoned. There shall be three prisons in the state: the first of them is to be the common prison in the neighborhood of the agora for the safe-keeping of the generality of offenders; another is to be in the neighborhood of the nocturnal council, and is to be called the ‘House of Reformation’; another, to be situated in some wild and desolate region in the centre of the country, shall be called by some name expressive of retribution. Now, men fall into impiety from three causes, which have been already mentioned, and from each of these causes arise two sorts of impiety, in all six, which are worth distinguishing, and should not all have the same punishment. For he who does not believe in the Gods, and yet has a righteous nature, hates the wicked and dislikes and refuses to do injustice, and avoids unrighteous men, and loves the righteous. But they who besides believing that the world is devoid of Gods are intemperate, and have at the same time good memories and quick wits, are worse; although both of them are unbelievers, much less injury is done by the one than by the other. The one may talk loosely about the Gods and about sacrifices and oaths, and perhaps by laughing at other men he may make them like himself, if he be not punished. But the other who holds the same opinions and is called a clever man, is full of stratagem and deceit—men of this class deal in prophecy and jugglery of all kinds, and out of their ranks sometimes come tyrants and demagogues and generals and hierophants of private mysteries and the Sophists, as they are termed, with their ingenious devices. There are many kinds of unbelievers, but two only for whom legislation is required; one the hypocritical sort, whose crime is deserving of death many times over, while the other needs only bonds and admonition. In like manner also the notion that the Gods take no thought of men produces two other sorts of crimes, and the notion that they may be propitiated produces two more. Assuming these divisions, let those who have been made what they are only from want of understanding, and not from malice or an evil nature, be placed by the judge in the House of Reformation, and ordered to suffer imprisonment during a period of not less than five years. And in the meantime let them have no intercourse with the other citizens, except with members of the nocturnal council, and with them let them converse with a view to the improvement of their soul's health. And when the time of their imprisonment has expired, if any of them be of sound mind let him be restored to sane company, but if not, and if he be condemned a second time, let him be punished with death. As to that class of monstrous natures who not only believe that there are no Gods, or that they are negligent, or to be propitiated, but in contempt of mankind conjure the souls of the living and say that they can conjure the dead and promise to charm the Gods with sacrifices and prayers, and will utterly overthrow individuals and whole houses and states for the sake of money—let him who is guilty of any of these things be condemned by the court to be bound according to law in the prison which is in the centre of the land, and let no freeman ever approach him, but let him receive the rations of food appointed by the guardians of the law from the hands of the public slaves; and when he is dead let him be cast beyond the borders unburied, and if any freeman assist in burying him, let him pay the penalty of impiety to any one who is willing to bring a suit against him. But if he leaves behind him children who are fit to be citizens, let the guardians of orphans take care of them, just as they would of any other orphans, from the day on which their father is convicted.

In all these cases there should be one law, which will make men in general less liable to transgress in word or deed, and less foolish, because they will not be allowed to practice religious rites contrary to law. And let this be the simple form of the law:—No man shall have sacred rites in a private house. When he would sacrifice, let him go to the temples and hand over his offerings to the priests and priestesses, who see to the sancity of such things, and let him pray himself, and let any one who pleases join with him in prayer. The reason of this is as follows:—Gods and temples are not easily instituted, and to establish them rightly is the work of a mighty intellect. And women especially, and men too, when they are sick or in danger, or in any sort of difficulty, or again on their receiving any good fortune, have a way of consecrating the occasion, vowing sacrifices, and promising shrines to Gods, demigods, and sons of Gods; and when they are awakened by terrible apparitions and dreams or remember visions, they find in altars and temples the remedies of them, and will fill every house and village with them, placing them in the open air, or wherever they may have had such visions; and with a view to all these cases we should obey the law. The law has also regard to the impious, and would not have them fancy that by the secret performance of these actions—by raising temples and by building altars in private houses, they can propitiate the God secretly with sacrifices and prayers, while they are really multiplying their crimes infinitely, bringing guilt from heaven upon themselves, and also upon those who permit them, and who are better men than they are; and the consequence is that the whole state reaps the fruit of their impiety, which, in a certain sense, is deserved. Assuredly God will not blame the legislator, who will enact the following law:—No one shall possess shrines of the Gods in private houses, and he who is found to possess them, and perform any sacred rites not publicly authorized,—supposing the offender to be some man or woman who is not guilty of any other great and impious crime,—shall be informed against by him who is acquainted with the fact, which shall be announced by him to the guardians of the law; and let them issue orders that he or she shall carry away their private rites to the public temples, and if they do not persuade them, let them inflict a penalty on them until they comply. And if a person be proven guilty of impiety, not merely from childish levity, but such as grown-up men may be guilty of, whether he have sacrificed publicly or privately to any Gods, let him be punished with death, for his sacrifice is impure. Whether the deed has been done in earnest, or only from childish levity, let the guardians of the law determine, before they bring the matter into court and prosecute the offender for impiety.

## Book 11.

Athenian Stranger:: In the next place, dealings between man and man require to be suitably regulated. The principle of them is very simple:—Thou shalt not, if thou canst help, touch that which is mine, or remove the least thing which belongs to me without my consent; and may I be of a sound mind, and do to others as I would that they should do to me. First, let us speak of treasure-trove:—May I never pray the Gods to find the hidden treasure, which another has laid up for himself and his family, he not being one of my ancestors, nor lift, if I should find, such a treasure. And may I never have any dealings with those who are called diviners, and who in any way or manner counsel me to take up the deposit entrusted to the earth, for I should not gain so much in the increase of my possessions, if I take up the prize, as I should grow in justice and virtue of soul, if I abstain; and this will be a better possession to me than the other in a better part of myself; for the possession of justice in the soul is preferable to the possession of wealth. And of many things it is well said,—'Move not the immovables' and this may be regarded as one of them. And we shall do well to believe the common tradition which says, that such deeds prevent a man from having a family. Now as to him who is careless about having children and regardless of the legislator, taking up that which neither he deposited, nor any ancestor of his, without the consent of the depositor, violating the simplest and noblest of laws which was the enactment of no mean man:—'Take not up that which was not laid down by thee'—of him, I say, who despises these two legislators, and takes up, not some small matter which he has not deposited, but perhaps a great heap of treasure, what he ought to suffer at the hands of the Gods, God only knows; but I would have the first person who sees him go and tell the wardens of the city, if the occurrence has taken place in the city, or if the occurrence has taken place in the agora he shall tell the wardens of the agora, or if in the country he shall tell the wardens of the country and their commanders. When information has been received the city shall send to Delphi, and, whatever the God answers about the money and the remover of the money, that the city shall do in obedience to the oracle; the informer, if he be a freeman, shall have the honour of doing rightly, and he who informs not, the dishonor of doing wrongly; and if he be a slave who gives information, let him be freed, as he ought to be, by the state, which shall give his master the price of him; but if he do not inform he shall be punished with death. Next in order shall follow a similar law, which shall apply equally to matters great and small:—If a man happens to leave behind him some part of his property, whether intentionally or unintentionally, let him who may come upon the left property suffer it to remain, reflecting that such things are under the protection of the Goddess of ways, and are dedicated to her by the law. But if any one defies the law, and takes the property home with him, let him, if the thing is of little worth, and the man who takes it a slave, be beaten with many stripes by him who meets him, being a person of not less than thirty years of age. Or if he be a freeman, in addition to being thought a mean person and a despiser of the laws, let him pay ten times the value of the treasure which he has moved to the leaver. And if some one accuses another of having anything which belongs to him, whether little or much, and the other admits that he has this thing, but denies that the property in dispute belongs to the other, if the property be registered with the magistrates according to law, the claimant shall summon the possessor, who shall bring it before the magistrates; and when it is brought into court, if it be registered in the public registers, to which of the litigants it belonged, let him take it and go his way. Or if the property be registered as belonging to some one who is not present, whoever will offer sufficient surety on behalf of the absent person that he will give it up to him, shall take it away as the representative of the other. But if the property which is deposited be not registered with the magistrates, let it remain until the time of trial with three of the eldest of the magistrates; and if it be an animal which is deposited, then he who loses the suit shall pay the magistrates for its keep, and they shall determine the cause within three days.

Any one who is of sound mind may arrest his own slave, and do with him whatever he will of such things as are lawful; and he may arrest the runaway slave of any of his friends or kindred with a view to his safe-keeping. And if any one takes away him who is being carried off as a slave, intending to liberate him, he who is carrying him off shall let him go; but he who takes him away shall give three sufficient sureties; and if he give them, and not without giving them, he may take him away, but if he take him away after any other manner he shall be deemed guilty of violence, and being convicted shall pay as a penalty double the amount of the damages claimed to him who has been deprived of the slave. Any man may also carry off a freedman, if he do not pay respect or sufficient respect to him who freed him. Now the respect shall be, that the freedman go three times in the month to the hearth of the person who freed him, and offer to do whatever he ought, so far as he can; and he shall agree to make such a marriage as his former master approves. He shall not be permitted to have more property than he who gave him liberty, and what more he has shall belong to his master. The freedman shall not remain in the state more than twenty years, but like other foreigners shall go away, taking his entire property with him, unless he has the consent of the magistrates and of his former master to remain. If a freedman or any other stranger has a property greater than the census of the third class, at the expiration of thirty days from the day on which this comes to pass, he shall take that which is his and go his way, and in this case he shall not be allowed to remain any longer by the magistrates. And if any one disobeys this regulation, and is brought into court and convicted, he shall be punished with death, and his property shall be confiscated. Suits about these matters shall take place before the tribes, unless the plaintiff and defendant have got rid of the accusation either before their neighbors or before judges chosen by them. If a man lay claim to any animal or anything else which he declares to be his, let the possessor refer to the seller or to some honest and trustworthy person, who has given, or in some legitimate way made over the property to him; if he be a citizen or a metic, sojourning in the city, within thirty days, or, if the property have been delivered to him by a stranger, within five months, of which the middle month shall include the summer solstice. When goods are exchanged by selling and buying, a man shall deliver them, and receive the price of them, at a fixed place in the agora, and have done with the matter; but he shall not buy or sell anywhere else, nor give credit. And if in any other manner or in any other place there be an exchange of one thing for another, and the seller give credit to the man who buys from him, he must do this on the understanding that the law gives no protection in cases of things sold not in accordance with these regulations. Again, as to contributions, any man who likes may go about collecting contributions as a friend among friends, but if any difference arises about the collection, he is to act on the understanding that the law gives no protection in such cases.

He who sells anything above the value of fifty drachmas shall be required to remain in the city for ten days, and the purchaser shall be informed of the house of the seller, with a view to the sort of charges which are apt to arise in such cases, and the restitutions which the law allows. And let legal restitution be on this wise:—If a man sells a slave who is in a consumption, or who has the disease of the stone, or of strangury, or epilepsy, or some other tedious and incurable disorder of body or mind, which is not discernible to the ordinary man, if the purchaser be a physician or trainer, he shall have no right of restitution; nor shall there be any right of restitution if the seller has told the truth beforehand to the buyer. But if a skilled person sells to another who is not skilled, let the buyer appeal for restitution within six months, except in the case of epilepsy, and then the appeal may be made within a year. The cause shall be determined by such physicians as the parties may agree to choose; and the defendant, if he lose the suit, shall pay double the price at which he sold. If a private person sell to another private person, he shall have the right of restitution, and the decision shall be given as before, but the defendant, if he be cast, shall only pay back the price of the slave. If a person sells a homicide to another, and they both know of the fact, let there be no restitution in such a case, but if he do not know of the fact, there shall be a right of restitution, whenever the buyer makes the discovery; and the decision shall rest with the five youngest guardians of the law, and if the decision be that the seller was cognizant of the fact, he shall purify the house of the purchaser, according to the law of the interpreters, and shall pay back three times the purchase-money.

If a man exchanges either money for money, or anything whatever for anything else, either with or without life, let him give and receive them genuine and unadulterated, in accordance with the law. And let us have a prelude about all this sort of roguery, like the preludes of our other laws. Every man should regard adulteration as of one and the same class with falsehood and deceit, concerning which the many are too fond of saying that at proper times and places the practice may often be right. But they leave the occasion, and the when, and the where, undefined and unsettled, and from this want of definiteness in their language they do a great deal of harm to themselves and to others. Now a legislator ought not to leave the matter undetermined; he ought to prescribe some limit, either greater or less. Let this be the rule prescribed:—No one shall call the Gods to witness, when he says or does anything false or deceitful or dishonest, unless he would be the most hateful of mankind to them. And he is most hateful to them who takes a false oath, and pays no heed to the Gods; and in the next degree, he who tells a falsehood in the presence of his superiors. Now better men are the superiors of worse men, and in general elders are the superiors of the young; wherefore also parents are the superiors of their offspring, and men of women and children, and rulers of their subjects; for all men ought to reverence any one who is in any position of authority, and especially those who are in state offices. And this is the reason why I have spoken of these matters. For every one who is guilty of adulteration in the agora tells a falsehood, and deceives, and when he invokes the Gods, according to the customs and cautions of the wardens of the agora, he does but swear without any respect for God or man. Certainly, it is an excellent rule not lightly to defile the names of the Gods, after the fashion of men in general, who care little about piety and purity in their religious actions. But if a man will not conform to this rule, let the law be as follows:—He who sells anything in the agora shall not ask two prices for that which he sells, but he shall ask one price, and if he do not obtain this, he shall take away his goods; and on that day he shall not value them either at more or less; and there shall be no praising of any goods, or oath taken about them. If a person disobeys this command, any citizen who is present, not being less than thirty years of age, may with impunity chastise and beat the swearer, but if instead of obeying the laws he takes no heed, he shall be liable to the charge of having betrayed them. If a man sells any adulterated goods and will not obey these regulations, he who knows and can prove the fact, and does prove it in the presence of the magistrates, if he be a slave or a metic, shall have the adulterated goods; but if he be a citizen, and do not pursue the charge, he shall be called a rogue, and deemed to have robbed the Gods of the agora; or if he proves the charge, he shall dedicate the goods to the Gods of the agora. He who is proved to have sold any adulterated goods, in addition to losing the goods themselves, shall be beaten with stripes,—a stripe for a drachma, according to the price of the goods; and the herald shall proclaim in the agora the offence for which he is going to be beaten. The wardens of the agora and the guardians of the law shall obtain information from experienced persons about the rogueries and adulterations of the sellers, and shall write up what the seller ought and ought not to do in each case; and let them inscribe their laws on a column in front of the court of the wardens of the agora, that they may be clear instructors of those who have business in the agora. Enough has been said in what has preceded about the wardens of the city, and if anything seems to be wanting, let them communicate with the guardians of the law, and write down the omission, and place on a column in the court of the wardens of the city the primary and secondary regulations which are laid down for them about their office.

After the practices of adulteration naturally follow the practices of retail trade. Concerning these, we will first of all give a word of counsel and reason, and the law shall come afterwards. Retail trade in a city is not by nature intended to do any harm, but quite the contrary; for is not he a benefactor who reduces the inequalities and incommensurabilities of goods to equality and common measure? And this is what the power of money accomplishes, and the merchant may be said to be appointed for this purpose. The hireling and the tavern-keeper, and many other occupations, some of them more and others less seemly—all alike have this object;—they seek to satisfy our needs and equalize our possessions. Let us then endeavor to see what has brought retail trade into ill-odor, and wherein lies the dishonor and unseemliness of it, in order that if not entirely, we may yet partially, cure the evil by legislation. To effect this is no easy matter, and requires a great deal of virtue.

Clinias:: What do you mean?

Athenian Stranger:: Dear Cleinias, the class of men is small—they must have been rarely gifted by nature, and trained by education,—who, when assailed by wants and desires, are able to hold out and observe moderation, and when they might make a great deal of money are sober in their wishes, and prefer a moderate to a large gain. But the mass of mankind are the very opposite: their desires are unbounded, and when they might gain in moderation they prefer gains without limit; wherefore all that relates to retail trade, and merchandise, and the keeping of taverns, is denounced and numbered among dishonorable things.

For if what I trust may never be and will not be, we were to compel, if I may venture to say a ridiculous thing, the best men everywhere to keep taverns for a time, or carry on retail trade, or do anything of that sort; or if, in consequence of some fate or necessity, the best women were compelled to follow similar callings, then we should know how agreeable and pleasant all these things are; and if all such occupations were managed on incorrupt principles, they would be honored as we honour a mother or a nurse. But now that a man goes to desert places and builds houses which can only be reached by long journeys, for the sake of retail trade, and receives strangers who are in need at the welcome resting-place, and gives them peace and calm when they are tossed by the storm, or cool shade in the heat; and then instead of behaving to them as friends, and showing the duties of hospitality to his guests, treats them as enemies and captives who are at his mercy, and will not release them until they have paid the most unjust, abominable, and extortionate ransom,—these are the sort of practices, and foul evils they are, which cast a reproach upon the succor of adversity. And the legislator ought always to be devising a remedy for evils of this nature. There is an ancient saying, which is also a true one—'To fight against two opponents is a difficult thing' as is seen in diseases and in many other cases. And in this case also the war is against two enemies—wealth and poverty; one of whom corrupts the soul of man with luxury, while the other drives him by pain into utter shamelessness. What remedy can a city of sense find against this disease? In the first place, they must have as few retail traders as possible; and in the second place, they must assign the occupation to that class of men whose corruption will be the least injury to the state; and in the third place, they must devise some way whereby the followers of these occupations themselves will not readily fall into habits of unbridled shamelessness and meanness.

After this preface let our law run as follows, and may fortune favor us:—No landowner among the Magnetes, whose city the God is restoring and resettling—no one, that is, of the 5040 families, shall become a retail trader either voluntarily or involuntarily; neither shall he be a merchant, or do any service for private persons unless they equally serve him, except for his father or his mother, and their fathers and mothers; and in general for his elders who are freemen, and whom he serves as a freeman. Now it is difficult to determine accurately the things which are worthy or unworthy of a freeman, but let those who have obtained the prize of virtue give judgment about them in accordance with their feelings of right and wrong. He who in any way shares in the illiberality of retail trades may be indicted for dishonoring his race by any one who likes, before those who have been judged to be the first in virtue; and if he appear to throw dirt upon his father's house by an unworthy occupation, let him be imprisoned for a year and abstain from that sort of thing; and if he repeat the offence, for two years; and every time that he is convicted let the length of his imprisonment be doubled. This shall be the second law:—He who engages in retail trade must be either a metic or a stranger. And a third law shall be:—In order that the retail trader who dwells in our city may be as good or as little bad as possible, the guardians of the law shall remember that they are not only guardians of those who may be easily watched and prevented from becoming lawless or bad, because they are well-born and bred; but still more should they have a watch over those who are of another sort, and follow pursuits which have a very strong tendency to make men bad. And, therefore, in respect of the multifarious occupations of retail trade, that is to say, in respect of such of them as are allowed to remain, because they seem to be quite necessary in a state,—about these the guardians of the law should meet and take counsel with those who have experience of the several kinds of retail trade, as we before commanded concerning adulteration (which is a matter akin to this), and when they meet they shall consider what amount of receipts, after deducting expenses, will produce a moderate gain to the retail trades, and they shall fix in writing and strictly maintain what they find to be the right percentage of profit; this shall be seen to by the wardens of the agora, and by the wardens of the city, and by the wardens of the country. And so retail trade will benefit every one, and do the least possible injury to those in the state who practice it.

When a man makes an agreement which he does not fulfill, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance, the other party may go to law with him in the courts of the tribes, for not having completed his agreement, if the parties are not able previously to come to terms before arbiters or before their neighbors. The class of craftsmen who have furnished human life with the arts is dedicated to Hephaestus and Athene; and there is a class of craftsmen who preserve the works of all craftsmen by arts of defense, the votaries of Ares and Athene, to which divinities they too are rightly dedicated. All these continue through life serving the country and the people; some of them are leaders in battle; others make for hire implements and works, and they ought not to deceive in such matters, out of respect to the Gods who are their ancestors. If any craftsman through indolence omit to execute his work in a given time, not reverencing the God who gives him the means of life, but considering, foolish fellow, that he is his own God and will let him off easily, in the first place, he shall suffer at the hands of the God, and in the second place, the law shall follow in a similar spirit. He shall owe to him who contracted with him the price of the works which he has failed in performing, and he shall begin again and execute them gratis in the given time. When a man undertakes a work, the law gives him the same advice which was given to the seller, that he should not attempt to raise the price, but simply ask the value; this the law enjoins also on the contractor; for the craftsman assuredly knows the value of his work. Wherefore, in free states the man of art ought not to attempt to impose upon private individuals by the help of his art, which is by nature a true thing; and he who is wronged in a matter of this sort, shall have a right of action against the party who has wronged him. And if any one lets out work to a craftsman, and does not pay him duly according to the lawful agreement, disregarding Zeus the guardian of the city and Athene, who are the partners of the state, and overthrows the foundations of society for the sake of a little gain, in his case let the law and the Gods maintain the common bonds of the state. And let him who, having already received the work in exchange, does not pay the price in the time agreed, pay double the price; and if a year has elapsed, although interest is not to be taken on loans, yet for every drachma which he owes to the contractor let him pay a monthly interest of an obol. Suits about these matters are to be decided by the courts of the tribes; and by the way, since we have mentioned craftsmen at all, we must not forget that other craft of war, in which generals and tacticians are the craftsmen, who undertake voluntarily or involuntarily the work of our safety, as other craftsmen undertake other public works;—if they execute their work well the law will never tire of praising him who gives them those honors which are the just rewards of the soldier; but if any one, having already received the benefit of any noble service in war, does not make the due return of honour, the law will blame him. Let this then be the law, having an ingredient of praise, not compelling but advising the great body of the citizens to honour the brave men who are the saviors of the whole state, whether by their courage or by their military skill;—they should honour them, I say, in the second place; for the first and highest tribute of respect is to be given to those who are able above other men to honour the words of good legislators.

The greater part of the dealings between man and man have been now regulated by us with the exception of those that relate to orphans and the supervision of orphans by their guardians. These follow next in order, and must be regulated in some way. But to arrive at them we must begin with the testamentary wishes of the dying and the case of those who may have happened to die intestate. When I said, Cleinias, that we must regulate them, I had in my mind the difficulty and perplexity in which all such matters are involved. You cannot leave them unregulated, for individuals would make regulations at variance with one another, and repugnant to the laws and habits of the living and to their own previous habits, if a person were simply allowed to make any will which he pleased, and this were to take effect in whatever state he may have been at the end of his life; for most of us lose our senses in a manner, and feel crushed when we think that we are about to die.

Clinias:: What do you mean, Stranger?

Athenian Stranger:: O Cleinias, a man when he is about to die is an intractable creature, and is apt to use language which causes a great deal of anxiety and trouble to the legislator.

Clinias:: In what way?

Athenian Stranger:: He wants to have the entire control of all his property, and will use angry words.

Clinias:: Such as what?

Athenian Stranger:: O ye Gods, he will say, how monstrous that I am not allowed to give, or not to give, my own to whom I will—less to him who has been bad to me, and more to him who has been good to me, and whose badness and goodness have been tested by me in time of sickness or in old age and in every other sort of fortune!

Clinias:: Well, Stranger, and may he not very fairly say so?

Athenian Stranger:: In my opinion, Cleinias, the ancient legislators were too good-natured, and made laws without sufficient observation or consideration of human things.

Clinias:: What do you mean?

Athenian Stranger:: I mean, my friend, that they were afraid of the testator’s reproaches, and so they passed a law to the effect that a man should be allowed to dispose of his property in all respects as he liked; but you and I, if I am not mistaken, will have something better to say to our departing citizens.

Clinias:: What?

Athenian Stranger:: O my friends, we will say to them, hard is it for you, who are creatures of a day, to know what is yours,—hard too, as the Delphic oracle says, to know yourselves at this hour. Now I, as the legislator, regard you and your possessions, not as belonging to yourselves, but as belonging to your whole family, both past and future, and yet more do I regard both family and possessions as belonging to the state; wherefore, if some one steals upon you with flattery, when you are tossed on the sea of disease or old age, and persuades you to dispose of your property in a way that is not for the best, I will not, if I can help, allow this; but I will legislate with a view to the whole, considering what is best both for the state and for the family, esteeming as I ought the feelings of an individual at a lower rate; and I hope that you will depart in peace and kindness towards us, as you are going the way of all mankind; and we will impartially take care of all your concerns, not neglecting any of them, if we can possibly help. Let this be our prelude and consolation to the living and dying, Cleinias, and let the law be as follows:—He who makes a disposition in a testament, if he be the father of a family, shall first of all inscribe as his heir any one of his sons whom he may think fit; and if he gives any of his children to be adopted by another citizen, let the adoption be inscribed. And if he has a son remaining over and above who has not been adopted upon any lot, and who may be expected to be sent out to a colony according to law, to him his father may give as much as he pleases of the rest of his property, with the exception of the paternal lot and the fixtures on the lot. And if there are other sons, let him distribute among them what there is more than the lot in such portions as he pleases. And if one of the sons has already a house of his own, he shall not give him of the money, nor shall he give money to a daughter who has been betrothed, but if she is not betrothed he may give her money. And if any of the sons or daughters shall be found to have another lot of land in the country, which has accrued after the testament has been made, they shall leave the lot which they have inherited to the heir of the man who has made the will. If the testator has no sons, but only daughters, let him choose the husband of any one of his daughters whom he pleases, and leave and inscribe him as his son and heir. And if a man have lost his son, when he was a child, and before he could be reckoned among grown-up men, whether his own or an adopted son, let the testator make mention of the circumstance and inscribe whom he will to be his second son in hope of better fortune. If the testator has no children at all, he may select and give to any one whom he pleases the tenth part of the property which he has acquired; but let him not be blamed if he gives all the rest to his adopted son, and makes a friend of him according to the law. If the sons of a man require guardians, and the father when he dies leaves a will appointing guardians, those who have been named by him, whoever they are and whatever their number be, if they are able and willing to take charge of the children, shall be recognized according to the provisions of the will. But if he dies and has made no will, or a will in which he has appointed no guardians, then the next of kin, two on the father's and two on the mother's side, and one of the friends of the deceased, shall have the authority of guardians, whom the guardians of the law shall appoint when the orphans require guardians. And the fifteen eldest guardians of the law shall have the whole care and charge of the orphans, divided into threes according to seniority,—a body of three for one year, and then another body of three for the next year, until the cycle of the five periods is complete; and this, as far as possible, is to continue always. If a man dies, having made no will at all, and leaves sons who require the care of guardians, they shall share in the protection which is afforded by these laws. And if a man dying by some unexpected fate leaves daughters behind him, let him pardon the legislator if when he gives them in marriage, he have a regard only to two out of three conditions,—nearness of kin and the preservation of the lot, and omits the third condition, which a father would naturally consider, for he would choose out of all the citizens a son for himself, and a husband for his daughter, with a view to his character and disposition—the father, I say, shall forgive the legislator if he disregards this, which to him is an impossible consideration. Let the law about these matters where practicable be as follows:—If a man dies without making a will, and leaves behind him daughters, let his brother, being the son of the same father or of the same mother, having no lot, marry the daughter and have the lot of the dead man. And if he have no brother, but only a brothers son, in like manner let them marry, if they be of a suitable age; and if there be not even a brother's son, but only the son of a sister, let them do likewise, and so in the fourth degree, if there be only the testator's father's brother, or in the fifth degree, his father's brother's son, or in a sixth degree, the child of his father's sister. Let kindred be always reckoned in this way: if a person leaves daughters the relationship shall proceed upwards through brothers and sisters, and brothers' and sisters' children, and first the males shall come, and after them the females in the same family. The judge shall consider and determine the suitableness or unsuitableness of age in marriage; he shall make an inspection of the males naked, and of the women naked down to the navel. And if there be a lack of kinsmen in a family extending to grandchildren of a brother, or to the grandchildren of a grandfather's children, the maiden may choose with the consent of her guardians any one of the citizens who is willing and whom she wills, and he shall be the heir of the dead man, and the husband of his daughter. Circumstances vary, and there may sometimes be a still greater lack of relations within the limits of the state; and if any maiden has no kindred living in the city, and there is some one who has been sent out to a colony, and she is disposed to make him the heir of her father's possessions, if he be indeed of her kindred, let him proceed to take the lot according to the regulation of the law; but if he be not of her kindred, she having no kinsmen within the city, and he be chosen by the daughter of the dead man, and empowered to marry by the guardians, let him return home and take the lot of him who died intestate. And if a man has no children, either male or female, and dies without making a will, let the previous law in general hold; and let a man and a woman go forth from the family and share the deserted house, and let the lot belong absolutely to them; and let the heiress in the first degree be a sister, and in a second degree a daughter of a brother, and in the third, a daughter of a sister, in the fourth degree the sister of a father, and in the fifth degree the daughter of a father's brother, and in a sixth degree of a father's sister; and these shall dwell with their male kinsmen, according to the degree of relationship and right, as we enacted before. Now we must not conceal from ourselves that such laws are apt to be oppressive and that there may sometimes be a hardship in the lawgiver commanding the kinsman of the dead man to marry his relation; he maybe thought not to have considered the innumerable hindrances which may arise among men in the execution of such ordinances; for there may be cases in which the parties refuse to obey, and are ready to do anything rather than marry, when there is some bodily or mental malady or defect among those who are bidden to marry or be married. Persons may fancy that the legislator never thought of this, but they are mistaken; wherefore let us make a common prelude on behalf of the lawgiver and of his subjects, the law begging the latter to forgive the legislator, in that he, having to take care of the common weal, cannot order at the same time the various circumstances of individuals, and begging him to pardon them if naturally they are sometimes unable to fulfill the act which he in his ignorance imposes upon them.

Clinias:: And how, Stranger, can we act most fairly under the circumstances?

Athenian Stranger:: There must be arbiters chosen to deal with such laws and the subjects of them.

Clinias:: What do you mean?

Athenian Stranger:: I mean to say, that a case may occur in which the nephew, having a rich father, will be unwilling to marry the daughter of his uncle; he will have a feeling of pride, and he will wish to look higher. And there are cases in which the legislator will be imposing upon him the greatest calamity, and he will be compelled to disobey the law, if he is required, for example, to take a wife who is mad, or has some other terrible malady of soul or body, such as makes life intolerable to the sufferer. Then let what we are saying concerning these cases be embodied in a law:—If any one finds fault with the established laws respecting testaments, both as to other matters and especially in what relates to marriage, and asserts that the legislator, if he were alive and present, would not compel him to obey,—that is to say, would not compel those who are by our law required to marry or be given in marriage, to do either,—and some kinsman or guardian dispute this, the reply is that the legislator left fifteen of the guardians of the law to be arbiters and fathers of orphans, male or female, and to them let the disputants have recourse, and by their aid determine any matters of the kind, admitting their decision to be final. But if any one thinks that too great power is thus given to the guardians of the law, let him bring his adversaries into the court of the select judges, and there have the points in dispute determined.

And he who loses the cause shall have censure and blame from the legislator, which, by a man of sense, is felt to be a penalty far heavier than a great loss of money. Thus will orphan children have a second birth. After their first birth we spoke of their nurture and education, and after their second birth, when they have lost their parents, we ought to take measures that the misfortune of orphanhood may be as little sad to them as possible. In the first place, we say that the guardians of the law are lawgivers and fathers to them, not inferior to their natural fathers. Moreover, they shall take charge of them year by year as of their own kindred; and we have given both to them and to the children's own guardians a suitable admonition concerning the nurture of orphans. And we seem to have spoken opportunely in our former discourse, when we said that the souls of the dead have the power after death of taking an interest in human affairs, about which there are many tales and traditions, long indeed, but true; and seeing that they are so many and so ancient, we must believe them, and we must also believe the lawgivers, who tell us that these things are true, if they are not to be regarded as utter fools. But if these things are really so, in the first place men should have a fear of the Gods above, who regard the loneliness of the orphans; and in the second place of the souls of the departed, who by nature incline to take an especial care of their own children, and are friendly to those who honour, and unfriendly to those who dishonor them. Men should also fear the souls of the living who are aged and high in honour; wherever a city is well ordered and prosperous, their descendants cherish them, and so live happily; old persons are quick to see and hear all that relates to them, and are propitious to those who are just in the fulfillment of such duties, and they punish those who wrong the orphan and the desolate, considering that they are the greatest and most sacred of trusts. To all which matters the guardian and magistrate ought to apply his mind, if he has any, and take heed of the nurture and education of the orphans, seeking in every possible way to do them good, for he is making a contribution to his own good and that of his children. He who obeys the tale which precedes the law, and does no wrong to an orphan, will never experience the wrath of the legislator. But he who is disobedient, and wrongs any one who is bereft of father or mother, shall pay twice the penalty which he would have paid if he had wronged one whose parents had been alive. As touching other legislation concerning guardians in their relation to orphans, or concerning magistrates and their superintendence of the guardians, if they did not possess examples of the manner in which children of freemen should be brought up in the bringing up of their own children, and of the care of their property in the care of their own, or if they had not just laws fairly stated about these very things,—there would have been reason in making laws for them, under the idea that they were a peculiar class, and we might distinguish and make separate rules for the life of those who are orphans and of those who are not orphans.

But as the case stands, the condition of orphans with us is not different from the case of those who have a father, though in regard to honour and dishonor, and the attention given to them, the two are not usually placed upon a level. Wherefore, touching the legislation about orphans, the law speaks in serious accents, both of persuasion and threatening, and such a threat as the following will be by no means out of place:—He who is the guardian of an orphan of either sex, and he among the guardians of the law to whom the superintendence of this guardian has been assigned, shall love the unfortunate orphan as though he were his own child, and he shall be as careful and diligent in the management of his possessions as he would be if they were his own, or even more careful and diligent. Let every one who has the care of an orphan observe this law. But any one who acts contrary to the law on these matters, if he be a guardian of the child, may be fined by a magistrate, or, if he be himself a magistrate, the guardian may bring him before the court of select judges, and punish him, if convicted, by exacting a fine of double the amount of that inflicted by the court. And if a guardian appears to the relations of the orphan, or to any other citizen, to act negligently or dishonestly, let them bring him before the same court, and whatever damages are given against him, let him pay fourfold, and let half belong to the orphan and half to him who procured the conviction. If any orphan arrives at years of discretion, and thinks that he has been ill-used by his guardians, let him within five years of the expiration of the guardianship be allowed to bring them to trial; and if any of them be convicted, the court shall determine what he shall pay or suffer. And if a magistrate shall appear to have wronged the orphan by neglect, and he be convicted, let the court determine what he shall suffer or pay to the orphan, and if there be dishonesty in addition to neglect, besides paying the fine, let him be deposed from his office of guardian of the law, and let the state appoint another guardian of the law for the city and for the country in his room.

Greater differences than there ought to be sometimes arise between fathers and sons, on the part either of fathers who will be of opinion that the legislator should enact that they may, if they wish, lawfully renounce their son by the proclamation of a herald in the face of the world, or of sons who think that they should be allowed to indict their fathers on the charge of imbecility when they are disabled by disease or old age. These things only happen, as a matter of fact, where the natures of men are utterly bad; for where only half is bad, as, for example, if the father be not bad, but the son be bad, or conversely, no great calamity is the result of such an amount of hatred as this. In another state, a son disowned by his father would not of necessity cease to be a citizen, but in our state, of which these are to be the laws, the disinherited must necessarily emigrate into another country, for no addition can be made even of a single family to the 5040 households; and, therefore, he who deserves to suffer these things must be renounced not only by his father, who is ‘a single person, but by the whole family, and what is done in these cases must be regulated by some such law as the following:—He who in the sad disorder of his soul has a mind, justly or unjustly, to expel from his family a son whom he has begotten and brought up, shall not lightly or at once execute his purpose; but first of all he shall collect together his own kinsmen, extending to cousins, and in like manner his son’s kinsmen by the mother’s side, and in their presence he shall accuse his son, setting forth that he deserves at the hands of them all to be dismissed from the family; and the son shall be allowed to address them in a similar manner, and show that he does not deserve to suffer any of these things. And if the father persuades them, and obtains the suffrages of more than half of his kindred, exclusive of the father and mother and the offender himself—I say, if he obtains more than half the suffrages of all the other grown-up members of the family, of both sexes, the father shall be permitted to put away his son, but not otherwise. And if any other citizen is willing to adopt the son who is put away, no law’ shall hinder him; for the characters of young men are subject to many changes in the course of their lives. And if he has been put away, and in a period of ten years no one is willing to adopt him, let those who have the care of the superabundant population which is sent out into colonies, see to him, in order that he may be suitably provided for in the colony. And if disease or age or harshness of temper, or all these together, makes a man to be more out of his mind than the rest of the world are,—but this is not observable, except to those who live with him,—and he, being master of his property, is the ruin of the house, and his son doubts and hesitates about indicting his father for insanity, let the law in that case ordain that he shall first of all go to the eldest guardians of the law and tell them of his father's misfortune, and they shall duly look into the matter, and take counsel as to whether he shall indict him or not. And if they advise him to proceed, they shall be both his witnesses and his advocates; and if the father is cast, he shall henceforth be incapable of ordering the least particular of his life; let him be as a child dwelling in the house for the remainder of his days. And if a man and his wife have an unfortunate incompatibility of temper, ten of the guardians of the law, who are impartial, and ten of the women who regulate marriages, shall look to the matter, and if they are able to reconcile them they shall be formally reconciled; but if their souls are too much tossed with passion, they shall endeavor to find other partners. Now they are not likely to have very gentle tempers; and, therefore, we must endeavor to associate with them deeper and softer natures. Those who have no children, or only a few, at the time of their separation, should choose their new partners with a view to the procreation of children; but those who have a sufficient number of children should separate and marry again in order that they may have some one to grow old with and that the pair may take care of one another in age. If a woman dies, leaving children, male or female, the law will advise rather than compel the husband to bring up the children without introducing into the house a stepmother. But if he have no children, then he shall be compelled to marry until he has begotten a sufficient number of sons to his family and to the state. And if a man dies leaving a sufficient number of children, the mother of his children shall remain with them and bring them up. But if she appears to be too young to live virtuously without a husband, let her relations communicate with the women who superintend marriage, and let both together do what they think best in these matters; if there is a lack of children, let the choice be made with a view to having them; two children, one of either sex, shall be deemed sufficient in the eye of the law. When a child is admitted to be the offspring of certain parents and is acknowledged by them, but there is need of a decision as to which parent the child is to follow,—in case a female slave have intercourse with a male slave, or with a freeman or freedman, the offspring shall always belong to the master of the female slave. Again, if a free woman have intercourse with a male slave, the offspring shall belong to the master of the slave; but if a child be born either of a slave by her master, or of his mistress by a slave—and this be proven—the offspring of the woman and its father shall be sent away by the women who superintend marriage into another country, and the guardians of the law shall send away the offspring of the man and its mother.

Neither God, nor a man who has understanding, will ever advise any one to neglect his parents. To a discourse concerning the honour and dishonor of parents, a prelude such as the following, about the service of the Gods, will be a suitable introduction:—There are ancient customs about the Gods which are universal, and they are of two kinds: some of the Gods we see with our eyes and we honour them, of others we honour the images, raising statues of them which we adore; and though they are lifeless, yet we imagine that the living Gods have a good will and gratitude to us on this account. Now, if a man has a father or mother, or their fathers or mothers treasured up in his house stricken in years, let him consider that no statue can be more potent to grant his requests than they are, who are sitting at his hearth, if only he knows how to show true service to them.

Clinias:: And what do you call the true mode of service?

Athenian Stranger:: I will tell you, O my friend, for such things are worth listening to.

Clinias:: Proceed.

Athenian Stranger:: Oedipus, as tradition says, when dishonored by his sons, invoked on them curses which every one declares to have been heard and ratified by the Gods, and Amyntor in his wrath invoked curses on his son Phoenix, and Theseus upon Hippolytus, and innumerable others have also called down wrath upon their children, whence it is clear that the Gods listen to the imprecations of parents; for the curses of parents are, as they ought to be, mighty against their children as no others are. And shall we suppose that the prayers of a father or mother who is specially dishonored by his or her children, are heard by the Gods in accordance with nature; and that if a parent is honored by them, and in the gladness of his heart earnestly entreats the Gods in his prayers to do them good, he is not equally heard, and that they do not minister to his request? If not, they would be very unjust ministers of good, and that we affirm to be contrary to their nature.

Clinias:: Certainly.

Athenian Stranger:: May we not think, as I was saying just now, that we can possess no image which is more honored by the Gods, than that of a father or grandfather, or of a mother stricken in years? whom when a man honors, the heart of the God rejoices, and he is ready to answer their prayers. And, truly, the figure of an ancestor is a wonderful thing, far higher than that of a lifeless image. For the living, when they are honored by us, join in our prayers, and when they are dishonored, they utter imprecations against us; but lifeless objects do neither. And therefore, if a man makes a right use of his father and grandfather and other aged relations, he will have images which above all others will win him the favor of the Gods.

Clinias:: Excellent.

Athenian Stranger:: Every man of any understanding fears and respects the prayers of parents, knowing well that many times and to many persons they have been accomplished. Now these things being thus ordered by nature, good men think it a blessing from heaven if their parents live to old age and reach the utmost limit of human life, or if taken away before their time they are deeply regretted by them; but to bad men parents are always a cause of terror. Wherefore let every man honour with every sort of lawful honour his own parents, agreeably to what has now been said. But if this prelude be an unmeaning sound in the ears of any one, let the law follow, which may be rightly imposed in these terms:—If any one in this city be not sufficiently careful of his parents, and do not regard and gratify in every respect their wishes more than those of his sons and of his other offspring or of himself,—let him who experiences this sort of treatment either come himself, or send some one to inform the three eldest guardians of the law, and three of the women who have the care of marriages; and let them look to the matter and punish youthful evil-doers with stripes and bonds if they are under thirty years of age, that is to say, if they be men, or if they be women, let them undergo the same punishment up to forty years of age. But if, when they are still more advanced in years, they continue the same neglect of their parents, and do any hurt to any of them, let them be brought before a court in which every single one of the eldest citizens shall be the judges, and if the offender be convicted, let the court determine what he ought to pay or suffer, and any penalty may be imposed on him which a man can pay or suffer. If the person who has been wronged be unable to inform the magistrates, let any freeman who hears of his case inform, and if he do not, he shall be deemed base, and shall be liable to have a suit for damage brought against him by any one who likes. And if a slave inform, he shall receive freedom; and if he be the slave of the injurer or injured party, he shall be set free by the magistrates, or if he belong to any other citizen, the public shall pay a price on his behalf to the owner; and let the magistrates take heed that no one wrongs him out of revenge, because he has given information.

Cases in which one man injures another by poisons, and which prove fatal, have been already discussed; but about other cases in which a person intentionally and of malice harms another with meats, or drinks, or ointments, nothing has as yet been determined. For there are two kinds of poisons used among men, which cannot clearly be distinguished. There is the kind just now explicitly mentioned, which injures bodies by the use of other bodies according to a natural law; there is also another kind which persuades the more daring class that they can do injury by sorceries, and incantations, and magic knots, as they are termed, and makes others believe that they above all persons are injured by the powers of the magician. Now it is not easy to know the nature of all these things; nor if a man do know can he readily persuade others to believe him. And when men are disturbed in their minds at the sight of waxen images fixed either at their doors, or in a place where three ways meet, or on the sepulchers of parents, there is no use in trying to persuade them that they should despise all such things because they have no certain knowledge about them. But we must have a law in two parts, concerning poisoning, in whichever of the two ways the attempt is made, and we must entreat, and exhort, and advise men not to have recourse to such practices, by which they scare the multitude out of their wits, as if they were children, compelling the legislator and the judge to heal the fears which the sorcerer arouses, and to tell them in the first place, that he who attempts to poison or enchant others knows not what he is doing, either as regards the body (unless he has a knowledge of medicine), or as regards his enchantments (unless he happens to be a prophet or diviner). Let the law, then, run as follows about poisoning or witchcraft:—He who employs poison to do any injury, not fatal, to a man himself, or to his servants, or any injury, whether fatal or not, to his cattle or his bees, if he be a physician, and be convicted of poisoning, shall be punished with death; or if he be a private person, the court shall determine what he is to pay or suffer. But he who seems to be the sort of man who injures others by magic knots, or enchantments, or incantations, or any of the like practices, if he be a prophet or diviner, let him die; and if, not being a prophet, he be convicted of witchcraft, as in the previous case, let the court fix what he ought to pay or suffer.

When a man does another any injury by theft or violence, for the greater injury let him pay greater damages to the injured man, and less for the smaller injury; but in all cases, whatever the injury may have been, as much as will compensate the loss. And besides the compensation of the wrong, let a man pay a further penalty for the chastisement of his offence: he who has done the wrong instigated by the folly of another, through the lightheartedness of youth or the like, shall pay a lighter penalty; but he who has injured another through his own folly, when overcome by pleasure or pain, in cowardly fear, or lust, or envy, or implacable anger, shall endure a heavier punishment. Not that he is punished because he did wrong, for that which is done can never be undone, but in order that in future times, he, and those who see him corrected, may utterly hate injustice, or at any rate abate much of their evil-doing. Having an eye to all these things, the law, like a good archer, should aim at the right measure of punishment, and in all cases at the deserved punishment. In the attainment of this the judge shall be a fellow-worker with the legislator, whenever the law leaves to him to determine what the offender shall suffer or pay; and the legislator, like a painter, shall give a rough sketch of the cases in which the law is to be applied. This is what we must do, Megillus and Cleinias, in the best and fairest manner that we can, saying what the punishments are to be of all actions of theft and violence, and giving laws of such a kind as the Gods and sons of Gods would have us give.

If a man is mad he shall not be at large in the city, but his relations shall keep him at home in any way which they can; or if not, let them pay a penalty,—he who is of the highest class shall pay a penalty of one hundred drachmas, whether he be a slave or a freeman whom he neglects; and he of the second class shall pay four-fifths of a mina; and he of the third class three-fifths; and he of the fourth class two-fifths. Now there are many sorts of madness, some arising out of disease, which we have already mentioned; and there are other kinds, which originate in an evil and passionate temperament, and are increased by bad education; out of a slight quarrel this class of madmen will often raise a storm of abuse against one another, and nothing of that sort ought to be allowed to occur in a well-ordered state. Let this, then, be the law about abuse, which shall relate to all cases:—No one shall speak evil of another; and when a man disputes with another he shall teach and learn of the disputant and the company, but he shall abstain from evil-speaking; for out of the imprecations which men utter against one another, and the feminine habit of casting aspersions on one another, and using foul names, out of words light as air, in very deed the greatest enmities and hatreds spring up. For the speaker gratifies his anger, which is an ungracious element of his nature; and nursing up his wrath by the entertainment of evil thoughts, and exacerbating that part of his soul which was formerly civilized by education, he lives in a state of savageness and moroseness, and pays a bitter penalty for his anger. And in such cases almost all men take to saying something ridiculous about their opponent, and there is no man who is in the habit of laughing at another who does not miss virtue and earnestness altogether, or lose the better half of greatness. Wherefore let no one utter any taunting word at a temple, or at the public sacrifices, or at the games, or in the agora, or in a court of justice, or in any public assembly. And let the magistrate who presides on these occasions chastise an offender, and he shall be blameless; but if he fails in doing so, he shall not claim the prize of virtue; for he is one who heeds not the laws, and does not do what the legislator commands. And if in any other place any one indulges in these sort of revilings, whether he has begun the quarrel or is only retaliating, let any elder who is present support the law, and control with blows those who indulge in passion, which is another great evil; and if he do not, let him be liable to pay the appointed penalty. And we say now, that he who deals in reproaches against others cannot reproach them without attempting to ridicule them; and this, when done in a moment of anger, is what we make matter of reproach against him. But then, do we admit into our state the comic writers who are so fond of making mankind ridiculous, if they attempt in a good-natured manner to turn the laugh against our citizens? or do we draw the distinction of jest and earnest, and allow a man to make use of ridicule in jest and without anger about any thing or person; though as we were saying, not if he be angry and have a set purpose? We forbid earnest—that is unalterably fixed; but we have still to say who are to be sanctioned or not to be sanctioned by the law in the employment of innocent humor. A comic poet, or maker of iambic or satirical lyric verse, shall not be permitted to ridicule any of the citizens, either by word or likeness, either in anger or without anger. And if any one is disobedient, the judges shall either at once expel him from the country, or he shall pay a fine of three minae, which shall be dedicated to the God who presides over the contests. Those only who have received permission shall be allowed to write verses at one another, but they shall be without anger and in jest; in anger and in serious earnest they shall not be allowed. The decision of this matter shall be left to the superintendent of the general education of the young, and whatever he may license, the writer shall be allowed to produce, and whatever he rejects let not the poet himself exhibit, or ever teach anybody else, slave or freeman, under the penalty of being dishonored, and held disobedient to the laws.

Now he is not to be pitied who is hungry, or who suffers any bodily pain, but he who is temperate, or has some other virtue, or part of a virtue, and at the same time suffers from misfortune; it would be an extraordinary thing if such an one, whether slave or freeman, were utterly forsaken and fell into the extremes of poverty in any tolerably well-ordered city or government. Wherefore the legislator may safely make a law applicable to such cases in the following terms:—Let there be no beggars in our state; and if anybody begs, seeking to pick up a livelihood by unavailing prayers, let the wardens of the agora turn him out of the agora, and the wardens of the city out of the city, and the wardens of the country send him out of any other parts of the land across the border, in order that the land may be cleared of this sort of animal.

If a slave of either sex injure anything, which is not his or her own, through inexperience, or some improper practice, and the person who suffers damage be not himself in part to blame, the master of the slave who has done the harm shall either make full satisfaction, or give up the slave who has done the injury. But if the master argue that the charge has arisen by collusion between the injured party and the injurer, with the view of obtaining the slave, let him sue the person, who says that he has been injured, for malpractices. And if he gain a conviction, let him receive double the value which the court fixes as the price of the slave; and if he lose his suit, let him make amends for the injury, and give up the slave. And if a beast of burden, or horse, or dog, or any other animal, injure the property of a neighbor, the owner shall in like manner pay for the injury.

If any man refuses to be a witness, he who wants him shall summon him, and he who is summoned shall come to the trial; and if he knows and is willing to bear witness, let him bear witness, but if he says he does not know let him swear by the three divinities Zeus, and Apollo, and Themis, that he does not, and have no more to do with the cause. And he who is summoned to give witness and does not answer to his summoner, shall be liable for the harm which ensues according to law. And if a person calls up as a witness any one who is acting as a judge, let him give his witness, but he shall not afterwards vote in the cause. A free woman may give her witness and plead, if she be more than forty years of age, and may bring an action if she have no husband; but if her husband be alive she shall only be allowed to bear witness. A slave of either sex and a child shall be allowed to give evidence and to plead, but only in cases of murder; and they must produce sufficient sureties that they will certainly remain until the trial, in case they should be charged with false witness. And either of the parties in a cause may bring an accusation of perjury against witnesses, touching their evidence in whole or in part, if he asserts that such evidence has been given; but the accusation must be brought previous to the final decision of the cause. The magistrates shall preserve the accusations of false witness, and have them kept under the seal of both parties, and produce them on the day when the trial for false witness takes place. If a man be twice convicted of false witness, he shall not be required, and if thrice, he shall not be allowed to bear witness; and if he dare to witness after he has been convicted three times, let any one who pleases inform against him to the magistrates, and let the magistrates hand him over to the court, and if he be convicted he shall be punished with death. And in any case in which the evidence is rightly found to be false, and yet to have given the victory to him who wins the suit, and more than half the witnesses are condemned, the decision which was gained by these means shall be rescinded, and there shall be a discussion and a decision as to whether the suit was determined by that false evidence or not; and in whichever way the decision may be given, the previous suit shall be determined accordingly.

There are many noble things in human life, but to most of them attach evils which are fated to corrupt and spoil them. Is not justice noble, which has been the civilizer of humanity? How then can the advocate of justice be other than noble? And yet upon this profession which is presented to us under the fair name of art has come an evil reputation. In the first place, we are told that by ingenious pleas and the help of an advocate the law enables a man to win a particular cause, whether just or unjust; and that both the art, and the power of speech which is thereby imparted, are at the service of him who is willing to pay for them. Now in our state this so-called art, whether really an art or only an experience and practice destitute of any art, ought if possible never to come into existence, or if existing among us should listen to the request of the legislator and go away into another land, and not speak contrary to justice. If the offenders obey we say no more; but for those who disobey, the voice of the law is as follows:—If any one thinks that he will pervert the power of justice in the minds of the judges, and unseasonably litigate or advocate, let any one who likes indict him for malpractices of law and dishonest advocacy, and let him be judged in the court of select judges; and if he be convicted, let the court determine whether he may be supposed to act from a love of money or from contentiousness. And if he is supposed to act from contentiousness, the court shall fix a time during which he shall not be allowed to institute or plead a cause; and if he is supposed to act as he does from love of money, in case he be a stranger, he shall leave the country, and never return under penalty of death; but if he be a citizen, he shall die, because he is a lover of money, in whatever manner gained; and equally, if he be judged to have acted more than once from contentiousness, he shall die.

## Book 12.

Athenian Stranger:: If a herald or an ambassador carry a false message from our city to any other, or bring back a false message from the city to which he is sent, or be proved to have brought back, whether from friends or enemies, in his capacity of herald or ambassador, what they have never said, let him be indicted for having violated, contrary to the law, the commands and duties imposed upon him by Hermes and Zeus, and let there be a penalty fixed, which he shall suffer or pay if he be convicted.

Theft is a mean, and robbery a shameless thing; and none of the sons of Zeus delight in fraud and violence, or ever practiced either. Wherefore let no one be deluded by poets or mythologers into a mistaken belief of such things, nor let him suppose, when he thieves or is guilty of violence, that he is doing nothing base, but only what the Gods themselves do. For such tales are untrue and improbable; and he who steals or robs contrary to the law, is never either a God or the son of a God; of this the legislator ought to be better informed than all the poets put together. Happy is he and may he be for ever happy, who is persuaded and listens to our words; but he who disobeys shall have to contend against the following law:—If a man steal anything belonging to the public, whether that which he steals be much or little, he shall have the same punishment. For he who steals a little steals with the same wish as he who steals much, but with less power, and he who takes up a greater amount, not having deposited it, is wholly unjust. Wherefore the law is not disposed to inflict a less penalty on the one than on the other because his theft is less, but on the ground that the thief may possibly be in one case still curable, and may in another case be incurable. If any one convict in a court of law a stranger or a slave of a theft of public property, let the court determine what punishment he shall suffer, or what penalty he shall pay, bearing in mind that he is probably not incurable. But the citizen who has been brought up as our citizens will have been, if he be found guilty of robbing his country by fraud or violence, whether he be caught in the act or not, shall be punished with death; for he is incurable.

Now for expeditions of war much consideration and many laws are required; the great principle of all is that no one of either sex should be without a commander; nor should the mind of any one be accustomed to do anything, either in jest or earnest, of his own motion, but in war and in peace he should look to and follow his leader, even in the least things being under his guidance; for example, he should stand or move, or exercise, or wash, or take his meals, or get up in the night to keep guard and deliver messages when he is bidden; and in the hour of danger he should not pursue and not retreat except by order of his superior; and in a word, not teach the soul or accustom her to know or understand how to do anything apart from others. Of all soldiers the life should be always and in all things as far as possible in common and together; there neither is nor ever will be a higher, or better, or more scientific principle than this for the attainment of salvation and victory in war. And we ought in time of peace from youth upwards to practice this habit of commanding others, and of being commanded by others; anarchy should have no place in the life of man or of the beasts who are subject to man. I may add that all dances ought to be performed with a view to military excellence; and agility and ease should be cultivated for the same object, and also endurance of the want of meats and drinks, and of winter cold and summer heat, and of hard couches; and, above all, care should be taken not to destroy the peculiar qualities of the head and the feet by surrounding them with extraneous coverings, and so hindering their natural growth of hair and soles. For these are the extremities, and of all the parts of the body, whether they are preserved or not is of the greatest consequence; the one is the servant of the whole body, and the other the master, in whom all the ruling senses are by nature set. Let the young man imagine that he hears in what has preceded the praises of the military life; the law shall be as follows:—He shall serve in war who is on the roll or appointed to some special service, and if any one is absent from cowardice, and without the leave of the generals, he shall be indicted before the military commanders for failure of service when the army comes home; and the soldiers shall be his judges; the heavy-armed, and the cavalry, and the other arms of the service shall form separate courts; and they shall bring the heavy-armed before the heavy-armed, and the horsemen before the horsemen, and the others in like manner before their peers; and he who is found guilty shall never be allowed to compete for any prize of velour, or indict another for not serving on an expedition, or be an accuser at all in any military matters. Moreover, the court shall further determine what punishment he shall suffer, or what penalty he shall pay. When the suits for failure of service are completed, the leaders of the several kinds of troops shall again hold an assembly, and they shall adjudge the prizes of velour; and he who likes shall give judgment in his own branch of the service, saying nothing about any former expedition, nor producing any proof or witnesses to confirm his statement, but speaking only of the present occasion. The crown of victory shall be an olive wreath which the victor shall offer up at the temple of any war-god whom he likes, adding an inscription for a testimony to last during life, that such an one has received the first, the second, or the third prize. If anyone goes on an expedition, and returns home before the appointed time, when the generals have not withdrawn the army, he shall be indicted for desertion before the same persons who took cognizance of failure of service, and if he be found guilty, the same punishment shall be inflicted on him. Now every man who is engaged in any suit ought to be very careful of bringing false witness against any one, either intentionally or unintentionally, if he can help; for justice is truly said to be an honorable maiden, and falsehood is naturally repugnant to honor and justice. A witness ought to be very careful not to sin against justice, as for example in what relates to the throwing away of arms—he must distinguish the throwing them away when necessary, and not make that a reproach, or bring an action against some innocent person on that account. To make the distinction may be difficult; but still the law must attempt to define the different kinds in some way. Let me endeavor to explain my meaning by an ancient tale:—If Patroclus had been brought to the tent still alive but without his arms (and this has happened to innumerable persons), the original arms, which the poet says were presented to Peleus by the Gods as a nuptial gift when he married Thetis, remaining in the hands of Hector, then the base spirits of that day might have reproached the son of Menoetius with having cast away his arms. Again, there is the case of those who have been thrown down precipices and lost their arms; and of those who at sea, and in stormy places, have been suddenly overwhelmed by floods of water; and there are numberless things of this kind which one might adduce by way of extenuation, and with the view of justifying a misfortune which is easily misrepresented. We must, therefore, endeavor to divide to the best of our power the greater and more serious evil from the lesser. And a distinction may be drawn in the use of terms of reproach. A man does not always deserve to be called the thrower away of his shield; he may be only the loser of his arms. For there is a great or rather absolute difference between him who is deprived of his arms by a sufficient force, and him who voluntarily lets his shield go. Let the law then be as follows:—If a person having arms is overtaken by the enemy and does not turn round and defend himself, but lets them go voluntarily or throws them away, choosing a base life and a swift escape rather than a courageous and noble and blessed death—in such a case of the throwing away of arms let justice be done, but the judge need take no note of the case just now mentioned; for the bad man ought always to be punished, in the hope that he maybe improved, but not the unfortunate, for there is no advantage in that. And what shall be the punishment suited to him who has thrown away his weapons of defense? Tradition says that Caeneus, the Thessalian, was changed by a God from a woman into a man; but the converse miracle cannot now be wrought, or no punishment would be more proper than that the man who throws away his shield should be changed into a woman. This however is impossible, and therefore let us make a law as nearly like this as we can—that he who loves his life too well shall be in no danger for the remainder of his days, but shall live for ever under the stigma of cowardice. And let the law be in the following terms:—When a man is found guilty of disgracefully throwing away his arms in war, no general or military officer shall allow him to serve as a soldier, or give him any place at all in the ranks of soldiers; and the officer who gives the coward any place, shall suffer a penalty which the public examiner shall exact of him; and if he be of the highest class, he shall pay a thousand drachmae; or if he be of the second class, five minae; or if he be of the third, three minae; or if he be of the fourth class, one mina. And he who is found guilty of cowardice, shall not only be dismissed from manly dangers, which is a disgrace appropriate to his nature, but he shall pay a thousand drachmae, if he be of the highest class, and five minae if he be of the second class, and three if he be of the third class, and a mina, like the preceding, if he be of the fourth class.

What regulations will be proper about examiners, seeing that some of our magistrates are elected by lot, and for a year, and some for a longer time and from selected persons? Of such magistrates, who will be a sufficient censor or examiner, if any of them, weighed down by the pressure of office or his own inability to support the dignity of his office, be guilty of any crooked practice? It is by no means easy to find a magistrate who excels other magistrates in virtue, but still we must endeavor to discover some censor or examiner who is more than man. For the truth is, that there are many elements of dissolution in a state, as there are also in a ship, or in an animal; they all have their cords, and girders, and sinews,—one nature diffused in many places, and called by many names; and the office of examiner is a most important element in the preservation and dissolution of states. For if the examiners are better than the magistrates, and their duty is fulfilled justly and without blame, then the whole state and country flourishes and is happy; but if the examination of the magistrates is carried on in a wrong way, then, by the relaxation of that justice which is the uniting principle of all constitutions, every power in the state is rent asunder from every other; they no longer incline in the same direction, but fill the city with faction, and make many cities out of one, and soon bring all to destruction. Wherefore the examiners ought to be admirable in every sort of virtue. Let us invent a mode of creating them, which shall be as follows:—Every year, after the summer solstice, the whole city shall meet in the common precincts of Helios and Apollo, and shall present to the God three men out of their own number in the manner following:—Each citizen shall select, not himself, but some other citizen whom he deems in everyway the best, and who is not less than fifty years of age. And out of the selected persons who have the greatest number of votes, they shall make a further selection until they reduce them to one-half, if they are an even number; but if they are not an even number, they shall subtract the one who has the smallest number of votes, and make them an even number, and then leave the half which have the greater number of votes. And if two persons have an equal number of votes, and thus increase the number beyond one-half, they shall withdraw the younger of the two and do away the excess; and then including all the rest they shall again vote, until there are left three having an unequal number of votes. But if all the three, or two out of the three, have equal votes, let them commit the election to good fate and fortune, and separate off by lot the first, and the second, and the third; these they shall crown with an olive wreath and give them the prize of excellence, at the same time proclaiming to all the world that the city of the Magnetes, by the providence of the Gods, is again preserved, and presents to the Sun and to Apollo her three best men as first-fruits, to be a common offering to them, according to the ancient law, as long as their lives answer to the judgment formed of them. And these shall appoint in their first year twelve examiners, to continue until each has completed seventy-five years, to whom three shall afterwards be added yearly; and let these divide all the magistracies into twelve parts, and prove the holders of them by every sort of test to which a freeman may be subjected; and let them live while they hold office in the precinct of Helios and Apollo, in which they were chosen, and let each one form a judgment of some things individually, and of others in company with his colleagues; and let him place a writing in the agora about each magistracy, and what the magistrate ought to suffer or pay, according to the decision of the examiners. And if a magistrate does not admit that he has been justly judged, let him bring the examiners before the select judges, and if he be acquitted by their decision, let him, if he will, accuse the examiners themselves; if, however, he be convicted, and have been condemned to death by the examiners, let him die (and of course he can only die once):— but any other penalties which admit of being doubled let him suffer twice over.

And now let us pass under review the examiners themselves; what will their examination be, and how conducted? During the life of these men, whom the whole state counts worthy of the rewards of virtue, they shall have the first seat at all public assemblies, and at all Hellenic sacrifices and sacred missions, and other public and holy ceremonies in which they share. The chiefs of each sacred mission shall be selected from them, and they only of all the citizens shall be adorned with a crown of laurel; they shall all be priests of Apollo and Helios; and one of them, who is judged first of the priests created in that year, shall be high priest; and they shall write up his name in each year to be a measure of time as long as the city lasts; and after their death they shall be laid out and carried to the grave and entombed in a manner different from the other citizens. They shall be decked in a robe all of white, and there shall be no crying or lamentation over them; but a chorus of fifteen maidens, and another of boys, shall stand around the bier on either side, hymning the praises of the departed priests in alternate responses, declaring their blessedness in song all day long; and at dawn a hundred of the youths who practice gymnastic exercises, and whom the relations of the departed shall choose, shall carry the bier to the sepulcher, the young men marching first, dressed in the garb of warriors,—the cavalry with their horses, the heavy-armed with their arms, and the others in like manner. And boys near the bier and in front of it shall sing their national hymn, and maidens shall follow behind, and with them the women who have passed the age of child-bearing; next, although they are interdicted from other burials, let priests and priestesses follow, unless the Pythian oracle forbid them; for this burial is free from pollution. The place of burial shall be an oblong vaulted chamber underground, constructed of tufa, which will last for ever, having stone couches placed side by side. And here they will lay the blessed person, and cover the sepulcher with a circular mound of earth and plant a grove of trees around on every side but one; and on that side the sepulcher shall be allowed to extend for ever, and a new mound will not be required. Every year they shall have contests in music and gymnastics, and in horsemanship, in honor of the dead. These are the honors which shall be given to those who at the examination are found blameless; but if any of them, trusting to the scrutiny being over, should, after the judgment has been given, manifest the wickedness of human nature, let the law ordain that he who pleases shall indict him, and let the cause be tried in the following manner. In the first place, the court shall be composed of the guardians of the law, and to them the surviving examiners shall be added, as well as the court of select judges; and let the pursuer lay his indictment in this form—he shall say that so-and-so is unworthy of the prize of virtue and of his office; and if the defendant be convicted let him be deprived of his office, and of the burial, and of the other honors given him. But if the prosecutor do not obtain the fifth part of the votes, let him, if he be of the first class, pay twelve minae, and eight if he be of the second class, and six if he be of the third class, and two minae if he be of the fourth class.

The so-called decision of Rhadamanthus is worthy of all admiration. He knew that the men of his own time believed and had no doubt that there were Gods, which was a reasonable belief in those days, because most men were the sons of Gods, and according to tradition he was one himself. He appears to have thought that he ought to commit judgment to no man, but to the Gods only, and in this way suits were simply and speedily decided by him. For he made the two parties take an oath respecting the points in dispute, and so got rid of the matter speedily and safely. But now that a certain portion of mankind do not believe at all in the existence of the Gods, and others imagine that they have no care of us, and the opinion of most men, and of the worst men, is that in return for a small sacrifice and a few flattering words they will be their accomplices in purloining large sums and save them from many terrible punishments, the way of Rhadamanthus is no longer suited to the needs of justice; for as the opinions of men about the Gods are changed, the laws should also be changed;—in the granting of suits a rational legislation ought to do away with the oaths of the parties on either side—he who obtains leave to bring an action should write down the charges, but should not add an oath; and the defendant in like manner should give his denial to the magistrates in writing, and not swear; for it is a dreadful thing to know, when many lawsuits are going on in a state, that almost half the people who meet one another quite unconcernedly at the public meals and in other companies and relations of private life are perjured. Let the law, then, be as follows :—A judge who is about to give judgment shall take an oath, and he who is choosing magistrates for the state shall either vote on oath or with a voting tablet which he brings from a temple; so too the judge of dances and of all music, and the superintendents and umpires of gymnastic and equestrian contests, and any matters in which, as far as men can judge, there is nothing to be gained by a false oath; but all cases in which a denial confirmed by an oath clearly results in a great advantage to the taker of the oath, shall be decided without the oath of the parties to the suit, and the presiding judges shall not permit either of them to use an oath for the sake of persuading, nor to call down curses on himself and his race, nor to use unseemly supplications or womanish laments. But they shall ever be teaching and learning what is just in auspicious words; and he who does otherwise shall be supposed to speak beside the point, and the judges shall again bring him back to the question at issue. On the other hand, strangers in their dealings with strangers shall as at present have power to give and receive oaths, for they will not often grow old in the city or leave a fry of young ones like themselves to be the sons and heirs of the land.

As to the initiation of private suits, let the manner of deciding causes between all citizens be the same as in cases in which any freeman is disobedient to the state in minor matters, of which the penalty is not stripes, imprisonment, or death. But as regards attendance at choruses or processions or other shows, and as regards public services, whether the celebration of sacrifice in peace, or the payment of contributions in war—in all these cases, first comes the necessity of providing a remedy for the loss; and by those who will not obey, there shall be security given to the officers whom the city and the law empower to exact the sum due; and if they forfeit their security, let the goods which they have pledged be sold and the money given to the city; but if they ought to pay a larger sum, the several magistrates shall impose upon the disobedient a suitable penalty, and bring them before the court, until they are willing to do what they are ordered.

Now a state which makes money from the cultivation of the soil only, and has no foreign trade, must consider what it will do about the emigration of its own people to other countries, and the reception of strangers from elsewhere. About these matters the legislator has to consider, and he will begin by trying to persuade men as far as he can. The intercourse of cities with one another is apt to create a confusion of manners; strangers are always suggesting novelties to strangers. When states are well governed by good laws the mixture causes the greatest possible injury; but seeing that most cities are the reverse of well-ordered, the confusion which arises in them from the reception of strangers, and from the citizens themselves rushing off into other cities, when any one either young or old desires to travel any where abroad at whatever time, is of no consequence. On the other hand, the refusal of states to receive others, and for their own citizens never to go to other places, is an utter impossibility, and to the rest of the world is likely to appear ruthless and uncivilized; it is a practice adopted by people who use harsh words, such as xenelasia or banishment of strangers, and who have harsh and morose ways, as men think. And to be thought or not to be thought well of by the rest of the world is no light matter; for the many are not so far wrong in their judgment of who are bad and who are good, as they are removed from the nature of virtue in themselves. Even bad men have a divine instinct which guesses rightly, and very many who are utterly depraved form correct notions and judgments of the differences between the good and bad. And the generality of cities are quite right in exhorting us to value a good reputation in the world, for there is no truth greater and more important than this—that he who is really good (I am speaking of the man who would be perfect) seeks for reputation with, but not without, the reality of goodness. And our Cretan colony ought also to acquire the fairest and noblest reputation for virtue from other men; and there is every reason to expect that, if the reality answers to the idea, she will be one of the few well-ordered cities which the sun and the other Gods behold. Wherefore, in the matter of journeys to other countries and the reception of strangers, we enact as follows:—In the first place, let no one be allowed to go anywhere at all into a foreign country who is less than forty years of age; and no one shall go in a private capacity, but only in some public one, as a herald, or on an embassy, or on a sacred mission. Going abroad on an expedition or in war is not to be included among travels of the class authorized by the state. To Apollo at Delphi and to Zeus at Olympia and to Nemea and to the Isthmus, citizens should be sent to take part in the sacrifices and games there dedicated to the Gods; and they should send as many as possible, and the best and fairest that can be found, and they will make the city renowned at holy meetings in time of peace, procuring a glory which shall be the converse of that which is gained in war; and when they come home they shall teach the young that the institutions of other states are inferior to their own. And they shall send spectators of another sort, if they have the consent of the guardians, being such citizens as desire to look a little more at leisure at the doings of other men; and these no law shall hinder. For a city which has no experience of good and bad men or intercourse with them, can never be thoroughly and perfectly civilized, nor, again, can the citizens of a city properly observe the laws by habit only, and without an intelligent understanding of them. And there always are in the world a few inspired men whose acquaintance is beyond price, and who spring up quite as much in ill-ordered as in well-ordered cities. These are they whom the citizens of a well-ordered city should be ever seeking out, going forth over sea and over land to find him who is incorruptible—that he may establish more firmly institutions in his own state which are good already, and amend what is deficient; for without this examination and enquiry a city will never continue perfect any more than if the examination is ill-conducted.

Clinias:: How can we have an examination and also a good one?

Athenian Stranger:: In this way:—In the first place, our spectator shall be of not less than fifty years of age; he must be a man of reputation, especially in war, if he is to exhibit to other cities a model of the guardians of the law, but when he is more than sixty years of age he shall no longer continue in his office of spectator. And when he has carried on his inspection during as many out of the ten years of his office as he pleases, on his return home let him go to the assembly of those who review the laws. This shall be a mixed body of young and old men, who shall be required to meet daily between the hour of dawn and the rising of the sun. They shall consist, in the first place, of the priests who have obtained the rewards of virtue; and, in the second place, of guardians of the law, the ten eldest being chosen; the general superintendent of education shall also be a member, as well the last appointed as those who have been released from the office; and each of them shall take with him as his companion a young man, whomsoever he chooses, between the ages of thirty and forty. These shall be always holding conversation and discourse about the laws of their own city or about any specially good ones which they may hear to be existing elsewhere; also about kinds of knowledge which may appear to be of use and will throw light upon the examination, or of which the want will make the subject of laws dark and uncertain to them. Any knowledge of this sort which the elders approve, the younger men shall learn with all diligence; and if any one of those who have been invited appear to be unworthy, the whole assembly shall blame him who invited him. The rest of the city shall watch over those among the young men who distinguish themselves, having an eye upon them, and especially honoring them if they succeed, but dishonoring them above the rest if they turn out to be inferior. This is the assembly to which he who has visited the institutions of other men, on his return home shall straightway go, and if he have discovered any one who has anything to say about the enactment of laws or education or nurture, or if he have himself made any observations, let him communicate his discoveries to the whole assembly. And if he be seen to have come home neither better nor worse, let him be praised at any rate for his enthusiasm; and if he be much better, let him be praised so much the more; and not only while he lives but after his death let the assembly honor him with fitting honors. But if on his return home he appear to have been corrupted, pretending to be wise when he is not, let him hold no communication with any one, whether young or old; and if he will hearken to the rulers, then he shall be permitted to live as a private individual; but if he will not, let him die, if he be convicted in a court of law of interfering about education and the laws. And if he deserve to be indicted, and none of the magistrates indict him, let that be counted as a disgrace to them when the rewards of virtue are decided.

Let such be the character of the person who goes abroad, and let him go abroad under these conditions. In the next place, the stranger who comes from abroad should be received in a friendly spirit. Now there are four kinds of strangers, of whom we must make some mention—the first is he who comes and stays throughout the summer; this class are like birds of passage, taking wing in pursuit of commerce, and flying over the sea to other cities, while the season lasts; he shall be received in market-places and harbors and public buildings, near the city but outside, by those magistrates who are appointed to superintend these matters; and they shall take care that a stranger, whoever he be, duly receives justice; but he shall not be allowed to make any innovation. They shall hold the intercourse with him which is necessary, and this shall be as little as possible. The second kind is just a spectator who comes to see with his eyes and hear with his ears the festivals of the Muses; such ought to have entertainment provided them at the temples by hospitable persons, and the priests and ministers of the temples should see and attend to them. But they should not remain more than a reasonable time; let them see and hear that for the sake of which they came, and then go away, neither having suffered nor done any harm. The priests shall be their judges, if any of them receive or do any wrong up to the sum of fifty drachmae, but if any greater charge be brought, in such cases the suit shall come before the wardens of the agora. The third kind of stranger is he who comes on some public business from another land, and is to be received with public honors. He is to be received only by the generals and commanders of horse and foot, and the host by whom he is entertained, in conjunction with the Prytanes, shall have the sole charge of what concerns him. There is a fourth class of persons answering to our spectators, who come from another land to look at ours. In the first place, such visits will be rare, and the visitor should be at least fifty years of age; he may possibly be wanting to see something that is rich and rare in other states, or himself to show something in like manner to another city. Let such an one, then, go unbidden to the doors of the wise and rich, being one of them himself: let him go, for example, to the house of the superintendent of education, confident that he is a fitting guest of such a host, or let him go to the house of some of those who have gained the prize of virtue and hold discourse with them, both learning from them, and also teaching them; and when he has seen and heard all, he shall depart, as a friend taking leave of friends, and be honored by them with gifts and suitable tributes of respect. These are the customs, according to which our city should receive all strangers of either sex who come from other countries, and should send forth her own citizens, showing respect to Zeus, the God of hospitality, not forbidding strangers at meals and sacrifices, as is the manner which prevails among the children of the Nile, nor driving them away by savage proclamations. When a man becomes surety, let him give the security in a distinct form, acknowledging the whole transaction in a written document, and in the presence of not less than three witnesses if the sum be under a thousand drachmae, and of not less than five witnesses if the sum be above a thousand drachmae. The agent of a dishonest or untrustworthy seller shall himself be responsible; both the agent and the principal shall be equally liable. If a person wishes to find anything in the house of another, he shall enter naked, or wearing only a short tunic and without a girdle, having first taken an oath by the customary Gods that he expects to find it there; he shall then make his search, and the other shall throw open his house and allow him to search things both sealed and unsealed. And if a person will not allow the searcher to make his search, he who is prevented shall go to law with him, estimating the value of the goods after which he is searching, and if the other be convicted he shall pay twice the value of the article. If the master be absent from home, the dwellers in the house shall let him search the unsealed property, and on the sealed property the searcher shall set another seal, and shall appoint any one whom he likes to guard them during five days; and if the master of the house be absent during a longer time, he shall take with him the wardens of the city, and so make his search, opening the sealed property as well as the unsealed, and then, together with the members of the family and the wardens of the city, he shall seal them up again as they were before. There shall be a limit of time in the case of disputed things, and he who has had possession of them during a certain time shall no longer be liable to be disturbed. As to houses and lands there can be no dispute in this state of ours; but if a man has any other possessions which he has used and openly shown in the city and in the agora and in the temples, and no one has put in a claim to them, and some one says that he was looking for them during this time, and the possessor is proved to have made no concealment, if they have continued for a year, the one having the goods and the other looking for them, the claim of the seeker shall not be allowed after the expiration of the year; or if he does not use or show the lost property in the market or in the city, but only in the country, and no one offers himself as the owner during five years, at the expiration of the five years the claim shall be barred for ever after; or if he uses them in the city but within the house, then the appointed time of claiming the goods shall be three years, or ten years if he has them in the country in private. And if he has them in another land, there shall be no limit of time or prescription, but whenever the owner finds them he may claim them.

If any one prevents another by force from being present at a trial, whether a principal party or his witnesses; if the person prevented be a slave, whether his own or belonging to another, the suit shall be incomplete and invalid; but if he who is prevented be a freeman, besides the suit being incomplete, the other who has prevented him shall be imprisoned for a year, and shall be prosecuted for kidnapping by any one who pleases. And if any one hinders by force a rival competitor in gymnastic or music, or any other sort of contest, from being present at the contest, let him who has a mind inform the presiding judges, and they shall liberate him who is desirous of competing; and if they are not able, and he who hinders the other from competing wins the prize, then they shall give the prize of victory to him who is prevented, and inscribe him as the conqueror in any temples which he pleases; and he who hinders the other shall not be permitted to make any offering or inscription having reference to that contest, and in any case he shall be liable for damages, whether he be defeated or whether he conquer.

If any one knowingly receives anything which has been stolen, he shall undergo the same punishment as the thief, and if a man receives an exile he shall be punished with death. Every man should regard the friend and enemy of the state as his own friend and enemy; and if any one makes peace or war with another on his own account, and without the authority of the state, he, like the receiver of the exile, shall undergo the penalty of death. And if any fraction of the city declare war or peace against any, the generals shall indict the authors of this proceeding, and if they are convicted death shall be the penalty. Those who serve their country ought to serve without receiving gifts, and there ought to be no excusing or approving the saying, ‘Men should receive gifts as the reward of good, but not of evil deeds’; for to know which we are doing, and to stand fast by our knowledge, is no easy matter. The safest course is to obey the law which says, ‘Do no service for a bribe’ and let him who disobeys, if he be convicted, simply die. With a view to taxation, for various reasons, every man ought to have had his property valued: and the tribesmen should likewise bring a register of the yearly produce to the wardens of the country, that in this way there may be two valuations; and the public officers may use annually whichever on consideration they deem the best, whether they prefer to take a certain portion of the whole value, or of the annual revenue, after subtracting what is paid to the common tables.

Touching offerings to the Gods, a moderate man should observe moderation in what he offers. Now the land and the hearth of the house of all men is sacred to all Gods; wherefore let no man dedicate them a second time to the Gods. Gold and silver, whether possessed by private persons or in temples, are in other cities provocative of envy, and ivory, the product of a dead body, is not a proper offering; brass and iron, again, are instruments of war; but of wood let a man bring what offering he likes, provided it be a single block, and in like manner of stone, to the public temples; of woven work let him not offer more than one woman can execute in a month. White is a color suitable to the Gods, especially in woven works, but dyes should only be used for the adornments of war. The most divine of gifts are birds and images, and they should be such as one painter can execute in a single day. And let all other offerings follow a similar rule.

Now that the whole city has been divided into parts of which the nature and number have been described, and laws have been given about all the most important contracts as far as this was possible, the next thing will be to have justice done. The first of the courts shall consist of elected judges, who shall be chosen by the plaintiff and the defendant in common: these shall be called arbiters rather than judges. And in the second court there shall be judges of the villages and tribes corresponding to the twelvefold division of the land, and before these the litigants shall go to contend for greater damages, if the suit be not decided before the first judges; the defendant, if he be defeated the second time, shall pay a fifth more than the damages mentioned in the indictment; and if he find fault with his judges and would try a third time, let him carry the suit before the select judges, and if he be again defeated, let him pay the whole of the damages and half as much again. And the plaintiff, if when defeated before the first judges he persist in going on to the second, shall if he wins receive in addition to the damages a fifth part more, and if defeated he shall pay a like sum; but if he is not satisfied with the previous decision, and will insist on proceeding to a third court, then if he win he shall receive from the defendant the amount of the damages and, as I said before, half as much again, and the plaintiff, if he lose, shall pay half of the damages claimed. Now the assignment by lot of judges to courts and the completion of the number of them, and the appointment of servants to the different magistrates, and the times at which the several causes should be heard, and the votings and delays, and all the things that necessarily concern suits, and the order of causes, and the time in which answers have to be put in and parties are to appear—of these and other things akin to these we have indeed already spoken, but there is no harm in repeating what is right twice or thrice:—All lesser and easier matters which the elder legislator has omitted may be supplied by the younger one. Private courts will be sufficiently regulated in this way, and the public and state courts, and those which the magistrates must use in the administration of their several offices, exist in many other states. Many very respectable institutions of this sort have been framed by good men, and from them the guardians of the law may by reflection derive what is necessary for the order of our new state, considering and correcting them, and bringing them to the test of experience, until every detail appears to be satisfactorily determined; and then putting the final seal upon them, and making them irreversible, they shall use them for ever afterwards. As to what relates to the silence of judges and the abstinence from words of evil omen and the reverse, and the different notions of the just and good and honorable which exist in our own as compared with other states, they have been partly mentioned already, and another part of them will be mentioned hereafter as we draw near the end. To all these matters he who would be an equal judge shall justly look, and he shall possess writings about them that he may learn them. For of all kinds of knowledge the knowledge of good laws has the greatest power of improving the learner; otherwise there would be no meaning in the divine and admirable law possessing a name akin to mind (νοῦς, νόμος). And of all other words, such as the praises and censures of individuals which occur in poetry and also in prose, whether written down or uttered in daily conversation, whether men dispute about them in the spirit of contention or weakly assent to them, as is often the case—of all these the one sure test is the writings of the legislator, which the righteous judge ought to have in his mind as the antidote of all other words, and thus make himself and the city stand upright, procuring for the good the continuance and increase of justice, and for the bad, on the other hand, a conversion from ignorance and intemperance, and in general from all unrighteousness, as far as their evil minds can be healed, but to those whose web of life is in reality finished, giving death, which is the only remedy for souls in their condition, as I may say truly again and again. And such judges and chiefs of judges will be worthy of receiving praise from the whole city.

When the suits of the year are completed the following laws shall regulate their execution:—In the first place, the judge shall assign to the party who wins the suit the whole property of him who loses, with the exception of mere necessaries, and the assignment shall be made through the herald immediately after each decision in the hearing of the judges; and when the month arrives following the month in which the courts are sitting, (unless the gainer of the suit has been previously satisfied,) the court shall follow up the case, and hand over to the winner the goods of the loser; but if they find that he has not the means of paying, and the sum deficient is not less than a drachma, the insolvent person shall not have any right of going to law with any other man until he have satisfied the debt of the winning party; but other persons shall still have the right of bringing suits against him. And if any one after he is condemned refuses to acknowledge the authority which condemned him, let the magistrates who are thus deprived of their authority bring him before the court of the guardians of the law, and if he be cast, let him be punished with death, as a subverter of the whole state and of the laws.

Thus a man is born and brought up, and after this manner he begets and brings up his own children, and has his share of dealings with other men, and suffers if he has done wrong to any one, and receives satisfaction if he has been wronged, and so at length in due time he grows old under the protection of the laws, and his end comes in the order of nature. Concerning the dead of either sex, the religious ceremonies which may fittingly be performed, whether appertaining to the Gods of the under-world or of this, shall be decided by the interpreters with absolute authority. Their sepulchers are not to be in places which are fit for cultivation, and there shall be no monuments in such spots, either large or small, but they shall occupy that part of the country which is naturally adapted for receiving and concealing the bodies of the dead with as little hurt as possible to the living. No man, living or dead, shall deprive the living of the sustenance which the earth, their foster-parent, is naturally inclined to provide for them. And let not the mound be piled higher than would be the work of five men completed in five days; nor shall the stone which is placed over the spot be larger than would be sufficient to receive the praises of the dead included in four heroic lines. Nor shall the laying out of the dead in the house continue for a longer time than is sufficient to distinguish between him who is in a trance only and him who is really dead, and speaking generally, the third day after death will be a fair time for carrying out the body to the sepulcher. Now we must believe the legislator when he tells us that the soul is in all respects superior to the body, and that even in life what makes each one of us to be what we are is only the soul; and that the body follows us about in the likeness of each of us, and therefore, when we are dead, the bodies of the dead are quite rightly said to be our shades or images; for the true and immortal being of each one of us which is called the soul goes on her way to other Gods, before them to give an account—which is an inspiring hope to the good, but very terrible to the bad, as the laws of our fathers tell us; and they also say that not much can be done in the way of helping a man after he is dead. But the living—he should be helped by all his kindred, that while in life he may be the holiest and justest of men, and after death may have no great sins to be punished in the world below. If this be true, a man ought not to waste his substance under the idea that all this lifeless mass of flesh which is in process of burial is connected with him; he should consider that the son, or brother, or the beloved one, whoever he may be, whom he thinks he is laying in the earth, has gone away to complete and fulfill his own destiny, and that his duty is rightly to order the present, and to spend moderately on the lifeless altar of the Gods below. But the legislator does not intend moderation to be taken in the sense of meanness. Let the law, then, be as follows:—The expenditure on the entire funeral of him who is of the highest class, shall not exceed five minae; and for him who is of the second class, three minae, and for him who is of the third class, two minae, and for him who is of the fourth class, one mina, will be a fair limit of expense. The guardians of the law ought to take especial care of the different ages of life, whether childhood, or manhood, or any other age. And at the end of all, let there be some one guardian of the law presiding, who shall be chosen by the friends of the deceased to superintend, and let it be glory to him to manage with fairness and moderation what relates to the dead, and a discredit to him if they are not well managed. Let the laying out and other ceremonies be in accordance with custom, but to the statesman who adopts custom as his law we must give way in certain particulars. It would be monstrous for example that he should command any man to weep or abstain from weeping over the dead; but he may forbid cries of lamentation, and not allow the voice of the mourner to be heard outside the house; also, he may forbid the bringing of the dead body into the open streets, or the processions of mourners in the streets, and may require that before daybreak they should be outside the city. Let these, then, be our laws relating to such matters, and let him who obeys be free from penalty; but he who disobeys even a single guardian of the law shall be punished by them all with a fitting penalty. Other modes of burial, or again the denial of burial, which is to be refused in the case of robbers of temples and parricides and the like, have been devised and are embodied in the preceding laws, so that now our work of legislation is pretty nearly at an end; but in all cases the end does not consist in doing something or acquiring something or establishing something,—the end will be attained and finally accomplished, when we have provided for the perfect and lasting continuance of our institutions; until then our creation is incomplete.

Clinias:: That is very good, Stranger; but I wish you would tell me more clearly what you mean.

Athenian Stranger:: O Cleinias, many things of old time were well said and sung; and the saying about the Fates was one of them.

Clinias:: What is it?

Athenian Stranger:: The saying that Lachesis or the giver of the lots is the first of them, and that Clotho or the spinster is the second of them, and that Atropos or the unchanging one is the third of them; and that she is the preserver of the things which we have spoken, and which have been compared in a figure to things woven by fire, they both (i.e. Atropos and the fire) producing the quality of unchangeableness. I am speaking of the things which in a state and government give not only health and salvation to the body, but law, or rather preservation of the law, in the soul; and, if I am not mistaken, this seems to be still wanting in our laws: we have still to see how we can implant in them this irreversible nature.

Clinias:: It will be no small matter if we can only discover how such a nature can be implanted in anything.

Athenian Stranger:: But it certainly can be; so much I clearly see.

Clinias:: Then let us not think of desisting until we have imparted this quality to our laws; for it is ridiculous, after a great deal of labor has been spent, to place a thing at last on an insecure foundation.

Megillus:: I approve of your suggestion, and am quite of the same mind with you.

Clinias:: Very good: And now what, according to you, is to be the salvation of our government and of our laws, and how is it to be effected?

Athenian Stranger:: Were we not saying that there must be in our city a council which was to be of this sort:—The ten oldest guardians of the law, and all those who have obtained prizes of virtue, were to meet in the same assembly, and the council was also to include those who had visited foreign countries in the hope of hearing something that might be of use in the preservation of the laws, and who, having come safely home, and having been tested in these same matters, had proved themselves to be worthy to take part in the assembly;—each of the members was to select some young man of not less than thirty years of age, he himself judging in the first instance whether the young man was worthy by nature and education, and then suggesting him to the others, and if he seemed to them also to be worthy they were to adopt him; but if not, the decision at which they arrived was to be kept a secret from the citizens at large, and, more especially, from the rejected candidate. The meeting of the council was to be held early in the morning, when everybody was most at leisure from all other business, whether public or private—was not something of this sort said by us before?

Clinias:: True.

Athenian Stranger:: Then, returning to the council, I would say further, that if we let it down to be the anchor of the state, our city, having everything which is suitable to her, will preserve all that we wish to preserve.

Clinias:: What do you mean?

Athenian Stranger:: Now is the time for me to speak the truth in all earnestness.

Clinias:: Well said, and I hope that you will fulfill your intention.

Athenian Stranger:: Know, Cleinias, that everything, in all that it does, has a natural savior, as of an animal the soul and the head are the chief saviors.

Clinias:: Once more, what do you mean?

Athenian Stranger:: The well-being of those two is obviously the preservation of every living thing.

Clinias:: How is that?

Athenian Stranger:: The soul, besides other things, contains mind, and the head, besides other things, contains sight and hearing and the mind, mingling with the noblest of the senses, and becoming one with them, may be truly called the salvation of all.

Clinias:: Yes, quite so.

Athenian Stranger:: Yes, indeed; but with what is that intellect concerned which, mingling with the senses, is the salvation of ships in storms as well as in fair weather? In a ship, when the pilot and the sailors unite their perceptions with the piloting mind, do they not save both themselves and their craft?

Clinias:: Very true.

Athenian Stranger:: We do not want many illustrations about such matters:—What aim would the general of an army, or what aim would a physician propose to himself, if he were seeking to attain salvation?

Clinias:: Very good.

Athenian Stranger:: Does not the general aim at victory and superiority in war, and do not the physician and his assistants aim at producing health in the body?

Clinias:: Certainly.

Athenian Stranger:: And a physician who is ignorant about the body, that is to say, who knows not that which we just now called health, or a general who knows not victory, or any others who are ignorant of the particulars of the arts which we mentioned, cannot be said to have understanding about any of these matters.

Clinias:: They cannot.

Athenian Stranger:: And what would you say of the state? If a person proves to be ignorant of the aim to which the statesman should look, ought he, in the first place, to be called a ruler at all; and further, will he ever be able to preserve that of which he does not even know the aim?

Clinias:: Impossible.

Athenian Stranger:: And therefore, if our settlement of the country is to be perfect, we ought to have some institution, which, as I was saying, will tell what is the aim of the state, and will inform us how we are to attain this, and what law or what man will advise us to that end. Any state which has no such institution is likely to be devoid of mind and sense, and in all her actions will proceed by mere chance.

Clinias:: Very true.

Athenian Stranger:: In which, then, of the parts or institutions of the state is any such guardian power to be found? Can we say?

Clinias:: I am not quite certain, Stranger; but I have a suspicion that you are referring to the assembly which you just now said was to meet at night.

Athenian Stranger:: You understand me perfectly, Cleinias; and we must assume, as the argument implies, that this council possesses all virtue; and the beginning of virtue is not to make mistakes by guessing many things, but to look steadily at one thing, and on this to fix all our aims.

Clinias:: Quite true.

Athenian Stranger:: Then now we shall see why there is nothing wonderful in states going astray—the reason is that their legislators have such different aims; nor is there anything wonderful in some laying down as their rule of justice, that certain individuals should bear rule in the state, whether they be good or bad, and others that the citizens should be rich, not caring whether they are the slaves of other men or not. The tendency of others, again, is towards freedom; and some legislate with a view to two things at once,—they want to be at the same time free and the lords of other states; but the wisest men, as they deem themselves to be, look to all these and similar aims, and there is no one of them which they exclusively honor, and to which they would have all things look.

Clinias:: Then, Stranger, our former assertion will hold, for we were saying that laws generally should look to one thing only; and this, as we admitted, was rightly said to be virtue.

Athenian Stranger:: Yes.

Clinias:: And we said that virtue was of four kinds?

Athenian Stranger:: Quite true.

Clinias:: And that mind was the leader of the four, and that to her the three other virtues and all other things ought to have regard?

Athenian Stranger:: You follow me capitally, Cleinias, and I would ask you to follow me to the end, for we have already said that the mind of the pilot, the mind of the physician and of the general look to that one thing to which they ought to look; and now we may turn to mind political, of which, as of a human creature, we will ask a question:—O wonderful being, and to what are you looking? The physician is able to tell his single aim in life, but you, the superior, as you declare yourself to be, of all intelligent beings, when you are asked are not able to tell. Can you, Megillus, and you, Cleinias, say distinctly what is the aim of mind political, in return for the many explanations of things which I have given you?

Clinias:: We cannot, Stranger.

Athenian Stranger:: Well, but ought we not to desire to see it, and to see where it is to be found?

Clinias:: For example, where?

Athenian Stranger:: For example, we were saying that there are four kinds of virtue, and as there are four of them, each of them must be one.

Clinias:: Certainly.

Athenian Stranger:: And further, all four of them we call one; for we say that courage is virtue, and that prudence is virtue, and the same of the two others, as if they were in reality not many but one, that is, virtue.

Clinias:: Quite so.

Athenian Stranger:: There is no difficulty in seeing in what way the two differ from one another, and have received two names, and so of the rest. But there is more difficulty in explaining why we call these two and the rest of them by the single name of virtue.

Clinias:: How do you mean?

Athenian Stranger:: I have no difficulty in explaining what I mean. Let us distribute the subject into questions and answers.

Clinias:: Once more, what do you mean?

Athenian Stranger:: Ask me what is that one thing which I call virtue, and then again speak of as two, one part being courage and the other wisdom. I will tell you how that occurs:—One of them has to do with fear; in this the beasts also participate, and quite young children,—I mean courage; for a courageous temper is a gift of nature and not of reason. But without reason there never has been, or is, or will be a wise and understanding soul; it is of a different nature.

Clinias:: That is true.

Athenian Stranger:: I have now told you in what way the two are different, and do you in return tell me in what way they are one and the same. Suppose that I ask you in what way the four are one, and when you have answered me, you will have a right to ask of me in return in what way they are four; and then let us proceed to enquire whether in the case of things which have a name and also a definition to them, true knowledge consists in knowing the name only and not the definition. Can he who is good for anything be ignorant of all this without discredit where great and glorious truths are concerned?

Clinias:: I suppose not.

Athenian Stranger:: And is there anything greater to the legislator and the guardian of the law, and to him who thinks that he excels all other men in virtue, and has won the palm of excellence, than these very qualities of which we are now speaking,—courage, temperance, wisdom, justice?

Clinias:: How can there be anything greater?

Athenian Stranger:: And ought not the interpreters, the teachers, the lawgivers, the guardians of the other citizens, to excel the rest of mankind, and perfectly to show him who desires to learn and know or whose evil actions require to be punished and reproved, what is the nature of virtue and vice? Or shall some poet who has found his way into the city, or some chance person who pretends to be an instructor of youth, show himself to be better than him who has won the prize for every virtue? And can we wonder that when the guardians are not adequate in speech or action, and have no adequate knowledge of virtue, the city being unguarded should experience the common fate of cities in our day?

Clinias:: Wonder! no.

Athenian Stranger:: Well, then, must we do as we said? Or can we give our guardians a more precise knowledge of virtue in speech and action than the many have? or is there any way in which our city can be made to resemble the head and senses of rational beings because possessing such a guardian power?

Clinias:: What, Stranger, is the drift of your comparison?

Athenian Stranger:: Do we not see that the city is the trunk, and are not the younger guardians, who are chosen for their natural gifts, placed in the head of the state, having their souls all full of eyes, with which they look about the whole city? They keep watch and hand over their perceptions to the memory, and inform the elders of all that happens in the city; and those whom we compared to the mind, because they have many wise thoughts—that is to say, the old men—take counsel, and making use of the younger men as their ministers, and advising with them,—in this way both together truly preserve the whole state:—Shall this or some other be the order of our state? Are all our citizens to be equal in acquirements, or shall there be special persons among them who have received a more careful training and education?

Clinias:: That they should be equal, my good sir, is impossible.

Athenian Stranger:: Then we ought to proceed to some more exact training than any which has preceded.

Clinias:: Certainly.

Athenian Stranger:: And must not that of which we are in need be the one to which we were just now alluding?

Clinias:: Very true.

Athenian Stranger:: Did we not say that the workman or guardian, if he be perfect in every respect, ought not only to be able to see the many aims, but he should press onward to the one? this he should know, and knowing, order all things with a view to it.

Clinias:: True.

Athenian Stranger:: And can any one have a more exact way of considering or contemplating anything, than the being able to look at one idea gathered from many different things?

Clinias:: Perhaps not.

Athenian Stranger:: Not ‘Perhaps not’ but ‘Certainly not’ my good sir, is the right answer. There never has been a truer method than this discovered by any man.

Clinias:: I bow to your authority, Stranger; let us proceed in the way which you propose.

Athenian Stranger:: Then, as would appear, we must compel the guardians of our divine state to perceive, in the first place, what that principle is which is the same in all the four—the same, as we affirm, in courage and in temperance, and in justice and in prudence, and which, being one, we call as we ought, by the single name of virtue. To this, my friends, we will, if you please, hold fast, and not let go until we have sufficiently explained what that is to which we are to look, whether to be regarded as one, or as a whole, or as both, or in whatever way. Are we likely ever to be in a virtuous condition, if we cannot tell whether virtue is many, or four, or one? Certainly, if we take counsel among ourselves, we shall in some way contrive that this principle has a place amongst us; but if you have made up your mind that we should let the matter alone, we will.

Clinias:: We must not, Stranger, by the God of strangers I swear that we must not, for in our opinion you speak most truly; but we should like to know how you will accomplish your purpose.

Athenian Stranger:: Wait a little before you ask; and let us, first of all, be quite agreed with one another that the purpose has to be accomplished.

Clinias:: Certainly, it ought to be, if it can be.

Athenian Stranger:: Well, and about the good and the honorable, are we to take the same view? Are our guardians only to know that each of them is many, or also how and in what way they are one?

Clinias:: They must consider also in what sense they are one.

Athenian Stranger:: And are they to consider only, and to be unable to set forth what they think?

Clinias:: Certainly not; that would be the state of a slave.

Athenian Stranger:: And may not the same be said of all good things—that the true guardians of the laws ought to know the truth about them, and to be able to interpret them in words, and carry them out in action, judging of what is and of what is not well, according to nature?

Clinias:: Certainly.

Athenian Stranger:: Is not the knowledge of the Gods which we have set forth with so much zeal one of the noblest sorts of knowledge;—to know that they are, and know how great is their power, as far as in man lies? We do indeed excuse the mass of the citizens, who only follow the voice of the laws, but we refuse to admit as guardians any who do not labor to obtain every possible evidence that there is respecting the Gods; our city is forbidden and not allowed to choose as a guardian of the law, or to place in the select order of virtue, him who is not an inspired man, and has not labored at these things.

Clinias:: It is certainly just, as you say, that he who is indolent about such matters or incapable should be rejected, and that things honorable should be put away from him.

Athenian Stranger:: Are we assured that there are two things which lead men to believe in the Gods, as we have already stated?

Clinias:: What are they?

Athenian Stranger:: One is the argument about the soul, which has been already mentioned—that it is the eldest and most divine of all things, to which motion attaining generation gives perpetual existence; the other was an argument from the order of the motion of the stars, and of all things under the dominion of the mind which ordered the universe. If a man look upon the world not lightly or ignorantly, there was never any one so godless who did not experience an effect opposite to that which the many imagine. For they think that those who handle these matters by the help of astronomy, and the accompanying arts of demonstration, may become godless, because they see, as far as they can see, things happening by necessity, and not by an intelligent will accomplishing good.

Clinias:: But what is the fact?

Athenian Stranger:: Just the opposite, as I said, of the opinion which once prevailed among men, that the sun and stars are without soul. Even in those days men wondered about them, and that which is now ascertained was then conjectured by some who had a more exact knowledge of them—that if they had been things without soul, and had no mind, they could never have moved with numerical exactness so wonderful; and even at that time some ventured to hazard the conjecture that mind was the orderer of the universe. But these same persons again mistaking the nature of the soul, which they conceived to be younger and not older than the body, once more overturned the world, or rather, I should say, themselves; for the bodies which they saw moving in heaven all appeared to be full of stones, and earth, and many other lifeless substances, and to these they assigned the causes of all things. Such studies gave rise to much atheism and perplexity, and the poets took occasion to be abusive,—comparing the philosophers to she-dogs uttering vain howlings, and talking other nonsense of the same sort. But now, as I said, the case is reversed.

Clinias:: How so?

Athenian Stranger:: No man can be a true worshipper of the Gods who does not know these two principles—that the soul is the eldest of all things which are born, and is immortal and rules over all bodies; moreover, as I have now said several times, he who has not contemplated the mind of nature which is said to exist in the stars, and gone through the previous training, and seen the connection of music with these things, and harmonized them all with laws and institutions, is not able to give a reason of such things as have a reason. And he who is unable to acquire this in addition to the ordinary virtues of a citizen, can hardly be a good ruler of a whole state; but he should be the subordinate of other rulers. Wherefore, Cleinias and Megillus, let us consider whether we may not add to all the other laws which we have discussed this further one,—that the nocturnal assembly of the magistrates, which has also shared in the whole scheme of education proposed by us, shall be a guard set according to law for the salvation of the state. Shall we propose this?

Clinias:: Certainly, my good friend, we will if the thing is in any degree possible.

Athenian Stranger:: Let us make a common effort to gain such an object; for I too will gladly share in the attempt. Of these matters I have had much experience, and have often considered them, and I dare say that I shall be able to find others who will also help.

Clinias:: I agree, Stranger, that we should proceed along the road in which God is guiding us; and how we can proceed rightly has now to be investigated and explained.

Athenian Stranger:: O Megillus and Cleinias, about these matters we cannot legislate further until the council is constituted; when that is done, then we will determine what authority they shall have of their own; but the explanation of how this is all to be ordered would only be given rightly in a long discourse.

Clinias:: What do you mean, and what new thing is this?

Athenian Stranger:: In the first place, a list would have to be made out of those who by their ages and studies and dispositions and habits are well fitted for the duty of a guardian. In the next place, it will not be easy for them to discover themselves what they ought to learn, or become the disciple of one who has already made the discovery. Furthermore, to write down the times at which, and during which, they ought to receive the several kinds of instruction, would be a vain thing; for the learners themselves do not know what is learned to advantage until the knowledge which is the result of learning has found a place in the soul of each. And so these details, although they could not be truly said to be secret, might be said to be incapable of being stated beforehand, because when stated they would have no meaning.

Clinias:: What then are we to do, Stranger, under these circumstances?

Athenian Stranger:: As the proverb says, the answer is no secret, but open to all of us:—We must risk the whole on the chance of throwing, as they say, thrice six or thrice ace, and I am willing to share with you the danger by stating and explaining to you my views about education and nurture, which is the question coming to the surface again. The danger is not a slight or ordinary one, and I would advise you, Cleinias, in particular, to see to the matter; for if you order rightly the city of the Magnetes, or whatever name God may give it, you will obtain the greatest glory; or at any rate you will be thought the most courageous of men in the estimation of posterity. Dear companions, if this our divine assembly can only be established, to them we will hand over the city; none of the present company of legislators, as I may call them, would hesitate about that. And the state will be perfected and become a waking reality, which a little while ago we attempted to create as a dream and in idea only, mingling together reason and mind in one image, in the hope that our citizens might be duly mingled and rightly educated; and being educated, and dwelling in the citadel of the land, might become perfect guardians, such as we have never seen in all our previous life, by reason of the saving virtue which is in them.

Megillus:: Dear Cleinias, after all that has been said, either we must detain the Stranger, and by supplications and in all manner of ways make him share in the foundation of the city, or we must give up the undertaking.

Clinias:: Very true, Megillus; and you must join with me in detaining him.

Megillus:: I will.

# Laws.

Translated by Thomas L. Pangle.

[or On Lawgiving]

DRAMATIS PERSONAE: An Athenian Stranger, Kleinias, Megillus.

## Book I.

Athenian Stranger:: Is it a god or some human being, strangers, who is given the credit for laying down your laws?

Clinias:: A god, stranger, a god—to say what is at any rate the most just thing. Among us Zeus, and among the Lacedaimonians, from whence this man here comes, I think they declare that it’s Apollo. Isn’t that so?

Megillus:: Yes.

Athenian Stranger:: Don’t you people follow Homer, and say that Minos got together with his father every ninth year and was guided by his oracles in establishing the laws for your cities?

Clinias:: So it is said among us. And also that his brother Rhadamanthus, at least—you’ve both heard the name—became very just. We Cretans, at any rate, would assert that he won this praise because he regulated judicial affairs correctly in those times.

Athenian Stranger:: His fame is splendid at least, and very appropriate for a son of Zeus. But since you and this man here were reared in such conventions and habits, I expect it would not be unpleasant for you to pass the present time discussing the political regime and laws, talking and listening as we go on our way. The road from Knossos to the cave and temple of Zeus is altogether long enough, as we hear, and there are resting places along the way, appropriate for this stifling heat; there are shady spots under tall trees, where it would be fitting for men of our age to pause often. Encouraging one another with speeches, we would thus complete the whole journey in ease.

Clinias:: And as one goes along this route, stranger, there are groves with cypresses of amazing height and beauty, and meadows in which we could rest and pass the time.

Athenian Stranger:: What you say is correct.

Clinias:: Yes indeed. And when we see them we'll assert it even more emphatically. But let's proceed, accompanied by good fortune.

Athenian Stranger:: So be it. Tell me this, now. For what reason has your law ordained the common meals, and also the gymnastic training and the weapons you employ?

Clinias:: I think, stranger, that it's easy for anyone to understand our ways. As you can both see, the nature of the entire Cretan countryside is not flat like the Thessalian, and hence, while they use horses more, we depend on running. The unevenness of the terrain here is more fitted to the practice of running on foot. In such country light arms, not heavy arms, are necessary if one is to be able to run, and the lightness of bows and arrows seems to harmonize with this. So all these practices of ours exist with a view to war, and to me at least it appears that our lawgiver had this in view in everything he did. Thus with the common meals: it's very likely he set them up after seeing that all men, when on a military campaign, are compelled by the business to eat together during this time in order to keep up their guard. I believe he condemned the mindlessness of the many, who do not realize that for everyone throughout the whole of life an endless war exists against all cities. And if, when a state of war exists, defense requires common meals and orderly relays of rulers and ruled among the guards, then this same thing should be-done in peacetime. For what most humans call peace he held to be only a name; in fact, for everyone there always exists by nature an undeclared war among all cities. If you look at it this way, you are pretty sure to find that the lawgiver of the Cretans established all our customs, public Sand private, with a view to war, and that he handed down the laws to be guarded according to these principles. For according to him nothing is really beneficial, neither possessions nor customs, unless one triumphs in war. For then all the good things of the defeated belong to the victors.

Athenian Stranger:: You appear to me, stranger, to have had a fine gymnastic training in understanding the legal customs of the Cretans. But explain this to me more clearly: the definition you seem to me to have given for a well-governed city is that it must be ordered in such a way as to defeat the other cities in war. Isn’t that so?

Clinias:: By all means. And I think that’s how it seems to this man here.

Megillus:: How else would any Lacedaimonian answer, you divine man?

Athenian Stranger:: Well, is it the case that this definition is correct for cities, in relation to cities, but that another would be correct for a neighborhood, in relation to another neighborhood?

Clinias:: In no way.

Athenian Stranger:: The same applies?

Clinias:: Yes.

Athenian Stranger:: What then? For a household in relation to another household in the neighborhood, and for one man in relation to another man, the same still?

Clinias:: The same.

Athenian Stranger:: For a person in relation to himself, should the relationship be understood to be one of enemy to enemy? Or how then should we speak of this?

Clinias:: O Athenian stranger—I would rather not address you as merely “Attic,” for you seem to me worthy of being called rather by the name of the goddess—you have correctly followed the argument up to its source and have thus made it clearer, so that you will the more easily discover that we were correct just now in saying that all are enemies of all in public, and in private each is an enemy of himself.

Athenian Stranger:: What are you saying, you amazing man?

Clinias:: Why, right here, stranger, is the first and best of all victories, the victory of oneself over oneself; and being defeated by oneself is the most shameful and at the same time the worst of all defeats. These things indicate that there is a war going on in us, ourselves against ourselves.

Athenian Stranger:: Let’s turn the argument back in the reverse direction. Given that each one of us is superior to himself or inferior to himself, should we also assert that a house and a neighborhood and a city all have this same thing within them? Or should we not assert it?

Clinias:: You mean that one is superior to itself and another inferior?

Athenian Stranger:: Yes.

Clinias:: You’re correct in asking this. Now such a situation certainly does exist, and not least in cities. For in those where the better men are victors over the majority, and the worse, the city would correctly be said to be superior to itself, and would very justly be praised for such a victory. But the opposite would hold where the opposite things happen.

Athenian Stranger:: Let’s set aside the question whether the worse can ever somehow be superior to the better (that would require a longer discussion). Here is how I now understand what you are saying: sometimes citizens of a common stock and of the same city become unjust and numerous, and combine to enslave by force the just who are less numerous. When they do prove superior, the city itself would correctly be said to be inferior to itself and at the same time bad; but where they prove inferior, stronger and good.

Clinias:: What is now being said is very odd, stranger; yet it is very necessary to agree to it.

Athenian Stranger:: Just a moment—let’s also consider this once again: where there were many brothers, the sons of one man and one woman, it wouldn’t be at all surprising if more of them turned out unjust and fewer of them just.

Clinias:: No, it wouldn’t.

Athenian Stranger:: Now it wouldn’t be fitting for me and the two of you to go hunting after whether the whole household or family should itself be called “inferior to itself” when the wicked are victorious, and “superior” when they are inferior; we aren’t now investigating the speech employed by the many with a view to the question of the seemliness or unseemliness of words, but rather with a view to laws, seeking whatever in them constitutes correctness and faultiness according to nature.

Clinias:: What you say is very true, stranger.

Megillus:: I agree that what you’ve said so far, at least, is certainly fine.

Athenian Stranger:: Then let’s look at this: presumably there would be some judge for these brothers just mentioned?

Clinias:: By all means.

Athenian Stranger:: Which would be better: the one who destroyed the wicked among them and set the better to ruling themselves, or the one who made the worthy men rule and allowed the worse to live while making them willing to be ruled? But I suppose we should also mention the judge who is third in respect to virtue—if there should ever be such a judge—one capable of taking over a single divided family and destroying no one, but rather reconciling them by laying down laws for them for the rest of time and thus securing their friendship for one another.

Clinias:: Such a judge and lawgiver would be better by far.

Athenian Stranger:: And surely he would be enacting laws for them with a view not to war but to its opposite.

Clinias:: That is true.

Athenian Stranger:: Now what about someone who brings harmony to the city? Would he order its way of life with a view more to external war or more to that internal war called “civil war,” which occurs from time to time and which everyone would wish never to come to pass in his city and, if it does, would wish to end as soon as possible?

Clinias:: Clearly, with a view to this latter.

Athenian Stranger:: Which of these sets of circumstances would someone prefer: civil peace brought about by the destruction of some and the victory of others, or friendship as well as peace brought about through reconciliation—supposing it were necessary to pay attention to external enemies?

Clinias:: Everyone would prefer the latter rather than the former for his own city.

Athenian Stranger:: Then wouldn't the lawgiver also?

Clinias:: How could he not?

Athenian Stranger:: And doesn't everyone set up all his lawful customs for the sake-of what is best?

Clinias:: How could he not?

Athenian Stranger:: The best, however, is neither war nor civil war—the necessity for these things is to be regretted—but rather peace and at the same time goodwill towards one another. Moreover, it is likely that even that victory of the city over itself belonged not to the best things but to the necessary things. To think otherwise is as if someone held that a sick body, after it had received a medical purgation, were in the best active condition, and never turned his mind to a body which had no need of such remedies at all. Likewise, with regard to the happiness of a city or of a private person, anyone who thought this way would never become a correct statesman, if he looked first and only to external wars, and would never become a lawgiver in the strict sense, if he didn't legislate the things of war for the sake of peace rather than the things of peace for the sake of what pertains to war.

Clinias:: This argument appears somehow to be stated correctly, stranger; but I would be amazed if our customs and those of Lacedaimon were not directed, in all seriousness, to what pertains to war.

Athenian Stranger:: Perhaps so. Still, we should not fight harshly with one another, but should rather make a calm inquiry about the present matters, since we, as well as they, are very serious about these things. So follow the argument along with me. Let us appeal to Tyrtaeus, who was by birth an Athenian but who became a naturalized citizen of this fellow’s people, and who was the most serious of human beings about these matters. He says: “I would not memorialize nor set down in speech a man,” even if someone were the wealthiest of human beings, he declares, even if he possessed many good things (and then he mentions just about all of them), unless that man always were best in war. Presumably you too have heard these poetic lines; and this fellow, I believe, is surfeited with them.

Megillus:: Yes, indeed.

Clinias:: They’ve been brought to us from Lacedaimon.

Athenian Stranger:: Come now, let’s question this poet in common, roughly as follows: “Tyrtaeus, most divine poet! You seem to us to be wise and also good, because you have praised in so distinguished a manner those who are distinguished in war. Now I, and this fellow here, and this other fellow, Kleinias the Knossian, happen to be very much in agreement with you regarding this matter, we believe. But we want to know clearly whether we are referring to the same men or not. So tell us: do you clearly hold, as we do, that there are two forms of war? Or what?” To these things I think even a much less respectable figure than Tyrtaeus would respond with the truth, namely that these are two, one of which we all call civil war—the harshest of all wars, as we just now declared. The other I believe we would all set down as the kind that is waged against outsiders and members of other tribes, and this is much milder than the former.

Clinias:: How could it not be?

Athenian Stranger:: “Well, then, which sort of men in which sort of war were you praising when you gave such strong praise to some and such blame to others? That waged against outsiders, it appears. For you have said in your verses, at any rate, that you cannot at all abide men who do not dare;

… to look on bloody death,
And staying near assail the foe.”

So after these things we would say, “It appears, Tyrtaeus, that you praise especially those who become conspicuous in foreign and external war.” Presumably he would affirm that this is so, and would agree?

Clinias:: But of course.

But we, at any rate, would assert that while these men are good, better by far are those who reveal themselves to be best in the greatest war. And we have a poet as witness—Theognis, a citizen of Sicilian Megara, who declares:

Cyrnus, in harsh civil strife a trustworthy
Man is equal in value to gold and silver.

This man in the harsher war, we assert, is altogether better than that other man, in almost the same degree as justice and moderation and prudence, existing in a man along with courage, are better than courage itself alone. For a man would never become trustworthy and sound in the midst of civil wars if he didn’t have the whole of virtue. There are very many mercenaries who are willing to take a stand and fight to the death in the war Tyrtaeus mentions, and most of them are rash, unjust, insolent, and very imprudent, with only a very few who are not.

Where has this argument, of ours wound up now, and what does it want to make clear when it says these things? Isn’t it obvious that it wanted to show us that above all others the lawgiver of this place, who came from Zeus, as well as any other lawgiver worth much of anything, will never set down laws with a view to anything but the greatest virtue? And this is, as Theognis asserts, trustworthiness in the midst of dangers—that quality which someone would call perfect justice. As for what Tyrtaeus praised especially, it is something noble, and the poet has adorned it in a fitting way; yet one would speak most correctly if one said it was fourth in number and in claim to honor.

Clinias:: Stranger, we are consigning our lawgiver to a pretty low rank among lawgivers!

Athenian Stranger:: No, it’s ourselves that we’re consigning to a low rank, O best of men, when we show that we think Lycurgus and Minos arranged all the customs at Lacedaimon and here chiefly with a view to war!

Clinias:: But what should we have been saying?

Athenian Stranger:: What is true, I think and just, since we were carrying on a dialogue on behalf of a divine man. We should have said that he had in view not just some part of virtue—and that the lowest—but that he looked to the whole of virtue, and that in seeking his laws he arranged them in forms that are different from the forms used by those who now seek to put forward laws. Nowadays, each seeks merely to add on that form which he needs. So one concerns himself with inheritances and heiresses, another with assaults, and others with myriad other such things. But we assert that the search for laws belongs to those who seek well, as we have now begun to do. For I wholly admire the way you started out interpreting the laws; it is correct to begin from virtue and say that he laid down the laws for the sake of this. But when you claimed that he legislated by referring everything to a part of virtue—and that the smallest—I was sure you were no longer correct, and that is why all this last part of the argument has been put forward now. How then would I have liked to hear you proceeding in your talk? Do you want me to show you?

Clinias:: By all means.

Athenian Stranger:: “O stranger,” it should have been said, “not in vain are the laws of Crete in especially high repute among all the Greeks. They are correct laws, laws that make those who use them happy. For they provide all the good things. Now the good things are two fold, some human, some divine. The former depend on the divine goods, and if a city receives the greater it will also acquire the lesser. If not, it will lack both. Health leads the lesser goods; in the second place is beauty; third is strength, both in running and in all the other motions of the body; and fourth is Wealth—not blind but sharp-sighted, insofar as it follows prudence. Prudence, in turn, is first and leader among the divine goods. Second after intelligence comes a moderate disposition of the soul, and from these two mixed with courage comes justice, in third place. Courage is fourth. All of these last goods are by nature placed prior in rank to the first, and this is the rank they should be placed in by the legislator.

After these things, the citizens should be told that the other orders are given to them with a view to these goods, of which the human look to the divine and the divine all look to the leader, intelligence. It is necessary to care for the citizens by apportioning honor and dishonor correctly among them, in their marriage associations, and then later in the birth and rearing of the children, male and female, while they are young and also as they get older, until they reach old’ age. In all their mingling with one another one must keep a guard, watching their pains and pleasures, their desires and the ardors of all their erotic longings, blaming and praising correctly by means of the laws themselves. Moreover, in fits of anger, in fears, in “the disturbances that come over souls in bad fortune and the release from such things that comes with good fortune, in the experiences brought by diseases and wars and poverty, and the experiences brought upon human beings by the opposite circumstances—in all such situations what is noble and what, is ignoble in each case must be taught and defined.

After these matters necessity demands that the lawgiver guard the citizens’ acquisitions and expenditures, in whatever way these take place, and also that he watch over the formation and dissolution of their associations with one another for all these purposes, both voluntary and involuntary, keeping an eye on how they behave towards one another in each of; these sorts of activity, and observing which sorts are just and which are lacking in justice. For those citizens who obey the: laws he should ordain honor, and for those who disobey he should ordain penalties. When he comes to what is the end of the whole political regime, he should consider how each of those who has died should be buried and what honors should be allocated to them.

Looking back over all these things, the one who frames the; laws will set up guards—some grounded in prudence, others in true opinion—so that intelligence will knit together all: these things and may declare that they follow moderation and. justice but not wealth or love of honor.”

Thus, O strangers, I at least would have wished and still do wish that you would speak: explaining how all this is to be found in the laws that are said to be from Zeus and the Pythian Apollo, the laws laid down by Minos and Lycurgus. And then I would like to be shown why it is that their order is so clear to anyone with experience in laws, either because of technical skill or because of certain habits, while it remains quite unapparent to the rest of us.

Clinias:: What should be said after these things, stranger?

Athenian Stranger:: In my opinion, it’s necessary to start over again from the beginning, commencing just as we did, by first discussing the practices that contribute to courage and then proceeding through another and then yet another form of virtue—if you wish to do so. As soon as we’ve been through the first, we will try to use it as a pattern for the others and thus have a comforting discussion about them as we go along our route. Later, if god is willing, we’ll show how what we just went through is aimed at virtue as a whole.

Clinias:: What you’re saying is fine. How about trying first to test our praiser of Zeus here?

Athenian Stranger:: I will, but I’ll also try to test you and me as well. For the discussion is common to us all. So both of you tell me now: didn’t we assert that the common meals and the gymnastics were devised by the legislator with a view to war?

Megillus:: Yes.

Athenian Stranger:: And what would come third, and fourth? For one probably ought to count in this way as regards the things that constitute the rest of virtue too (whether one calls them “parts” or speaks of them by themselves, so long as it’s clear what one means to say).

Megillus:: Thirdly, I and any Lacedaimonian would say, he devised hunting.

Athenian Stranger:: Let’s try to give a fourth, or a fifth if we can.

Megillus:: In the fourth place I at least would try to put the great attention that we pay to endurance of suffering, in the fistfights we hold with one another and in certain practices of theft we have, which always involve many blows. Then too., there is a practice called the “secret service,” which is amazingly full of the sort of toils that instill endurance; they go barefoot and sleep without blankets in winter, and they have to take care of themselves without any servants as they wander by night as well as by day through the whole territory. And then there is the festival of naked games, where we undergo terrible suffering, combating the stifling heat of summer. There are many other such practices—so many that one would almost never stop if he tried to enumerate them all.

Athenian Stranger:: You’ve spoken well indeed, Lacedaimonian stranger. But look, as to courage, how shall we define it? Shall we leave it at saying that it’s a combat against fears and pains only, or also against longings and pleasures, and certain terrible cajoling flatteries that can turn to wax the spiritedness even of those who think themselves solemn?

Megillus:: I agree; it fights against all these.

Athenian Stranger:: If we recall the earlier arguments, this fellow here said that a certain sort of city is inferior to itself, and also a certain sort of man; isn’t that so, Knossian stranger?

Clinias:: It certainly is.

Athenian Stranger:: Are we now saying that the man inferior to pains is bad, or do we mean the man inferior to pleasures also?

Clinias:: More the one inferior to pleasures, in my opinion at least. Presumably we all mean the one overcome by pleasures rather than the one overcome by pains when we refer to one who is blamably inferior to himself.

Athenian Stranger:: Surely the lawgiver of Zeus or of the Pythian hasn’t instituted a crippled courage, able to resist only on the left side but unable to resist on the right, the side of cunning and flattery? Isn’t his resistant on both sides?

Clinias:: On both, I at least would maintain.

Athenian Stranger:: All right then, let’s go back and say what these practices are in both your cities that constrain men to taste pleasures and not flee them—just as they were constrained not to flee pains, but were dragged right into the midst of them and, by the use of force and by persuasion through honors, were made to conquer them. Where in the laws is this same thing set up with regard to pleasures? Let it be said what this practice of yours is that makes the same men equally courageous before sufferings and pleasures, triumphing over what they should and in no way proving inferior to their own nearest and harshest enemies.

Megillus:: Although I was able to list for you many laws ordained with a view to sufferings, stranger, I couldn’t with equal ease produce major and conspicuous examples with regard to pleasures. I would probably have no trouble in finding some minor examples.

Clinias:: Nor could I myself, in regard to the Cretan laws, show this as clearly as I could the other.

Athenian Stranger:: Best of strangers, this is not surprising. But if one of us should blame some feature in the laws belonging to each of the others, being led to this out of a wish to see what is true and, at the same time, what is best, let’s accept such behavior from one another not in a harsh way, but gently.

Clinias:: What you’ve said is correct, Athenian stranger, and it should be heeded.

Athenian Stranger:: For of course, Kleinias, that kind of thing wouldn’t be fitting for men of our age.

Clinias:: Indeed it wouldn’t.

Athenian Stranger:: Whether or not someone can correctly blame the Laconian and the Cretan regime is another question. But I am probably in a better position than either of you to tell what things are said by the many. Because, given that what pertains to your laws has been put together in a measured way, one of the finest is the law that does not allow any of the young to inquire which laws are finely made and which are not, but that commands all to say in harmony, with one voice from one mouth, that all the laws are finely made by gods; if someone says otherwise, there is to be no heed paid to him at all. And yet if some old man has been thinking over something in your laws, he is to make such arguments before a magistrate and someone his own age, with no young person present.

Clinias:: Most correctly spoken, stranger, and like a diviner! Even though you're far away in time from the thought of him who laid down these strictures, I think you've fairly hit upon it. What you say is very true.

Athenian Stranger:: Well, there are no youngsters around us now; and on account of our old age the lawgiver allows us a dispensation—carrying on a conversation about these matters alone "by ourselves, we'll be doing nothing wrong, will we?

Clinias:: That's so, and don't hold yourself back from laying blame on our laws. It's not dishonorable simply to find out about something that is ignoble; in fact, if the one who hears is not resentful, but well disposed, the outcome may be a remedy of the ill.

Athenian Stranger:: Nobly spoken. What I have to say will not really be a blame of the laws—-not, at least, until I am on firm ground after inquiring as closely as I can—but will be rather an expression of perplexity. For you are the only peoples of whom we know, among Greeks as well as barbarians, whose lawgiver has given orders to keep away from and not taste the greatest sorts of pleasure and play; while as to pains and fears, as we just remarked, he held that if someone flees them, from childhood until the end of life, the result will be that when he gets into unavoidable toils and fears and pains, he will flee before those who have had gymnastic training in such things and will be enslaved by them. I think the same legislator should have thought the same thing about pleasures. He should have said to himself, "If our citizens grow up from youth lacking experience in the greatest pleasures, if they aren't practiced in enduring pleasures and in never being compelled to do anything shameful, their softness of spirit before pleasures will lead them to suffer the same thing as those who are overcome by fears. They will be enslaved in another and more shameful fashion to those who are capable of enduring pleasures, who know about pleasures, and who are sometimes human beings vicious in every way. They'll have souls that are part slave and., part free, and will not be worthy of being called courageous and free men without qualification." Consider now whether you think any of this that's just been said is to the point.

Clinias:: Offhand, the argument seems to us, at least, to make sense. But to be quickly and easily persuaded about matters of such gravity might well betoken youth and mindlessness.

Athenian Stranger:: Well, Kleinias, and Lacedaimonian stranger, suppose we turn to the next matter, we proposed to deal with. Let's discuss moderation after courage. What will we find in these regimes that is different from what is, in regimes arranged at random, parallel to the features we just discovered pertaining to war?

Megillus:: It’s not too easy to say, but it’s- likely that the common meals and the gymnastics have been devised so as to be fine for both.

Athenian Stranger:: It’s likely indeed, strangers, that it is difficult for regimes to become as uncontroversial in deed as they are in speech. It’s the same as with bodies: it’s almost impossible to prescribe one exercise for any one body that would not appear in some respects harmful as well as in some respects beneficial to our bodies. So it is with these gymnastics and common meals: in many other ways they now benefit cities, but in the event of civil strife they are harmful (as is shown by the examples of the Miletian, Boeotian, and Thurian boys). What’s more, there is an ancient law concerning sexual pleasures not only of humans but of beasts, a law laid down even in nature, which this practice seems to have corrupted. For these offenses your cities might be the first to be accused by someone, along with other cities that zealously pursue gymnastics. However such things are to be considered, in a playful or a serious mood, it should be understood that the pleasure is given according to nature, it seems, when the female unites with the nature of males for procreation. Males coming together with males, and females with females, seems against nature; and the daring of those who first did it seems to have arisen from a lack of self-restraint with regard to pleasure. But the fact is, we all accuse the, Cretans of being the originators of the myth of Ganymede: since their laws were believed to have come from Zeus, they added this myth about Zeus so that they could be following the god as they continued to reap the enjoyments of this pleasure. About the myth no more need be said; but about human beings who inquire into laws almost their entire inquiry concerns pleasures and pains, in cities and in private dispositions. These two. springs flow forth by nature, and he who draws from the right one, at the right time, and in the right amount, is happy; the same holds for a city and for a private individual and for every animate thing. But he who does so without knowledge and at the wrong time lives a life that is just the opposite.

Megillus:: What's been said, stranger, is in some ways fine, and we have trouble finding words in response to these things, but to me at least, the lawgiver in Lacedaimon seems to have done what's correct when he ordered fleeing from pleasures. As for the laws in Knossos, this fellow here, if he wishes, will take the field in their support. But the ways of Sparta with regard to pleasures are in my opinion the finest to be found among humankind. For our law proscribed from the entire country that practice which leads humans to fall into the greatest pleasures and the greatest sorts of insolence and total mindlessness. Never would you see in fields or towns under Spartan supervision any drinking parties or any of the stuff that goes with them, which has such power to incite men to every sort of pleasure. There isn't a one of us who wouldn't immediately inflict the gravest punishment when he encountered one of those drunken revelers, and the Dionysia wouldn't afford an excuse that would protect him, if he were doing the sorts of things I saw them do in the carts once among your people. Why, in Tarentum among our colonists I witnessed the whole city drunk at a Dionysia! That kind of thing just doesn't exist among us.

Athenian Stranger:: O Lacedaimonian stranger, all such things are praiseworthy, where there is endurance; where that is loosened, they do become pretty stupid. Perhaps someone from our side might defend himself by taking you up, and pointing to the looseness of your women. But whether in Tarentum or among my people or among yours, there is one response that seems to acquit all such things of evil and make them correct. To a stranger amazed at seeing what he is not used to seeing among his own people, everyone answers this way: “Don’t be amazed, stranger. This is the law among us—among your people perhaps there is a different law pertaining to these same things.” Yet our present discussion is not about the rest of mankind, my dear sirs, but about the vice and virtue of the lawgivers themselves. So let’s speak at greater length about the whole subject of intoxication. It is not a practice of minor significance, and to understand it is not the part of any paltry lawgiver. I’m speaking now, not about the drinking or nondrinking of wine in general, but about getting drunk, and whether it should be employed as the Scythians and Persians do, and also the Carthaginians, the Celts, the Iberians, and the Thracians- (all these being warlike races), or whether it should be employed as you do. You people, as you say, wholly abstain from it, while the Scythians and Thracians drink wine completely undiluted, women as well as men, and pour it over their cloaks, believing that they’re engaging in a fine and happy practice. The Persians also use it a great deal, along with other luxuries you abstain from, but they preserve more orderliness than those others.

Megillus:: But, O best of men, we do put all these peoples, to flight when we take up our arms.

Athenian Stranger:: Best of men, don’t talk that way. Many routs and pursuits have occurred, and will occur again, without a clear cause. So we should always set down victory or defeat in battle not as a clear but as a controversial criterion for whether practices are noble or not. The fact is, bigger cities defeat smaller ones in battle: the Syracusans enslave the Locrians, who seem the best-governed of the people in that area; the Athenians enslave the Ceians; and we could find ten thousand other such examples. So with regard to each practice we discuss, let’s now leave aside the talk about victories and defeats and try to persuade ourselves with arguments, showing how one sort of thing is noble and how another sort is not noble. But first hear me out as I explain how one should inquire into what is advantageous and what is not in these matters.

Megillus:: How do you say it should be done?

Athenian Stranger:: It seems to me that all those who take up a practice for discussion and propose to blame or praise it as soon as it’s mentioned proceed in a manner that is not at all proper. They do the same as someone who, when he hears another strongly praising a kind of cheese as a good food, immediately blames it, without learning either its effect or the way it is administered—in what manner, by whom, along with what, in what condition, and to persons in what condition. This is the very thing, it seems to me, we’re now doing in our arguments. Having heard only this much about the subject of drunkenness, some of us are immediately blaming it and others are praising it—both absurdly. On both sides we present our praise by using witnesses and praisers: one side claims that what they say is decisive because they bring forward so many, while the other side replies that their claim is decisive because we see that those who don’t use the practice are victorious in battle. And then this has become a subject of controversy between us. I really don’t think it makes sense for us to go through each of the other legal customs this way. Instead, I am willing to go through this very custom, drunkenness, in another way, which to me appears the required way. In so doing I will try, if I can, to demonstrate what is the correct method for our inquiry into all such things. For thousands upon thousands of nations would disagree with your two cities and fight with them in speech over these things.

Megillus:: Well, if in fact we have some correct method of inquiry into such things, there should be no hesitation to hear about it.

Athenian Stranger:: Let's carry out the inquiry, then, in roughly the following way: come, suppose someone were to praise the raising of goats, and the animal itself as. a fine possession. Suppose someone else, who had seen goats grazing without a goatherd and doing damage to cultivated fields, were to denounce the animal and blame, in the same way, every animal he had ever seen without a ruler or with bad rulers over it. Would we consider such a man's denunciation—whatever he might denounce—to be sound?

Megillus:: How could we?

Athenian Stranger:: Do we suppose someone is a worthy ruler in ships if he possesses only the knowledge of navigation, regardless of whether he is subject to seasickness or not? Or what would we say?

Megillus:: Not at all, if in addition to possessing the art, he suffers from the defect you mention.

Athenian Stranger:: And what of a ruler over an army? Is it sufficient qualification that he possess the knowledge of war even if he's cowardly in the midst of dangers, even if he's seasick with the drunkenness of terror?

Megillus:: How could it be?

Athenian Stranger:: And what if in addition to being a coward he lacked the art?

Megillus:: Now you're speaking of someone who is a complete wretch—a ruler of certain womanish women but not at all of men.

Athenian Stranger:: Take any community for which there is by nature a ruler, and which is beneficial when that ruler is present: what would we say about someone who praised it or blamed it without ever having seen it operating in a correct communal way under its ruler, but had always seen such social intercourse without a ruler or under bad rulers? Do we believe onlookers like these will ever have any worthwhile praise or blame for such communities?

Megillus:: How could they, when they've never seen or taken part in a correct version of any of the communities?—

Athenian Stranger:: Hold on a moment. Should we set down drinking parties and drinking gatherings as one sort of social intercourse, among the many sorts of communities?

Megillus:: Very much so.

Athenian Stranger:: Well, has anyone ever yet seen one of these proceed correctly? For you two it's easy to reply, "Never yet at all," because among you this practice is neither customary nor legal; but I have encountered many drinking parties in many places, and what's more I have studied all of them, so to speak. I have hardly seen or heard of a single one being run correctly in its entirety—if a few small aspects of some were correct, the vast majority were, so to speak, entirely faulty.

Clinias:: What do you mean by that, stranger? Speak still more clearly. For, as you've said, we lack experience of such gatherings, and if we happened upon them we probably wouldn't know straight off what was correct or not in the way they were proceeding.

Athenian Stranger:: That's likely. Try to learn from my explanation. You do understand, don't you, that in every gathering, in every community formed for any kind of action, there is always a correct ruler in each case?

Clinias:: How could there not be?

Athenian Stranger:: And we said just now that for fighting men a courageous ruler is needed.

Clinias:: But of course.

Athenian Stranger:: Now a courageous man is less disturbed by fears than are cowardly men.

Clinias:: That, too, is so.

Athenian Stranger:: So if there had been some device for putting a general who wasn't at all fearful or disturbed at the head of an army, shouldn't we have exerted every effort to do so?

Clinias:: Most certainly.

Athenian Stranger:: At the moment, though, we're speaking not of a ruler of an army in gatherings of men who are fighting enemies in war, but rather of friends communing with friends in peace and with goodwill.

Clinias:: That's correct.

Athenian Stranger:: And such intercourse, if accompanied by drunkenness, is not without disturbance, is it?

Clinias:: How could it be? Entirely the opposite, I think!

Athenian Stranger:: First, then, these also need a ruler.

Clinias:: How could they not? More than in any other action!

Athenian Stranger:: Should a ruler be provided who is undisturbed, if possible?

Clinias:: But of course.

Athenian Stranger:: And it's likely that he should be someone who is prudent in regard to social intercourse, at any rate. For he becomes both the guardian of their present friendship and the one who sees to it that the friendship will increase through the intercourse they will have.

Clinias:: Very true.

Athenian Stranger:: So shouldn't a sober and wise ruler be set over the drunkards, and not the opposite? For if the ruler of drunken men were a young drunk who wasn't wise, he'd need a lot of good fortune to avoid doing some great evil.

Clinias:: A lot indeed.

Athenian Stranger:: Now if someone were to blame this kind of intercourse even in cities where it proceeds in the most correct way possible—if he objected to the activity itself—he might perhaps be correct in his blame. But if someone reviles the practice when he has only seen it proceeding under the most mistaken conditions, he shows first that he doesn't know that this is an example of an incorrect version, and then in addition shows that he is ignorant of the fact that any activity proceeding thus—without a sober despot and ruler—appears wicked. Or don't you agree that a drunken pilot, and indeed any drunken ruler of anything, will upset all—whether ship, or chariot, or army, or whatever might be governed by him?

Clinias:: What you've said here, stranger, is in every respect true. But tell us this next: suppose this custom regarding drinking were to proceed correctly—what good would it then do us? Just as, to refer back to what we said a moment ago, if an army were led correctly, then victory in war would accrue to the followers (and that's no small benefit), and so on with the rest; so from a correctly instructed drinking party what great thing accrues to private individuals or to the city?

Athenian Stranger:: Well, from one child or one chorus correctly instructed, what great thing would we claim accrues to the city? If we were asked the question in this way, wouldn't we reply as follows? "From one, only a little good comes to the city, but if you ask about the education in general of all who are educated, what great benefit it gives the city, the answer is not difficult: those who are well educated become good men, and becoming such, they act nobly in other respects, as well as in winning victories when they fight their enemies. Education brings victory, although victory sometimes brings a loss of education; for many have grown more insolent because of victories in war, and through their insolence have been filled with ten thousand other vices. And education has never become 'Cadmean,' although many such victories have happened and will happen again to human beings."

Clinias:: You seem to us to be saying, friend, that spending time drinking together is a great contribution to education, if it is done correctly!

Athenian Stranger:: Why not?

Clinias:: Well, could you explain next how what's just been said is true?

Athenian Stranger:: Stranger, to be sure of the truth in these matters, when so many disagree, would belong to a god. But I don't begrudge giving my own view, if that's what's required, since we have now embarked on the discussion of laws and a regime.

Clinias:: That is precisely what we should try to understand, your view on these now-disputed matters.

Athenian Stranger:: All right then, that's what we must do: you two must strive somehow or other to understand the argument and I must strive somehow or other to make it clear. First, however, hear me out on this: all the Greeks regard our city as one that loves to talk and that talks a great deal; but as for Lacedaimon and Crete, the former is considered to be pithy in speech and the latter to be clever rather than talkative. Now I'm anxious not to give you the opinion that I'm long-winded about small matters, as I go ahead to elaborate what is a very lengthy argument about the small activity of getting drunk. Because it would never be possible to regulate this according to nature without giving a clear and sufficient account of what is correct in music; and it would never be possible to give an account of music without going into the whole subject matter of education. All this means very long speeches. So consider what we should do. How would it be if we leave off the discussion of these things for now and turn to a different discussion about laws?

Megillus:: Athenian stranger, you probably are not aware of the fact that our hearth happens to be the consulate for your city. And in all us children who hear that we are the "consuls" for some city there probably sinks in, from the time we are young, a friendly disposition towards that city, as if it were a second fatherland after one's own city. Now this is just what has happened to me. For whenever the Lacedaimonians were blaming or praising the Athenians for something, I would immediately hear the children crying, "That's your city, Megillus, that's dealing with us ignobly or nobly." Hearing these things, and always fighting over them on your behalf against those who blamed your city, I became entirely well disposed; even now your dialect is a friendly sound to me, and I believe that what is said by many is very true, namely, that those Athenians who are good are good in a different way. They alone are good by their own nature without compulsion, by a divine dispensation: they are truly, and not artificially, good. So with regard to me at any rate, you should take heart and talk as long as you like.

Clinias:: Once you've heard and accepted what I too have to say, stranger, you may surely take heart and talk as much as you wish. As you may have heard, Epimenides, that divine man, was born around here and is, as a matter of fact, related to my family. In obedience to a god's oracle he journeyed to you people ten years before the Persian Wars and made some sacrifices that had been demanded by the god. He told the Athenians, who were at that time living in dread of a Persian expedition, that "the Persians won't come for another ten years and when they do come, they'll go away having accomplished nothing of what they hoped, and having suffered more evil than they've inflicted." At that time, then, our ancestors formed a bond with yours, and from that day to this, I and my family have felt well disposed towards your people.

Athenian Stranger:: It's likely, then, that you're ready to take your part and listen. I'm willing to take my part, but it's not a part that's very easy to carry out. Still, it must be tried. First, for the purposes of the argument, let's define education—saying what it is and what power it has. That's the way we assert the argument we have now taken in hand should go, until it arrives at the god.

Clinias:: By all means let's do just that, if it pleases you.

Athenian Stranger:: Now as I say what one ought to assert education is, you think over whether what is said is acceptable.

Clinias:: Say on.

Athenian Stranger:: I will, and what I assert is this: whatever a man intends to become good at, this he must practice from childhood; whether he's playing or being serious, he should spend his time with each of the things that pertain to the activity. Thus, in the case of someone intending to become a good farmer or a good house-builder of some sort, the house-builder should play at games that educate in house-building, and the farmer similarly, and the person who raises each child should provide each with miniature tools that are imitations of the true ones. Moreover, the child should learn any knowledge that is a necessary preliminary: a carpenter, for example, should learn to measure and gauge things, and a soldier should play at horseback riding or some other such things. The attempt should be made to use the games to direct the pleasures and desires of children toward those activities in which they must become perfect. The core of education, we say, is a correct nurture, one which, as much as possible, draws the soul of the child at play toward an erotic attachment' to what he must do when he becomes a man who is perfect as regards the virtue of his occupation.

Now, as I said, see if what has been said up to this point is acceptable to us.

Clinias:: Why shouldn't it be?

Athenian Stranger:: Because what we mean by education is not yet defined! When we at present blame or praise the upbringing of different persons, we say that one of us is "educated" and another is "uneducated," sometimes applying the latter characterization to human beings who are very well educated in trade or merchant shipping or some other such things. So it's appropriate that in our present discussion we do not consider these sorts of training to be education; we mean rather the education from childhood in virtue, that makes one desire and love to become a perfect citizen who knows how to rule and be ruled with justice. It is this upbringing alone, it appears to me, that this discussion would wish to isolate and to proclaim as education. As for an upbringing that aims at money, or some sort of strength, or some other sort of wisdom without intelligence and justice, the argument proclaims it to be vulgar, illiberal, and wholly unworthy to be called education. But let's not get into a dispute with each other over the name. Let's simply hold fast to the argument now being agreed to by us, the argument that states: "Those who are correctly educated usually become good, and nowhere should education be dishonored, as it is first among the noblest things for the best men. If it ever goes astray, and if it is possible to set it right, everyone ought always to do so as much as he can, throughout the whole of life."

Clinias:: That is correct, and we agree with what you're saying.

Athenian Stranger:: Now long ago, at least, we agreed that the good are those able to rule themselves, and the bad are those who cannot.

Clinias:: What you say is very correct.

Athenian Stranger:: Let's consider again in a clearer way what we mean by that. Allow me to clarify it for you, if I can, by means of an image.

Clinias:: Just speak on.

Athenian Stranger:: May we then assume that each of us is one person?

Clinias:: Yes.

Athenian Stranger:: But possessing within himself two opposed and imprudent counselors, which we call pleasure and pain?

Clinias:: That is so.

Athenian Stranger:: Connected to these two there are opinions about the future, common to both of which there is the name "expectation," but each of which also has its own peculiar name: “fear” is the expectation of pain, and “boldness” the expectation of the opposite. Over all these there is calculation as to which of them is better and which worse—and when this calculation becomes the common opinion of the city, it is called law.

Clinias:: I follow this only with great difficulty; but say what comes next as if I were following.

Megillus:: I’m experiencing similar difficulties.

Athenian Stranger:: Let’s think about these things in this way: let’s consider each of us living beings to be a divine puppet, put together either for their play or for some serious purpose—which, we don’t know. What we do know is that these passions work within us like tendons or cords, drawing us and pulling against one another in opposite directions toward opposing deeds, struggling in the region where virtue and vice lie separated from one another. Now the argument asserts that each person should always follow one of the cords, never letting go of it and pulling with it against the others; this cord is the golden and sacred pull of calculation, and is called the common law of the city; the other cords are hard and iron, while this one is soft, inasmuch as it is golden; the others resemble a multitude of different forms. It is necessary always to assist this most noble pull of law because calculation, while noble, is gentle rather than violent, and its pull is in need of helpers if the race of gold is to be victorious for us over the other races.

Thus, the myth of virtue, the myth about us being puppets, would be saved, and what was intended by the notion of being superior to oneself or inferior would be somewhat clearer. Moreover, as regards a city and a private individual, it’ll be clearer that the latter should acquire within himself true reasoning about these cords and live according to it, while a city should take over a reasoning either from one of the gods or from this knower of these things, and then set up the reasoning as the law for itself and for its relations with other cities. Thus, certainly, vice and virtue would be more clearly distinguished for us. With this distinction sharpened, education and other practices will perhaps be clarified, and the practice of spending time drinking together, which might be considered too trivial to be worth so many words, may well appear not unworthy of such lengthy speech.

Clinias:: You speak well; let's complete whatever may be demanded by our present pastime.

Athenian Stranger:: Then tell me: if we introduce drunkenness into this puppet what effect shall we produce?

Clinias:: What do you have in view in asking this?

Athenian Stranger:: Nothing in particular as yet, but just what happens, in general, when the two come together. But I'll try to explain what I want more clearly. What I'm asking is this: doesn't the drinking of wine make pleasures, pains, the spirited emotions, and the erotic emotions, more intense?

Clinias:: Very much so.

Athenian Stranger:: What about sensations, memories, opinions, and prudent thoughts? Do they become more intense in the same way? Or don't they abandon anyone who becomes thoroughly soused?

Clinias:: Yes, they completely abandon him.

Athenian Stranger:: So he arrives at a disposition of the soul that is the same as the one he had when he was a young child?

Clinias:: But of course.

Athenian Stranger:: At such a time he would be least the master of himself.

Clinias:: Least.

Don’t we assert that such a man is most wicked?

Clinias:: Very much so.

Athenian Stranger:: It’s likely, then, that it’s not only the old man who becomes a child for a second time, but also the man who is drunk.

Clinias:: Very well put, stranger.

Athenian Stranger:: Is there really any argument that will try to persuade us that we must taste such a practice and not flee from it with all the strength we have?

Clinias:: It’s likely that there is. You, at any rate, assert that there is, and were ready just now to state it.

Athenian Stranger:: What you two remember is true. And I am indeed ready, now that you two have asserted that you would listen in a spirit of eagerness.

Clinias:: How could we not listen—if for no other reason than the wonder, the strangeness, of the notion that a human being should ever voluntarily cast himself into a state of complete degradation.

Athenian Stranger:: … of soul, you mean? Or don’t you?

Clinias:: Yes.

Athenian Stranger:: Well, what about badness in the body, comrade: would we be amazed if someone ever voluntarily got into a state that was emaciated, ugly, and weak?

Clinias:: How could we not be?

Athenian Stranger:: Well, but what about those who go voluntarily to a dispensary to drink medicine: do we think they are ignorant of the fact that a little while later and for many days thereafter they may be in a bodily state such that if they had to live thus until the end of their lives they would refuse to go on living? And don’t we know that those who go to gymnasiums for exercise become exhausted right afterwards?

Clinias:: We know all this.

Athenian Stranger:: And that it’s for the subsequent benefit that they go voluntarily?

Clinias:: That’s a very noble way of putting it.

Athenian Stranger:: Shouldn’t one think about other practices in the same way?

Clinias:: Certainly.

Athenian Stranger:: Then this is the way one should think about the pastime of drinking wine—if it can correctly be thought of as among these other practices.

Clinias:: Why not?

Athenian Stranger:: Now if it’s evident that this practice procures for us a benefit no less than that which accrues to the body, it will gain the victory over the bodily practices at the outset, because they involve suffering while this doesn’t.

Clinias:: What you say is correct, but I would be amazed if we were able to discover such a thing in it.

Athenian Stranger:: Then it’s likely that this is what we must now try to explain. Tell me this: can we distinguish in our minds two forms of fear that are nearly opposite?

Clinias:: Which?

Athenian Stranger:: These: on the one hand we presumably fear evils, when we expect them to come to pass.

Clinias:: Yes.

Athenian Stranger:: And on the other hand we often fear opinion, when we think we will be considered evil if we say or do something that is not noble. This is the sort of fear that we at least, and I believe everyone, calls “shame.”

Clinias:: What else?

Athenian Stranger:: These are the two fears I spoke of. The latter opposes sufferings and other fears, but also opposes the most frequent and greatest pleasures.

Clinias:: What you say is very correct.

Athenian Stranger:: Now won’t the lawgiver, and indeed anyone worth much of anything, revere with the greatest honors this sort of fear, calling it “awe” and the boldness opposed to it “lack of awe”? Won’t he consider lack of awe to be the greatest evil for everyone both in private and in public life?

Clinias:: You speak correctly.

Athenian Stranger:: Doesn’t this fear save us from many great evils, and in particular doesn’t it play a greater role than anything else in procuring for us victory and safety in war? For there are two things that procure victory, boldness with enemies and with friends fear of shame on account of vileness.

Clinias:: That is so.

Athenian Stranger:: Each of us then must be at the same time fearless and fearful: in respect to what, in each case, we have just indicated.

Clinias:: Indeed.

Athenian Stranger:: Now, when we wish to make each man immune to many fears, we accomplish this by dragging him into the midst of fear in a manner that is consistent with the law.

Clinias:: It appears that we do.

Athenian Stranger:: What about when we try to make him fearful, in a manner that is consistent with justice?

Shouldn’t we throw him against shamelessness, and by thus giving him gymnastic training in combating it, make him a victorious fighter against his own pleasures? A man becomes perfect in courage by fighting against and conquering the cowardice within him; surely no man who lacks experience and gymnastic training in these struggles would ever attain half his potential in virtue. Can a man then become perfect in moderation if he has not fought triumphantly against the many pleasures and desires that try to seduce him into shamelessness and injustice, using the help of speech, deed, and art, in games and in serious pursuits? Can he remain inexperienced in all such things?

Clinias:: That wouldn’t make sense.

Athenian Stranger:: Well, now, is there a fear drug, handed down to human beings by some god, which has the effect that the more one is willing to drink, the more unfortunate one conceives oneself to be with each drink, fearing for oneself everything in the present and in the future, until finally the most courageous human being experiences total terror, and yet when he has slept it off and the drink has been sloughed off he becomes himself again each time?

Clinias:: What drink of this sort could we claim human beings possess, stranger?

Athenian Stranger:: There is none. But if one had appeared from somewhere, could the lawgiver have used it in any way to promote courage? We might well carry on a dialogue with him about it as follows: “Come, lawgiver—whether you are the lawgiver for the Cretans or whoever—would you like to be able, first, to test the citizens for courage and cowardice?”

Clinias:: Obviously, every one of them would say he would.

Athenian Stranger:: “Well then, would you prefer a test that was safe, without great risks, or the opposite?”

Clinias:: All would also agree on a test that was safe.

Athenian Stranger:: “And would you use it to drag them into fears and test them in their sufferings, so as to force them to become fearless—encouraging, exhorting, and honoring them, but dishonoring anyone who refused to obey you and become in every respect the type of person you ordered him to be? The man who had performed well and courageously in this gymnastic you would dismiss without penalty, wouldn’t you? And the man who did badly you would penalize? Or would you refuse to use the drug at all, even though you had no other objection to it?”

Clinias:: But why wouldn’t he use it, stranger?

Athenian Stranger:: At any rate, friend, compared to our present gymnastics this gymnastic would certainly be amazingly easy—for one person, for a few, or for as many as one might want to apply it to on each occasion. Then too, if someone went off alone to a deserted place, excusing himself out of a sense of shame at being seen before he was in what he considered good condition, and engaged in gymnastic exercise against fear by merely drinking, instead of performing tens of thousands of other activities, he would be acting in a correct manner. On the other hand, a man would act just as correctly if, trusting in himself on account of the fine preparation given by nature and by training, he did not hesitate to perform such gymnastic exercise in the company of many fellow drinkers, making a display of his capacity to outstrip and overcome the power of the necessary transformation effected by the drink. Thus would he show that because of his virtue he was not made to fall into a single major disgraceful act nor to act like a different person, but that he could go away before taking that last drink, because he was afraid of the weakness all human beings have in the face of the drink.

Clinias:: Yes. For he too would be moderate, stranger—the man who acted in this way.

Athenian Stranger:: Let's speak to the lawgiver again: "Well, lawgiver, it's likely that no god has bestowed such a fear drug on human beings, and we have not devised one for ourselves—I'm not including magicians in the banquet. But what about a drink that induces fearlessness, boldness that is too great, at the wrong time, and toward the wrong things—does one exist or how shall we say?"

Clinias:: "One does," he assert, naming wine.

Athenian Stranger:: Isn't it just the opposite of the one now mentioned? Doesn't it first make a human being who drinks it immediately more cheerful than he was before, and to the degree to which he tastes more, doesn't he become more puffed up with good hopes and an opinion of his own power? Then, finally, doesn't he wind up being filled with complete license of speech, believing himself wise; isn't he filled with freedom and total fearlessness, so that he doesn't hesitate to say or even to do anything? Everyone would agree with us on this description, I think.

Clinias:: How could they not?

Athenian Stranger:: Let's recollect how we asserted that there are two things in our souls that need to be cultivated: on the one hand that we be as bold as possible, and on the other hand the opposite, that we be as fearful as possible.

Clinias:: Which you said belonged to awe, we suppose.

Athenian Stranger:: You two remember in a fine way. But given that courage and fearlessness in the midst of fears should be practiced, one should consider whether the opposite quality in the midst of the opposite things should also be cultivated.

Clinias:: That seems likely, anyway.

Athenian Stranger:: Then it’s likely that those experiences in which we are naturally inclined to be especially rash and bold are the ones in which we should practice becoming as little filled with shamelessness and boldness as possible, and instead be afraid to say or suffer or do anything shameful on each occasion.

Clinias:: That’s likely.

Athenian Stranger:: Aren’t all the experiences where we’re like that these: spirited anger, erotic desire, insolence, lack of learning, love of gain, cowardice, and, in addition, wealth, beauty, strength, and everything which drives a person out of his wits with the intoxication of pleasure? Now is there any one of these that is as inexpensive or comparatively harmless, first for testing and then for practicing, than the test and play associated with wine? What pleasure can we say is more measured, if indulged in with any kind of care? Let’s just consider it. To test a harsh and savage soul from which tens of thousands of injustices come, is it safer to run the risks involved in making contracts or to get together with it at the festival sights of Dionysus? Or take the example of a soul dominated by sexual desires: is it safer to test it by turning over one’s own daughters, sons, and wives, and risk those who are dearest, in order to see the soul’s disposition? One could give ten thousand such examples without ever showing fully how different the method is which observes people through play, and involves no other payoff or penalty. Indeed, in this respect we believe that neither the Cretans nor any other human beings would disagree that this is a decent way of testing one another—one which in cheapness, safety, and speed differs from the other tests.

Clinias:: That, at least, is true.

Athenian Stranger:: This then—the knowledge of the natures and the habits of souls—is one of the things that is of the greatest use for the art whose business it is to care for souls. And we assert (I think) that that art is politics. Or what?

Clinias:: It certainly is.

## Book II.

Athenian Stranger:: In the next place, what probably ought to be investigated is whether the insight into our natures is the only good to be derived from correctly managed wine parties, or whether there is not a great benefit, worthy of much serious consideration. What do we say, then? The argument seems to want to indicate that there is such a great benefit. Let's listen to hear in what sense and how, doing so with attentive minds, lest the argument ensnare us.

Clinias:: Say on.

Athenian Stranger:: I have a desire to recollect again what we say correct education is, in our view. Because it's now my guess that a safeguard for this education is to be found in this institution, when it's nobly directed.

Clinias:: That's a big claim you make!

Athenian Stranger:: Well, I say that the first infantile sensation in children is the sensation of pleasure and pain, and that it is in these that virtue and vice first come into being in the soul; as for prudence, and true opinions that are firmly held, he is a fortunate person to whom it comes even in old age. He who does possess them, and all the good things that go with them, is a perfect human being. Education, I say, is the virtue that first comes into being in children. Pleasure and liking, pain and hatred, become correctly arranged in the souls of those who are not yet able to reason, and then, when the souls do become capable of reasoning, these passions can in consonance with reason affirm that they have been correctly habituated in the appropriate habits. This consonance in its entirety is virtue; that part of virtue which consists in being correctly trained as regards pleasures and pains so as to hate what one should hate from the very beginning until the end, and also to love what one should love—if you separate this off in speech and assert that this is education, you will, in my view, be making a correct assertion.;

Clinias:: Stranger, what you said earlier about education and what you have said now both seem correct to us.

Athenian Stranger:: Fine. Now, this education which consists in correctly trained pleasures and pains tends to slacken in human beings, and in the course of a lifetime becomes corrupted to a great extent. So, taking pity on this suffering that is natural to the human race, the gods have ordained the change of holidays as times of rest from labor. They have given as fellow celebrants the Muses, with their leader Apollo, and Dionysus—in order that these divinities might set humans right again. Thus men are sustained by their holidays in the company of gods.

It is necessary to see whether or not the things the argument is singing to us now are true according to nature. The argument asserts that every young thing, so to speak, is incapable of remaining calm in body or in voice, but always seeks to move and cry: young things leap and jump as if they were dancing with pleasure and playing together, and emit all sorts of cries. The other animals, the argument goes, lack perception of orders and disorders in motions (the orders which have received the names of “rhythm” and “harmony”); we, in contrast, have been given the aforementioned gods as fellow-dancers, and they have given us the pleasant perception of rhythm and harmony. Using this they move us, and lead us in choruses, joining us together with songs and dances; and that is why they bestowed the name “choruses”—from the “joy” [charā] which is natural to these activities.

First, then, do we accept this? Do we proclaim that the first education comes through the Muses and Apollo, or what?

Clinias:: So be it.

Athenian Stranger:: So the uneducated man will in our view be the one untrained in choral performances, and the educated ought to be set down as the one sufficiently trained in choral performances?

Clinias:: But of course.

Athenian Stranger:: Now a chorus is the combination of dance and song taken together as a whole.

Clinias:: Necessarily.

Athenian Stranger:: He who is finely educated will be able then to sing and dance in a fine way.

Clinias:: That's likely.

Athenian Stranger:: Let's see exactly what it is that has just been said.

Clinias:: Which part of what was just said?

Athenian Stranger:: "He sings in a fine way," we declared, "and he dances in a fine way": should we add, "if he also sings fine songs and dances fine dances." or not?

Clinias:: We should add that.

Athenian Stranger:: What about someone who regards as fine the things that are fine and regards as ugly the things that are ugly, and uses them this way? Which version of such a man shall we hold to be better educated in the choral art and in music: the one who is able to give adequate devotion with his body and voice to what is understood to be fine each time, while neither delighting in the fine things nor hating the ignoble; or the one who is not fully able to express correctly with voice and body what he understands, yet feels pleasure and pain correctly—

welcoming what is fine and being disgusted by what is ignoble?

Clinias:: You’re speaking of a vast difference as regards education, stranger.

Athenian Stranger:: Then, if we three know what is fine in song and dance, we will also know who has been correctly educated and who is uneducated. But if we don’t know the former we will never be able to know if, and where, a safeguard exists for education. Isn’t this so?

Clinias:: Yes, that’s so.

Athenian Stranger:: Then the next thing for us to do is to track down, like dogs sniffing out prey, what is fine in posture, tune, song, and dance. If these elude us and get away, our discussion that should come after—about correct education, whether Greek or barbarian—would be in vain.

Clinias:: Yes.

Athenian Stranger:: Well, what should we declare constitutes beauty in posture or tune? Consider this: if a courageous and then a cowardly soul undergo identical and equal sufferings, do the same postures and utterances result?

Clinias:: How could they, when not even the pallor or color is the same?

Athenian Stranger:: What you say is fine, comrade. It should be noted, though, that music includes postures and tunes, since music involves rhythm and harmony; now one can speak of “good rhythm” and “good harmony.” but one cannot correctly apply to either tune or posture and image “good color”—as the chorus teachers, speaking in images, do. On the other hand, with regard to the posture or tune of the coward and the courageous man, it is correct to call what pertains to courageous men “fine,” and what pertains to cowards “ugly.” To avoid our getting involved in a very lengthy discussion of all these things, let's simply let all the postures and tunes that belong to virtue of the soul or of the body (whether they belong to virtue itself or to an image of it) be beautiful, and those belonging to vice be entirely the opposite.

Clinias:: Your proposal is a correct one, and for now let us respond by saying that's the way things are.

Athenian Stranger:: Here's another question: do we all feel a similar joy in every choral performance, or is this far from being the case?

Clinias:: It's not at all the case.

Athenian Stranger:: What shall we say is the reason for our wavering? Shall we say that the beautiful things are not the same for all of us? Or that they are the same but don't seem to be the same? Surely no one will say, at least, that choral performances of vice are ever more beautiful than those of virtue, nor again that he himself delights in the postures appropriate to depravity, while the rest like an opposite Muse. Most people do say, at least, that the criterion for correct music is its power to provide pleasure to the souls. But that is not acceptable, nor is it at all pious to utter such a thing.

The source of our wavering is in all likelihood rather the following—

Clinias:: What?

Athenian Stranger:: Choral performances are imitations of characters, in all sorts of action and fortune, and each brings to bear both his habitual dispositions and his capacity to imitate. Now those whose character is in accord with what is said and sung and in any way performed—because of nature or habit or both—are necessarily delighted by the things, and led to praise them and pronounce them fine. Those, on the other hand, who find that the things go against nature, character, or a certain habituation, are unable to delight in them or to praise them, and must necessarily pronounce them ugly. Then there are some whose nature is correct but whose habituation is opposed, and others whose habituation is correct but whose nature is opposed, and these make pronouncements of praise that are opposed to their feelings of pleasure. They call each performance pleasant, but wicked; in the presence of others whom they think prudent, they are ashamed to move their bodies in such ways and ashamed to sing, because they will show that they treat them as fine things, and take them seriously. Nevertheless, they do delight in them when they're all by themselves.

Clinias:: What you say is very correct.

Athenian Stranger:: Isn't a person who delights in wicked postures or songs harmed in some way, and aren't those who take pleasure in the opposite things benefited in some way?

Clinias:: That's likely, anyway.

Athenian Stranger:: Is it only a matter of likelihood or is it not a necessity that such a person be in the same position as one who comes into contact with the wicked habits of evil human beings and doesn't hate them, but instead accepts them with delight—blaming them only in a playful way, on those occasions when he sees as in a dream their vileness? Surely it is necessary that one who takes delight in things becomes then similar to the things he takes delight in, even when he is ashamed to praise them; and what greater good or evil could we declare there is for us than such completely necessary assimilation?

Clinias:: I believe there is none greater.

Athenian Stranger:: Where there are or will some day be fine laws laid down regarding the education and play which concerns the Muses, do we suppose that poets will be allowed to teach the children of those who live under good laws, and the young men in the choruses, whatever the poet himself finds pleasing in the rhythm or tune or words of poetry, so that he makes them similar to whatever he happens to be as regards virtue or wickedness?

Clinias:: That at least wouldn't make sense. How could it?

Athenian Stranger:: Yet this is just what can be done nowadays, at any rate, in all cities, so to speak, except Egypt.

Clinias:: What sort of legislation on this matter do you claim they have in Egypt?

Athenian Stranger:: It's astounding to hear. Long ago, as is likely, this argument which we are now enunciating was known to them—the argument which says that it's necessary for the young in the cities to practice fine postures and fine songs. They made a list of these, indicating which they were and what kind they were, and published it in their temples. Painters and others who! represented postures and that sort of thing were not allowed to make innovations or think up things different from the ancestral. And they are still not allowed to—not in these things or in music altogether. If you look into this you will find that for ten thousand years—not "so to speak" but really ten thousand years—the paintings and sculptures have been in no way; more beautiful or more ugly than those that are being made, with the very same skill, by their craftsmen now.

Clinias:: What you say is astounding!

Athenian Stranger:: An extreme in the lawgiving and political art. There are other features in their law that you would find pretty poor. But this much about the music is true and worthy of thought: it was possible to be firm about such things, and mandate in law songs which are by nature correct. This would have to be the work of a god or someone divine—even as they claim there that the songs which have been preserved for this long time were the poetry of Isis. So, as I said, if someone could grasp in any way what is correct in these things, he ought boldly to order it in law. The search, dictated by pleasure and pain, for a music that is continually new brands the sanctified chorus “old-fashioned”; but this will not have a very corrupting effect on a chorus that has been made sacred. In that land, at any rate, it has probably had no corrupting power; entirely the contrary.

Clinias:: So it appears from what you say now.

Athenian Stranger:: So won’t we take heart and elaborate the correct use of music and the correct play associated with the choric art, in something like the following way? Don’t we feel delight when we think we are doing well? Isn’t this so?

Clinias:: Yes, that is so.

Athenian Stranger:: And when we are in such a mood, a mood of delight, we aren’t able to remain still?

Clinias:: Such is the case.

Athenian Stranger:: Isn’t it also the case that while our young men are ready by themselves to perform in the chorus, we elders hold that it is fitting for us to look on at their performance, delighting in their play and festivity? Isn’t it because we are now no longer very lively, and yet miss and welcome liveliness, that we establish contests for those who can as much as possible restore us, through memory, to youthfulness?

Clinias:: Very true.

Athenian Stranger:: Then do we think that the account the many give about celebrators of holidays is completely vacuous, when they say that the person who as much as possible gives us joy and delight is the one who should be considered wisest and judged victorious? For since we give ourselves over to play on such occasions, the one who makes the most people enjoy themselves the most should be the one who is most honored and, as I just now said, given the victory prizes. Isn't this correctly spoken, and wouldn't things be done correctly, if they were done in this way?

Clinias:: Maybe.

Athenian Stranger:: But let's not judge such a thing quickly, blessed one. Instead, let's analyze it part by part and consider it in something like the following way: suppose someone once set up a contest simply—without specifying whether it was for gymnastic or for music or for horseback riding. Suppose he gathered together everyone in the city and proclaimed a victory prize, open to anyone who wanted to compete regarding pleasure alone, the prize to go to that person who had pleased the spectators the most. No restrictions on the means; the winner to be simply he who had done this the most and who was judged to be the most pleasant of all the contestants. What do we think would ever result from this proclamation?

Clinias:: In which respect do you mean?

Athenian Stranger:: Well, I suppose it's likely that one, like Homer, would present a rhapsody, and another a recital on the kithara, and another a tragedy, and another, again, a comedy; and it wouldn't be surprising if someone thought he could best win by presenting puppets. If performers such as these came forward and tens of thousands of others as well, can we say which justly wins?

Clinias:: Your question is strange. Who could ever answer you as if he knew, before he had heard and had himself been part of the audience for each contestant?

Athenian Stranger:: What then? Do you want me to give the two of you the strange reply?

Clinias:: Why not?

Athenian Stranger:: If the very little children are the judges they'll choose the man who presents puppets. Isn't that so?

Clinias:: How could they not?

Athenian Stranger:: If the bigger boys, the one who presents the comedies. Tragedy will be the choice of the educated among the women, the younger men, and probably almost the majority of the whole.

Clinias:: Most probably.

Athenian Stranger:: But the rhapsode, who gave a beautiful recital of the Iliad or the Odyssey or something from Hesiod, would probably please us old men listeners most and be proclaimed the winner by far. Now who would have correctly been winner? That's the next question, isn't it?

Clinias:: Yes.

Athenian Stranger:: Clearly, for me at least and the two of you, it's necessary to declare that the ones chosen by men of our age are the ones who are the correct winners. For our kind of habituation seems to be the best by far of the sorts of habituation nowadays found in all the cities and everywhere.

Clinias:: But of course.

Athenian Stranger:: For my part I go along with the many to this extent, at least, that music must be judged by pleasure, but not by the pleasure of any chance listeners. Almost the finest Muse is she who pleases the best men and the adequately educated men, and especially finest is she who pleases the one man who is distinguished in virtue and education.

The reason why we assert that the judges of these matters should have virtue is that they must partake of the rest of prudence and especially of courage. The true judge should not learn from the audience how to judge, swept away by the noise of the many and his own lack of education. Nor, again, I should lack of manliness and cowardice make him contradict what he knows, and pronounce a soft-spirited judgment, lying through the very same lips that just finished swearing an oath to gods. If justice prevails, it's not as a student but as a teacher that the judge will sit before the audience, and he will oppose himself to those who provide the spectators with pleasure in a way that is not appropriate or correct. That's the way it used to be, under the ancient Greek law—just the opposite of what the law commands today in Sicily and Italy. There it has given way to the majority of the spectators, and decides the winner by a show of hands. Thus it has corrupted the poets themselves, who now create with- a view to the lowly pleasure of the judges; as a result, the spectators educate the poets! In addition, it has corrupted the pleasures of the theater itself: an audience should be continually hearing about characters better than their own, and hence continually experiencing better pleasure; but now they make it so that entirely the opposite takes place among them.

What is it that the things now gone through again in the argument wish to indicate to us? Consider if it's the following—

Clinias:: What?

Athenian Stranger:: It seems to me that the argument has come around again for the third or fourth time to the same thing, namely, that education is the drawing and pulling of children toward the argument that is said to be correct by the law and is also believed, on account of experience, to be really correct by those who are most decent and oldest. So, to prevent the child's soul from becoming habituated to feeling delight and pain in a way opposed to the law and to those who are persuaded by the law, to make the child's soul follow and feel the same joys and pains as an old man, the things we call songs, but which are really incantations for souls, have now come into being. These have as their serious goal the consonance we are speaking about. But since the souls of the young cannot sustain seriousness, these incantations are called "games" and "songs," and I are treated as such. It's just like when people are sick and their bodies are weak; those in charge try to give them the needed nourishment mixed with other pleasant tasting foods and drinks, and offer them the bad things mixed with unpleasant stuff, so that they will welcome one and become correctly habituated in hating the other. This is the same thing the correct lawgiver will persuade—or, if he cannot persuade, compel—the poet to do in his beautiful and praiseworthy phrases: to create poetry correctly by depicting in rhythms and harmonies the postures and songs of moderate, courageous, and wholly good men.

Clinias:: In the name of Zeus, stranger! Do they seem to you to create poetry this way nowadays, in other cities? As far as I observe, I know of no place except among us and the Lacedaimonians where things are done as you now say. There is continual innovation in dances and in all the rest of music, and the changes are not ordained by the laws but by certain disorderly pleasures, which, far from remaining the same and being concerned with the same things (as in the Egyptian system you have interpreted) never stay the same.

Athenian Stranger:: Excellent, Kleinias! If I seemed to you to say that the things you refer to exist now, I wouldn't be surprised if I did so by not expressing clearly what I was thinking. What I was describing was what I wish would come to pass in regard to music, but perhaps I did speak in such a way as to seem to you to say that this is the way things are. For it is not at all pleasant to rail at incurable practices and errors that are far developed, though sometimes it is necessary.

But come, since you also are in agreement with these standards: are you claiming that they are followed among your people and among his people more than among the rest of the Greeks?

Clinias:: Why not?

Athenian Stranger:: And what if the rest were to adopt them? Would we then claim things were in a finer condition than they are now?

Clinias:: Presumably it would be a big change if things were done as they are among his people and my people, and also as you just now said things should be done.

Athenian Stranger:: Look, let's come to an agreement regarding the matters under discussion now. Among your peoples, in all education and music is anything said other than the following? You compel the poets to say that the good man, being moderate and just, is happy and blessed, whether he be great and strong or small and weak, whether he be rich or not. Even if someone is richer “than Cinyras or Midas,” if he is unjust, he is a wretch and lives a life of misery. And “I would not memorialize,” declares your poet—if, that is, he speaks correctly—”nor set down in speech a man” who without justice performed and acquired all the things said to be noble; not even if such a man were to “stand near and assail the enemy”; if he were unjust, I would not want such a man to remain bold after “seeing bloody death,” or win a victory in running against “the Northwind of Thrace,” or ever to obtain any of the things said to be good. For the things said to be good by the many are not correctly so described. It is said that the best thing is health, and second is beauty, and third is wealth—and then there are said to be ten thousand other goods: sharp sight, hearing, and good perception of all the objects of the senses; and then, by becoming a tyrant, to do whatever one desires; and finally the perfection of complete blessedness, which is to possess all these things and then to become immortal, as quickly as possible. But you two and I, presumably, speak as follows: we say that these things, beginning with health, are all very good when possessed by just and pious men, but all very bad when possessed by unjust men. To see, to hear, to perceive, and, in general, to live as an immortal for the whole of time, while possessing all the things said to be good except for justice and the whole of virtue, is the greatest of evil. The evil gets less as the time such a man continues to live gets shorter.

Now you two are going to persuade and compel your poets to say just the things I’ve been saying, I suppose; in addition, they must furnish rhythms and harmonies that go along with this, and thus educate your young. Or isn’t this so? See what you think. To speak plainly, I say that the things said to be “bad” are good for unjust men and bad for just men, while the good things are really good for good men but bad for bad men.

Well, I ask again, are we in consonance, I and you two, or what?

Clinias:: Well, in some respects we appear to me, at least, to be, but in other respects not at all.

Athenian Stranger:: Given a man who possesses in a lasting way health, wealth, and tyrannical power—and for you two, I add exceptional strength and courage along with immortality—but who has nothing else of the things said to be bad, and who has within himself only injustice and insolence—given a man who lives such an existence, perhaps I don't persuade you when I say he is unhappy and indeed manifestly miserable?

Clinias:: That is very true, you don't.

Athenian Stranger:: Well, what should we say after this? Doesn't it seem to you two that a man who is courageous, strong, beautiful, and rich, and who does whatever he might desire throughout his whole life will, if he should also be unjust and insolent, necessarily live in a shameful way? This perhaps you would agree to, that he would live in a shameful way, at any rate?

Clinias:: By all means.

Athenian Stranger:: What then? Also in a bad way?

Clinias:: No, there is no longer the same agreement.

Athenian Stranger:: What then? That he would live also in an unpleasant way and in a way that was not to his benefit?

Clinias:: Now how could we agree to these things in addition?

Athenian Stranger:: How? It would be likely, my friends, if some god were to give us consonance—for now, at any rate, we sing pretty much at variance with one another. For to me, dear Kleinias, these things appear more necessary than the proposition that Crete is manifestly an island; and if I were a legislator I would try to compel the poets and everyone in the city to speak in this way: I would lay down almost the gravest penalty for anyone in the territory who should say that there are some human beings who were once wicked but live in a pleasant way, or who said that some things are profitable and gainful while others are more just. I would persuade my citizens to say things that are different from the things that are now said, it appears, by Cretans and Lacedaimonians—and by the rest of mankind too, doubtless.

Come now, best of men, in the name of Zeus and Apollo! Suppose we could question these very gods who were your lawgivers and ask: “Then is the most just way of life the most pleasant? Or are there two ways of life, of which the most pleasant happens to be one, and the most just another?” If they were to declare that there are two, we would probably ask them again, if we were questioning correctly: “Then which men must be called the happier—those who live the most just life or those who live the most pleasant?” If they were to reply, “those who live the most pleasant,” their answer would be a strange one.

But I don’t want such a thing to be put by me in the mouth of the gods; rather, in the mouths of fathers and lawgivers. Let the questions I asked just now be asked of a father and lawgiver, and let him say that the one who lives the most pleasant life is most blessed. Then, after these things I at least would declare: “O father, didn’t you want me to live as happily as possible? Yet you never ceased bidding me to live always as justly as possible.” Now the lawgiver or father who laid things down in this way would appear strange, I think, and unable to speak in consonance with himself. And if, on the other hand, he had proclaimed the most just life to be the happiest, I think everyone who heard him would ask whatever this was that the law was praising, what good and noble thing, superior to pleasure, was possessed by this life. For what indeed would be this good, separate from pleasure, that accrues to the just man?

Come now, is fame, and the praise that comes from human beings and gods, something good and noble, but unpleasant? Is ignominy the opposite? “Far from it, dear lawgiver,” we will declare. But is it unpleasant, though good or noble, neither to do someone injustice nor to be done an injustice by someone? Are the opposites pleasant, though shameful and bad?

Clinias:: How could they be?

Athenian Stranger:: So then the argument which does not split the pleasant from the just, and the good from the noble, is (if nothing else) persuasive in making some willing to live the pious and just life. And this means that for a lawgiver, at least, the most shameful and most opposed of arguments is the one that fails to declare that these things are so. For no one would voluntarily be willing to be persuaded to do that which does not bring him more joy than pain.

Looking at things from a distance produces a dizzying obscurity in everyone, so to speak, and especially in children; but our lawgiver will do the opposite to opinion by taking away the obscurity, and will somehow or other persuade, with habits and praises and arguments, that the just and unjust things are shadow-figures. From the perspective of the unjust and evil man himself, the unjust things appear pleasant, the opposite of the way they appear to the just man, while the just things appear very unpleasant. But from the perspective of the just everything appears entirely the opposite.

Clinias:: So it appears.

Athenian Stranger:: Which shall we claim is the better authority for judging the truth: that of the worse soul or that of the better?

Clinias:: Necessarily, I suppose, that of the better.

Athenian Stranger:: Necessarily then, the unjust way of life is not only more shameful and more wicked, but is also truly more unpleasant than the just and pious way of life.

Clinias:: That's pretty much the way it is according to the argument being presented now, at any rate, my friends.

Athenian Stranger:: Even if what the argument has now established were not the case, could a lawgiver of any worth ever tell a lie more profitable than this (if, that is, he ever has the daring to lie to the young for the sake of a good cause), or more effective in making everybody do all the just things willingly, and not out of compulsion?

Clinias:: Truth is a noble and a lasting thing, stranger; but it is likely that it's not easy to persuade people of it.

Athenian Stranger:: So be it. Now didn't it prove easy to persuade people of that myth told by the Sidonian, though it was incredible, and doesn't the same hold for tens of thousands of other myths?

Clinias:: What myths?

Athenian Stranger:: About the teeth that were once sown in the ground, from which grew heavily-armed men. Indeed, this myth is a great example for the lawgiver of how it is possible to persuade the souls of the young of just about anything, if one tries. It follows from this that the lawgiver should seek only the convictions which would do the greatest good for the city, and he should discover every device of any sort that will tend to make the whole community speak about these things with one and the same voice, as much as possible, at every moment throughout the whole of life, in songs and myths and arguments.

Now if anyone thinks things are otherwise, let him not hesitate to carry on the controversy through argument.

Clinias:: It seems to me that with regard to what you've now said, at least, neither of us would ever be able to dispute you.

Athenian Stranger:: What follows after this, then, would belong to me. So I assert that the choruses, three in number, must all sing incantations for the tender young souls of the children, repeating to them all the noble things we have been saying and will say later on, the sum of which is this: when we claim that the gods say that the most pleasant life and the best life are the same, we will be saying what is most true, and also persuading those who must be persuaded, more effectively than if we spoke in some other way.

Clinias:: What you say must be agreed to.

Athenian Stranger:: First, it would be most correct for the children's chorus dedicated to the Muses to lead off, singing such things in complete seriousness before the whole city. Second should come the chorus for those up to thirty years of age, invoking Paean as witness to the truth of what is said and praying that he be gracious and make the young believers. Then it is necessary that a third group sing, the men between the ages of thirty and sixty; the ones who come after these, since they aren't able anymore to bear the toil of singing, should use their divinely inspired voices to present mythical speeches about the same kinds of characters.

Clinias:: Who do you say is to make up this third chorus, stranger? We didn’t follow very clearly what you intended to explain about them.

Athenian Stranger:: Yet most of the arguments that have been uttered up until now have been pretty much for the sake of these men!

Clinias:: We haven’t understood; try to explain more clearly.

Athenian Stranger:: We said, if we remember, at the beginning of our discussion, that the nature of all young things is fiery, and unable to remain calm either, in body or in voice, but is always crying and leaping in a disorderly way. We said that none of the other animals attains perception of order in either of these, but that human nature alone has this. The name for order in movement is “rhythm,” and for order in voice, the mixture of sharp and deep, the name is “harmony”; the two things together are called “a chorus.” The gods, we asserted, have taken pity on us and given us as fellow members or leaders of our choruses Apollo and the Muses; then, if we remember, we spoke of a third, Dionysus.

Clinias:: How could we not remember?

Athenian Stranger:: Now the chorus of Apollo, and that of the Muses have been described; the third and last, the chorus of Dionysus, must necessarily be described.

Clinias:: What? Explain. For it sounds very strange, at first hearing, a Dionysian chorus of elders—if, that is, men over thirty or even fifty, men as old as sixty, are to dance in his honor.

Athenian Stranger:: What you say is certainly very true. This does require an argument, I think, showing how this would be reasonable.

Clinias:: But of course.

Athenian Stranger:: So then, are we in agreement on what went before?

Clinias:: In what respect?

Athenian Stranger:: That every man and child, free and slave, female and male—indeed, the whole city—must never cease singing, as an incantation to itself, these things we've described, which must in one way or another be continually changing, presenting variety in every way, so that the singers will take unsatiated pleasure in their hymns.

Clinias:: How could it not be agreed that this is how things must be done?

Athenian Stranger:: Where would our best part of the city—the part that is most persuasive of those in the city because of its age and also its prudence—do its singing of the most beautiful things, so as to effect the most good things? Or will we foolishly neglect this part which would wield authority over the most beautiful and beneficial songs?

Clinias:: But it's impossible to neglect them, at least according to what's being said now.

Athenian Stranger:: So what would be fitting for this part? See if it's the following—

Clinias:: Which?

Athenian Stranger:: Everyone as he gets more elderly is presumably full of reluctance to sing songs; he gets less delight from doing this and would become rather ashamed if compelled to do it. The more elderly and more moderate he becomes, the more this increases. Isn't that so?

Clinias:: That is so.

Athenian Stranger:: Then he would be still more ashamed to sing at the theater, standing up before all sorts of human beings. Especially if such men were compelled to sing under the same conditions as the choruses that train their voices for competitions, lean and without having eaten, they would presumably do so entirely without pleasure, ashamed, and without any eagerness' of spirit.

Clinias:: What you say would be inevitable.

Athenian Stranger:: How then will we encourage them so as to make their spirits eager to sing the songs? Won't we legislate as follows? First, children until the age. of eighteen are not to taste wine at all. We will teach that one shouldn't pour fire into the fire that is already in the body and the soul until they've taken up their tasks, and that they must be on their guard against the madness that is habitual in youth. After this, up until the age of thirty it will be permitted to taste wine with due measure; but drunkenness and copious wine drinking will be totally forbidden to the young man. As a man approaches forty he is to share in the enjoyment of the common meals, invoking the presence of the other gods, and especially Dionysus, at this mystery-rite and play of older men, which he has bestowed on human beings as a drug that heals the austerity of old age. Its effect is that we are rejuvenated, and the soul, by forgetting its despondency of spirit, has its disposition turned from harder to softer, so that it becomes more malleable, like iron when it is plunged into fire.

First, then, if each man were so disposed, wouldn't he become more eager in spirit and less ashamed to sing and (as we've often put it) to chant incantations—not before many, but only before a measured number; and not in the presence of strangers, but only among his own intimates?

Clinias:: Very much so!

Athenian Stranger:: So this method wouldn’t be entirely unseemly as a device for inducing them to partake of our singing.

Clinias:: Not at all.

Athenian Stranger:: In what sort of voice will the men sing? Or isn’t it obvious that they must have some Muse that is fitting for them?

Clinias:: What else?

Athenian Stranger:: So which would be fitting for divine men? Would it be that of the choruses?

Clinias:: My people at any rate, stranger, and this fellow’s as well, wouldn’t be able to sing any song other than the ones we learned to sing when we were habituated in the choruses.

Athenian Stranger:: Of course not. For you have really never attained to the most beautiful song. Your regime is that of an armed camp and not of men settled in cities. You keep your young in a flock, like a bunch of colts grazing in a herd. None of you takes his own youngster apart, drawing him, all wild and complaining, away from his fellow grazers. None of you gives him a private groom and educates him by currying and soothing him, giving him all that is appropriate for child rearing. If you did, he would become not only a good soldier but someone capable of managing a city and towns, someone who, as we said at the beginning, was more of a warrior than those warriors in Tyrtaeus. He would always and everywhere honor the possession of courage as the fourth, not the first, part of virtue, for private individuals and the whole city.

Clinias:: Somehow or other, stranger, you are once again belittling our lawgivers.

Athenian Stranger:: No!—but if I am, I'm not doing so intentionally, my good man. Let's follow wherever the argument carries us, if you will.

Now if we possess a Muse that is more beautiful than that of the choruses and that in the common theaters, let's try to give her to these men whom we assert are ashamed of that one and seek to share in this" one that is most beautiful.

Clinias:: By all means.

Athenian Stranger:: First, then, isn't it the case that in all things which are accompanied by some charm, the most important or serious feature is either this charm itself, alone, pr a certain correctness, or, third, the benefit? I mean, for example, that food, drink, and nourishment in general are accompanied by a charm, which we would call pleasure. As for the correctness and the benefit, the healthiness which we say is in each meal is also the most correct aspect.

Clinias:: Yes indeed.

Athenian Stranger:: Then again, accompanying the experience of learning there is something of charm, the pleasure; but the correctness and the benefit, the goodness and the beauty, come from its truth.

Clinias:: That is so.

Athenian Stranger:: What about the image-making arts which produce resemblances? Isn't it the case that when these arts produce this, the accompanying pleasure in them—if there is pleasure—-would be very justly pronounced "charm"?

Clinias:: Yes.

Athenian Stranger:: Presumably the correctness in such things is, generally speaking, produced primarily by equality in quantity and quality, not by pleasure.

Clinias:: Nobly put.

Athenian Stranger:: So then pleasure would be a correct criterion only for something which wasn't produced to provide some benefit, or truth, or similarity, nor of course harm,, but was produced only for the sake of what accompanies these, the charm. And when it is accompanied by none of the other things, it would be very noble for someone to call the charm "pleasure."

Clinias:: You are speaking now of harmless pleasure only.

Athenian Stranger:: Yes, and this is what I call "play"—when something doesn't do any harm or any benefit worthy of serious consideration.

Clinias:: What you are saying is very true.

Athenian Stranger:: Well then, wouldn't we assert that it follows from the things that have just been said that pleasure and untrue opinion are the least appropriate criteria for judging any imitation—or, for that matter, any equality? Surely it's not just because of somebody's opinion, or because somebody doesn't feel charmed, that the equal would be equal or the proportionate wholly proportionate; wouldn't it be because of the truth, most of all, and least of all anything else?

Athenian Stranger:: Entirely so.

Athenian Stranger:: Now don't we assert that all music, at least, is imagery and imitation?

Clinias:: But of course.

Athenian Stranger:: So the argument that is least acceptable is when someone asserts that music should be judged by pleasure. If there should exist somewhere such a music, it should be sought as the least serious; what should be sought as serious is music that contains a resemblance to the imitation of the beautiful.

Clinias:: Very true.

Athenian Stranger:: And these who seek the most beautiful song and Muse should seek, it is likely, not she who is pleasant, but she who is correct. For correctness of imitation, we have asserted, exists when there is complete reproduction both in quantity and quality of the thing imitated.

Clinias:: How could it be otherwise?

Athenian Stranger:: And in the case of music everyone would agree to this at least, that all its creation is imitation and image-making; wouldn't everybody—poets, audience, actors—agree to this at least?

Clinias:: Very much so.

Athenian Stranger:: Then it's likely that in the case of each creation one must know what it is, in order to avoid making mistakes about it. If one doesn't know the being—what is intended and what the image is really of—one will scarcely know whether it is correct ‘ in its intention or mistaken.

Clinias:: Scarcely. How could it be otherwise?

Athenian Stranger:: He who does not know what is done correctly would never be able to know what is done well or badly, would he? But I have not put this very clearly. Perhaps it would be clearer if put this way—

Clinias:: How?

Athenian Stranger:: There are of course myriad images which are visible to our eye.

Clinias:: Yes.

Athenian Stranger:: What then, if someone doesn't know what each of the bodies of the things imitated is? Would he ever know what is correctly executed in them? What I mean is something like this: doesn't he have to know whether the imitation captures the number and the arrangement of each of the parts, how many there are and how they fit next to one another in the appropriate order, and also the colors and shapes, or whether all these things have been put together in a confused way? Do you think someone can ever know these things if he is completely ignorant of what the living thing is that has been imitated?

Clinias:: How could he?

Athenian Stranger:: What if we were to know that the thing that has Been painted or sculpted is a human being, and that all his own parts, colors, and shapes have been captured by the art? Does it follow necessarily that whoever knows about these things also readily knows whether the work is beautiful or just where it is deficient in beauty?

Clinias:: That would mean, stranger, that all of us, so to speak, know what is beautiful in any paintings of living things.

Athenian Stranger:: What you say is very correct. Isn't it the case, then, that with regard to each image, in painting and in music and in all the rest, the person who is going to be a prudent judge must have three kinds of knowledge? He must know first what the thing is, and then know how correctly, and then—the third thing—how well, any of the images of it in words, tunes, and rhythms are produced.

Clinias:: That's likely, anyway.

Athenian Stranger:: Now we mustn't fail to indicate the way in which music presents a difficulty. Since people sing on about music more than about the other sorts of images, music requires the most careful treatment of all the images. For if someone makes a mistake in regard to music, he becomes well disposed toward wicked characters and he suffers the greatest harm. Yet it is very difficult to perceive that one has made a mistake, because the poets are so inferior, as poets, to the Muses themselves. The latter would never make a mistake like setting a man's words to a woman's color and tune, or like harmonizing the tune and postures of free men with the rhythms of slaves and men who are not free, or, again, giving to free rhythms and postures they've constructed a tune or speech that contradicts the rhythms.) Nor, again, would they mix together the sounds of beasts, humans, instruments, and every sort of noise, pretending to imitate some one thing. But the human poets do indeed weave and jumble together such things, creating a senseless mishmash such as would be laughable to the humans who, in the words of Orpheus, "are at the age when pleasure blooms." for they see that all these are jumbled concoctions, and moreover, that the poets are guilty of separating rhythm and postures from melodies—that they write bare words in meter without any accompaniment, and create melody and rhythm without words, to be played on kithara or aulos all alone, and thus make it very difficult to know what is intended and which of the worthwhile imitations are being imitated by this rhythm and harmony presented without words. But all those creations which depend on speed, dexterity, and beast-like cries, which lead to the employment of aulos or kithara without dance and song, must be considered completely uncouth. The use of aulos or kithara all alone must be regarded as unmusical virtuosity.

Enough said about such things. Our task, after all, is to consider what use our thirty-year-olds and men over fifty should make of the Muses, not what use they should not make. Now from what has been said our argument seems to me to be indicating the following: those fifty-year-olds for whom the singing is appropriate must have an education superior to that given by the chorus Muse. For they must necessarily be sensitive themselves to and knowledgeable about rhythms and harmoniae. Otherwise how will any of them know what is correct in melodies—whether a given melody is or is not suitable for the Dorian and whether or not the poet has set the melody to a correct rhythm?

Clinias:: Obviously, they won’t know at all.

Athenian Stranger:: It’s laughable that the great mob considers itself capable of knowing what is good harmony and good rhythm, and what is not, as many of them as have been drilled to sing to an aulos and dance in rhythm; they don’t realize that they practice these things without understanding each of them. The fact remains, every melody when accompanied by the appropriate things is presumably correct, and when accompanied by inappropriate things erroneous.

Clinias:: Most necessarily.

Athenian Stranger:: What then? Will someone who doesn’t know this ever know what we’re speaking of—that is, whether the melody has been performed correctly?

Clinias:: How could he possibly?

Athenian Stranger:: Once again now, it seems, we have discovered that our singers, whom we have now invited and in a way compelled to sing willingly, must, almost of necessity, be educated to this point: each of them must be able to follow the steps of the rhythms and the notes of the melodies, so that by keeping an eye on the harmoniae and rhythms, they may choose what is appropriate, what is fitting for men of their age and condition to sing; then they will sing in this way what is chosen, and by singing, they will themselves enjoy harmless pleasures at the moment and will lead the younger men to take the proper enjoyment in worthy characters.

Now in becoming educated to this extent, they would handle an education which is more exacting than both the education of the majority and the education of the poets themselves. For there is no necessity that a poet know the third thing—that is, whether the imitation is noble or ignoble; but it is almost a necessity that the poet know about the harmonia and rhythm. The former, however, must know all three things, in order to choose which music is most noble as well as which is second. Otherwise the young will never hear an adequate incantation on behalf of virtue.

The argument has done its best to present what it wished to demonstrate in the beginning, namely, that it is noble to speak out in favor of the Dionysian chorus; let us consider then whether this is the case.

Presumably, such a meeting will always become, of necessity, more boisterous as more drinking goes on—from the beginning we laid this down as a necessary hypothesis regarding the things that are taking place now.

Clinias:: Necessarily.

Athenian Stranger:: Everyone becomes lighter than he really is, rejoices, becomes filled with license of speech, and fails to listen to his neighbors; each considers himself capable of ruling the others as well as himself.

Clinias:: How could it be otherwise?

Athenian Stranger:: Didn't we assert that when these things come to pass, the souls of the drinkers, like some iron, become fiery, softened, and youthful, so that they can easily be led—as they were when they were young—by someone who possesses the ability and the knowledge required to educate and mold souls? Didn't we say that the one who did the molding is the same as he who molded them earlier, the good lawgiver, whose laws must be fellow drinkers at the banquet? They must be able to make whoever becomes sanguine, bold, and more shameless than he should be, whoever refuses to take his orderly turn in being silent and in speaking, in drinking and in music, willing to act just the opposite. When ignoble boldness appears, these laws will be able to send in as a combatant the noblest sort of fear accompanied by justice, the divine fear to which we gave the name “awe” and “shame.”

Clinias:: So we did.

Athenian Stranger:: And as guardians of these laws, and fellow craftsmen, we will appoint steady and sober men as generals to command those who are unsober. Without them, it would be more dangerous to fight against the effects of drunkenness than it is to fight against enemies in war when one’s commanders are unsteady. Anyone who is incapable of willing obedience to these and to the Dionysian leaders (who will be men over sixty years of age) will bear shame equal to or surpassing that of the man who is disobedient to Ares’s commanders.

Clinias:: Correctly spoken.

Athenian Stranger:: Suppose, then, such drunkenness, and such play, were to be instituted; suppose the fellow drinkers were to carry on all their intercourse in accordance with the laws, obeying whenever the sober men gave orders to the unsober: wouldn’t those who drank together benefit? Instead of becoming enemies as happens now, wouldn’t they part from one another closer friends than they had been before?

Clinias:: Correct—if, that is, it were to take place as you now say.

Athenian Stranger:: Let us not then simply blame any more the gift of Dionysus, as if it were evil and unacceptable in a city. Indeed, someone might say still more -on its behalf, but one must be wary of speaking in the presence of the many about the greatest good it brings;

human beings misinterpret it, and don't understand what is said.

Clinias:: What are you referring to?

Athenian Stranger:: There is an argument and oracle spread about somehow, telling how this god had his soul deprived of its wits through the agency of his stepmother Hera. In revenge, it is said, he inflicts Bacchic frenzies with all their mad choruses; and this is the cause of the gift of wine. I'll leave it to those who think it's safe to say such things about gods to say them; but this much I do know: every living being, to the degree to which it is appropriate for it to possess intelligence when fully developed, to this same degree it lacks intelligence when it first is born. During the time in which it lacks the prudence that is proper to it, every being is completely mad and cries out in a disorderly way; as soon as it can stand by itself, it jumps in a disorderly way. Let us recollect that we asserted that these motions and cries were the source of music and gymnastic.

Clinias:: We remember; how could we not?

Athenian Stranger:: We also asserted that this source gave us humans the perception of rhythm and harmony, and that Apollo, the Muses, and Dionysus are the gods responsible?

Clinias:: But of course.

Athenian Stranger:: The argument put forward by the others seems to claim that wine was given to human beings out of revenge and was intended to drive us mad; the argument we are putting forth, in contrast, claims that it is a medicine given with just the opposite intention—to put awe in the soul and health as well as strength in the body.

Clinias:: You have recalled the argument in a very fine way, stranger.

Athenian Stranger:: And half of the discussion about the choral art has been completed. Shall we complete the other half in whatever way may seem well, or shall we skip it?

Clinias:: What are you talking about, and how are you making this division?

Athenian Stranger:: Presumably the choral art as a whole is for us the same as education as a whole, and -the vocal aspect of this is rhythms and harmoniae.

Clinias:: Yes.

Athenian Stranger:: Now the aspect that pertains to bodily movement has rhythm, which is shared by the movement of the voice, and posture, which is peculiar to it alone; while peculiar to the movement of the voice is melody.

Clinias:: Very true.

Athenian Stranger:: The vocal aspect, reaching to the soul, we regarded as education in virtue and we named it—how I don't know—"music." And correctly so.

Athenian Stranger:: Now with regard to the bodily aspect, which we referred to as "dance" in the case of persons at play, if this sort of movement becomes effective in instilling the virtue of the body we would give the name "gymnastic" to the art of training involved in the process.

Clinias:: That is very correct.

Athenian Stranger:: With regard to music, we said a moment ago—and let it be said again now—that almost half of the choral art has been gone through and completed; shall we talk about the other half, or what shall we do, and how?

Clinias:: Best of men, you are carrying on a dialogue with Cretans and Lacedaimonians, and we have gone through music but have omitted to speak of gymnastic:

now how do you think either of us is going to answer you this question?

Athenian Stranger:: I at least would assert that you have with your question given a pretty clear answer; I understand your present question to be an answer, as I say, and in fact a command to complete the discussion of gymnastic.

Clinias:: You have understood very well: so do it.

Athenian Stranger:: It must be done; of course, it's not very difficult to talk to you about what you both know. You have much more experience in this art than you had in the other.

Clinias:: What you say is pretty much true.

Athenian Stranger:: Well, the source of this play is once again the fact that every living being is by nature accustomed to jumping, and that humankind, as we asserted, obtained a perception of rhythm and thus engendered and gave birth to dance. When song recalled and awakened rhythm, the two in common gave birth to the chorus and to play.

Clinias:: Very true.

Athenian Stranger:: Now the one, as we said, we've already gone over; next we will try to go through the other.

Clinias:: Yes indeed.

Athenian Stranger:: First, though, if it's all right with you two, let's put the capstone on our discussion of the use of drunkenness.

Clinias:: What capstone and what sort do you mean?

Athenian Stranger:: If a city will consider the practice that has now been discussed as something serious, and will make use of it, in conformity with laws and order, for the sake of moderation, and will not refrain from other pleasures but will arrange them with a view to mastering them according to the same argument, then all these things should be employed, in this manner.

On the other hand, if this is treated as something playful, if anyone who wishes will be allowed to drink whenever he wishes, with whomever he wishes, along with all sorts of other similar practices, I would not vote for the use of drunkenness at any time by this city or this man. Indeed, I would go beyond the Cretan and the Lacedaimonian usage, and advocate the Carthaginian law which forbids anyone to taste this drink while out on campaign and requires that only water be drunk for all that time. I would add to that law, and forbid drinking within the city too, among female and male slaves, and among magistrates during the year in which they serve; pilots and judges would not be allowed to taste wine at all while they were performing their services, and the same would apply to anyone who was about to give advice in an important council meeting. Moreover, no one would be allowed to drink at all during the day except for purposes of physical training or illness, nor at night would any man or woman who was intending to create children. And someone might list many other circumstances in which those who possess intelligence and a correct law should not drink wine.

So according to this argument no city would need many vines, and while the other farm products and the diet as a whole would be regulated, the wine production would be almost the most measured and modest of all. Let this, strangers, if you agree, be our capstone to the argument about wine.

Clinias:: Beautifully spoken, and we agree.

## Book III.

Athenian Stranger:: So then that’s how these things should be done. But what shall we assert was the original source of the political regime? Wouldn’t one see it in the easiest and finest way by looking from this viewpoint …?

Clinias:: From which?

Athenian Stranger:: From the same viewpoint one should always choose in order to see the progression of cities as they change towards virtue and at the same time towards vice.

Clinias:: What viewpoint are you speaking of?

Athenian Stranger:: I suppose I mean one that embraces an infinite length of time and the changes during that time.

Clinias:: How do you mean?

Athenian Stranger:: Come, do you think you could ever conceive how long a time there have been cities, and human beings engaged in politics?

Clinias:: It’s not at all easy, at least.

Athenian Stranger:: You do see, though, that it would be an immense and immeasurable time?

Clinias:: Yes, that at least, indeed.

Athenian Stranger:: Don’t we suppose that tens upon tens of thousands of cities have come into being during that time, and that just as many, in the same proportions, have been destroyed? And hasn’t each place been governed often by every kind of regime? And haven’t they at one time gotten bigger from being smaller, and then smaller from being bigger, and haven’t they gone from better to worse and from worse to better?

Clinias:: Necessarily.

Athenian Stranger:: Let us grasp, if we can, the cause of this change. For this might perhaps show us the first origin and transformation of political regimes.

Clinias:: You speak well, and we should proceed with eager spirits—you to show what you think about these things, and we to follow.

Athenian Stranger:: Well, then, do both of you believe that there's some truth in the ancient sayings?

Clinias:: Which sayings?

Athenian Stranger:: The ones that tell of many disasters—floods and plagues and many other things—which have destroyed human beings and left only a tiny remnant of the human race.

Clinias:: This sort of thing seems entirely credible to everyone.

Athenian Stranger:: Come, of the many disasters let's focus our minds on one that occurred once on account of a flood.

Clinias:: What shall we think about in regard to it?

Athenian Stranger:: How those who then escaped the destruction would almost all be mountain herdsmen—little sparks of the human race saved on the peaks somewhere.

Clinias:: Clearly.

Athenian Stranger:: Presumably men such as these, at least, necessarily lack experience in the arts, and especially in the contrivances that city dwellers use against one another, motivated by the desire to have more, the love of victory, and all the other mischief they think up against each other.

Clinias:: That's likely, anyway.

Athenian Stranger:: Shall we assume that the cities settled in the plains and along the sea were utterly destroyed at that time?

Clinias:: So we shall assume.

Athenian Stranger:: Won't we assert that all tools were destroyed, and that if some serious and important part of an art—whether politics or some other sort of wisdom—had been discovered, all these things would have perished at that time? For otherwise, best of men, if these things had remained through all time as thoroughly ordered as they are today, how could anything new ever have been discovered?

Clinias:: In other words, for tens upon tens of thousands of years these things were unknown to the men at that time, and only within the past one or two thousand years have they been brought to light, some by Daedalus, others by Orpheus, and others by Palamedes; the things that pertain to music by Marsyas and Olympos, the things that pertain to the lyre by Amphion; and very many other arts by other men—just yesterday or the day before, so to speak.

Athenian Stranger:: Is there any reason, Kleinias, why you omitted your friend, who really was around only yesterday?

Clinias:: You don't mean Epimenides?

Athenian Stranger:: Yes, him. He far surpassed all others among your people in inventiveness, my friend; what Hesiod had divined in speech long ago, he actually brought to completion in deed—as you people claim.

Clinias:: So we claim.

Athenian Stranger:: So what shall we say human affairs were like after the destruction? Wasn't there a vast and frightening desolation, but a great mass of abundant land?

Won’t we say the other animals were destroyed, while the cattle, and the remnant of the stock of goats that might have happened to remain somewhere, barely supported the life of the herdsmen at the beginning?

Clinias:: How else could it have been?

Athenian Stranger:: With regard to the city and the political regime and law-giving—the subjects with which our discussion is now concerned—do we suppose that there was, so to speak, any memory at all?

Clinias:: None at all.

Athenian Stranger:: So from those men, in that situation, have developed all the things we possess now: cities and political regimes and arts and laws, and much wickedness—but much virtue as well.

Clinias:: How do you mean?

Athenian Stranger:: Do we suppose, you amazing man, that men at that time—inexperienced in the many beautiful things that go with urban life, and inexperienced in the opposite sorts of things as well—ever became either perfectly virtuous or perfectly vicious?

Clinias:: You’ve stated it beautifully, and we understand what you mean.

Athenian Stranger:: Then as time went on, and as our race multiplied, everything arrived at the state it’s in now?

Clinias:: That’s very correct.

Athenian Stranger:: Not straightaway though, it’s likely, but rather little by little over a very long period of time.

Clinias:: This seems most appropriate.

Athenian Stranger:: For I suppose that the fear of descending from the heights into the valleys was ringing in everyone’s ears.

Clinias:: How could it be otherwise?

Athenian Stranger:: Weren't they; glad whenever they saw each other, because there were so few of them during that time, although the means of transportation by land and by sea were almost all destroyed, so to speak, along with the arts? I don't think, therefore, that it was very easy to mix with one another. For iron and copper and all metals had disappeared under the mud, and they were at a complete loss as to how to extract such things; as a result they had very little cut timber. If some tool had survived somewhere up in the mountains, it was soon worn out with use and disappeared, and there weren't others to replace it until the art of metals had appeared among human beings.

Clinias:: How could there have been?

Athenian Stranger:: And how many generations later do we suppose this happened?

Clinias:: Very many, obviously.

Athenian Stranger:: Doesn't it follow that the arts which depend on iron and copper and all such things would have disappeared for an equal or even longer time?

Clinias:: How could they not?

Athenian Stranger:: For a variety of reasons, then, civil war and war were destroyed during that time.

Clinias:: How so?

Athenian Stranger:: First because they were delighted with one another and full of goodwill on account of the desolation. Then again, food was not something they fought over. At that time most lived from herding, and there was no lack of pasture land—except perhaps for some people at the start. So they didn't lack milk and meat. Besides, by hunting they provided themselves with food that was neither poor in quality nor scanty in amount. They were well off in cloaks, bedding, houses, and equipment for use over the fires and also for tasks that don't call for fire. For not one of the molding and weaving arts requires iron; and a god has given these two arts to provide all these things for human beings, so that whenever the human race finds itself in such straits it may be able to grow and progress. Hence they weren't terribly poor, and weren't compelled by poverty to differ with one another. On the other hand, since they lacked gold and silver they didn't ever become rich, either—and such was their situation then. Now the most well bred dispositions usually spring up in a home when neither wealth nor poverty dwell there. For neither insolence nor injustice, nor again jealousies and ill will, come into being there.

They were good on account of these things and also because of what is called naive simplicity. For whenever they heard something was noble or something was shameful, in their simplicity they considered what had been said to be the very truth, and believed it. No one had the wisdom, as they do nowadays, to know how to be on the lookout for lies. They believed that what they heard about gods as well as about human beings was true, and lived according to these things. That is why they were in every way as we have just described them.

Clinias:: To me at least, and to him too, it seems this is the way things were.

Athenian Stranger:: Shouldn't we go on to say that the many generations who passed their lives this way were less practiced and less knowledgeable in the arts generally than those who lived before the flood or those who live now, and especially as regards the arts of war? They didn't know all the present-day arts of war on land or on sea, or in a city all by itself, which are called lawsuits and civil wars, and in which every sort of contrivance of words and deeds is devised in order to do mutual mischief and injustice. So, for the reason we already have explained, shouldn't we say that they were simpler and more courageous and also more moderate and in every way more just?

Clinias:: What you say is correct.

Athenian Stranger:: Now what we've been saying, and all that is still to follow from it, has been said as a means to our coming to understand what need the men of that time had for laws, and who was lawgiver for them.

Clinias:: You've stated it in a fine way.

Athenian Stranger:: Isn't it the case, though, that they didn't yet need lawgivers, and that such a thing wasn't yet likely to occur in those times? For writing doesn't yet exist among those born in that part of the cycle, and their lives are guided by habits and by what are called ancestral laws.

Clinias:: That's likely, anyway.

Athenian Stranger:: But even this is already a kind of political regime.

Clinias:: Which kind?

Athenian Stranger:: I think everyone calls the regime of that epoch "dynasty," and even now it still exists in many places, among Greeks as well as barbarians. This is presumably the regime Homer speaks of in connection with the household of the Cyclopes, when he says;

> Among these people are neither deliberative assemblies nor clan-rules,
> But they dwell, on crests of lofty mountains
> In hollow caves, and each gives the rule to
> His own children and wives, and they don't trouble themselves about one another.

Clinias:: This poet of yours seems to have been quite charming. We've gone through other verses of his and found them very urbane. But we're not familiar with much of what he says because we Cretans don't make much use of foreign poetry.

Megillus:: We, however, do; and he is probably the chief of such poets, although he portrays in each case a way of life that is not Laconian but rather sort of Ionian. He certainly seems to be a good witness now to your argument, since through his. myth he attributes their ancient ways to savagery.

Athenian Stranger:: Yes, he is a witness, so let's take his word for it that such regimes do sometimes arise.

Clinias:: Fine.

Athenian Stranger:: Aren't they found among those who have been scattered in single households or clans in the confusion caused by the destructive disasters? The eldest rules with an authority handed down from the father and mother, whom the others follow, like birds forming one flock. Thus aren't they ruled by paternal laws and by a monarchy that is the most just of all monarchies?

Clinias:: Most certainly.

Athenian Stranger:: After this, larger numbers come together in bigger communities, making cities. Those who live in the foothills are the first to turn to farming; and they create one common, large dwelling by erecting defensive walls of stone around themselves, on account of wild beasts.

Clinias:: It seems likely, at any rate, that it happened this way.

Athenian Stranger:: Then what? Isn't the following likely…?

Clinias:: What?

Athenian Stranger:: As these dwellings are growing bigger out of the smaller original ones, each of the small family groups arrives clan by clan, possessing both its own eldest who rules, and its own particular customs because it has lived apart. The variety of their different customs pertaining to the gods and to themselves derives from the variety in their parents and in those who reared them; the rather orderly have rather orderly customs and the manly have rather manly customs. Since they each thus imprint their own conceptions on their own children and on their children's children, they come, as we say, to the larger common dwelling bringing their own particular laws.

Clinias:: Of course, how could they not?

Athenian Stranger:: Moreover, presumably the laws of each are necessarily pleasing to them, while the others' are less so.

Clinias:: So it is.

Athenian Stranger:: It's likely that we've stumbled unawares, as it were, upon the origin of legislation.

Clinias:: Indeed it is.

Athenian Stranger:: Surely, after this, those who have come together are compelled to choose certain men common to them who look over the customs of all the clans and, having picked out the ones they find especially agreeable for the community, display them clearly and present them for the approval of the leaders and chiefs, the monarchs as it were, of the populace. The men who do this will be called lawgivers; but although they have appointed the ruling officials, thus fashioning a sort of aristocracy or even monarchy out of the dynasties, during the period when the regime is undergoing the transformation they themselves will rule.

Clinias:: Things would turn out just this way, though step by step.

Athenian Stranger:: Now let's say that yet a third pattern of regime emerges, in which all forms and experiences of political regimes and of cities come together.

Clinias:: Which is this?

Athenian Stranger:: The one that comes after the second, as Homer reveals when he says the third emerged in this way: "… and he founded Dardania," he asserts somewhere;

> since sacred Ilium had not yet been
> Founded on the plain, a city of human beings endowed with speech,
> But instead they still dwelled among the foothills of Ida with the many springs.

When he speaks these words, and those others that he spoke about the Cyclopes, he speaks somehow according to god, as well as according to nature. For the race of poets is divine, and becomes inspired when it sings: each time, singing in the company of certain Graces and Muses, they hit upon many things that truly happened.

Clinias:: They surely do.

Athenian Stranger:: Let's proceed still further into this myth which has now come upon us, since it may reveal something about the object of our inquiry. Shouldn't we?

Clinias:: Certainly.

Athenian Stranger:: Ilium was settled, we assert, when they left the heights for the wide and beautiful plain and settled on a low hill with many rivers that rushed down from Ida.

Clinias:: So they say, anyway.

Athenian Stranger:: Don't we suppose that this came to pass many ages after the flood?

Clinias:: It had to be many ages.

Athenian Stranger:: It's likely that they were possessed by an amazing degree of forgetfulness regarding the disaster just now discussed, when they thus set up a city close to a lot of rivers flowing down from the heights, putting their trust in some hills that were not very high.

Clinias:: This makes it completely clear that they were separated by a great interval of time from such suffering.

Athenian Stranger:: I suppose that already, at that time, there were many other cities being settled down below, since human beings were multiplying.

Clinias:: But of course.

Athenian Stranger:: And presumably these others undertook a military expedition against this one, and probably came by sea, since now everyone was making use of the sea without fear.

Clinias:: So it appears.

Athenian Stranger:: After remaining about ten years, presumably, the Achaeans sacked Troy.

Clinias:: They certainly did.

Athenian Stranger:: And so during this time, a ten-year period, while Ilium was being besieged many evils befell each of the besiegers at home, through the revolts of the young men. When the soldiers returned to their cities and homes they were not nobly received by these, nor with justice, but instead in such a way as to produce many deaths and slaughters and exiles. The ones who were driven into exile came back again though, having changed their name from Achaeans to Dorians because Dorieus was the one who gathered the exiles together at that time. And surely it is you, O Lacedaimonians, who tell the myth and complete the account of all the things that happened after this.

Megillus:: But of course.

Athenian Stranger:: We have come now once again, as if according to a god, to the point at the beginning of our dialogue about laws where we digressed and fell into the topics of music and drunken carousals. The argument is, as it were, letting us get a good hold on it again, for it has arrived at the very settling of Lacedaimon, which you both were asserting to have been correctly settled (along with Crete, as if by codes of law that were brothers). Now we've gained this much by the meanderings of the argument, by going through certain regimes and settlements: we have seen the first, the second, and the third city, settled one after the other, as we believe, over immense stretches of time. And here this fourth city—or nation, if you wish—comes before us, having been settled in an earlier time and now being settled once again. If from all of this we are able to learn what has and has not been nobly settled, which laws preserve the things that are preserved and which destroy the things that are destroyed, and what sort of changes would make a city happy, then, Megillus and Kleinias, we ought to discuss all these things again, from the beginning as it were—unless we have some objection to what has been said so far.

Megillus:: If, stranger, some god would promise us that if we make a second attempt at an investigation into lawgiving we will hear arguments no worse and no shorter than what were said just now, I at least would be willing to have a long walk, and for me this day would seem to become short—even though we are close to the day when the god turns from summer toward winter.

Athenian Stranger:: So it's likely that these things must be investigated.

Megillus:: By all means.

Athenian Stranger:: Let's put ourselves in thought back into that time when not only Lacedaimon but also Argos and Messene and their dependencies were sufficiently under the control of your ancestors, Megillus. According to what is said in myth at least, they decided next to divide the army into three parts and found three cities—Argos, Messene and Lacedaimon.

Megillus:: Indeed they did.

Athenian Stranger:: Temenos became king of Argos, Kresphontes of Messene, and Procles and Eurusthenes of Lacedaimon.

Megillus:: But of course.

Athenian Stranger:: And everyone at that time swore that they would come to their aid if anyone subverted their monarchies.

Megillus:: Of course.

Athenian Stranger:: In the name of Zeus! Is a monarchy dissolved, or has any rule ever been dissolved, by anybody other than the rulers themselves? Or have we now forgotten that we established this just a little while ago now, in the speeches we chanced to make?

Megillus:: How could we?

Athenian Stranger:: Then we shall now have made such a thesis even firmer. For it's likely that the deeds we've chanced upon lead us to the same argument, so we won't be investigating the same argument on the basis of some empty figment, but on the basis of something that really happened and possesses truth.

What happened was this: the three kings and the three cities that were to be governed monarchically all swore mutual oaths, in accordance with the common laws they set up for ruling and being ruled. The former swore not to make their rule harsher as time went on and the line continued, while the latter swore that if the rulers kept their oaths, they in return would never dissolve the monarchies or allow others to try to do so. They also promised that the kings would help the other kings or the populaces if they were treated unjustly, and that the populaces would help the other populaces or kings if they were treated unjustly. Isn't that the way it was?

Megillus:: That's the way it was.

Athenian Stranger:: Now, whether the kings or certain others did the legislating, wasn't this a very great advantage in the three regime-establishments that were legislated in the three cities …?

Megillus:: What?

Athenian Stranger:: The fact that there were always two cities ready to take the field against any one of the cities that disobeyed the established laws.

Megillus:: Clearly.

Athenian Stranger:: Of course, the many command their lawgivers to establish such laws as the populaces and the majorities will accept voluntarily, just as if someone were to command gymnasts or doctors to do what is pleasant as they care for and cure the bodies they care for.

Megillus:: Entirely so.

Athenian Stranger:: Yet in fact it is often the case that one must be contented if someone can make bodies strong and healthy with only modest pain.

Megillus:: But of course.

Athenian Stranger:: At that time, they were provided with yet this other advantage that had no small role in making the laying down of the laws easy.

Megillus:: What?

Athenian Stranger:: When the lawgivers were arranging for them some sort of equality in property they were not subjected to that very great reproach raised in many other cities during the time of the establishment of laws, whenever someone seeks to change land tenure and dissolve debts because he sees that otherwise a sufficient degree of equality will never be possible. When a lawgiver tries to change any of such things, everyone raises against him the cry, “Do not move the immovable!” and curses him for introducing redivision of the land and dissolution of debts, and thus putting every man at his wit’s end. But for the Dorians there was this further advantage, that the process went along in a fine way and was free from blame, because they could divide up the land without disputes and, in addition, there were no large, ancient debts.

Megillus:: True.

Athenian Stranger:: So then how, you two best of men, did the settlement and legislation ever turn out so badly for them?

Megillus:: What do you mean, and what do you blame in them?

Athenian Stranger:: The fact that of the three existing dwelling places, two of them swiftly corrupted their regime and laws, while only one held fast—your city.

Megillus:: That’s not a very easy question you’re asking.

Athenian Stranger:: But this is what we must now investigate and inquire into, playing at this moderate old man’s game concerning laws, and proceeding on our way without discomfort, as we asserted we would do when we began our walk.

Megillus:: Why not? It must be done as you say.

Athenian Stranger:: And what more beautiful inquiry into laws could we make than an inquiry into the laws which have brought order to these cities? Could we inquire into the settlement of cities more famous and greater than these?

Megillus:: You wouldn’t easily find substitutes for these!

Athenian Stranger:: Now it’s pretty clear that at that time they at least intended their arrangement to be a sufficient defense not only of the Peloponnese but of all the Greeks, in case any of the barbarians might do them injustice, as happened when the people who once lived in the area around Ilium relied on the support of the Assyrian Empire of Ninos and rashly stirred up the Trojan War. For what was left of the grandeur of that empire was not insignificant: just as we nowadays fear the Great King, so they at that time trembled at that combined system; and in fact, since Troy was a part of that empire, its second capture was a grave charge against them. In the face of all this, the unified arrangement whereby the army was then divided up into three cities seemed to be a fine discovery on the part of the brother kings, the sons of Heracles, and a mode of organization superior to that of the expedition against Troy. For in the first place, the sons of Heracles were considered to be better rulers than the descendants of Pelops; then again, this army of theirs was considered to be superior in virtue to the army that went against Troy. After all, these bore the victory, and the others were defeated by them: the Achaeans were defeated by the Dorians. Don’t we suppose that the men of those days organized themselves this way and with this intention?

Megillus:: Certainly.

Athenian Stranger:: Isn’t it also likely that they supposed these things would remain stable, and last a long time, since they had shared together many toils and risks, and had been organized by brother kings belonging to a single family? Moreover, hadn’t they employed many diviners, including the Delphic Apollo?

Megillus:: That is indeed likely.

Athenian Stranger:: It’s likely, however, that these great expectations flew away soon after—except, as we just said, what pertained to the small part in your area, and even that part has never to this day ceased fighting with the other two parts. For if the original intention had been carried through, and unified consonance had been established, it would have possessed an irresistible power in war.

Megillus:: How could it not have?

Athenian Stranger:: So how and in what way was it destroyed? Isn’t it worthwhile to investigate what sort of chance it was that ever destroyed so great a system of this kind?

Megillus:: If one were to disregard this investigation, one would seek in vain to see other laws or regimes that preserve or, on the contrary, utterly destroy the fine and great matters.

Athenian Stranger:: Then it looks as though we have somehow been fortunate enough to come across an adequate investigation.

Megillus:: It surely does.

Athenian Stranger:: But look here, you amazing man, haven’t we now fallen into the same error that affects all us human beings? We are always supposing, whenever we see some fine object, that it would achieve amazing things if only someone knew the way to put it to a fine use. But maybe we aren’t yet thinking about this particular matter correctly, or according to nature—and maybe this is true of everything that everyone thinks of in this way.

Megillus:: What are you talking about? What are we to declare you’re referring to when you make this argument?

Athenian Stranger:: My good man, I just had a laugh at my own expense. For when I gazed at this armed force we're discussing, it appeared to me to be a wholly fine and amazing possession that had fallen to the Greeks—if, as I said, someone had used it in a fine way at that time.

Megillus:: And wasn't all that you said—and we praised—spoken well and sensibly?

Athenian Stranger:: Maybe. I do think that everyone who sees something big, with a lot of power and strength, immediately feels that if only the possessor knew how to use a thing of such quality and magnitude, he would perform many amazing deeds and thus become happy.

Megillus:: Well isn't that correct? Or what do you say?

Athenian Stranger:: Consider for a moment what a person has in view in each case when he correctly gives this sort of praise to something. Consider first the very case under discussion. If those who arranged affairs in those days had known how to order the army properly, what would they have done to make the best of their opportunity? Wouldn't they have kept the army firmly together and preserved it for the rest of time, in order to maintain their own freedom while they ruled over anyone else they wished, and in order to enable themselves and their descendants to do whatever they wanted with the whole human race, Greeks as well as barbarians? Wouldn't it be on account of these things that men gave them praise?

Megillus:: Certainly.

Athenian Stranger:: Furthermore, isn't it the case that when someone speaks this way after having seen great wealth, or an especially honorable family, or any such thing, he does so with a view to the fact that through this thing one might gain all, or most—and the worthiest part—of what one desires?

Megillus:: That's likely, anyway.

Athenian Stranger:: Well then, do all human beings have one desire in common, the one revealed by the present argument—as the argument itself claims?

Megillus:: Which desire?

Athenian Stranger:: To have things happen in accordance with the commands of one's own soul—preferably all things, but if not that, then at least the human things.

Megillus:: But of course.

Athenian Stranger:: Then since all of us wish such a thing always, when we're children, when we're men, and when we're elderly, wouldn't it necessarily follow that we pray for this throughout?

Megillus:: How could it not?

Athenian Stranger:: And presumably we would also join with our friends, at any rate, in praying that they might have the things they wish for themselves.

Megillus:: But of course.

Athenian Stranger:: A son is a friend of a father though one is a child and the other is a man.

Megillus:: How could it be otherwise?

Athenian Stranger:: Yet many of the things a child prays he will get, a father would pray the gods never to allow in accordance with the son's prayers.

Megillus:: You mean when the son who prays lacks intelligence and is still young?

Athenian Stranger:: And also when the father, either because he is an old man or all-too-much a youth, knows nothing of what is noble and just, and, experiencing passions akin to those of Theseus against Hippolytus (who died so unfortunately), prays with a vehement spirit, do you suppose that the son—the son who knows—will ever join in the father’s prayers?

Megillus:: I understand what you mean. You mean, I think, that one shouldn’t pray or be eager to have everything follow his own wish, but rather to have his wish follow his prudence. This is what a city and each one of us should pray and strive for—to possess intelligence.

Athenian Stranger:: Yes, and also that the man who is a statesman-lawgiver must always look to this in setting up the orderings of the laws; and I’m reminded here, and I’d like to recollect for you two as well, what was said at the beginning of the discussion, if you remember: you two maintained that the good lawgiver should lay down all his enactments for the sake of war; I on the other hand maintained that this would constitute an exhortation to set up laws for the sake of only one virtue out of four, whereas what should be done was to look to the whole of virtue, and especially at the first part, the leader of all virtue, which would be prudence, and intelligence, and opinion—with eros and desire following upon these. The argument has arrived again at the same place, and I, the speaker, now say again what I said back then—playfully, if you wish, or seriously, but this is what I assert: it is dangerous for one who lacks intelligence to pray, and the opposite of what he wishes comes to pass. If you want to take me seriously here, you may.

I do certainly expect that you two will now find, if you follow the argument we set forth a little earlier, that the cause of the destruction of the kings and of the whole plan was not cowardice, nor a lack of knowledge of war on the part of the rulers or those for whom it was fitting to be ruled. The corruption was caused by all the rest of vice, and especially ignorance regarding the greatest of human affairs. That this is how things happened then, and still can happen now in similar circumstances, and will happen again in times to come, I will try my best—since we're friends—to discover and show you, if you're willing, by proceeding along the course of the argument.

Clinias:: It would be rather tasteless for us to praise you in speech, stranger, but we will enthusiastically praise you in deed. We will follow what is said with attentive spirits, and it's in this way that a free man makes clear what he finds praiseworthy and what he does not.

Megillus:: Excellent, Kleinias! Let's do as you say.

Clinias:: So be it, if god is willing. Go ahead and speak.

Athenian Stranger:: We are now asserting, as we follow the rest of the path of the argument, that the greatest sort of ignorance is what destroyed that earlier power and that it is natural for it to do the same in the present as well. If this is so, then the lawgiver at least should try to instill as much prudence as possible in the cities and to drive out lack of intelligence as much as possible.

Clinias:: Clearly.

Athenian Stranger:: What then would justly be called the greatest sort of ignorance? See if you both agree with what is going to be said. I now set it down to be something like the following—

Clinias:: What?

Athenian Stranger:: When someone doesn't like, but rather hates, what in his opinion is noble or good, and likes and welcomes what in his opinion is wicked and unjust. This dissonance between pleasure and pain on the one hand, and the opinion that is according to reason on the other, I assert to be the ultimate and greatest ignorance, because it belongs to the major part of the soul. In the soul, you see, the part that feels pain and pleasure is like the populace and the majority in the city. So when the soul opposes knowledge, or opinions, or reason—the natural rulers—this I call lack of intelligence: in a city, when the majority refuses to obey the rulers and the laws, and in one man, when the noble arguments in the soul achieve nothing, but indeed go contrary to these things. All these, I at any rate, would set down as the sorts of ignorance that are most discordant, both in the city and in each one of the citizens, and not the sorts of ignorance belonging to craftsmen—if you understand what I mean, strangers.

Clinias:: We understand, friend, and we agree with the things you're saying.

Athenian Stranger:: This, then, can be set down as something resolved and declared: nothing that pertains to ruling is to be given to citizens who are ignorant in the above respects; and they are to be blamed for their ignorance, even if they are shrewd at calculating and have been trained in all the elegant niceties whose natural effect is to make the soul agile. It is just the opposite sort who are to be proclaimed wise—even if, as in the proverb, they "know neither how to read nor swim"—and the ruling offices are to be handed over to them on the grounds that they are the prudent ones. For without consonance, my friends, how can prudence—even in its smallest form—come about? It isn't possible. But the finest and greatest of consonances would most justly be called the greatest wisdom, and whoever partakes of this evidently lives according to reason, while he who doesn't partake of it evidently brings ruin to his home and is in no way a savior of his city, but is instead just the opposite, as a result of his ignorance in these matters. So, as we just said, let these things stand as the declaration in this matter.

Clinias:: Let them stand indeed.

Athenian Stranger:: Now I suppose there must necessarily be rulers and ruled in cities.

Clinias:: But of course.

Athenian Stranger:: Well then, which and how many are the worthy titles to rule and to be ruled, in large and small cities and in households as well? Wouldn’t one be that of the father and mother, and in general, wouldn’t it be everywhere correct for parents to have title to rule over their descendants?

Clinias:: Emphatically so.

Athenian Stranger:: And, following upon this, for the well born to rule over those who are not well born. Thirdly, following these, the elderly ought to rule and the younger ought to be ruled.

Clinias:: But of course.

Athenian Stranger:: Fourthly, then, that slaves be ruled and masters rule.

Clinias:: How could it be otherwise?

Athenian Stranger:: Fifth at any rate, I think, that the stronger rule and the weaker be ruled.

Clinias:: Now you’ve mentioned a kind of rule that is compellingly necessary.

Athenian Stranger:: And the one most widely spread among all living things, and according to nature, as the Theban Pindar once asserted. But it’s likely that the greatest title would be the sixth, the one bidding the ignorant to follow and the prudent to lead and rule. Indeed it is this title, O most wise Pindar, that I at least would hardly assert is against nature, but rather according to nature: the natural rule exercised by the law over willing subjects, without violence.

Clinias:: What you say is very correct.

Athenian Stranger:: “Dear to the gods” at any rate, and “lucky,” is what we call the seventh sort of rule—where we bring forward someone for a drawing of lots and assert that it is very just for the one who draws a winning lot to rule and for the one who draws a losing lot to give way and be ruled.

Clinias:: What you say is very true.

Athenian Stranger:: “Do you see then,” we would say, “O lawgiver,” (joking with one of those who undertakes lightly the task of laying down laws) “how many worthy titles to rule there are, and that they are by nature opposed to one another? Here, indeed, we have discovered a source of civil strife, which you must treat.

“But first investigate with us how and why the kings of Argos and Messene managed to go wrong in respect to these matters, and destroy both themselves and the power of the Greeks, which was so amazing at that time. Didn’t their mistake consist in the fact that they were ignorant of what Hesiod has stated very correctly—that ‘the half is often more than the whole’? When it is harmful to take the whole, but the half is a measured amount, then the measured amount should be considered more than the amount that is unmeasured—for the one is better and the other is worse.”

Clinias:: That is very correct, at least.

Athenian Stranger:: Do we suppose that this occurs and causes corruption each time among the kings first, or the populaces?

Clinias:: It’s likely that most of the time this is a disease of kings who live in an arrogant manner because of luxury.

Athenian Stranger:: Then isn’t it clear that it was the kings of that time who were first seized by this—the desire to have more than the established laws allowed—and that they weren’t in consonance with themselves as regards what they praised in speech and in their oath? The dissonance—which we have asserted to be the greatest ignorance but which seems to be wisdom—corrupted everything, through discord and a shrill lack of music.

Clinias:: That’s likely, anyway.

Athenian Stranger:: All right then: what should the legislator have set up at that time in order to forestall the emergence of this affliction? In the name of the gods! It doesn’t take any wisdom to understand now, does it, nor is it difficult to say; but if it had been possible to foresee it back then, the foreseer would have been wiser than we are, wouldn’t he?

Megillus:: What are you referring to?

Athenian Stranger:: By looking at what has happened to your people, Megillus, it is now possible to know and, knowing, easy to say what should have happened back in that time.

Megillus:: Speak still more clearly.

Athenian Stranger:: The clearest way of putting it would be about as follows—

Megillus:: How?

Athenian Stranger:: If someone goes against due measure and gives more power to those who are inferior—whether it involves giving sails to ships or food to bodies or ruling offices to souls—he will presumably overturn everything; filled with insolence, some things will run to sickness, others to the injustice that is born from insolence. So what then is our point? Isn’t it something like this? There does not exist, dear sirs, a mortal soul whose nature, so long as it is still young and irresponsible, will ever bear the greatest sort of rule among human beings. The result is always that its thought becomes filled with the greatest sickness, namely lack of intelligence, and hence comes to be hated by its closest friends; and this, when it occurs, swiftly destroys it and obliterates all its power. Knowing how to preserve due measure in this respect is the sign of great lawgivers. So a very well measured guess to make now is that such a thing did occur in those days. It seems likely that there was—

Megillus:: What?

Athenian Stranger:: —that there was some god taking care of you, who foresaw the future, and by bringing about the birth of twin kings from a single line made things more measured for you.

Then after this some human nature, having been mixed with some divine power, saw that your system of rule was still feverish and proceeded to mix the moderate power of old age with the willful strength of family lineage: the council of the twenty-eight old men was given, in the greatest matters, a vote equal to the power of the kings.

Your third savior, seeing that your system of rule was still swollen and irritated with spiritedness, put a sort of bridle on it through the power of the Ephors, and drew near to the power based on a lottery.

So according to this account your monarchy, having become a mixture of the proper things and having attained due measure, preserved itself and was the cause of the preservation of the rest. If it had been left to Temenos and Kresphontes and the lawgivers of that time—whoever those lawgivers might have been—even the portion of Aristodemus wouldn’t have been saved. For they were not sufficiently experienced in lawgiving; otherwise they would hardly ever have thought they could keep a young soul within measured bounds by means of oaths, once the soul had obtained a rule which might become tyrannical. Now, however, the god has shown what had to be done and what should still be done to bring about an especially stable rule. And as I said at the beginning, it isn't any mark of wisdom for us to figure out these things now, because it isn't difficult to see them by looking at the model that has emerged; but if someone had foreseen these things then, and had been able to arrange the ruling offices in due measure—creating one out of three—he would have saved all the fine plans of that time, and there would never have been an expedition by the Persians or by anybody else against Greece, caused by their looking down on us as people who count for little.

Clinias:: What you say is true.

Athenian Stranger:: Anyway, it was shameful the way they repulsed them, Kleinias. When I say it was shameful I don't mean to deny that the men of that time were victorious and won noble victories on land and sea; what I assert was shameful at that time was the following: first, that of these cities, being three in number, only one defended Greece, while the other two were so far gone in corruption that one of them prevented Lacedaimon from assisting in the defense—fighting against her with might and main—and the other, the one in Argos (which had the primacy, in those days of the original division), refused to pay heed or help defend when called upon to repulse the barbarian. There are many things that went on during the war at that time that would be the occasion for someone's making unseemly accusations against Greece. And if one were to say that Greece defended itself, he would not be speaking correctly; had not the common resolution of the Athenians and the Lacedaimonians warded off the approaching slavery, the Greek races would by this time probably be all mixed together, and there would be barbarians among Greeks and Greeks among barbarians, like the peoples the Persians now tyrannize over, who live scattered in a miserable fashion after having been dispersed and herded together.

These are the things, Kleinias and Megillus, for which we can blame the so-called statesmen and lawgivers of old—and also the ones now. And the reason we engage in such blame is to investigate the causes and to find out what should have been done differently. As we said with regard to the present case, they shouldn't have legislated great ruling offices, or unmixed authority; they should have considered something like the following: that a city should be free and prudent and a friend to itself, and that the lawgiver should give his laws with a view to these things.

By the way, let's not be surprised to find that we have often before laid down goals which we've asserted the lawgiver should look to when he lays down his laws, but that the goals don't appear to be the same for us each time. One should reason as follows: when we asserted one should look toward moderation, or toward prudence, or friendship, these goals are not different but the same. Even if many other words of this sort crop up, let's not let it disturb us.

Clinias:: We'll make an attempt to proceed in this way when we go back over the arguments. But for now, tell us what you intended to say—just what is it the lawgiver should aim at with regard to friendship and prudence and freedom?

Athenian Stranger:: Listen, then. There are, as it were, two mothers of regimes. It would be correct for someone to say that the others spring from these, and correct to call one monarchy and the other democracy, and to say that the Persian type is the full development of the former, while my people's country is the full development of the latter.

Almost all other regimes, as I said, are woven from these. Both of them should and must necessarily be present if there is to be freedom and friendship, together with prudence: this is what the argument wishes to set before us when it says that no city will ever have a fine political life if it lacks a share in either of these.

Clinias:: Of course not, how could it?

Athenian Stranger:: Now one of these two nations delighted exclusively and more than was necessary in monarchy, the other in freedom, and neither possessed due measure in these matters. Your regimes, on the other hand—the Laconian and the Cretan—have more measure. The Athenians and Persians of old were also once somewhat well measured, but now are less so. Let's go through the causes, shall we?

Clinias:: By all means, if, at any rate, we're going to complete the task we laid but.

Athenian Stranger:: Let's listen then: the Persians under Cyrus, possessing the proper amount of slavery and freedom, began by becoming free and then became despots over many others. For the rulers shared their freedom with the ruled and drew toward equality; as a result the soldiers felt more friendly toward their generals and faced danger with eager spirits. Moreover, if someone among them was prudent and capable of giving counsel, the king wasn't jealous but allowed freedom of speech and honored those capable of giving counsel; hence, a man was willing to share his capacity, in their midst, as something common. Everything prospered for them in those days because of freedom and friendship and a common sharing in intelligence.

Clinias:: It's likely, at any rate, that things happened somewhat in the way they've been described.

Athenian Stranger:: How then was this ever destroyed under Cambyses and then almost saved again under Darius? Do you want us to figure it out, as if we were using divination?

Clinias:: That at least would help us in the investigation we've embarked upon.

Athenian Stranger:: Now I divine that Cyrus, though in other respects a good general and a friend to his city, failed completely to grasp what is a correct education, and didn't direct his mind at all to household management.

Clinias:: What makes us assert such a thing?

Athenian Stranger:: It's likely that he spent his whole life, from youth on, preoccupied with military matters, and turned his children over, to the women to be brought up. They brought the children up as though they were happy from the time they were babies, and blessed from the moment they were born, lacking nothing. The women allowed no one to oppose them in anything, on the grounds that they were endowed with happiness, and compelled everyone else to praise whatever the children said or did: that was the sort of children they raised.

Clinias:: It sounds lovely, this upbringing you've described!

Athenian Stranger:: A feminine upbringing—the children were brought up by royal, newly-rich women, and in the absence of the men, who were unable to find leisure because of wars and many other dangers.

Clinias:: That stands to reason.

Athenian Stranger:: Their father, meanwhile, kept acquiring flocks and herds, including many droves of men along with many other animals, on their behalf; but he didn't know that they to whom he was going to give all this were not being educated in their father's art, which was

Persian (for the Persians are shepherds because of the rough country from which they originate). This art is a tough one, sufficient to make men very strong herdsmen, capable of living outdoors, able to keep watch without sleep, and ready to serve as soldiers whenever they have to. Anyway, he failed to see that women and eunuchs had given his sons an education which had been corrupted by the so-called happiness of the Medes, and the sons turned out as one would expect, after having been brought up without any restraint. When his children took over from Cyrus after his death, they were bursting with luxury and lack of restraint. First one killed the other because he couldn't bear to share equally; after this the one who remained, maddened by drunkenness and lack of education, had his rule destroyed by the Medes and by the fellow they, at that time, called "the Eunuch," who had nothing but contempt for the silliness of Cambyses.

Clinias:: These things are said to have happened, anyway, and it is likely that they happened more or less this way.

Athenian Stranger:: And presumably it is said that the rule passed back into the hands of the Persians because of Darius and the Seven.

Clinias:: But of course.

Athenian Stranger:: Let's observe as we follow the argument. For Darius was not the son of a king, and was not brought up under a luxurious education. He came into the rule and seized it as the seventh member of a group, and divided it into seven parts (traces of this division still remain now). He saw fit to govern by establishing laws, through which he introduced a sort of general equality and regulated by law the tribute promised to the Persians by Cyrus; thus he brought about friendship and a sense of community among all the Persians, and won over the Persian populace with money and gifts. That's why his army was well disposed to him and gave him additional territories, no less than those left by Cyrus. But then after Darius Xerxes was once again educated in a royal and luxurious education: "O Darius!" it's perhaps very just to say, "you have failed to learn from the vice of Cyrus and have brought up Xerxes in the same habits as Cyrus did Cambyses!" Anyway, as he was an offspring of the same sorts of education, so he wound up suffering just about the same things as Cambyses. And since that time there has arisen among the Persians hardly a single truly "great" king, except in name. The cause of this is not chance, my argument goes, but rather the evil life led for the most part by children of exceptionally rich and tyrannical men. No child or man or old man will ever become outstanding in virtue if he has been brought up in such a way. And these, we assert, are matters a lawgiver ought to look into, and that we ought to look into right now.

As for your city, Lacedaimonians, it is just to give it this at least: in the distribution of honor, and training, you draw no distinctions between poverty and wealth, private individual and king—except for distinctions laid down by the divine oracle given you by some god at the beginning. And as far as the~-city is concerned at least, there shouldn't be preeminent honors bestowed on someone because he is especially rich—: any more than if he is swift or beautiful or strong—unless he has some virtue. And not if he has virtue, unless it includes; moderation.

Megillus:: How do you mean this, stranger?

Athenian Stranger:: Presumably courage is one part of virtue?

Megillus:: How could it not be?

Athenian Stranger:: You yourself be the judge, after you’ve heard the argument: would you be willing to have as a member of your household or as a neighbor someone who was very courageous, but was lacking in restraint, rather than moderate?

Megillus:: Hush!

Athenian Stranger:: What about an artisan, wise in these matters but unjust?

Megillus:: In no way!

Athenian Stranger:: What is just, at least, does not by nature grow apart from moderation.

Megillus:: How could it?

Athenian Stranger:: Nor does the man we’ve just now set down as wise, the one who possesses pleasures and pains that are in consonance with and follow the correct reasonings.

Megillus:: No indeed.

Athenian Stranger:: Now we should also consider the following with regard to the question of which honors are correctly or incorrectly bestowed on each occasion in the city.

Megillus:: What?

Athenian Stranger:: Suppose moderation exists alone in some soul, without any of the rest of virtue: would it be just to honor it or dishonor it?

Megillus:: I Can’t say.

Athenian Stranger:: What you have said, at least, is measured. For if you had given either of the answers I suggested, you would have seemed, to me at least, to be speaking out of tune.

Megillus:: So the answer turned out to be fine.

Athenian Stranger:: Indeed. After all, an adjunct to the things that qualify for honors or dishonors would be worthy not of talk, but of some silent sign.

Megillus:: You appear to me to be speaking of moderation.

Athenian Stranger:: Yes. As for the rest, the most correct way to apportion honors is to honor preeminently the thing which, when combined with this adjunct, gives us the greatest benefit, then to honor second the thing which gives the second-greatest benefit. If the rest were honored in succession according to this principle, then each would get its correct share.

Megillus:: That's so.

Athenian Stranger:: What then? Won't we assert again that this apportionment is the lawgiver's responsibility?

Megillus:: Emphatically.

Athenian Stranger:: Do you want us to leave it to him to apportion everything for every deed in detail, and shall we try to make a threefold distinction—distinguishing the greatest things, and the second, and the third? For we ourselves are somehow desirous of laws.

Megillus:: By all means.

Athenian Stranger:: We say, then, that the likelihood is that if a city is to be preserved and is to become happy within the limits of human power, it must necessarily apportion honors and dishonors correctly. The correct apportionment is one which honors most the good things pertaining to the soul (provided it has moderation), second, the beautiful and good things pertaining to the body, and third, the things said to accrue from property and money. If some lawgiver or city steps outside this ranking either by promoting money to a position of honor or by raising one of the lesser things to a more honorable status, he will do a deed that is neither pious nor statesmanlike. Shall these things be declared by us, or what?

Megillus:: Let this be declared by all means, and clearly.

Athenian Stranger:: We’ve been led to speak about these things at greater length because of the investigation into the regime of the Persians. We find that they got worse year by year, and we claim the cause is this: by going too far in depriving the populace of freedom, and by bringing in more despotism than is appropriate, they destroyed the friendship and community within the city. Once this is corrupted, the policy of the rulers is no longer made for the sake of the ruled and the populace, but instead for the sake of their own rule; if they suppose just a little more will accrue to themselves each time, the rulers are willing to overturn cities and overturn and destroy with fire friendly nations, and as a result, they give and receive bitter, pitiless hatred. When they come to need the assistance of their populaces to fight in their defense, they discover that there no longer exists a community with a spirit eager to run risks and fight. They have countless myriads of subjects in number, but all of them are useless in war; so they have to hire helpers as if they lacked human subjects: they think they can then protect themselves by relying on mercenaries and foreign human beings. In addition to these things, they’re compelled to become so stupid as to proclaim by their deeds that the things regularly said to be honorable and noble in the city are worthless each time compared to gold and silver.

Megillus:: That is certainly so.

Athenian Stranger:: Then let this be the end of the discussion of what pertains to the Persians, and of how their affairs are at present incorrectly managed because of an excess of slavery and despotism.

Megillus:: By all means.

Athenian Stranger:: Next we should go through the discussion of what pertains to the Attic regime in the same way, showing how total freedom from all rule is to no small extent inferior to a measured degree of rule by others.

For at that time, when the Persian expedition came against the Greeks, and probably against all the settlements of Europe, there was an ancient regime with certain rulers based on a division into four classes. In it was a certain despotic mistress—Awe—on account of whom we were willing to live as slaves of the laws that then existed. In addition, the magnitude of the invading force, on land and sea, struck us with a helpless feeling of fear: this made us even more the slaves of the rulers and the laws, and all these things created a very strong sense of friendship among us.

For you see, almost ten years before the naval battle of Salamis, Datis came, bringing a Persian expedition, sent by Darius expressly against the Athenians and Eretrians with orders to bring them back enslaved, and under the threat of death if he failed in this. In a brief space of time Datis with his myriad hordes completely subdued the Eretrians by force and then sent a frightening message to our city, to the effect that not a single Eretrian had escaped him: Datis's soldiers had actually joined hands to form a dragnet around the whole of Eretria. This report, whether true or not, and wherever it came from, terrified all the Greeks and especially the Athenians. But when they sent embassies everywhere for help, no one was willing to come except the Lacedaimonians. However, they were held up by a war they were waging at that time with Messene and maybe by some other impediment (we don't know what was alleged) and arrived one day too late for the battle of Marathon.

After that, reports came in of vast preparations and myriad threats on the part of the king. As time went on, it was reported that Darius had died but that a robust young son of his had taken over the rule and was in no way abating the assault preparations. The Athenians supposed that all these preparations were aimed at them on account of what had happened at Marathon. When they heard that a canal was being dug across the peninsula at Athos and that the Hellespont was being bridged, and how many ships there were, they came to believe that there was no way of saving themselves, by land or by sea. For they expected no one would help them—remembering how on the earlier occasion, when Eretria had fallen, no one had come to help or had dared to fight on their side. They expected the same thing to happen this time, on land at least; on the sea they felt they were completely at a loss because more than a thousand ships were coming against them. They figured out one means of survival. It was a slender and desperate recourse, but the only one available. Besides, they looked back at what had happened before, when victory had appeared to come when they were fighting in a situation that was desperate. Embarking on this hope they found their refuge in themselves alone, and in the gods.

So all these things instilled in them a friendship for one another: fear, both that which came at the time and that which sprang from the laws they already had—the fear which they possessed as a result of their enslavement to those previous laws, which we have often in the arguments before called "awe," and which we claimed those who are going to be good must be enslaved to. The coward is free from this and is fearless in respect to it. But if our populace had not at that time been seized by this sort of fear, they would never have banded together as they then did to defend themselves, nor would they have defended the temples, the graves, the fatherland, and their relatives, as well as their friends. Instead, each of us would have been scattered from the rest at that time and little by little dispersed here and there.

Megillus:: You have spoken altogether correctly, stranger, and in a manner befitting both you and your fatherland.

Athenian Stranger:: That is so, Megillus. And it's just to speak about what happened in that time with you, surely, who share the nature of your forefathers.

But consider now, you and Kleinias, if what we're speaking of is pertinent to lawgiving. After all, that's why I'm going through all this, I'm not doing it for the sake of the myths. See how this sounds to you: my people have in a way suffered the same thing the Persians suffered—they by leading their populace into complete slavery and we by leading the majority in the opposite direction, into complete freedom. Given this, the arguments we laid down earlier are in a way fine for showing us what we should say here and how we should say it.

Megillus:: You speak well: but try to give us a clearer indication of what is being said now.

Athenian Stranger:: All right. Under the ancient laws, my friends, our populace was not sovereign over certain matters but was rather voluntarily enslaved, in a certain sense, to the laws.

Megillus:: Which laws are you speaking of?

Athenian Stranger:: First those regulating the music of that time—if we are to start from the origin of the excessive development of the free way of life. Our music in those days was divided according to its own forms and postures. There was a form of song comprising prayers sung to the gods, called “hymns”; opposite to this was another form of song which someone might well call “dirges.” “Paeans” were another. Then there was yet another called the “dithyramb,” which was about the birth of Dionysus, I believe. They gave the name “laws” [nomoi] to another form of song—this sort was for the kithara, they used also to say. Once these, and certain others, had been arranged, it was not allowed to misuse one form of song for another. The authority that knew about these things and used its knowledge to judge them, penalizing anyone who disobeyed, was not, as is the case today, whistling, nor the majority, with its unmusical shouts, nor the clapping that bestows praise. Instead it was accepted practice for the educated to listen in silence until the end, while the children and their attendants and the general mob were kept in order by the threat of a beating.

So the majority of the citizens were willing to be ruled in an orderly fashion in these respects, and did not dare to render judgment by their noise. But later, with the passage of time, the poets became rulers and held sway over unmusical lawlessness. Although by nature poetic, the poets were ignorant about what is just and lawful for the Muse. In a sort of Bacchic frenzy, more overwhelmed by pleasure than they should have been, they jumbled together dirges with hymns and paeans with dithyrambs; they used kithara sounds to imitate the sounds of the aulos—they confounded everything. In their mindlessness they involuntarily falsified music itself when they asserted that there was no such thing as correct music, and that it was quite correct to judge music by the standard of the pleasure it gives to whoever enjoys it, whether he be better or worse. By creating works of this kind, and then by adding these sorts of arguments, they instilled in the many a lawlessness as regards music, and made them dare to suppose that they were adequate judges. The outcome was that the theaters have become noisy instead of quiet, claiming to understand what is beautiful in the Muses and what is not; and in place of an aristocracy in music, a wretched theatocracy has emerged.

If only there had emerged a democracy of free men, in music, what has happened wouldn't be so terrible. But as it was, the opinion that everyone is wise in everything, together with lawlessness, originated in our music, and freedom followed. People became fearless, as if they were knowers, and the absence of fear engendered shamelessness. For to be so bold as not to fear the opinion of someone who is better, this is almost the same as vile shamelessness, and springs from an excessively brazen freedom.

Megillus:: What you say is very true.

Athenian Stranger:: Next after this freedom would come the sort that involves the loss of the willingness to be enslaved to the rulers; following upon this is the rejection of the enslavement to and guidance by one's father and mother and elders; the next to the last stage involves seeking not to have to obey laws; after this comes the ultimate freedom when they cease to give any more thought to oaths and pledges and everything pertaining to the gods, but instead display and imitate what is called the ancient Titanic nature—arriving back again at those same conditions, and introducing a harsh epoch in which there is never a cessation of evils.

Why, again, have these things been said by us? In my view at least, it's clearly necessary to pull up the argument like a horse, every now and then, and not allow oneself to be carried along by force as if the argument had no bridle in its mouth. To avoid the proverbial fall from the ass, one needs to insist on the question just asked—for the sake of what have these things been said?

Megillus:: Fine question.

Athenian Stranger:: Well, they have been said for the sake of the earlier things.

Megillus:: Which?

Athenian Stranger:: We said that the lawgiver must in laying down his laws aim at three things, namely that the city for which he legislates be free, that it be a friend to itself, and that it possess intelligence. Those were the goals—weren't they?

Megillus:: Certainly.

Athenian Stranger:: For the sake of these things we chose the most despotic regime and the freest, and are now investigating which of these is correctly governed. We have seen that when either—the despotic or the free—was limited within measure, affairs went outstandingly well; but when either marched on to its extreme—the one to slavery and the other to the opposite—there was no advantage in either case.

Megillus:: What you say is very true.

Athenian Stranger:: It was also for the sake of these things that we looked at the establishment of the Dorian armed camp, the hill dwellings of Dardanos and the establishment on the sea, the first people, who were the survivors of the catastrophe, the arguments about music and drunkenness that emerged earlier than these, and the things that came even before that. All these things have been discussed for the sake of understanding hew a city might best be established sometime, and how, in private, someone might best lead his own life.

But what sort of a test in conversation might we ever set for ourselves in speech, Megillus and Kleinias, to reveal whether we have been making something that is useful?

Clinias:: I, stranger, think that I can conceive one. It’s likely that some stroke of luck has brought before us the subjects of all these arguments we’ve gone through, for I at any rate have now come almost to the point of needing them, and you, and also Megillus here, have come along at an opportune time. For I won’t hide from you two my present situation but will treat this as a good omen. The greater part of Crete, you see, is attempting to found a certain colony and has put the Knossians in charge of the affair. The city of the Knossians has in turn delegated it to me and nine others. We have been commissioned to establish the same laws as the ones there, if we find some satisfactory; but if we discover some laws from elsewhere that appear to be better, we are not to hesitate about their being foreign. So now let’s do ourselves—me and you two as well—this favor: making a selection from the things that have been said, let’s construct a city in speech, just as if we were founding it from the very beginning. That way there will be an examination of the subject we are inquiring into, while at the same time I may perhaps make use of this construction, in the city that is going to exist.

Athenian Stranger:: You’re not declaring war, at any rate, Kleinias! Unless it would be somehow irksome to Megillus, you may consider that I for my part will do all in my power to accommodate your intention.

Clinias:: Well spoken!

Megillus:: For my part, I’ll do the same.

Clinias:: The two of you have spoken very nobly! So let’s try now, first in speech, to found the city.

## Book IV.

Athenian Stranger:: Come then, what must one think the city is going to be? In saying this, I’m not asking what name it has at present or what it will be necessary to call it in time to come, because that will probably depend on the circumstances of its settlement, or on the locale—a name taken from some river or spring, or from one of the local gods. One of these will give its august name to the new city. What I mean to ask about it now is rather this: whether it will be on the sea or inland.

Clinias:: The city we’re now discussing, stranger, is roughly eighty stades from the sea.

Athenian Stranger:: What then? Does it have harbors along the near coast, or is it entirely without harbors?

Clinias:: It has the best possible harbor there, stranger.

Athenian Stranger:: Alas, what are you saying! But what about the land around it? Is it productive in all respects or lacking in some things?

Clinias:: It lacks practically nothing.

Athenian Stranger:: And will there be any nearby neighbor city?

Clinias:: None at all, that’s why it’s being settled. For an ancient migration from the place has left the land deserted for an incalculably long time.

Athenian Stranger:: What about plains and mountains and forests? What portion of each do we have?

Clinias:: It resembles the nature, as a whole, of the rest of Crete.

Athenian Stranger:: You’d say the land is quite rough rather than quite flat.

Clinias:: Very much so.

Athenian Stranger:: Then it would not be incurable, at least, as regards the acquisition of virtue. For if it was to be right on the sea, with a good harbor, and not productive in all respects but lacking many things, why, with such a nature it would have required some great savior, and some lawgivers who were divine, to prevent it from coming to have many diverse and low habits. As it is, there is comfort in the eighty stades. It is indeed nearer to the sea than it should be, the more so since you declare it has good harbors, but this has to be made the best of. For although a land's proximity to the sea affords daily pleasure, the sea really is a "briny and bitter neighbor." It infects a place with commerce and the money-making that comes with retail trade, and engenders shifty and untrustworthy dispositions in souls; it thereby takes away the trust and friendship a city feels for itself and for the rest of humanity. In this regard there's comfort in the fact that the city will be productive in every way, while the roughness of the terrain obviously prevents it from being both productive of great quantities and, at the same time, fertile in all respects. If it were, that would mean large exports and a resulting infection of silver and gold money. And on balance there is nothing that does more harm, so to speak, to a city's acquisition of well-born and just dispositions—as we asserted, if you remember, in our earlier discussions.

Clinias:: But we do remember, and we agree that we spoke correctly then, as well as now.

Athenian Stranger:: Next, then: how is the land in our place as regards timber for shipbuilding?

Clinias:: There's no fir worth mentioning, nor pine, and not much cypress. One wouldn't find much pitch pine and plane, either—the trees shipbuilders must always use for the inner parts of ships.

Athenian Stranger:: These natural features would also not be bad for the land.

Clinias:: How’s that?

Athenian Stranger:: It’s good that a city cannot easily imitate its enemies when it comes to wicked imitations.

Clinias:: Which of the things mentioned do you have in view, in saying what you’ve said?

Athenian Stranger:: Be on your guard with me, you demonic man! Keep in view what was said back at the beginning, about how the Cretan laws looked to one goal. You two said this goal was what pertains to war. I then interrupted, saying it was fine that such legal institutions looked somehow to virtue, but that I could not at all go along with them when they looked only to a part and not to almost the whole. Now you two in your turn, as you follow the present legislation, must guard against my legislating something that doesn’t aim at virtue, or that aims at a part of virtue. For I assert that the only law correctly laid down is this: one which, just like an archer, aims each time at what alone is constantly accompanied by something noble, one which leaves all the rest aside, even if there is a chance of producing some wealth and some other such things by ignoring the things just mentioned.

Now the evil imitation of enemies I was referring to is the sort that occurs when someone dwells near the sea and is vexed by enemies—as in the days when (I say this not intending to remind you of ills) Minos imposed a certain harsh tribute on the inhabitants of Attica. He wielded great power on the sea, while they did not possess ships, as they do now, for war, nor a territory well stocked with shipbuilding timber that allows for the easy creation of naval power. As a result they were not able, through nautical imitation, to become seafarers immediately and defend themselves, at that time, against their enemies. For it would have been in their interest to have had many times seven youths destroyed, if by doing so they could have remained steady, heavily-armed infantrymen instead of adopting the habits of marines. Marines are quick to jump forward, then to retreat at a run back into their ships; they see nothing shameful in not daring to stand and die in the face of attacking enemies. Excuses are readily made for them, and they're quite prepared to throw away their weapons and flee, in certain routs they claim are not shameful! Such are the sentiments armed marines are apt to express—and these sentiments merit not myriad and frequent praises, but just the opposite. There should never be habituation in wicked ways, especially among the best part of the citizenry.

This at least could presumably be gathered from Homer, too (that is, that such a practice isn't noble). For his Odysseus reviles Agamemnon on the occasion when the Achaeans are being hard pressed in battle by the Trojans and he has ordered the ships to be dragged down to the sea. Taking him to task, Odysseus says;

> …you who bid us, while war and shouting still rages 'round,
> Draw our well-benched ships down to the sea, so that yet more
> The prayers of the Trojans may be fulfilled—even
> though they have long wished for this—
> And we be overtaken by utter destruction. For the Achaeans will not
> Maintain the war once the ships are drawn seaward;
> They'll be always looking behind, and will draw off from the battle.
> That will be the evident outcome of the counsel you're proclaiming!

So that man also knew these things and realized that it’s bad to support the combat of heavy infantry with triremes at sea. By using customs of this sort one would habituate lions to flee deer!

Besides, cities that rest their power on their navies, after being saved, don’t give honors to the noblest of their warriors, since the deliverance is brought about by the art of the pilot and the boatswain and the rower—in fact, by all sorts of human beings who aren’t very serious—and one wouldn’t be able to apportion honors correctly to each. Yet how would a regime become correct if it lacked this?

Clinias:: It’s almost impossible. But look, stranger: we Cretans at least assert that it was the naval battle of the Greeks against the barbarians at Salamis that saved Greece.

Athenian Stranger:: The many, both Greek and barbarian, do indeed say these things. But we, my friend, myself and Megillus here, assert that it was the land battles at Marathon and Plataea: the former began the deliverance of the Greeks and the latter completed it. Moreover, we assert that these battles made the Greeks better, while those other battles made them no better—if it’s all right for us to speak in such a way about the battles that contributed to our salvation in those days. For I would add the sea battle of Artemisium to your mention of that’ at Salamis.

But anyway, in our consideration of the nature of the land and the order of the laws, we’re looking now to the virtue of the regime. We do not hold, as the many do, that preservation and mere existence are what is most honorable for human beings; what is most honorable is for them to become as excellent as possible and to remain so for as long a time as they may exist. This too, I think, was said already, in our earlier discussions.

Clinias:: Why, of course.

Athenian Stranger:: Then let's consider this alone: whether or not we are continuing to proceed along the path that is best as regards the establishing of, and legislating for, cities.

Clinias:: By all means.

Athenian Stranger:: Now tell about what comes next after these things. Who are the people who will be your colonists? Will they be made up of anyone who wishes to come from all of Crete, because a sort of overflow mob, outstripping the earth's food supply, has come into being in each city? I'm assuming you people aren't collecting every Greek, at any rate, who wants to come (although I notice that you already have some colonists in your territory from Argos and Aegina and elsewhere in Greece). But come, tell us where you claim this armed camp of citizens will now come from.

Clinias:: It's likely that they'll come from all over Crete; as for the rest of Greece, it's clear to me that fellow colonists from the Peloponnese will be especially welcome. For what you just now said, about the people from Argos, is true: they make up the most famous of the tribes here now, the Gortynian. You see, they happen to be colonists from the Peloponnesian Gortyn.

Athenian Stranger:: Colonization wouldn't be as easy a thing for cities when it doesn't take place in the manner of bee-swarms, where one tribe from one land undertakes the new settlement, a friend coming from friends, because it was hemmed in by a shortage of land or compelled by other such sufferings. There is also the occasion when a part of a city may be compelled to move to some foreign place because of civil strife. There have even been times when a whole city went into exile, completely overpowered by an irresistible attack. In all these situations it is in one sense easier to settle and lay down laws, but in another sense more difficult. The tribal unity, the similarity of language and of laws, since they imply a sharing of the sacred things and all such matters, create a certain friendship; but then again, they do not easily accept laws and regimes different from their own. Sometimes, even when they have suffered from civil strife as a result of the wickedness of their laws they still prefer, out of habit, to live with the same habitual customs that corrupted them before. So they give trouble to the founder and lawgiver and become disobedient. In contrast, the tribe that has been collected from all over would probably be more willing to obey certain new laws; but for it to breathe together and grow to be constantly united—like a team of horses, as they say—would require much time and trouble.

Yes, it is really the case that lawgiving and the founding of cities is the most perfect of all tests of manly virtue.

Clinias:: That’s likely; but explain more clearly what you have in view in saying this.

Athenian Stranger:: My good man, when I go back over and consider lawgivers again, I’ll probably say something belittling about them. Still, if we say something that is opportune, it shouldn’t cause trouble. And after all, why should I ever be upset about it? It’s likely that almost-all the human things are in a similar condition.

Clinias:: What are you talking about?

Athenian Stranger:: I was about to say that no human being ever legislates anything, but that chances and accidents of every sort, occurring in all kinds of ways, legislate everything for us. Either it’s some war that violently overturns regimes and transforms laws, or it’s the baffling impasse of harsh poverty that does it. Diseases, too, make many innovations necessary, when epidemics occur or bad weather comes and frequently lasts many years. If he looked ahead to all these things, someone might be eager to say what I just said—that no mortal ever legislates anything, but that almost all human affairs are matters of chance. With regard to the sailing art, the pilot’s art, the art of medicine, and the art of the general it seems good to say all this; but it seems equally good to speak about these same affairs in the following way.

Clinias:: In what way?

Athenian Stranger:: To the effect that in all things god—and together with god, chance and opportunity—pilots all the human things. One must, indeed, concede that these are accompanied by yet a third thing, a gentler thing: art. For I at least would declare that the pilot’s art is a great advantage when it comes to cooperating with the opportune moment in the midst of a gale. Isn’t that so?

Clinias:: That is so.

Athenian Stranger:: So the same argument would hold in the same way for the other cases, and in particular this very thing must be granted in the case of lawgiving. Along with the rest of the good luck a land needs to have befall it if it would ever dwell in happiness, there must always happen along, for such a city, a lawgiver who possesses the truth.

Clinias:: What you say is very true.

Athenian Stranger:: Now in each of the cases mentioned the one who possesses the art would presumably be able to pray in the correct way for that which, being available to him through chance, would make nothing lacking except the art?

Clinias:: By all means.

Athenian Stranger:: All the others who were mentioned just now, if asked to pronounce their prayer, would speak up. Isn't that so?

Clinias:: Sure—why not?

Athenian Stranger:: And the lawgiver would do the same, I think.

Clinias:: I think so.

Athenian Stranger:: "Come, then, lawgiver!" let's say to him, "what city shall we give you and in what condition, so as to enable you to take it and proceed henceforth by yourself to arrange the city satisfactorily?" So what is the correct thing to say next after this? Shall we explain, on behalf of the lawgiver? Or what?

Clinias:: Yes.

Athenian Stranger:: Here it is: "Give me a tyrannized city," he will declare, "and let the tyrant be young, possessed of an able memory, a good learner, courageous, and magnificent by nature. And what we earlier said must accompany all the parts of virtue must now attend the tyrannized soul, if its other qualities are to prove beneficial."

Clinias:: It seems to me that the stranger is referring to moderation, Megillus, when he speaks of the necessary accompaniment. Isn't that so?

Athenian Stranger:: The popular sort, that is, Kleinias—not the sort one would speak of in a solemn way, compelling prudence to be moderation, but rather the sort that blooms naturally, from the beginning, in children and beasts, and by which some lack self-restraint with regard to pleasures while others possess self-restraint. We asserted that when this quality is separated from the many other things said to be good it is not worthy of mention. You get what I'm saying, I suppose.

Clinias:: Certainly.

Athenian Stranger:: So our tyrant should possess this nature in addition to those other natural qualities, if the city is to gain, in the shortest possible time and in the best possible manner, the political regime whose possession will make it most happy. For there is not now nor would there ever be a speedier and better process of founding a regime.

Clinias:: How, and by what argument, stranger, could someone say this and persuade himself that what he is saying is correct?

Athenian Stranger:: Presumably, Kleinias, it is easy to think this at least, that such a thing is according to nature.

Clinias:: What are you saying? If there were to be a tyrant, you claim, who was young, moderate, a good learner, with an able memory, courageous, and magnificent?

Athenian Stranger:: Add "with good luck"—not in other respects, but in this: that in his epoch there should arise a praiseworthy lawgiver, and that some chance should bring the two of them together. For if this should happen, then the god has done almost all the things that he does when he wants some city to fare especially well. Second is the situation where two such rulers arise; then comes the third situation, and so on in proportion, the situation becoming progressively more difficult the more there are, and the opposite as it moves in the opposite direction.

Clinias:: You're asserting, it appears, that the best city emerges out of tyranny, with an eminent lawgiver and an orderly tyrant, and that the city would be transformed most easily and most swiftly from such a situation; second would be a transformation from oligarchy—is that what you mean?—and third from democracy.

Athenian Stranger:: No, not at all; in first place would be the transformation from tyranny, second would be from a monarchic regime, and third would be from some sort of democracy. Oligarchy would be in fourth place, since it would with the greatest difficulty allow such a thing to come into being, because it has the largest number of all-powerful rulers.

We say that these things come to pass when there comes into being by nature a true lawgiver, who coincidentally shares some of the strength of those who are the most powerful in the city. If this should occur where the powerful are the smallest in number, but the strongest, as in tyranny, then the change is apt to take place there swiftly and easily.

Clinias:: How? The fact is, we don’t understand.

Athenian Stranger:: Yet we’ve said it, at least, not once but many times now, I think! But you two have probably never witnessed a city being tyrannized.

Clinias:: Nor am I, at least, desirous of witnessing it!

Athenian Stranger:: But you’d see in it what’s been spoken of now.

Clinias:: Namely?

Athenian Stranger:: You’d see that if a tyrant wishes to change a city’s habitual ways, he doesn’t need to exert great efforts or spend an enormous amount of time. What he has to do is first proceed himself, along the route he’d like the citizens to turn toward, whether it be toward the practices of virtue or the opposite. He need only first trace out a model in his own conduct of all that is to be done, praising and honoring some things while assigning blame to others, and casting dishonor on anyone who disobeys in each of the activities.

Clinias:: And why do we suppose that the other citizens will swiftly follow someone who has adopted such a combination of persuasion and violence?

Athenian Stranger:: Let no one persuade us, friends, that there will ever be a quicker or easier way for a city to change its laws than through the hegemony of all-powerful rulers. This is the case now and it will always be so. And for us this is not impossible or even difficult to bring about. What is difficult is the following, which seldom comes to pass even in a great span of time, but which, when it does happen in a city, brings to that city myriads of all that is good.

Clinias:: What are you talking about?

Athenian Stranger:: The possibility that a divine erotic passion for moderate and just practices should arise in some of the great and all-powerful rulers—whether they derive their power from monarchy, or from outstanding superiority in wealth or birth, or from the fact that some day one of them possesses the nature of Nestor, who they claim surpassed all human beings in moderation to an even greater degree than he surpassed them in the power of speaking. This man lived in the time of Troy, as they claim, though never among us; but if such a man has ever existed, or will exist some day, or is now among us, then he himself lives a blessed life, and blessed are those who join in paying heed to the words that flow from his moderate mouth.

The very same argument applies to every sort of power: when the greatest power coincides in a human being with prudence and moderation, then occurs the natural genesis of the best regime, and laws to match; but otherwise it will never come to pass.

Let these remarks be like a myth pronounced in oracular fashion, revealing, on the one hand, that it would be difficult for a city with good laws to come into being, but, on the other hand, that if what we discussed did occur, such a city's origin would be the quickest and by far the easiest of all.

Clinias:: How?

Athenian Stranger:: Let's try to harmonize this with your city, and like elderly children, let's try to fashion the laws in speech.

Clinias:: Yes, let's get on with it and not delay anymore.

Athenian Stranger:: Let us invoke a god in the setting up of the city. Let him hear us, and having heard, let him graciously and propitiously come to us and take part with us in the ordering of the city and the laws.

Clinias:: Let him come indeed!

Athenian Stranger:: Now what sort of regime do we have in mind to arrange for the city?

Clinias:: Just what do you mean by this question? State it yet more clearly: do you mean what sort of democracy, or oligarchy, or aristocracy, or monarchy? Surely you wouldn't be referring to tyranny—at any rate, we would assume not.

Athenian Stranger:: Come now: which of you two is more willing to answer first, by saying which of these fits his own regime?

Megillus:: Since I am the elder, wouldn't it be more just for me to speak first?

Clinias:: Perhaps.

Megillus:: Well, if I reflect on it, stranger, I can’t explain to you which of these names ought to be given to the regime in Lacedaimon. It seems to me that the regime does resemble tyranny—for the institution of the Ephors in it is surprisingly tyrannical; but then again, it sometimes appears to me that ours, of all cities, resembles most closely a democracy. Yet it would be altogether strange if I were not to assert that it was an aristocracy. Then too, there is a monarchy in it with a king for life: in fact, this is the most ancient of all monarchies, according to what is said by all human beings, including us. So when I’m now asked to reply on the spur of the moment I really can’t, as I said, separate it off and say which of these regimes it is.

Clinias:: I find myself undergoing the same difficulty as you, Megillus. For I am altogether at a loss to say definitely which of these characterizes the regime in Knossos.

Athenian Stranger:: That’s because you two really belong to regimes, best of men. The other things we just named, they aren’t regimes, but city administrations where the city is under the sway of despots, with some parts enslaved to other parts of itself. Each takes its name from the authority that is the despot. If one ought to name the city in this way, then one must use the name of the god who truly rules as despot over those who possess intellect.

Clinias:: Who is this god?

Athenian Stranger:: Should a little more use be made of myth, if it will allow us somehow to clarify, in a harmonious way, the answer to the present question?

Clinias:: Is that, then, the Way one has to proceed?

Athenian Stranger:: By all means. Now long before the cities whose formation we described earlier, there is said to have come into being a certain very happy rule and arrangement under Kronos. The best of arrangements at the present time is in fact an imitation of this.

Clinias:: Then it seems one certainly ought to hear about it.

Athenian Stranger:: So it appears to me at least; that's why I introduced it into the midst of the discussion.

Clinias:: And you acted in a most correct way. So you'd be quite correct in going on to complete the rest of the myth, if in fact it's relevant.

Athenian Stranger:: One must do as you two say. Now we have received an oracular report of the blessed way of life of those who lived in that time, how it had everything without stint and spontaneously. And the cause of these things is said to have been something like the following: Kronos understood that, as we have explained, human nature is not at all capable of regulating the human things, when it possesses autocratic authority over everything, without becoming swollen with insolence and injustice. So, reflecting on these things, he set up at that time kings and rulers within our cities—not human beings, but demons, members of a more divine and better species. He did just what we do now with sheep and the other tame herd animals. We don't make cattle themselves rulers of cattle, or goats rulers of goats; instead, we exercise despotic dominion over them, because our species is better than theirs. The same was done by the god, who was a friend of humanity: he set over us the better species of demons, who supervised us in a way that provided much ease both for them and for us. They provided peace and awe and good laws and justice without stint. Thus they made it so that the races of men were without civil strife, and happy.

What this present argument is saying, making use of the truth, is that there can be no rest from evils and toils for those cities in which some mortal rules rather than a god. The argument thinks that we should imitate by every device the way of life that is said to have existed under Kronos; in public life and in private life—in the arrangement of our households and our cities—we should obey whatever within us partakes of immortality, giving the name "law" to the distribution ordained by intelligence. But if there is one human being, or some oligarchy, or a democracy, whose soul is directed to pleasures and desires, and needs to be filled with these, and retains nothing, but is sick with endless and insatiable evil—if such a one rules a city or some private individual, trampling underfoot the laws, there is, as we just now said, no device of salvation.

We must think over this argument, Kleinias, and decide whether we will obey it, or just how we will behave.

Clinias:: Presumably it is necessary to obey it.

Athenian Stranger:: Do you understand, now, that some assert there are as many forms of laws as there are regimes, and that the forms of regimes spoken of by the many are those we have just enumerated? And do not suppose that this present disagreement is about something paltry: it concerns something very great. For once again we are involved in the dispute over the aim of the just and the unjust. They are claiming that laws ought not look to war or to virtue as a whole, but ought to look to what is in the interest of the established regime, to whatever will allow that regime to rule forever and avoid dissolution. They claim that the finest way to formulate the definition of justice that is according to nature is this—

Clinias:: How?

Athenian Stranger:: That it is the interest of the stronger.

Clinias:: Speak still more clearly.

Athenian Stranger:: It is as follows: “Presumably,” they assert, “it is the strong authority who lays down the laws on each occasion in the city. Isn’t that so?”

Clinias:: What you say is true.

Athenian Stranger:: “Well do you think,” they assert, “that when the populace is victorious, or some other regime, or even a tyrant, that it will voluntarily set up laws aimed primarily at something, other than what is in the interest of the maintenance of its own rule?”

Clinias:: How could it be otherwise?

Athenian Stranger:: And if someone violates these things that are set down, won’t the one who established them punish this person as someone who does injustice, naming the things set down “the just things”?

Clinias:: That’s indeed likely.

Athenian Stranger:: So these things would at every moment, thus and in this manner, be what is just.

Clinias:: So this argument asserts, at any rate.

Athenian Stranger:: For this is one of those worthy titles to rule.

Clinias:: What titles?

Athenian Stranger:: The ones we investigated earlier, to see who should rule over whom. It emerged that parents should rule over offspring, that the younger should be ruled by the elder, that the well born should rule over those not well born; and then there were several others, if we remember, and they were obstacles to one another. One of them was this very thing. We asserted, I suppose, that “according to nature” Pindar “pushes through and makes just what is most violent,” as he asserts.

Clinias:: Yes, these were the things that were said then.

Athenian Stranger:: Consider, then, to which men our city is to be turned over. For this sort of thing has already happened tens of thousands of times in some cities.

Clinias:: What sort of thing?

Athenian Stranger:: The ruling offices become matters for battle, and those who are victorious take over the city's affairs to such an extent that they refuse to share any of the rule with those who lost out—with either them or their descendants—and the two sides live keeping watch on one another lest someone ever get into office who might remember the old wrongs and start a revolt. These we presumably declare now not to be regimes, nor do we declare any laws correct that are not laid down for the sake of what is common to the whole city. Where the laws exist for the sake of some, we declare the inhabitants to be "partisans" rather than citizens, and declare that when they assert their ordinances to be the just things they have spoken in vain.

We have said these things because of the following: we will not apportion the offices in your city on the basis of someone's wealth or any such possession, be it physical strength or size or descent. Whoever is most obedient to the established laws and wins this victory in the city must, we assert, be given the service dedicated to the gods: the greatest service to the one who is first, the second-greatest to the one who is ranked second in mastery,, and so on in the same proportion for each rank of service after these.

I have now applied the term "servants of the laws" to the men usually said to be rulers, not for the sake of an innovation in names but because I hold that it is this above all that determines whether the city survives or undergoes the opposite. Where the law is itself ruled over and lacks sovereign authority, I see destruction at hand for such a place. But where it is despot over the rulers and the rulers are slaves of the law, there I foresee safety and all the good things which the gods have given to cities.

Clinias:: Yes by Zeus, stranger! For you see with the sharpness of age!

Athenian Stranger:: That is because every young human being sees such things indistinctly, when he looks by himself, but when old sees them with great sharpness.

Clinias:: Very true.

Athenian Stranger:: So what’s next after these matters? Shouldn’t we assume that the colonists have arrived and are present, and that the rest of the argument ought to be completed before them?

Clinias:: Why not?

Athenian Stranger:: “Sirs,” let us address them, “the god, just as the ancient saying has it, holding the beginning and the end and the middle of all the beings, completes his straight course by revolving, according to nature. Following him always is Justice, avenger of those who forsake the divine law. He who is going to become happy follows Her, in humility and orderliness. But anyone who is puffed up with boastfulness, or who feels exalted because of riches or honors or good bodily form accompanied by youth and mindlessness, anyone whose soul burns with insolence and hence regards himself as needing neither ruler nor any leader but rather considers himself capable of leading others, is left behind, abandoned by the god. Once left behind, he takes up with others like himself and leaps around overturning everything; to many, he seems to be somebody, but after no long while he undergoes the blameless vengeance of Justice, bringing complete ruin to himself and his household and city as well.

“Now if things are ordered in this way, what should and should not the prudent man do and think about in regard to them?”

Clinias:: Well, this at least is clear: every man must think about how he may become one of the followers of the god.

Athenian Stranger:: “What then is the activity that is dear to and follows god? There is one, and it is expressed in a single ancient saying: ‘like is dear to like, if it is measured’; things that lack measure are dear neither to one another nor to things that possess measure. For us, the god would be the measure of all things in the highest degree, and far more so than some ‘human being,’ as they assert. He who is to become dear to such a being must necessarily do all in his power to become like him; and according to this argument the moderate man among us is dear to god, because similar, while the man who is not moderate is dissimilar and different and unjust—and the other things follow thus, according to the same argument.

“Let us understand that from these observations there follows a principle of the following sort (the noblest and truest of all principles, I believe): for the good man it is very noble, very good, and most efficacious for a happy life, as well as preeminently fitting, if he sacrifices to and always communes with the gods—through prayers, votive offerings, and every sort of service to the gods. But for the bad man just the opposite of these things holds by nature. For the wicked man is impure in his soul, while his opposite is pure, and it is never correct for either a good man or a god to receive gifts from someone who is polluted. The great effort spent by the impious on the gods is therefore spent in vain—though such effort is very opportune for all the pious.

“This, then; is the target at which we must aim. What is the most correct way to characterize the missiles one should shoot and their trajectory? First, we assert, one would most correctly hit the target of pious reverence if one honored the gods of the underworld after the Olympians and the gods who possess the city, assigning to them the even-numbered, the second place, and the left side. The higher things—the odd-numbered and the other opposites—should be assigned to those just now mentioned. After these gods, the prudent man at least would worship the demons, and then next after these, the heroes. Following close upon them would be the private shrines of ancestral gods, worshipped as the law directs, and then after these the honors that are due to living parents. For it is just that one in debt pay back his first and greatest debts, the eldest of all his obligations, and that he consider all his acquisitions and possessions as belonging to those who engendered and nourished him; he should strive with all his power to devote these things to their service—starting with property, then secondly the things of the body, and thirdly the things of the soul. Thus he will pay back the ancient loans that were bestowed on the young—the cares and laborious pains suffered—and will be returning help to the ancient ones when they especially need it, in their old age. Beyond all this, it is essential that one maintain throughout life a tone of special respect in one’s speech to parents, because there is a very heavy penalty for flippant or winged words. Nemesis, the messenger of Justice, has been set to keep watch over everyone in this regard. So when parents become enraged it is necessary to bear with them and appease their spiritedness, whether they vent it in words or in deeds; one must keep in mind that it is very likely that a father feel an especially spirited anger at a son who he believes is doing him an injustice. And when parents die, the most moderate burial ceremony is the most beautiful, one not more elaborate than is customary and yet not falling short of those which the forefathers held for their parents. The yearly ritual services in honor of those who have reached their end should preserve a similar orderliness. One should reverence them especially by never ceasing to remember them and by continuing to allot to those who have passed away a well-measured portion of the wealth fortune bestows.

"If we do these things and live according to these precepts, each of us will on each occasion reap what we deserve from the gods and from those who are stronger than we are, and we will pass most of life in good hopes."

As for what pertains to offspring, relatives, friends, and citizens, as well as whatever services the gods require toward strangers, and how one is to commune with all these, the sequence of the laws themselves will show how one adorns and lawfully orders his own life by fulfilling his duties. Sometimes the law will persuade, and sometimes—when dispositions are recalcitrant—it will persuade by punishing, with violence and justice. Thus, if the gods are willing, the laws will succeed in making our city blessed and happy.

There are also some things which a lawgiver who thinks as I do should and must necessarily say, but which cannot be presented harmoniously in the shape of law; it seems to me that the lawgiver should present an example of these things for himself and for those he will give laws to. After he has done this, and has proceeded through everything else to the best of his ability, he should begin to establish the laws.

Clinias:: What shape should such things preferably take?

Athenian Stranger:: It is not too easy to embrace them by speaking of a single model, as it were; but let's conceive of them in something like the following way and see if we can get a firm grasp on them.

Clinias:: Say what sort of way you mean.

Athenian Stranger:: I would wish that the people would be as persuadable as possible with regard to virtue; and it's clear that the lawgiver will also strive to achieve this, in every facet of his legislation.

Clinias:: How could it be otherwise?

Athenian Stranger:: Now it seemed to me that the things that were just said, if they took hold of a soul that was not entirely savage, would contribute something to making the hearer listen in a more tame and agreeable mood to the advice. So even if these words have no great effect, but only a small one, still, insofar as they make the one who listens to what was said more agreeable and a better learner, that is in every way desirable. For there is no great plenty or abundance of persons who are eager in spirit to become as good as possible in the shortest possible time; indeed, the many show that Hesiod is wise when he says that the road to vice is smooth to travel and without sweat, since it is very short, but "before virtue," he asserts, the immortal gods have put sweat;

> And a path to it that is long and steep,
> And rough at first. When you arrive at the top,
> Then it's easy to endure; but the ascent is hard.

Clinias:: He sounds like someone who speaks nobly, at any rate.

Athenian Stranger:: He certainly does. Now I want to set directly before you two the effect produced on me by the preceding speech.

Clinias:: Do so.

Athenian Stranger:: Let’s engage then in the following dialogue with the lawgiver: “Tell us, O lawgiver: If in fact you knew what we should do and say, isn’t it obvious that you would state it?”

Clinias:: Necessarily.

Athenian Stranger:: “Well, didn’t we hear you saying just a little while ago that a lawgiver should not allow the poets to create whatever they like? For they would not know what in any of their speeches was opposed to the laws and hence harmful to the city.”

Clinias:: What you say is indeed true.

Athenian Stranger:: Now if we were to reply to him on behalf of the poets, would the following remarks be well measured?

Clinias:: Which?

Athenian Stranger:: The following. “There is an ancient myth, O lawgiver, which we ourselves always repeat and which is also the accepted opinion of all the others, to the effect that the poet, when seated on the tripod of the Muses, is not at that time in possession of his senses, but is like some spring that readily lets flow whatever comes up from within. Since his art consists of imitation, he is compelled to contradict himself often, by creating human beings who are opposed to one another; and he doesn’t know if either of the diverse things said is true. For the lawgiver, however, it isn’t possible to create this in a law—to make two speeches about one subject—but he must always exhibit one speech about one subject. Take a look at something from the speeches you pronounced just now.

Burial ceremonies can be either overly elaborate, or skimpy, or of measured size. You chose one of these, the medium size, and enjoined and praised this one without any qualifications. But as for me, if in my poetry some especially wealthy woman were to give orders for her funeral, I'd praise the overly elaborate funeral; or again, if some thrifty and poor man were involved, he'd praise the skimpy funeral; if he were someone possessing a measured amount of property, and were himself a person of measure, he'd praise the same funeral as you. Now, in your case it isn't sufficient to leave it at what you just now said, about a well-measured size; one must tell what and how much constitutes well measured. Until that is done you shouldn't think that such a speech has become a law."

Clinias:: What you say is very true.

Athenian Stranger:: So, then, is the one who is to have charge of our laws going to pronounce no such preface at the beginning of the laws? Is he just going to explain straightaway what must and must not be done, add the threat of a penalty, and turn to another law, without adding a single encouragement or bit of persuasion to his legislative edicts? There is one sort of doctor who used to proceed in this way, and another sort who used to proceed in the other way each time he took care of us. Let's recollect each of those different modes of procedure, so that we may beseech the lawgiver the same way children beseech a doctor, asking him to care for them in the most gentle way. Now just what sort of thing are we referring to? Presumably we assert that there are certain persons who are doctors; and then, that there are in addition doctor's servants, whom we also, I suppose, call "doctors."

Clinias:: Certainly.

Athenian Stranger:: Whether they be free men or slaves, they acquire the art by following their masters' command, by observing, and by experience, but not by following nature, as the free doctors do, who have themselves learned in this way and who teach their disciples in this way. Would you set these down as the two species of what are called doctors?

Clinias:: But of course.

Athenian Stranger:: Then you also understand that sick people in the cities, slaves? and free, are treated differently. The slaves are for the most | part treated by slaves, who either go on rounds or remain at! the dispensaries. None of these latter doctors gives or receives any account of each malady afflicting each domestic slave. Instead, he gives him orders on the basis of the opinions he has derived from experience. Claiming to know with precision, he gives his commands just like a headstrong tyrant and hurries off to some other sick domestic slave. In this way he relieves his master of the trouble of caring for the sick.

The free doctor mostly cares for and looks after the maladies of free men. He investigates these from their beginning and according to nature, communing with the patient himself and his friends, and he both learns something himself from the invalids and, as much as he can, teaches the one who is sick. He doesn't give orders until he has in some sense persuaded; when he has on each occasion tamed the sick person with persuasion, he attempts to succeed in leading him back to health.

Which of the two procedures is better, whether for a doctor who is curing or for a gymnast who is exercising people? Should the practitioner execute his single power in a split way or in only one way, employing only the worse and more savage of the two?

Clinias:: The double method would presumably make a great difference, stranger.

Athenian Stranger:: Do you want us to observe this double method, and then the simple, in the very acts of lawgiving?

Clinias:: How could I not want to!

Athenian Stranger:: Come, then, in the name of the gods, what would be the first law the lawgiver would lay down? Won't he proceed according to nature, and with his regulations bring order to what is the first cause of childbirth in cities?

Clinias:: But of course.

Athenian Stranger:: Isn't intercourse and partnership between married spouses the original cause of childbirths in all cities?

Clinias:: How could it be otherwise?

Athenian Stranger:: Then it's likely that in every city it's fine, with a view to what is correct, if the marriage laws are the first laid down.

Clinias:: In every way, surely.

Athenian Stranger:: Let's pronounce first the simple version, which would perhaps be something like this:

Everyone is to marry after he reaches the age of thirty and before the age of thirty-five. If not, there is to be a penalty of fines and dishonor, the fines to be of such-and-such an amount, the dishonor to be of such-and-such a character.

Let something like that be the simple formula regarding marriage. Here's the double formula:

Everyone is to marry after he reaches the age of thirty and before he reaches thirty-five, bearing in mind that there is a sense in which the human species has by a certain nature a share in immortality, and that it is the nature of everyone to desire immortality in every way. For the desire to become famous and not to lie nameless after one has died is a desire for such a thing. Thus the species of human beings has something in its nature that is bound together with all of time, which it accompanies and will always accompany to the end. In this way the species is immortal; by leaving behind the children of children and remaining one and the same for always, it partakes of immortality by means of coming-into-being. For anyone voluntarily to deprive himself of this is never pious, and whoever does not care for children and a wife does so intentionally deprive himself.

Now let him who obeys the law depart without penalty; but he who disobeys, he who at the age of thirty-five does not marry, is to pay a fine of such-and-such an amount every year—so that he won't be of the opinion that the bachelor's life is a source of gain and ease for him—and further let him be excluded from the honors the younger men in the city pay to their own elders on each occasion.

After listening to this law next to the other it's possible to decide in every single case whether they should become at the very least double in length by embodying persuasion as well as threats, or whether by employing threats alone they should remain simple in length.

Megillus:: The Laconic way, stranger, is to give more honor always to the shorter. Yet if someone were to ask me to be the judge who decides which of these writings I would want used in the written statutes of my city, I would choose the lengthier; in fact, in the case of every law I would make this same choice—if, as in this example, both possibilities were present. Of course, presumably the present legislation must also be satisfying to Kleinias here. After all, the city that is thinking of using such laws is his.

Clinias:: You've spoken nobly, at any rate, Megillus.

Athenian Stranger:: It's extremely simple-minded to argue over whether writings should be long or short; for what should be honored, I think, are the best writings, not the shortest or the lengthy. Besides, in the laws just mentioned, not only does the one version differ by double the amount of practical virtue, but, as was said just a moment ago, the comparison with the dual species of doctors is a very correct comparison.

In this regard, it's likely that none of the lawgivers has ever reflected on the fact that it is possible to use two means of giving laws, persuasion and violence (insofar as the uneducated condition of the mob permits). They have used only the latter; failing to mix compulsion with persuasion in their lawgiving, they have employed unmitigated violence alone. But I, O blessed ones, see the need for yet a third way of handling laws, one not at all in use nowadays.

Clinias:: What are you referring to?

Athenian Stranger:: Something which has emerged, by the aid of some god, out of the very things about which we're now carrying on a dialogue! We began to discuss laws about dawn, and it has become high noon and we've paused in this altogether lovely resting place. In all this time we've been having a dialogue about nothing except laws. Nevertheless, it seems to me that we have only just begun to enunciate laws, and that everything said before consisted of our preludes to laws.

Why have I said these things? What I wish to say is this: all speeches, and whatever pertains to the voice, are preceded by preludes—almost like warming-up exercises—which artfully attempt to promote what is to come. It is the case, I suppose, that of the songs sung to the kithara, the so-called “laws” or nomoi,  like all music, are preceded by preludes composed with amazing seriousness. Yet with regard to things that are really “laws,” the laws we assert to be political, no one has ever either uttered a prelude or become a composer and brought one to light—just as if it were a thing that did not exist in nature. But the way we’ve been spending our time has shown us, it seems to me, that such a thing really does exist; and the laws which were talked of as double seemed to me just now to be not simply double but rather composed of two different parts, a law and a prelude to the law. What was called a tyrannical command, and likened to the image of the commands of the doctors we said were unfree, seemed to be unmixed law; what was spoken of before this, and was said to be persuasive on behalf of this, really did seem to be persuasion, but seemed to have the power that a prelude has in speeches. For it became clear to me that this whole speech, which the speaker gives in order to persuade, is delivered with just this end in view: so that he who receives the law uttered by the legislator might receive the command—that is, the law—in a frame of mind more favorably disposed and therefore more apt to learn something. That’s why, according to my argument at least, this would correctly be called a “prelude” rather than an “argument” of the law.

Having said these things, what would I wish myself to say next? Just this: the lawgiver must always provide that all the laws, and each of them, will not lack preludes, so that the laws will differ from themselves to as great a degree as the two that were spoken of just now differed from one another.

Clinias:: For my part at least, I think that we should bid the one who knows about these things to legislate in no other way.

Athenian Stranger:: To me what you say seems fine to this extent, Kleinias—insofar as you say that all laws have preludes, and that at the beginning of every legislation as well as at the beginning of every speech one should pronounce the prelude which is by nature appropriate to each. For what is going to be said after this is of no small significance, and it makes no small difference whether or not the things are remembered clearly or unclearly. Yet if we should ordain that every one of the aforementioned laws, great or small, is to have a prelude, we would not be speaking correctly. Such a thing isn't necessary in the case of every song and every speech: even though there does exist by nature a prelude for all of them, it ought not be employed in all cases. In this regard one must leave a certain latitude to the particular orator, singer, or legislator in each case.

Clinias:: What you say seems very true to me. But look, stranger, let's not use up any more time in delay; let's retrace the steps of our discussion and begin, if it's all right with you, with the things you said a little while ago when you were not pronouncing a prelude. Let's repeat, with a second and better start, as they declare in playing games, but this time with the intention of completing a prelude and not just any chance sort of speech, as we were doing; let's take it as agreed that the beginning of them was a prelude. As regards honoring the gods and caring for ancestors, the things said just now are sufficient. Let's try to say what comes next, until the whole prelude seems to you to be sufficiently set forth. Then after this you will go ahead with the pronouncement of the laws themselves.

Athenian Stranger:: So we are now saying that earlier we pronounced a sufficient prelude as regards the gods, those who come after the gods, and the living and dead ancestors. And you appear to me to be asking now that I bring to light, as it were, whatever has been left unsaid.

Clinias:: Entirely so.

Athenian Stranger:: Well, next after such things it is fitting and very much in the common interest for the speaker and the listeners to deal with how they should be serious and how they should relax as regards their own souls, their bodies, and their property; by pondering these matters, they'll attain education—insofar as they are able. These, then, are for us the very matters that really should be spoken of and hearkened to next, after those others.

Clinias:: What you say is very correct.

## Book V.

Athenian Stranger:: “Listen, then, each of you who has heard what was said just now about the gods and the cherished forefathers.

“Of all the things that belong to one, the most divine—after the gods—is the soul, the thing that is most one’s own. It is the case with everybody that all one’s possessions fall into two classes. The superior and better sort are masterful, while the inferior and worse are slavish. Hence one’s masterful possessions should always be honored above one’s slave possessions. So I speak correctly when I urge that one honor one’s soul second after the gods, who are masters, and those who follow after the gods. There is no one among us, so to speak, who assigns honor correctly, though we are of the opinion that we do. For honor is presumably a divine good, and cannot be bestowed through what is bad: he who thinks that he is making his soul greater with words or gifts or certain indulgences, yet fails to change its condition from worse to better, seems to honor it, but in fact is not doing so at all.

“Every boy who has barely become an adult human being right away considers himself capable of understanding everything, thinks that he honors his soul by praising it, and with an eager spirit encourages it to do whatever it might wish; whereas, according to what is now being said, this sort of behavior harms rather than honors it. And yet, we assert, it should be honored second after the gods. And when a human being refuses to consider himself responsible on each occasion for his errors and most of his gravest evils, but assigns responsibility to others and always excuses himself, he is seeming to accord honor to his soul while falling far short of doing as he should. For he is doing harm. And when he delights in pleasures contrary to the advice and praise given by the lawgiver, then he does not honor it at all and instead dishonors it by filling it with evils and remorse. And when, in the opposite situation, he fails to endure firmly the hardships, fears, pains, and sufferings that are praised, and instead gives in to them, then he does not honor it, by giving in. Through all such actions he brings dishonor upon it. And when he considers survival to be always good, then too does he dishonor rather than honor it. For in this case he has given in and allowed the soul to go on supposing that everything done in Hades is bad; he has failed to struggle as he should, teaching and attempting to refute it in order to show that one doesn't know whether things aren't just the opposite—it may be that among the gods below are to be found the things that are by nature the greatest goods of all for us. And when someone honors beauty more than virtue, this constitutes nothing other than a real and thorough dishonoring of the soul. For this argument falsely claims that the body is more honorable than the soul. Yet nothing earth-born is more honorable than the Olympians, and he who has a different opinion when it comes to the soul fails to comprehend what a marvelous possession he is neglecting. And when someone has an erotic passion for ignoble gain, or fails to be troubled when he makes such gain, he then honors his own soul by giving it gifts—entirely missing the point. For he is selling what is honorable and beautiful in it for a small bit of gold; whereas all the gold on earth or beneath the earth is not equal in value to virtue.

"In short, with regard to the things the lawgiver enumerates and sets down as shameful and bad, and the opposite, good and noble, whoever is unwilling to use every means to avoid the former and employ all his capacities in the practice of the latter—every such human being—is ignorant of the fact that in all these matters he is treating his soul, a most divine thing, in a most dishonorable and unseemly way. No one, so to speak, takes into account the gravest of the so-called 'judicial penalties' for wrongdoing: what is gravest is to become similar to men who are wicked, and, in becoming similar, to avoid good men and be cut off from good conversation, and instead to attach oneself to the bad by seeking intercourse with them. He who grows similar in nature to such people must necessarily do and suffer what such men by their natures do and say to one another. To suffer in this way is not, indeed, a 'judicial penalty,' since what is just—including penalty—is noble. It is retribution, a suffering that is a consequence of injustice. Both he who undergoes this and he who escapes it are miserable: one because he does not get cured, the other because he is destroyed in order that many others may be saved. To speak generally, 'honor' means for us following the better things and, in the case of the worse things that allow for improvement, bringing them as close as possible to the same end. And hence no human possession is more naturally well-suited than the soul for fleeing the bad or for tracking down and capturing what is best of all, and, after capturing it, dwelling in common with it for the rest of one's life. That's why it was assigned the second rank of honor.

"The third rank of honor belongs by nature to the body (everyone would understand this at least). Here too it is necessary to look into the various sorts of honor to see which are true and how many are false, and this is the responsibility of the lawgiver. It appears to me that he would announce and distinguish them as follows: the honorable body is not the one that is beautiful, or strong, or swift, or large, or even healthy—though many would believe this, indeed, to be rather honorable—nor, of course, a body that has the opposite characteristics. Instead, those attributes which occupy the middle ground, in between all these, are the most moderate and steady by far. For the former extremes make souls boastful and rash, while the latter make them humble and unfree.

"The same holds true for the possession of money and property; honor should be bestowed on this according to the same scheme. Excesses of each of these create enmities and civil strife both in cities and in private life, while deficiencies lead, for the most part, to slavery.

"And let no one be a lover of money for the sake of his children, so that he may leave them as wealthy as possible: this is better neither for them nor for the city. A portion that will not attract flatterers around the young but will avoid neediness is the most musical and the best of all; for this brings us consonance, and through harmony makes life painless in all respects. Children should be left an abundance of awe rather than gold. Now we think that we bestow this legacy on the young by rebuking them whenever they behave shamelessly. Yet this is not the result produced if the young are exhorted the way they are nowadays, when they are urged to be ashamed before everyone. The prudent lawgiver would instead urge the elderly to be ashamed before the young, and to take care above all lest any young person ever see or hear them doing or saying anything shameful; for where the old are lacking in a sense of shame, there the young necessarily lack modest awe. What really makes a difference in education—not only of the young but of ourselves—is not so much the precepts one gives others, as the way one exemplifies the precepts one would give to another, in one's conduct throughout life.

“If a man honors and reverences family ties and his entire natural blood-community that shares in the family gods, he may expect the gods who watch over births to be proportionately well disposed towards his own begetting of children.

“Moreover, as for friends and comrades, one will make them favorably disposed in the interminglings of life if one thinks more highly than they do of the worth and importance of their services to oneself, and assigns to one’s own favors to friends a lesser value than that assigned by the friends and comrades themselves.

“With regard to the city and its citizens, the best person by far is the one who prefers, above any Olympic victories or any victories in contests of war or peace, the victorious reputation of having served his own laws—a reputation as the one who throughout his life served the laws more nobly than any other human being.

“Again, as regards strangers, one must consider contracts made with them to be the most hallowed. For almost all the wrongs committed among strangers or against strangers are linked more closely to an avenging god than are the wrongs committed among citizens. This is because the stranger, being bereft of comrades and relatives, evokes more pity on the part of both human beings and gods; therefore he who has the power to avenge him has a spirit that is more eager to come to his aid. And especially powerful, in each case, are the demon and the god of strangers, who follow Zeus, god of strangers. Thus anyone with even a little foresight will take great care to complete his life’s journey without having done any wrong to strangers. The gravest of these wrongs done to strangers, and native inhabitants as well, is in every case that done to suppliants; for the god who bore witness to the agreement the suppliant happened to obtain becomes a special guardian of the one who suffers, so that whatever he happens to suffer never goes unavenged.”

We have now just about covered the relations with parents, with oneself, and with what belongs to one, as well as with the city, friends, and family, and also strangers and the natives; what should come next after this is an explanation of; what sort of person one should be oneself if one is to lead the: most noble sort of life. In turning to these next matters we must speak not of law, but rather of how praise and blame can educate each of them so that they become more obedient and well disposed to the laws that are going to be laid down.

”Truth is the leader of all good things for gods, and of all things for human beings. Whoever is to become blessed and happy should partake of it from the very beginning, so that he may live as a truthful man for as long a time as possible. Such a man is trustworthy. The untrustworthy man is one who finds the voluntary lie congenial; he who finds the involuntary lie congenial is without intelligence. Neither of these is enviable, because every man who is untrustworthy, certainly, and ignorant, is also friendless. As time goes on such a man is discovered, and in the hard time of old age, near the end of life, he makes himself completely deserted, so that whether his comrades and children are living or not he lives almost as if he were an orphan.

”He who does not do injustice is indeed honorable; but he who does not allow unjust men to work their injustice is more [than twice as honorable. The former has a value of one, but the latter, by reporting the injustice of the others to the magistrates, is equal in value to many others. Yet the great man in the city, the man who is to be proclaimed perfect and the bearer of victory in virtue, is the one who does what he can to assist the magistrates in inflicting punishment.

“This same praise should of course be bestowed on moderation and prudence, and on any other good possessions which can be given to others as well as possessed by oneself. The one who does the giving should be honored most highly; in the second rank should be put the one who is willing to give, but unable; as for the one who begrudges certain good things and does not, out of friendship, voluntarily share them in common with anyone, he should be blamed—though the possession itself should not be dishonored on account of the possessor, and one should still strive to acquire it, as much as one can.

“Let all of us be lovers of victory when it comes to virtue, but without envy. The man of this sort—always competing himself but never thwarting others with slander—makes cities great. But the envious man, who fancies he must gain superiority by slandering the others, both lessens his own efforts to attain true virtue and makes his competitors dispirited by getting them unjustly blamed. Thus he makes the whole city a flaccid competitor in the contest for virtue and does what he can to diminish its fame.

“Every real man should be of the spirited type, but yet also as gentle as possible. For there is no way to avoid those injustices done by others that are both dangerous and difficult, or even impossible, to cure, except to fight and defend oneself victoriously, in no way easing up on punishment. This, every soul is unable to do, if it lacks a high-born spiritedness. On the other hand, in regard to the curable injustices men commit, one must first understand that no unjust man is ever voluntarily unjust. For no one anywhere would ever voluntarily acquire any of the greatest evils—least of all when the evil afflicts his most honored possessions. Now the soul, as we asserted, is truly the most honorable thing for everyone; therefore no one would ever voluntarily take the greatest evil into his most honorable possession and keep it for the rest of his life. So the unjust man, like the man who possesses bad things, is pitiable in every way, and it is permissible to pity such a man when his illness is curable; in this case one can become gentle, by restraining one's spiritedness and not keeping up that bitter, woman's raging. But against the purely evil, perverted man who cannot be corrected, one must let one's anger have free rein. This is why we declare that it is fitting for the good man to be of the spirited type and also gentle, as each occasion arises.

"The greatest of all evils for the mass of human beings is something which grows naturally in the soul, and everyone, by excusing it in himself, fails to devise any way to escape it. This is shown by the way people talk, when they say that every human being is by nature a friend to himself and that it is correct that he should be so. The truth is that the excessive friendship for oneself is the cause of all of each man's wrongdoings on every occasion. Everyone who cares for something is blind when it comes to the thing cared for, and hence is a poor judge of what is just and good and noble, because he believes he should always honor his own more than the truth. Yet a man who is to attain greatness must be devoted not to himself or to what belongs to him, but to what is just—whether it happens to be done by himself or by someone else. This same failing is the source of everyone's supposing that his lack of learning is wisdom. As a result, we think we know everything when in fact we know, so to speak, nothing: and when we refuse to turn over to others what we don't know how to do, we necessarily go wrong, by trying to do them ourselves. So every human being should flee excessive self-love, and should instead always pursue someone who is better than himself, without putting any feeling of shame in the way.

““There are some matters that are often talked about which are smaller, but no less useful, than these things; each person should repeat them to himself and keep recollecting them. For just as where there is a constant flow outward, there must be the opposite, constant replenishment, so recollection is’ the inflow that replenishes the supply of prudence. Thus excessive laughter or weeping should be restrained, and every man should remind everyone else to that effect. On the whole, one should try to keep all great joy or great pain hidden under a seemly veil, whether each person’s demon remains in good condition or whether in some enterprises chance brings high, steep slopes for the demons to climb. With regard to the troubles that fall upon men, they should hope that for good men at least the god will always diminish them, and change their present lot for the better, by means of the gifts he bestows; with regard to the good things, they should hope that, with the help of good luck, the opposite sort of change will always take place for them. It’s in these hopes that each should live and with recollections of all such admonitions, never flagging, but always recollecting them clearly, for another and for oneself, playfully and seriously.”

Now thus far, what has been said describing the practices that are to be followed and the sort of person each should be himself, concerns mainly the divine things; we have not yet discussed the human things, though we must—for we are carrying on a dialogue with human beings, not gods.

“By nature, the human consists above all in pleasures and pains and desires. To these every mortal animal is, as it were, inextricably attached and bound in the most serious ways. The noblest life should be praised not only because it is superior as regards the splendor of its reputation, but also because, if someone is willing to taste it and not become a fugitive from it because of his youth, it will prove superior in respect to that which we all seek—namely, having more delight and less pain throughout the whole of one's life. That this will be clear, if one tastes in the correct way, will be very obvious. But what is 'the correct way'? This is what must now be investigated, under the guidance of the argument: one way of life must be compared with another, the more pleasant with the more painful, to see whether the life grows for us according to nature or whether it grows otherwise, against nature.

"Now we want pleasure for ourselves, while we neither choose nor want pain; we don't want what is neither pleasant nor painful instead of what is pleasant, but we do want it in exchange for pain; we want less pain with more pleasure but we don't want less pleasure with more pain; where the pleasant things and the painful things are equal in each of two situations, we could not say clearly which situation we choose. As each choice is exercised, all these do or do not make a difference to him who is wishing, depending on their number, size, intensity, and equality, or the opposites. This being the way these things are necessarily ordered, in the case of a life that has many great and intense pleasures and pains, we want the life in which the pleasures predominate and don't want the life in which the opposite predominate. Again, in the case of a life that has a few small and calm pleasures and pains, we don't wish the life in which the painful things predominate but we do wish the life in which the opposite predominate. Further, the life whose intensity is balanced we have to understand in the same way: we wish the balanced life that has more of the things we like, but if it has more of the things we find repugnant, we do not wish it.-One must understand that all ways of life open to us are naturally limited by this range of alternatives, and on this basis one must decide which ways of life we wish for by nature. If we claim we wish something beyond these alternatives, we are speaking from a certain ignorance and lack of experience of what the ways of life really are.

"So then what and how many are the ways of life among which one must distinguish the Wished-for and voluntary from the unwished and involuntary—looking to a law that one gives to oneself, and choosing what is dear and also pleasant and best and most noble, and thus living as blessed a life as is humanly possible? One of these lives, let us say, is the moderate life; one is the prudent; and one is the courageous; in addition, let us set down the healthy life as one. Opposed to these, being four, are four others—the imprudent, the cowardly, the unrestrained, and the sickly. Now he who knows will set down the life of moderation as a life that is mild in every way, ¦with gentle pains and gentle pleasures, a life characterized by desires that are mild and loves that are not mad. The unrestrained life he will set down as intense in every way, with strong pains and strong pleasures, a life characterized by desires that are vehement and frenzied, and loves that are as mad as possible. In the moderate life, he will say, the pleasures predominate over the griefs, while in the unrestrained life the pains are greater and more numerous and more frequent than the pleasures. From this it falls out, necessarily and according to nature, that the one life is more pleasant for us and the other more painful; and he at least who wants to live pleasantly will no longer, voluntarily at any rate, permit himself to live in an unrestrained way. Indeed, it is now obvious—if what is being said now is correct—that every unrestrained man must necessarily be living this way involuntarily. The whole mob of humanity lives with a lack of moderation because of their ignorance or their lack of self-mastery or a combination of both. One must understand the sickly and healthy ways of life in the very same way. Both have their pleasures and pains, but in a healthy life the pleasures predominate over the pains, while sick men have more pains than pleasures. In choosing among ways of life we do not wish that the painful should predominate, and the life where pain is subordinate is the life we have judged to be more pleasant. Now in comparing the moderate life with the unrestrained, the prudent with the imprudent, and even the life of courage with that of cowardice, we would assert that in the former lives both pleasures and pains are fewer, smaller, and rarer, and the one life surpasses the other in pleasures, while the latter lives surpass the others in pain. The courageous man defeats the coward, the prudent man defeats the imprudent, and so their lives are more pleasant than the lives of the others: the moderate, courageous, prudent, and healthy lives compared to the cowardly, imprudent, unrestrained, and sickly. In sum, we would assert that the life that possesses virtue, of body or also of soul, is more pleasant than the life possessing vice, and that in the other respects—beauty, correctness, virtue, and fame—it is far superior to the life of vice. Thus it makes the one who possesses it live more happily than his opposite, in every way and on the whole."

Let the speeches that constitute the prelude to the laws come to an end here. After the "prelude" it is presumably necessary that a "law" follow—or rather, in truth, the outline of the laws of a political regime. Now just as in some web or any other woven article the woof and the warp can't be made of the same materials, and the warp must necessarily be different in regard to virtue (for it should be strong, with a certain firmness in its ways, while the other should be softer, with a certain just, yielding quality), so with respect to those who are to fill the ruling offices in cities one must in each case discriminate, in some reasonable way, between them and the others who have been tested and hardened by only a small education. For a political regime has two fundamental parts: on the one hand, the appointment of men to fill each ruling office, and on the other hand, the laws that are given to the ruling offices.

But before all these matters, it is necessary to think through such matters as the following. With regard to every herd, one who takes up the task of a shepherd or cowherd or horse breeder or any other such things will never attempt to care for his charges otherwise than by first instituting the purge appropriate to each group. Picking out the healthy from those who are not, and the well born from those not well born, he will send the latter away to other herds and direct his care to the former. He understands that his labor would be vain and endless, as regards both the body and the souls, if someone didn’t carry out a purification by the appropriate means. For in the case of each animal he owns, the souls that have been ruined by nature and by a corrupt upbringing will ruin the stock that has healthy and undefiled habits and bodies. With the other animals it is a less serious matter, and deserves mention in the argument only to serve as an example; but in the case of human beings it is a task of the greatest seriousness for the lawgiver to discover and give an account of what is appropriate for each group, as regards the purge and all other activities. So, without further ado, the account of the purges of the city would go as follows. There are many sorts of purification, some gentler and some harsher. If the same man were a tyrant as well as a lawgiver he could employ the purges that are harsh and best; if a lawgiver who lacks tyranny is setting up a new regime with laws, he should be glad if he can purify using even the gentlest of purges. The best method is painful, like medicines of this kind, since it involves punishing with justice and retribution, and completes the retribution by means of death and exile. That is how the greatest offenders, those who are incurable and who represent the greatest harm to the city, are usually gotten rid of. But our method of purification is one of the gentler—something like this: those who, because they lack food, show themselves ready to follow men who lead the have-nots in an attack on the property of the haves will be looked upon as a disease growing within the city; they will be sent away in as gentle a manner as possible, in an expulsion that bears the euphemistic name “colonization.” Every lawgiver must somehow or other accomplish this at the beginning, but for us now the problem happens to be rather unusual. There isn’t any need to devise a colonizing expedition or some purgative selection at present; instead, just as in the case of a single reservoir formed by the flowing together of many springs and mountain torrents, we are compelled to turn our minds to insuring that the water flowing in will be as pure as possible, partly by drawing off some and partly by diverting some in side-channels. But it’s likely that toil and danger are present in every political project. Since things are being done now in speech but not in deed, let’s assume that our selection has been carried out and that the purification has happened according to our manner of thinking. By thorough testing—with every sort of persuasion over a sufficient period of time—we will discover those who are bad among the people trying to become citizens of the present city and prevent them from entering;

to those who are good we will extend as gentle and as gracious an invitation as we can.

Let us not, by the way, overlook the good fortune that has befallen us, the same luck that we said befell the colony founded by the descendants of Heracles: they avoided the terrible, dangerous strife occasioned by redivision of land, cancelling of debts, and redistribution. When a city with ancient roots is compelled to legislate about this, it finds that it cannot leave things as they are, unchanged, nor is it able to change them in any way; the only thing left, so to speak, is prayer, and small, careful transformation that gradually produces a small result over a long period of time. For this to happen there must be a continual supply of reformers from among those who possess an abundance of land and many debtors. These reformers must be willing, out of a sense of fairness, to share in some way what they have with any of their debtors who are in distress, forgiving some of the debts and parcelling out some of their land. Thus they bring about a kind of measure and show that they believe poverty consists not in a lessening of one's property but in an increase of one's avarice. This is the most important source of a city's preservation, and provides a sort of sturdy foundation upon which someone can later build whatever political order befits such an arrangement. But if this foundation is rotten, political activity would always encounter difficulties in the city. This danger, as we assert, we're avoiding; nevertheless, it is more correct to discuss it, at any rate, and show how we might find a way out if we were not escaping it. It's been said that what would be needed is an absence of the money-loving that goes with justice: there is no other way of escape, broad or narrow, besides this device. So let this stand now as a kind of buttress for our city. Somehow or other things must be arranged so that they don’t have disputes over their property, because those who have even a little intelligence won’t voluntarily go ahead with the rest of the arrangements as long as ancient property disputes remain unsettled among themselves. But for men in a situation like ours now, where a god has given a new city to found, and where there are as yet no hatreds against one another; no human ignorance, even if combined with complete evil, would lead men to set up a division of land and houses that would introduce these hatreds among themselves.

What then would be the method of a correct distribution? First the numerical mass has to be decided—how many of them there ought to be. After that there must be agreement on the distribution of the citizens—how many divisions there should be, and how big they should be. Among these divisions the land and houses should be distributed as equally as possible. Now the only correct way to determine the adequate size of the population is by consideration of the land and the neighboring cities. The land should be large enough to support a certain number of people living moderately, and no more. This number should be large enough to enable them both to defend themselves, if they suffer an injustice from their neighbors, and to be in a position to give at least some aid to their neighbors if someone else does them an injustice. When we have looked over the territory and the neighbors we will decide on these things in deed as well as in speech. At the moment, for the sake of giving a sketch in outline, let the argument proceed to the giving of the laws, so that it can be completed.

As a suitable number, let there be five thousand forty landholders and defenders of the distribution; and let there be the same division of the land and the households, each man paired with an allotment. First let the whole number be divided by two, and then the same number by three—for its nature is to be divisible also by four, and five, and so on up to ten. Any man who is a lawgiver must understand at least this much about numbers: which number and what kind of number would be the most useful for all cities. Let's choose the number that has the most numerous and most nearly consecutive divisors within itself. The entire number series is divisible by every number for every purpose. Five thousand forty has no more than sixty, minus one, divisors, including all the numbers from one to ten, consecutively. And these divisions are useful in war and in peace—in all contracts and associations, in revenue-gathering, and in disbursements. These matters must be studied at leisure and firmly understood by those who are given this duty by the law; at any rate, this is the way it is, and the person who is going to set up a city should proclaim these things with a view to the following. The same applies whether someone is making a new city from the beginning or refounding an old city that has become corrupted: as regards gods and temples—which things are to be constructed in the city for each of them, and which gods or demons they are to be named after—no one of intelligence will try to change what has been laid down by Delphi or Dodona or Ammon, or what has been ordained by the ancient sayings, however they may have become manifest—whether they issue from apparitions or from an inspiration said to come from gods. Through such advice men have established sacrifices, mixed with mystery-rites, some of which have local origins and some of which are borrowed from Etruria, or Cyprus, or somewhere else. Such sayings have led them to sanctify oracles, statues, alters, and shrines, and to lay out sanctuaries for each of these things. Now a lawgiver should not change any of these things in the least. He should give to each group a god or demon or some hero, and before he makes any other land distribution he should set aside choice places for sanctuaries and everything that goes with them. In this way, when the various parts of the population gather together at the regularly established intervals, they'll be amply supplied with whatever they need; they'll become more friendly to one another, at the sacrifices, will feel they belong together, and will get to know one another. There is no greater good for a city than that its inhabitants be well known to one another; for where men's characters are obscured from one another by the dark instead of being visible in the light, no one ever obtains in a correct way the honor he deserves, either in terms of office or justice. Above everything else, every man in every city must strive to avoid deceit on every occasion and to appear always in simple fashion, as he truly is—and, at the same time, to prevent any other such man from deceiving him.

The next move in the process of establishing laws is analogous to the move made by someone playing draughts, who abandons his "sacred line," and because it's unexpected, it may seem amazing to the hearer at first. Nevertheless, anyone who uses his reason and experience will recognize that a second-best city is to be constructed. Perhaps someone would not accept this because he is unfamiliar with a lawgiver who is not a tyrant. But the most correct procedure is to state what the best regime is, and the second and the third, and after stating this to give the choice among them to whoever is to be in charge of the founding in each case. Let us, too, follow this procedure now: let's state what regime is first as regards virtue, what is second, and what is third. Then let's give the choice to Kleinias, in the present circumstances, and to anyone else who might be willing, at any time, to proceed to choose among such things—taking over from his own fatherland whatever his particular character leads him to cherish in it.

That city and that regime are first, and the laws are best, where the old proverb holds as much as possible throughout the whole city: it is said that the things of friends really are common. If this situation exists somewhere now, or if it should ever exist someday—if women are common, and children are common, and every sort of property is common; if every device has been employed to exclude all of what is called the "private" from all aspects of life; if, insofar as possible, a way has been devised to make common somehow the things that are by nature private, such as the eyes and the ears and the hands, so that they seem to see and hear and act in common; if, again, everyone praises and blames in unison, as much as possible delighting in the same things and feeling pain at the same things, if with all their might they delight in laws that aim at making the city come as close as possible to unity—then no one will ever set down a more correct or better definition than this of what constitutes the extreme as regards virtue. Such a city is inhabited, presumably, by gods or children of gods (more than one), and they dwell in gladness, leading such a life. Therefore one should not look elsewhere for the model, at any rate, of a political regime, but should hold on to this and seek with all one's might the regime that comes as close as possible to such a regime. If the regime we've been dealing with now came into being, it would be, in a way, the nearest to immortality and second in point of unity. The third we will elaborate next after these, if the god is willing.

Now then what do we say this regime is and how do we say it comes to be such? First, let them divide up the land and the households, and not farm in common, since such a thing would be too demanding for the birth, nurture, and education that have now been specified. However, the division of lands is to be understood in something like the following way: each shareholder must consider his share to be at the same time the common property of the whole city, and must cherish his land, as a part of the fatherland, more than children cherish their mother; he must consider the land as a goddess who is mistress of mortals. And he should have the same under- standing of the native gods and demons.

In order that these arrangements remain fixed for all the rest of time, the following must also be understood: the number of hearths we establish now is never to be altered, never to become greater or smaller. To maintain this arrangement firmly through the whole city, let each allotment holder always leave behind only one heir to his household from among his children. The child who is especially dear to him shall become his successor in ministering to the gods of the family and of the city, looking after both the living gods and those who may have reached their end by that time. As for the other children, in families where there are more than one, the females should be given in marriage according to the law that will be ordained, and the males should be distributed as sons to those citizens who lack sons. Personal likes and dislikes should be followed as closely as possible. If there are some who can find no one who pleases them, or if a surplus of females or males occurs, or on the contrary a deficiency because of a lack of childbirths, there will be a magistracy which we will designate—the greatest and most honored, in fact—which should, after looking into all these things, devise means of assisting those who have too many offspring and those who are lacking, so as to maintain the five thousand forty households always intact insofar as is possible. There are many devices, including ways of preventing birth in those who conceive too many offspring, and, on the contrary, various ways of encouraging and stimulating a greater number of conceptions. The use of honors and dishonors, as well as the encouraging words of elders addressed to young people, can accomplish what we're talking about. Finally, if we're at a complete loss as to how to deal with the inequalities among the five thousand forty; households, if we have an overflow of citizens because of the warmth of feeling among those who live together in house-holds, and can't devise any other way out, there is presumably the old device we've often spoken of: the dispatch of colonists from among those who seem suitable—colonists who will depart as friends leaving friends. If, on the other hand, the opposite dilemma ever occurs, if a flood-wave of disease washes over them, or destructive wars, and through bereavements their number becomes much smaller than the number ordained, then, though they should never voluntarily admit citizens educated in a bastard education, against necessity it is said that even a god is unable to use force.

Let us next assert that our present argument itself is speaking and giving counsel in the following way: "O you best of all men, never cease to follow nature in honoring similarity and equality and sameness and what has been agreed upon—in number and in every sort of capacity that pertains to noble and good practices. First, guard throughout your whole lives the number that has been stated just now. Moreover, do not! dishonor the well-measured height and magnitude of property that you were allotted at the beginning, by buying and selling it among yourselves. If you do, neither the Lot itself—which made the distribution, and is a god—nor the lawgiver will remain allied with you." He who disobeys this injunction will find first the law set against him, having warned him that he himself chose either to accept the allotment on these conditions or not; that he accepted it, in the first place, on the condition that Earth is sacred to all the gods, and, in addition, that he saw priests and priestesses praying at the first, the second, and the third sacrifices. The law will go on to warn that whoever sells or buys an allotted house or land will suffer penalties appropriate to these circumstances which have been enumerated: to wit, they will engrave the story of the offender on ‘cypress tablets stored in temples, there to be read and remembered for the rest of time. They will give responsibility for guarding and executing these provisions to that one of the magistrates who is believed to see the sharpest, so that the transgressions on any occasion will never escape their notice and they will be able to punish anyone who disobeys the law and the god.

The amount of good that the system now being laid down will do for all the cities that follow it (given, in addition, the appropriate arrangements) is, as the ancient proverb has it, forever unknown to the evil man and knowable only by him who has become experienced and decent through habituation. For under such a system great money-making is impossible, and the consequence is that there should not and cannot be anyone who makes money in any way from illiberal pursuits. No one need seek in any way to accumulate money from the sort of occupation that receives the contemptible epithet “gross vulgarity” and that can distort the character of a free man.

There is another law that is closely linked to all these matters: no one is to be allowed to possess any gold or silver in > any private capacity. There is a need for currency in daily exchange—the money that can scarcely be avoided when dealing with craftsmen, and that is required by all who pay hired help—slaves and foreigners—

their wages. For these purposes, we assert that they should possess a kind of coin that carries value among themselves but is valueless among other human beings. The city itself, however, must necessarily possess some money of the sort that is common to the Greeks, for use by army expeditions and by travelers who go abroad among other human beings—ambassadors, for instance, and any other necessary messengers whom the city must send out. For the sake of these things, the city must, on each occasion, possess Greek money. If a private individual is ever compelled to go abroad, let him go, if the magistrates allow it, but if he has any extra foreign money on his return home, let him deposit it with the city and receive back an amount of native currency equal in value. If anyone is caught keeping the illicit currency on his own, let the money be confiscated for the public, and let anyone else who knew of it, but failed to inform, share equally in the curse and blame and additional fine, which is to be an amount not less than the foreign currency that was brought back.

When someone marries or gives away a daughter in marriage, there is to be no dowry whatsoever given or received; moreover, no one should give money to someone he can’t trust, and no money should be lent at interest. Anyone who has received a loan will be permitted to refuse to pay it back, both interest and principal.

That these are the best practices for a city to follow will be seen by anyone who looks into the matter correctly, always referring back and judging according to the first principle and intention. The intention of the intelligent statesman, we assert, is not that which the many would assert a good legislator should have. They claim he should intend to make the city for which he is benevolently legislating very big and as rich as possible, possessing gold and silver, and ruling over as many people as possible, on land and sea. And they would add that he who legislates correctly, at any rate, should also wish the city to be the best and happiest possible. But of these things some can be achieved and others cannot. The one who orders things should aim at what is possible, and not waste his wishes or his efforts on what is in vain. Now it is almost a necessity that those who become happy also become good—and this he should wish for—but it is impossible that those who become very rich become also good, at least if by "rich" is meant the same thing the many mean. They mean those few human beings who possess the property that is worth the most money—the sort of possessions even some wicked man might have. If this is so, I at least would never agree with them that a rich man becomes truly happy, if he is not also good. But it is impossible for someone to be both unusually good and unusually rich.

"But why?" someone might perhaps ask.

"Because," we would reply, "the gain derived from both just and unjust means is more than twice that derived from just means alone; and he who is willing to spend money neither nobly nor shamefully spends less than half as much as they who are noble and are willing to spend money on noble objects. They who get twice as much and spend twice as little will never be exceeded in wealth by the one who does the opposite. Now of these men, one is good; the other is not bad so long as he is a miser, but utterly bad otherwise, and never good—as was said just now. The man who makes money both justly and unjustly and who spends it neither justly nor unjustly is rich—so long as he's a miser; but the utterly bad man, since he's mostly not a saver, is very poor. The man who spends on noble things and makes money only from just enterprises would never easily become either unusually rich or very poor. Thus our argument is correct: the very rich are not good, and if they’re not good then they’re not happy.”

The hypothesis that underlies our laws aims at making the people as happy and as friendly to one another as possible. Now citizens don’t ever become friends where they have many lawsuits among themselves, and where there are many injustices, but rather where such affairs are as minor and rare as possible. Indeed, we say there should be no gold and silver in the city, nor again big profits made through vulgar occupations, or usury, or other sorts of shameful breeding. There; should be just the things that farming gives and yields, and ¦ only as much of that as will not compel one because of moneymaking to neglect those things which money is by nature intended to serve—namely, the soul and the body (and even these, when they lack gymnastics and the rest of education, would never become worthy of mention). That, indeed, is why we have said more than once that the pursuit of money ranks last in the scale of honor. Of the total of three things that every human being is serious about, the serious and correct caring for money ranks last and third, for the body somewhere in the middle, and for the soul first. And in the case of the regime we are now elaborating, the legislation has been correct if honors are assigned according to this scale. But if one of the laws that will be laid down in the future there should show greater honor to health than to moderation, in the city, or should honor wealth above health and being moderate, it will reveal that it has not been correctly formulated. This, then, is what the lawgiver must repeatedly ask himself: “What is it that I want?” and, “Am I obtaining this or am I straying from the goal?” If he does this he may perhaps get through with his legislation, and relieve others of the task as well—but there is not a single other way that he ever will.

Now the main who receives one of the land allotments is to keep it, we declare, on the conditions that we've described. It would surely have been a fine thing if each one could have entered the colony possessing an equal amount of everything else as well; but since that is impossible, and one will arrive with more money and another with less, it follows that for many reasons, and for the sake of equality of opportunities in the city, there must be unequal classes, so that when it comes to offices, revenues, and distributions, the honor that is due to each person will depend not only on the virtue of his ancestors and himself, and the strength and handsomeness of bodies, but also on the way one uses money or poverty. Quarrels will be avoided because honors and offices will be distributed as equally as possible on the basis of proportional inequality. For these reasons, four classes should be created, according to the amount of property: a First, a Second, a Third, and a Fourth—or they may be known by some other names, both when individuals stay in the same class and when they pass over each other into the appropriate class, by becoming richer from being poor or by becoming poor from being rich.

Following upon these things, I at least would set down a law whose outline is as follows. We assert that if (as we presume) the city must avoid the greatest illness, which has been more correctly termed "civil war" than "faction," then neither harsh poverty nor wealth should exist among any of the citizens. For both these conditions breed both civil war and faction. It follows, therefore, that the lawgiver must announce a limit for; both conditions. So let the limit of poverty be the value of the ¦ allotment, which must be maintained, and which no magistrate, and none of the others who desires to be honored for! virtue, should ever allow to be diminished in the case of anyone. Taking this as the measure, the lawgiver will allow citizens to acquire twice again, and three times again, and up to four times again this amount. But if anyone acquires more than four times this amount—by finding something or by being given something, or by money-making, or some other such stroke of luck—let him dedicate the surplus to the city and to the gods who possess the city. Thus he would attain a good name and avoid all penalty. If, however, someone disobeys this law, then anyone who wishes can denounce him and take half the surplus, while the guilty party will pay an equal amount from his own property, and give the other half to the gods. Everything that anyone possesses apart from the original allotment must be clearly recorded in books kept by guardian-officials whom the law will designate, so that all lawsuits over property may proceed easily and with matters made very dear.

After this the first’ thing to be done is to build the city as close to the center of the territory as possible, having chosen a spot which has also those other advantages for the city that can without difficulty be understood and enumerated. Then after these things there should be a division into twelve parts. First a sanctuary should be set up to Hestia, Zeus, and Athena, called the “acropolis,” and surrounded with a circular wall. From there the twelve parts should radiate, dividing the city itself as well as the whole territory. The twelve parts should be equal, in the sense that the ones where the earth is good should be smaller and the ones where it is worse larger. There should be a division into five thousand forty allotments, but each of these should be divided in two, and the two parts put together to constitute an allotment, one part nearer and one part farther away. The part closest to the city should be paired with the part closest to the borders to make one allotment, and the second-closest to the city paired with the second-closest to the borders, and so on with all the rest. They should mingle the sterility and virtue of the soil in these double plots, using the device just mentioned: by assigning plots of larger and smaller size, the shares should be made equal. The men should also be distributed into twelve parts, in such a manner as to make the twelve parts as equal as possible with respect to the rest of their property—all having been duly recorded. And then, after this, they should give the twelve parts to the twelve gods as allotments, naming and sanctifying each after the god to whom it has been allotted, and calling the part a "tribe." The twelve parts of the city are to be divided just as the rest of the country was. Each individual is to have two houses, one near the center and the other near the border. Thus the settlement will be completed.

Yet we must by all means keep in mind something like the following: the things that have just been described may never all coincide with such opportune circumstances as would allow all of them to come to pass exactly the way the argument has indicated. There may not be found men who will live together in such a fashion without complaint, who will tolerate the stated and fixed limits on money throughout their whole lives, and the childbirth policies we've ordained for each person, or who will live deprived of gold and the other things the lawgiver must clearly proscribe according to what's been said now. They may not accept a territory and city such as he's described, with dwellings located at the center and all around; in fact, he's been talking in every respect almost as if he were telling dreams, or as if he were molding a city and citizens from wax. In one way it wasn't bad to talk that way, but he has to remind himself of things such as the following. Once again, then, the lawgiver expresses to us the following:

"Friends, you shouldn't suppose that in the course of this discussion I have overlooked the fact that what has just been said is in a way true. But I think that when future courses of action are being considered, the most just thing to do in each case is this: he who presents the model of what should be attempted should depart in no way from what is most noble and most true; but, when some aspect of these things turns out to be impossible for a fellow, he should steer away and not do it. Instead, he should contrive to bring about whatever is the closest to this from among the things that remain, and by nature the most akin from among the things that are appropriate to do. He should allow the lawgiver to complete things according to his wish; then, when that is done, he should investigate in common with him to see which part of what he has described is expedient and which part of the legislation he has described is too difficult. For a craftsman of even the meanest thing, who's going to be worth anything, must be everywhere consistent in his activity, I suppose."

Now, after the division into twelve parts has become accepted opinion, one should with an eager spirit look to see in what way each of the twelve parts (which will contain within themselves very many possible subdivisions) may be clearly subdivided, and then how those subdivisions may be further subdivided in successive stages until a division into five thousand forty parts is reached. In this way clans and districts and villages will be created, as well as military units and marching arrangements, and also currency units, dry and liquid measures, and weights: all of these should be so ordained by law as to be convertible and consonant with one another. In addition, the fear of appearing to speak in a petty way should not frighten one from ordering that all the tools they possess be of standard sizes; the general principle one should hold to is that the divisions and variations of numbers are useful for everything—both the variations that exist within numbers themselves and also those that exist in plane and solid figures, in sounds, and in motions (both straight up-and-down and circular revolution). With a view to all these things, the law-giver must order all the citizens to do all in their power to avoid abandoning this sort of coherence. For in household management, and in the political regime, and in all the arts, there is no single part of education that has as much power as the study of numbers. Most important of all, it awakens him who is by nature sleepy and unlearned, giving him ease of learning, memory, and sharpness, and thus making him surpass his own nature by a divine art. All these branches of education would be fine and fitting then—so long as one employs other laws and practices to take illiberality and the love of money away from the souls of those who are going to be competent in, and benefit from, the studies. Otherwise, before one knows it, one will have created a capacity for what is called mischief-making rather than wisdom, similar to what can now be seen among the Egyptians, the Phoenicians, and many other nations, who are formed by a lack of freedom in their other practices and possessions—either because they had a miserable lawgiver who gave them such ways, or because harsh luck befell them, or because of some other such natural thing.

For, Megillus and Kleinias, we mustn't overlook the fact that some places differ from one another in their tendency to breed better and worse human beings, and such factors shouldn't be defied when one makes laws. All sorts of winds and different exposures to the sun can presumably make places unfavorable or favorable, as can the local waters, and the type of plants in the earth. The latter can provide better or worse nourishment not only for the bodies but also for the souls—to no less degree and in all the similar respects. But of all these places, those territories which would differ the most would be those that have some divine presence in the winds and are under the care of demons, and hence receive those who come to settle each time either graciously or in the opposite way. An intelligent lawgiver, at least, will inquire about these places as closely as a human being can in such matters, in order to try to formulate laws that are appropriate. That’s what you must do as well, Kleinias: when you’re about to settle the territory, you must first turn your attention to such matters.

Clinias:: What you say is in every way fine, Athenian stranger, and that’s what I must do.

## Book VI.

Athenian Stranger:: At this point—after, that is, all the things that have just been discussed—almost your next task would be the establishment of offices for the city.

Clinias:: Yes, that is surely so.

Athenian Stranger:: There happen to be these two fundamental parts to the ordering of a political regime: first, there's the establishment of ruling offices and officeholders, including the decision as to how many there should be and how they should be selected; then, the laws must be given to each of the offices, and this, again, includes the decision as to what kind of laws there'll be, how many, and which ones would be fitting for each office.

But let's pause a bit before we make the choice, because there's something pertinent that we should say about it.

Clinias:: What's that?

Athenian Stranger:: The following. Presumably it's clear to everyone that although the giving of laws is a grand deed, still, even where a city is well equipped; if the magistrates established to look after the well-formulated laws were unfit, then not only would the laws no longer be well founded, and the situation most ridiculous, but those very laws would be likely to bring the greatest harm and ruin to cities.

Clinias:: How could it be otherwise?

Athenian Stranger:: Well, let's recognize this very possibility in the case of your present regime and city, my friend. For you see that, in the first place, if the powers of office are to go to the correct persons, they and their families must each have been given a sufficient test—from the time they were children until the time they are selected.

Then again, those who are to do the selecting should be reared in lawful habits, and well educated in the capacity of distinguishing correctly between the candidates, accepting or rejecting them as they deserve. Now how could people who are newly gotten together, and unknown to one another, and also uneducated, ever be able to make a blame-less selection of officials?

Clinias:: It's unlikely that they ever could.

Athenian Stranger:: Nevertheless, a contest, as they claim, doesn't tolerate excuses at all; you, and I too, must now accomplish this task. For, as you've asserted just now, the ten of you have made a promise to the Cretan nation that you will, with a firm spirit, carry out a founding; and I have promised to help you, with the mythic discourse we're now involved in. And surely when I'm telling a myth I wouldn't voluntarily leave it unfinished. Because if it wandered around like that, without a head, it would appear shapeless!

Clinias:: You've made your point very well, stranger.

Athenian Stranger:: Not only have I made it, but I'll act on it, as far as I'm able.

Clinias:: Let's by all means do as we say.

Athenian Stranger:: So be it, if the god is willing and if we can overcome old age sufficiently.

Clinias:: Well, it's likely that he's willing.

Athenian Stranger:: That is likely. Following him, let's start with this observation.

Clinias:: Which?

Athenian Stranger:: Observe how much courage and willingness to take risks will be needed, to found our city in the present circumstances.

Clinias:: Why? What exactly do you have in view in making this remark now?

Athenian Stranger:: The fact that we are confidently legislating for men who lack experience, without any fears as to how they'll ever accept the laws that are now being laid down. After all, Kleinias, this much at least is obvious to almost everyone, even to someone who isn't very wise: they won't easily, at any rate, accept any of them at the beginning. What is needed is for us to survive, somehow, for a long enough time so that the children who have grown up tasting the laws from an early age, having been reared under them and having become sufficiently accustomed to them, have taken part in the selection of magistrates for the whole city. If in some way, by some device, what we're now describing could come to pass correctly, I at least think that the city that had been given such a childhood training would, after this period of time, remain very stable.

Clinias:: That's a reasonable supposition, certainly.

Athenian Stranger:: Let's see now if we couldn't devise some adequate way of dealing with this problem, along the following lines:

For I assert, Kleinias, that the Knossians must, more than any of the other Cretans, not only remove any obstacles to the profanation of the territory that is being settled, but also strain with all their might to insure that the first rulers are the safest and best possible. The other magistrates present a less difficult task, but it is very necessary that your first Guardians of the Laws be chosen with total seriousness.

Clinias:: So what procedure and plan can we find for this task?

Athenian Stranger:: The following:

“I assert, O children of the Cretans, that the Knossians must, because they take precedence of age among the many cities, join with those who are arriving at this settlement in selecting, from among themselves and those, a total of thirty-seven men, nineteen of whom are to be chosen from the colonists and the rest from Knossos itself.”

The Knossians should give these men to your city, and should make you yourself a citizen of this colony and one of the eighteen—either by persuading you or compelling you, with a measured amount of force.

Clinias:: And why then don’t you and Megillus take part in our regime, stranger?

Athenian Stranger:: Kleinias, Athens thinks big—as does Sparta. And both are far away, while for you it is convenient, in every way. The same holds for the other founders, to whom what was just now said about you also applies.

Let this be the description of the most equitable solution, given our present conditions; after a certain time has passed, if the regime lasts, let the method of selecting them be some such thing as the following:

Eligibility to share in the selection of the magistrates is to be extended to all who possess heavy weapons, cavalry or infantry, as well as to those who have taken part in war as long as the capacity of their age allowed. The selection is to be carried out in the temple which the city considers most honorable. Each is to carry to the altar of the god a little tablet on which he has written the name of the candidate, his father’s name, his tribe’s name, and the name of the district where the candidate resides. Adjacent, each is to write his own name in the same way. Then, during a period of not less than thirty days, anyone who wishes may remove and set out in the marketplace any of the written tablets that doesn't please him. From the tablets that have thus been judged suitable, the magistrates are to take the first three hundred and display them for the whole city to see; from these the city is to select again, in the same way, each carrying up whomever he prefers. After this second round they are to display to everybody again the one hundred preferred names. In the third round, anyone who wishes should carry up his preference from among the hundred, by walking between the parts of a sacrificial animal. The thirty-seven who receive the most votes, after being scrutinized, are to be appointed to office.

Now who is there, Kleinias and Megillus, who will set up all these things concerning the offices and their scrutinies in our city? Don't we recognize that there must necessarily be such persons in cities that are being thus yoked together for the first time? And yet who would it be, before there are any magistrates? In one way or another, they must be there, and they can't be men of little capacity, but of the highest possible. For as the proverbs have it, "the beginning is half the whole deed," and we all praise a noble beginning, at least, on every occasion; in fact, in my view, the beginning is more than half, and no one has bestowed enough praise on the beginning that is noble.

Clinias:: What you say is very correct.

Athenian Stranger:: Let's not, then, knowingly pass by the problem without discussion, leaving completely unclarified the manner in which we ourselves will deal with it. Now I for my part can see no way of dealing with it at all, except to make one statement that in the present situation is both necessary and useful.

Clinias:: What is that?

Athenian Stranger:: I assert that this city we are about to found has no “father” or “mother” except the very city that is doing the founding. I say this without ignoring the fact that many colonies have had and will have differences, sometimes frequent, with those who colonized them. But at present it is just like a child: even if someday in the future a difference arises with its parents, in the present, at least, while it lacks education, it cherishes and is cherished by the parents, and always flees to its own people to find those who alone are allies by necessity. These are the ties that I assert will now readily bind the Knossians to the young city (because they care for it) and the young city to Knossos. So I repeat what I said just a moment ago (it doesn’t hurt to repeat the noble, at least, a second time): the Knossians should share in supervising all these things, by choosing not less than one hundred men from those who have arrived at the colony, selecting the oldest and the best men they can. Then there should be another one hundred from the Knossians themselves. These are the men I assert should go to the new city and together see to it that the magistrates are installed according to the laws, and, after being installed, scrutinized. Once these things are accomplished, the Knossians should go dwell in Knossos and the young city should try by itself to find its own safety and good fortune.

The thirty-seven who are elected, now and in all the rest of time, are to be chosen by us to do the following: first they are to stand as guards over the laws; then in addition, they are to be the guards of the written records in which each individual has written down for the rulers the amount of his property (except each person of the highest class may omit up to four minas, the second class three minas, the third class two! minas, and the fourth class a mina). If it becomes evident that someone possesses something other than this and what has been written, then the whole such amount is to be turned over to the public; in addition, anyone who wishes may bring a judicial action against the culprit, and if he is convicted of holding the laws in contempt for the sake of gain, the judicial procedure shall be neither noble nor illustrious, but shameful. So let anyone who wishes accuse him of shameful gain and take him to trial before the Guardians of the Laws. If the defendant loses, he is to have no share in common property, and whenever some division is made by the city, he is to go without a share—save for his original allotment. Moreover, as long as he lives his guilt is to be written down where anyone who; wishes may read about it.

Let a Guardian of the Laws rule for no more than twenty years, and let the minimum age for election be fifty years. If a man is sixty when elected, let him rule only ten years, and so on, according to this principle; if someone lives beyond seventy he is not to think that he can remain among these magistrates, ruling in such a high office.

Let these then be stated as the three duties of the Guardians of the Laws. As the laws unfold further, each law will enlarge upon the responsibilities that have now been assigned to these men.

At this point we may move on to discuss the selection of the other magistrates. Next after these, the Generals should be chosen, as well as those who are like assistants to them during wartime—Cavalry Commanders, Tribe Commanders, and those officers who supervise the marching order of the infantry tribes, whom it would be fitting to call by the very same name the many apply to them, “Rank Commanders.”

Of these, as regards the Generals, let the Guardians of the Laws make up a list of nominees drawn from this city itself, and from these nominees let all who took a share in war when they were of the proper age, or who are now ready to do so, choose. (If someone thinks there is someone who hasn’t been nominated who is better than someone who was nominated, let him name his nominee and the one he thinks should be replaced, and, swearing an oath, let him nominate the rival candidate. Then let whichever of the two wins in a vote by show of hands be placed on the election list.) The three who win the most votes by show of hands are to be made Generals and supervisors of the affairs of war—after having undergone the same scrutiny as the Guardians of the Laws. Let the elected Generals nominate their own twelve Rank Commanders, a Rank Commander for each tribe, and let there be the same procedure for counter-proposals in the case of the Rank Commanders as there was for the Generals, the same vote by show of hands, and the same scrutiny.

For the present, since Presidents and Council are not yet selected, it will be the Guardians of the Laws who will call together this public meeting, convening it in a place that is as sacred and spacious as possible, and separating off the heavily-armed infantry, the cavalry, and, in a third section next to these, the whole auxiliary military force. Let everyone participate in the show of hands by which the Generals and the Cavalry Commanders are elected, but let those who bear shields elect the Rank Commanders, while the entire cavalry should choose the subordinate Tribe Commanders. The leaders of the lightly-armed troops, or archers, or any other auxiliaries, the Generals should themselves appoint.

We have remaining the appointment of the Cavalry Commanders. Let these be nominated by the same people who nominated the Generals, and let the election and the procedure for counter-proposals also be the same as it was for the Generals, but the cavalry should elect by show of hands while the infantry look on, and the two who receive the most votes by show of hands should become leaders of all the cavalry.

Two recounts after disputed votes by show of hands are allowed; if somebody challenges the count on the third showing of hands the decision will rest with those who are responsible for making the count of hands on each occasion.

The Council is to number thirty twelves, for three hundred sixty would be an appropriate number for the subdivisions. By dividing the number into four parts of ninety each, there will be ninety councilmen elected from each of the classes. The first vote will be for men from the highest class, and all are to be compelled to vote: he who doesn't obey must pay the appointed fine. When the voting is completed, the names voted for are to be recorded. Then, on the next day, they are to vote for men from the second class according to the same procedures as on the day before. On the third day anyone who wishes may vote for men from the third class; while the upper three classes are to be compelled to vote, anyone who belongs to the fourth and lowest class and doesn't wish to vote is to be let off free of any fine. On the fourth day everyone is to vote for men from the fourth and lowest class, but there is to be no fine for anyone from the third or fourth class who doesn't wish to vote, while anyone belonging to the second and first classes who fails to vote must pay a fine. In the case of someone from the second class, it will be triple the first fine and, in the case of someone from the first class, quadruple. On the fifth day the magistrates will display the recorded names for all the citizens to see, and every man must vote on this list or pay the first fine. One hundred eighty are to be elected from each class; half of these are then to be chosen by lot, and, after being scrutinized, these are to be the Councilmen for the year.

This selection procedure would strike a mean between a monarchic and a democratic regime, which is the mean the regime should always aim for. For slaves and masters would never become friends, nor would lowly types and serious gentlemen, if they were both held equal when it comes to honors. Both these situations fill regimes with civil strife; equal rewards would become unequal if they were distributed to men who are unequal, unless the distribution struck a proper measure. The ancient pronouncement is true, that “equality produces friendship”: the saying is both very correct and graceful. But just whatever is the equality that has this effect? Because this is not very clear, we get into a lot of trouble!

For there are two equalities, the same in name, but in many respects almost diametrically opposed in deed. Every city and every lawgiver is competent to assign honors according to the other sort—the equality that consists in measure and weight and number—and by the use of the lot applies it in distributions. But it’s not so easy for everyone to discern the truest and best equality. For it is the judgment that belongs to Zeus, and it assists human beings only to a small degree, on each occasion; still, every bit of assistance it does give to cities or private individuals brings all the good things. By distributing more to what is greater and smaller amounts to what is lesser, it gives due measure to each according to their nature: this includes greater honors always to those who are greater as regards virtue, and what is fitting—in due proportion—to those who are just the opposite as regards virtue and education. Presumably this is just what constitutes for us political justice. It is for this that we should now strive, and to this equality that we should now look, Kleinias, to found the city that is now growing. The same holds in the case of another city someone might found sometime: it is to this that one should look while giving laws, not to the tyranny of a few, or of one, or some rule by the populace, but always to justice. And this is what has just been described—the natural equality given on each occasion to unequal men.

Nonetheless, necessity compels every city to blur sometimes the distinction between these two, if it is to avoid partaking of civil war in some of its parts. For equity and forgiveness, whenever they are applied, are always enfeeblements of the perfection and exactness that belong to strict justice. Because of the discontent of the many they are compelled to make use of the equality of the lot, but when they do, they should pray both to the god and to good luck to correct the lot in the direction of what is most just. Thus, of necessity, both equalities ought to be employed, though the type that depends on chance as rarely as possible. A city that is going to last is compelled, for these reasons, to do things this way, my friends.

Now just as a ship sailing at sea must have a watch at all times both day and night, so a city, driven by the waves of other cities and dwelling in danger of being taken over by all sorts of conspiracies, needs magistrates who rule in uninterrupted succession through the day until nightfall and through the night until daybreak, guards who always pass the watch on to guards without a break. It can never be the business of a large number to keep a sharp watch in this way; most of the time all but a few of the Councilmen must of necessity be allowed to stay at their own private business and attend to their own domestic affairs. But by dividing the Council into twelve parts corresponding to the twelve months, each single part can stand guard for one month, always ready to meet with someone coming from abroad or from within the city itself, who wants to give information or make inquiries about the replies it is fitting for a city to make other cities and about the answers it is fitting for it to receive when it asks others. They will also be ready to contend at any time with the innovations that are constantly wont to occur in cities everywhere: if possible they'll forestall them, but if they can't, they will at least see to it that the city knows about them as soon as possible, and can cure the sickness. That is why this presiding part of the city must always have the authority to convoke and dissolve the public meetings—both those that meet regularly according to the laws and those the city needs on sudden notice. Each twelfth part of the Council is to have charge of ordering all these things, and is to be at rest during eleven parts of the year; at all times this part of the Council is to share with the other officials in maintaining this guard over these matters throughout the city.

Thus the things of the city would be arranged in due measure; but what supervision and what order is there to be in all the rest of the territory? Now that the whole city and the whole land have been divided into twelve parts, shouldn't some supervisors be appointed for the streets of the city itself, the houses, the buildings, the harbors, the marketplaces, and the fountains—as well as the sanctuaries, temples, and all such things?

Clinias:: How else?

Athenian Stranger:: For the temples, let's say that there should be Temple Custodians as well as Priests and Priestesses. For the roads and buildings, and the maintenance of order around such places—to prevent the humans from committing injustices and to make the rest of the beasts behave, in the city itself and in the suburbs, in a manner that befits cities—three forms of officials must be selected: one, that will be called "City Regulators," to take care of the things just mentioned; another, the “Market Regulators,” to keep order in the markets; then, if there are Priests and Priestesses who hold hereditary priesthoods, they shouldn’t be changed, but if, as is likely in such matters with people who are being settled together for the first time, there are none or only a few set up, then Priests and Priestesses should be established to be the Temple Custodians for the gods who do not already have some.

Of all these officials, some should be elected and others chosen by lot, and for the sake of friendship we should mix individuals who belong to the populace with those who are not of the populace in each land and city, so that the place would be as much as possible of the same mind.

What pertains to the Priests should be turned over to the god himself so that what pleases him comes to pass: their choice should be given to the divine chance of the lottery, with the proviso that he who obtains the lot each time is to be scrutinized to make sure first that he is sound and of legitimate birth, and then that he comes from households that are as nearly unpolluted as possible—that he and his father and mother have lived without any pollution from homicide or any of the other crimes that offend in such ways against the divine. They should get their laws regulating all the divine things from Delphi, and establish Interpreters of them who will explain how to use them. Each Priesthood should be held for one year and no longer, and no one who is less than sixty years of age should be considered qualified to administer the divine things for us, in accordance with the sacred laws. Let these same legal customs apply to the Priestesses.

For the Interpreters: thrice the four tribes are to elect four, each of whom is to come from among themselves; the three who receive the most votes are to be scrutinized; then the nine are to be sent to Delphi, where one is to be chosen from each triad. The scrutiny and the age limit are to be the same in their case as for the Priests. These Interpreters are to serve for life, and when one passes away a replacement will be elected by the four tribes to whom the vacancy belongs.

The Treasurers in charge of the sacred funds in each of the temples, as well as of the sanctuaries and their harvests and revenues, are to be elected from the highest property class—three for the largest temples, two for the smaller, and one for the most elegant little ones. The election and scrutiny of these officials are to be the same as they were for the Generals. So let these be the arrangements for the sacred things.

To the extent of our power, nothing is to be unguarded. There are these guards for the city: the supervisory Generals, the Rank Commanders, the Cavalry Commanders, the Tribe Commanders, and the Presidents, as well as the City Regulators and the Market Regulators (once we have them adequately elected and installed). All the rest of the land should be guarded in the following ways:

Since our entire territory has been divided into twelve sections that are as close to being equal as they can be, let one tribe be assigned by lot to each section for the period of a year. The tribe is to supply five men who will be like Field Regulators or Officers of the Guard, and each [of the] five is to choose from their tribe twelve young men not less than twenty-five nor more than thirty years of age. These contingents should be given by lot the parts of the land, one part to each month, so that all will become experienced and knowledgeable about the whole country. The term of the office and guard duty will be two years for both guards and officers. Starting from the parts they are allotted first—the districts of the land, that is—the Officers of the Guard should always lead them each month to the next district on the right in a circle (on the right meaning toward the dawn). When one year's circuit has been completed and they are to begin the second year, in order to make as many of the guards as possible experienced with the land during more than one season of the year, in order that as many as possible not only know the land but also what goes on in each area in each season, the leaders should then lead them back around, always changing to the district on the left, until they have completed the second year. In the third year other Field Regulators or Officers of the Guard should be chosen, sets of five to supervise the sets of twelve.

During their periods of service they are to look after each district in something like the following way. First, to make the land as well defended as possible against enemies, they'll dig ditches wherever they're needed, and trenches, and do all they can with fortifications to check those who would try in any way to do harm to the land and property. They can employ the beasts of burden and domestic servants in each district in these tasks, using the former and supervising the latter, though insofar as they can, they should requisition them when they are not being used in their domestic tasks. They should make every place difficult of access for enemies but as easily accessible as possible for friends—for humans, and for beasts of burden and herds as well—by taking care that each of the roads be kept as smooth as possible. To prevent the water Zeus sends from doing evil to the land, and instead to make it beneficial, as it flows down from the heights into the hollow-like gulleys in the mountains, they can prevent the runoff with fortifications and ditches, thus containing and absorbing the water from Zeus, and thereby providing streams and springs for the lower fields and all the other areas. Thus they'll furnish the driest areas with plenty of water and good water. They should adorn the watering holes in a more becoming way, whether they be rivers or springs, with shrubbery and buildings, and by collecting the streams in pipes make sure there is an abundant supply; and if any sacred grove or sanctuary is located nearby they should adorn it with water in every season, introducing streams into the very temples of the gods. Everywhere in such places the young men should maintain gymnasia for themselves and for the old men as well, providing hot baths for the old and maintaining an abundant supply of seasoned, dry wood; thus they should give a cheerful welcome to those worn out with sicknesses and those whose bodies are weary from the farmer's toils. Surely this does more good than a welcome from some doctor who isn't very wise. These and all such activities would bring adornment and benefit to the areas while providing a kind of play that is not at all lacking in grace.

Their serious business in these matters is to be the following. Each group of sixty is to guard its district not only against enemies but also against those who profess to be friends. If a slave or a free man does an injustice to a neighbor or any of the rest of the citizens, they should be judges for the man who claims to have been done the injustice. For small matters the five officers themselves should sit in judgment; for greater matters (up to three minas in damages claimed by one man against another), they should sit together with the twelve, and the seventeen should be judges.

But no judge or magistrate shall sit in judgment and perform his ruling functions without being subject to an audit; the only exceptions are those quasi-regal judges of last appeal. In particular, if these Field Regulators are in some way insolent in their treatment of those they supervise—if they levy unequal assessments, if they try to take and carry something from the farms without getting permission, if they accept something given as a bribe, if they assign unjust penalties—then, for being susceptible to flatterers, they are to be held in ill repute throughout the entire city, and for the other sorts of injustice they commit against those in the district, if the damage claimed is one mina or less, they should voluntarily submit to be tried by a jury of the villagers and neighbors; if the damages claimed for the injustices on any occasion are more, or if, where the damages are less, the accused are unwilling to submit (because they trust they'll flee prosecution by means of the monthly rotation that always takes them out of a district), then the party done the injustice is to bring charges concerning these matters in the common courts: if he wins, let him exact double from the one who fled and was unwilling to undergo retribution voluntarily.

During their two years' service the Officers and Field Regulators will live in some such way as follows. First, there will be common meals in each of the districts, where all must dine together. If anyone is absent from a common meal on any day, or if anyone spends a night sleeping somewhere else, without being ordered to do so by the Officers or compelled by some dire necessity that befalls him, and if the five decide to take notice of this lapse and post his name in writing in the marketplace as a deserter from the guard, then he is to be held in ill repute, as one who betrayed his share in the regime. Moreover, let anyone Whom he encounters and who wishes punish him with blows, without retribution. If someone among the Officers themselves does such a thing, he must come under the purview of all sixty; if one of these perceives and learns of such delinquency but fails to prosecute, let him be punished under the same laws that apply to the young—

only more. He is to lose all eligibility to serve in any office that pertains to the young. The Guardians of the Laws are to keep a precise watch over these matters, to prevent his obtaining such office, or, if he should obtain one, to see to it that he gets the punishment he deserves.

Indeed, every real man must understand that no human being would ever-become a praiseworthy master unless he has been a slave, and that one should be more attentive to the’ adornment that comes from a noble enslavement than that which comes from a noble rule. The first enslavement is to the laws (for this is really an enslavement to the gods), and the next is that of the young to their elders at all times, and also to those who have lived honorable lives.

In the next place, someone who has served his two years among the Field Regulators should have developed a taste for a daily ration of humble and uncooked food. For once the sets of twelve have been chosen and put together with the sets of five, they must resolve that since they themselves are like domestic servants they will not have their own domestic servants and slaves; they won’t use the servants belonging to the other farmers and villagers for private tasks, but only for public tasks. When it comes to the rest, they must resolve that they are going to live by their own efforts and as their own servants. In addition, they are to scout over the whole country with their heavy weapons, summer and winter, so as constantly to guard and get to know all the districts. It’s likely that no learning they pursue is more important than that which gives all of them accurate knowledge of their own country. It’s for this reason, as much as for the rest of the pleasure and benefit such activities bring to everyone, that a young man should go in for hunting with hounds and the rest of hunting. Now these men—they and their functions—can be called the Secret Service, or the Field Regulators, or whatever one likes: whatever it’s called, this is the service that every real man, everyone who’s going to defend his city adequately, should serve in, with, an eager spirit and to the best of his ability.

Next in order in our selection of rulers was to be the selection of the Market Regulators and City Regulators. Following the sixty Field Regulators would be three City Regulators, who will divide the twelve parts of the city three ways. Imitating those others, they should attend to the city roads and to the thoroughfares coming into the city at each point from the country, as well as to the buildings, watching to see that all are constructed and maintained according to law. They should also attend to the water, seeing to it that the well-tended waters sent in and turned over to them by the Guards are conducted in sufficient amounts and in a pure condition to the fountains, so as to adorn and benefit the city.

These too should have the capacity and the leisure to look after the common things. That is why, for City Regulator, every man may nominate anyone he wishes from the highest class: then they are to vote by a show of hands and determine the six who have the most votes. Those who are responsible for drawings should select three of the six by lot; when these three have passed the scrutiny they are to rule according to the laws that have been assigned to them.

Next after these come the Market Regulators, five of whom are to be chosen from the second and first classes; in other respects the election procedure is to be the same as it was for the City Regulators. When the nominees are reduced to ten by voting with a show of hands, five are to be chosen by lot; when these have passed the scrutiny they are to be proclaimed magistrates.

Everyone must participate in the vote by show of hands, and this applies to every office. Anyone unwilling to do so, if he is reported to the magistrates, should be fined fifty; drachmas—besides getting the reputation of being a bad fellow. Anyone who wishes may attend the assembly and the public meetings, but it should be compulsory for the second and first classes. If any of them is absent from the meetings he is to be fined ten drachmas. Attendance will not be compulsory for the third and fourth classes; unless some necessity should compel the magistrates to announce that all must attend, a member of these classes who is absent will incur no penalty.

As for the Market Regulators, they are to keep order in the marketplace as the laws direct and look after the temples and fountains in the vicinity of the marketplace, seeing to it that no one does any injustice. They are to punish anyone committing injustice—with blows and bondage if he is a slave or stranger, while if it is one of the native inhabitants who is disorderly concerning such things, they should themselves wield the judging authority where the monetary fine involved is one hundred drachmas or less; for fines up to an amount twice this much, they should pass judgment and penalize the unjust offender together with the City Regulators. Let the City Regulators employ the same penalties and punishments in their own official jurisdiction: where the fine is one mina or less, let them inflict the penalty themselves, and where it is up to twice this amount, let them act together with the Market Regulators.

After this it would be fitting to establish magistrates for music and gymnastics. There should be two sets of each kind of official: some for education and some for contests. By “education” the law means to say those officials charged with looking after the gymnasia and schools, supervising their orderliness and the education given in them, and also the attendance and housing of the male and female youths. By “contests” the law means those who award prizes to athletes in gymnastic events and concerning music. These should again be divided into two sets: some for music and others for contests. In contests the same men can be judges, whether the competition be among human beings or horses. But in music it would be fitting that those who award prizes to solo singing and imitation—such as rhapsodes, kitharists, aulists, and all such—should be different from those who award prizes to choral singing.

First, I suppose, magistrates should be chosen to judge the play of the choruses of children, men, and young women, which consists of dances and the whole ordered arrangement that is music. One magistrate is enough for these things; he should be not less than forty years of age. And one magistrate not less than thirty years of age will suffice for solo singing: he will perform the function of Director and will judge adequately among the competitors. The magistrate who presides over and arranges the choruses should be selected in some such manner as the following. Those who are devoted to such pursuits should go to a public meeting. If they don’t go, they are to be penalized: the Guardians of the Laws will be judges of this. The rest will not be required to attend this meeting if they do not wish to. The elector should nominate from among those who have experience, and in the scrutiny, the one issue about which there should be favorable and unfavorable statements is whether the one who has won the draw lacks or possesses experience. Of the ten who receive the most votes by show of hands, one is to be selected by lot, and after being scrutinized, is to rule for a year over the choruses, according to law. With the same procedures, and in the same way as these, let one who wins the draw rule for that year over those who enter competitions in solo singing and singing to aulos accompaniment, after handing over to the other judges the decision as to the fitness for office of he who wins the draw.

Next, those who award the prizes at gymnastic contests of horses and human beings should be chosen from the third and second classes. The top three classes are to be required to participate in the election, but the lowest class may absent itself without penalty. Let three be chosen by lot from twenty who have been selected by a show of hands, and let the three out of twenty who win the draw be installed after having received a ratifying vote from those who conduct the scrutiny.

If anyone fails to pass the scrutiny in any appointment to, or examination for office, let others be selected instead, by repeating the same procedures and the same scrutiny.

There remains, for the affairs we mentioned, another office—that of Supervisor of Education in general for females and males. Let there be for these one official under the laws, a man not less than fifty years of age, who is a father of legitimate children—of sons and daughters both, if possible, but if not, of either. He who is judged preeminent, and the person who so judges him, must bear in mind that this office is by far the greatest of the highest offices in the city. For in everything that grows the initial sprouting, if nobly directed, has a sovereign influence in bringing about the perfection in virtue that befits the thing's own nature. This holds for the other growing things, and for animals—tame, wild, and human. The human being, we assert, is tame; nevertheless, though when it happens upon a correct education and lucky nature, it is wont to become the most divine and tamest animal, still, when its upbringing is inadequate or ignoble, it is the most savage of the things that the earth makes grow. This is why the lawgiver must not allow the upbringing of children to become something secondary or incidental, and since the one who is going to supervise them should begin by being chosen in a fine way, the lawgiver should do all he possibly can to insure that he provides them with a supervisor to direct them who is the best person in the city, in every respect. So all magistrates except the Council and the Presidents are to go to the temple of Apollo, there to vote by secret ballot for that man among the Guardians of the Laws who each believes would most nobly rule over educational affairs. Whoever receives the most votes is to be scrutinized by the other magistrates who elected him, with the exception of the Guardians of the Laws. He is to rule for five years, and at the sixth year another is to be chosen for this office in the same way.

If someone who rules in a public office should die with more than thirty days remaining in his term of office, another should be appointed to the office, according to the same procedures and by the individuals to whom this responsibility is appropriate. And if someone who is a guardian of orphans should die, the appropriate individuals who happen to be at home (the relatives on both the father's and the mother's sides extending as far as the children of first cousins) must appoint another within ten days, or pay a fine of one drachma a day each until they have appointed a guardian for the children.

Now doubtless every city would cease to exist as a city if it were not to have duly established courts of justice. Moreover, if our judge couldn't speak, if he could say no more than what is said by the opposing parties at a preliminary inquiry, as in arbitration proceedings, he would never make an adequate judgment about what is just. For this reason it isn't easy for many, or even a few, if they lack capacity, to judge well. The dispute must always be made clear on each side, and time is required, as well as slow and frequent questioning, in the interest of illuminating the dispute. To achieve this the litigants should go first before their neighbors, who are their friends and are as familiar as possible with the disputed actions. If someone fails to get an adequate judgment from these, let him go on to another court. Then there will be a third court, which must terminate the judicial contest if the other two courts could not settle it.

In a way, the establishment of courts is a selection of ruling officers. For every ruling officer is necessarily a judge of some affairs, and, though a judge is not a ruler, on the day when he makes his decision and concludes a judicial trial, a judge is in some sense a ruler—and no very petty one, at that. Treating judges as if they were rulers, then, let's say who would be fitting judges, what affairs they should judge, and how many of them should preside at each sort of hearing.

The court which the litigants put together themselves, by choosing judges together, should be most authoritative. The other courts should be resorted to for two reasons: either because a private individual accuses a private individual of doing him some injustice, and takes him to court wishing to get a judgment, or because someone wishes to defend the community when he thinks one of the citizens has done an injustice to the public. And it must be said how many and who the judges should be.

So first we should have a common court for all those private parties who are going through the third round of their disputes with one another. It should be constituted in something like the following way. On the day before the new year begins, with the new moon which follows the summer solstice, all officials whose term lasts a year, and those whose term lasts longer, should get together in one temple. After swearing an oath to the god they should, as it were, dedicate to him one judge chosen from each category of official—in each magistracy, the one who seems the best and who gives promise of rendering the best and most pious verdicts to his fellow citizens in the coming year. Those who have been elected should undergo scrutiny at the hands of the electors themselves; if any of them fails to pass scrutiny, another should replace him according to the same procedures. Those who pass the scrutiny will sit in judgment over all who have fled from the other courts, rendering their vote openly. The Councilmen as well as the other magistrates, who elected these judges, should be compelled to attend and witness the proceedings of this court, along with anyone else who wishes to attend. If someone accuses one of the judges of having voluntarily rendered an unjust verdict, he should go and lay his accusation before the Guardians of the Laws. Anyone convicted of rendering such a verdict must pay to the individual who was hurt half the damages suffered; if the convicted judge seems to merit a stiffer penalty, the judges in the case should decide what additional penalty he should suffer or pay to the community and to the one who brought him to trial.

In regard to crimes against the public, it is necessary, first, that the majority have a share in the decision. For when someone does an injustice to the city everyone suffers the injustice, and they would justly be vexed if they had no share in such trials. Still, while the beginning of such a trial and its final conclusion ought to be in the hands of the populace, the investigation should be the responsibility of three of the highest magistrates, chosen with the consent of the accused and the accuser. If they are unable to agree, then the Council should decide between their respective candidates.

Even in private suits it is necessary that everyone take part as much as possible. For anyone who does not share in the right of judging considers himself not at all a sharer in the city itself. That is why there should also be tribal courts, with judges selected by lot and as each occasion arises, and not judging corruptly in response to special pleading. But the final sentence in all such affairs belongs to the court which we claim has been so devised as to be as uncorruptible as human power, at least, can make it. It is to this court that appeal must be made by those who have been unable to reconcile their differences in the neighborhood courts or the tribal courts.

Now with regard to our courts—which, we assert, cannot easily be discussed either as ruling offices or as not, without difficulties arising—a sort of exterior outline has been presented, with certain things pretty much left out. For it would be most correct if the precise establishment and delineation of the laws concerning judicial matters were presented at length near the end of the lawgiving. Let these subjects, then, be asked to wait for us at the end. Most of the legislation concerning the installation of the other ruling offices has, on the other hand, been just about completed. Of course, the complete and precise account of each and every arrangement of the city and of the political art in general cannot be made clear until the exposition has proceeded from the beginning, to the second things, then to the middle, and thus through every part of itself until it arrives at the conclusion. But the point now reached, the selection of the magistrates, would be an adequate conclusion to what has preceded, and the laying down of the laws can begin without any further hesitations or delays.

Clinias:: The things you've said up until now have been entirely agreeable to me, stranger; but what you've just said—linking the beginning of what is going to be said with the end of what's been said—is still more pleasing than those things.

Athenian Stranger:: Then our prudent game of the elderly would have been played in noble fashion thus far.

Clinias:: It's likely that what you're setting forth is a noble and serious pursuit for real men.

Athenian Stranger:: It's likely, at least. But let's see if the following appears to you as it appears to me.

Athenian Stranger:: What do you mean, and whom does it concern?

Athenian Stranger:: You know how the painter's activity, for example, never seems to finish working on each of the figures, but keeps touching up or highlighting—or whatever it is painters' disciples call such activity? It seems never to cease its adorning, and hence never to reach a point where there can be no further improvement of the paintings as regards beauty and clarity.

Clinias:: I too know pretty well these things you're talking about, by hearsay—for I am not at all practiced, at least, in such an art.

Athenian Stranger:: That's no hindrance for you. We'll still make use of this allusion to it that's cropped up in our discussion now, in something like the following way: suppose someone once took it into his head to paint the most beautiful figure possible, one that would never get worse but would always improve as time went by. Don't you see that since he's mortal, he'll have to leave behind a successor, able to make it right if the painting suffers some decay at the hands of time, as well as to make future touch-ups that improve on deficiencies left by his own artistic weaknesses? Otherwise, won't his very great labor last but a brief time?

Clinias:: That’s true.

Athenian Stranger:: Well, then, don’t you think the lawgiver has such a purpose? He first writes his laws with as nearly adequate a precision as he can muster. Then, with the passage of time, as his opinions are tried out in deed, do you suppose there’s any lawgiver who is so imprudent as to be ignorant of the fact that he must necessarily have left very many such things that require being set right by some follower, if the regime and order of the city he has founded are always to become in no way worse but instead better?

Clinias:: It’s likely—how could it be otherwise?—that everyone wants such a thing.

Athenian Stranger:: So if someone had some device indicating the way in which, by deed or by words, he might teach another to understand, more or less, how he ought to guard and set right the laws, would he ever give up explaining such a thing before he had achieved his end?

Clinias:: How could he?

Athenian Stranger:: So now, in the present circumstances, is this what I and you two should do?

Clinias:: Just what do you mean?

Athenian Stranger:: We are about to give laws, but certain Guardians of the Laws have been chosen for us; since we are in the twilight of life, while they are young, relative to us, we shouldn’t only give laws ourselves—as we claim—but should at the same time try our best to make these same men lawgivers as well as Guardians of the Laws.

Clinias:: Why not?—if, that is, we are up to it.

Athenian Stranger:: But it ought at least to be attempted, and with an eager spirit.

Clinias:: Indeed, why shouldn’t it?

Athenian Stranger:: Then let’s speak to them:

“Dear Saviors of the laws, we will leave out many things as regards each of the matters for which we have established laws. This is inevitable. Still, in all but the small points, at least, and on the whole, we will do all we can not to leave the outline sketch, as it were, unfinished. Your task will be to help fill in the outline. You must hear now where you should look when you carry out this task. Megillus here, and I and Kleinias, have said the same things to one another not infrequently, and we are in agreement that they are nobly spoken. We want your agreement and your attention as our pupils, so that you will look to the things we have agreed together should be looked to by a Guardian of the Laws and a giver of the laws.

“In brief, this was the substance of the agreement: in whatever way a member of the community, whether his nature be male or female, young or old, might ever become a good man, possessing the virtue of soul that befits a human being—whether this be as a result of some practice, or some habituation, or some possession, or desire, or opinion, or certain things learned at some time—toward this, which we are describing, every serious effort will be made throughout the whole of life; no one of any sort is to be seen giving precedence in honor to any of the other things that are impediments, not even, finally, to the city, if it appears necessary that the alternative to its destruction is either willingly tolerating the slavish yoke of being ruled by worse men or departing from the city in exile. All such things must be borne, and suffered, rather than allowing the regime to be changed into one whose nature is to make human beings worse.

“These are the things we agreed to in our previous discussions, and now you must look to both these goals of ours as you pass our laws in review. You should blame those that aren’t capable of effecting these goals, but those that are capable, you should welcome and, gladly adopting them, live under them. As for other pursuits that aim at other things among those that are said to be good, you must proclaim good-bye to them.”

Now the beginning of our laws that come after these things should be as follows, starting with the sacred things: first we should consider again the number five thousand forty and the many convenient divisions it had and has, both as a whole and within its tribal subdivisions—each of which we set down as a twelfth part of the whole, and each of which is by nature exactly twenty taken twenty-one times. Our number as a whole has twelve divisions, and the number contained in each tribe also has twelve. Each part must be understood as a sacred entity, a gift of the god, corresponding to the months and to the revolution of the whole. That is why every city is naturally led to sanctify these divisions, though some people probably have made a more correct distribution and have been more fortunate in making the division divine than others have. We for our part now assert that the most correct number to choose is five thousand forty, which has as its divisors all the numbers from one to twelve—except for eleven, and for this there is a very minor remedy: one way the number becomes whole again is if two hearths are set aside. To show how these things truly are would not require a long tale, if one had leisure. But for now let’s take the present oracle and argument on trust, and proceed to make this division, solemnly assigning a god or the child of gods to each part, along with altars and the appropriate accoutrements. Let’s make sacrificial processions to two of these altars each month, twelve for the divisions within the tribe and twelve for the divisions of the city. We should do this first for the sake of pleasing the gods and the things connected with the gods, and second, we would assert, for the sake of our own kinship and familiarity with one another, and for the sake of every sort of intercourse.

For indeed, with regard to the community and commingling of those who are married, it is necessary to dispel the ignorance concerning the bride's people, the bride herself, and the people to whom they are giving her. Everything possible must be done, to the best of one's ability, to prevent any mistakes at all being made in such affairs. To achieve such a serious goal, play must be devised that consists of choral dancing by the boys and girls, where they can see and be seen, in a reasonable way and at an occasion that offers suitable pretexts. Both sexes should be naked, within the limits a moderate sense of shame sets for each. The supervisors and regulators of all these matters ought to be those who rule over and give laws to the choruses; in cooperation with the Guardians of the Laws they can arrange whatever we have left out.

For it's inevitable, as we've said, that in the case of all such matters the lawgiver will leave out the small and numerous details; and those who constantly gain experience in them, learning from yearly practice, must make yearly arrangements and corrective changes until what seems to be a satisfactory definition of such customs and practices has been reached. Ten years of sacrificing and dances would be a measured and sufficient period of time to assign for gaining experience in each and every aspect. If the lawgiver is still alive, they can share the task in common with him, but if he has died, each of the magistrates should bring to the attention of the Guardians of the Laws whatever omissions need correcting within their own jurisdictional spheres, and continue to do so until each feature seems to be perfected in noble fashion; then the. customs are to be made unchangeable, and adhered to along with the rest of the laws the lawgiver laid down for them at the beginning. They are never voluntarily to change a single one of them. But if some necessity should ever seem to overtake them, they must consult with all the magistrates and the whole populace and all the oracles of the gods. If all these are in consonant agreement, then the change can be made, but otherwise never in any way. If there is any opposition, the law will be that it always prevails.

So when anyone anywhere has passed twenty-five years of age, has observed and been observed by others, and trusts that he has found someone who pleases him and is appropriate for sharing and procreating children, let him marry. And everyone is to do so by the age of thirty-five. First, however, let him hearken to an account of how he should seek what is fitting and harmonious. For it is necessary, as Kleinias asserts, to preface each law with its own prelude.

Clinias:: You've reminded us in a very splendid way, stranger, by choosing what seems to me to be an opportune and especially well-measured moment in the argument.

Athenian Stranger:: Well spoken. "My lad" (let's address someone who has grown from good parents), "one should make a marriage of the kind that is held in good repute by prudent men, who would counsel you not to avoid someone of poor parents nor to pursue especially someone of rich parents, but, other things being equal, always to give precedence in honor to the less highly placed of your prospective partners. For this would be in the interest of the city, and also of the hearths that are being united; for the even-keeled and the commensurable are distinguished ten thousand-fold from the unrestrained when it comes to virtue. A man who knows himself to be too impatient and hasty in all his affairs should be eager to become related by marriage to orderly parents, and one whose natural disposition is the opposite should proceed to ally himself with the opposite sort of in-laws. In general, let there be one myth regarding marriage: in each marriage what must be wooed is not what is most pleasant for oneself, but what is in the interest of the city. It is according to nature that everyone always be somehow attracted to what is most similar to himself, and because of this the city as a whole becomes uneven as regards wealth and the dispositions of characters. The consequences of this, which we wish to avoid for ourselves, are very prevalent in most cities."

To enact by law, through discourse, that a rich man is not to marry from the rich, and a man capable of doing many things is not to marry someone similar to himself—and to compel those of hasty dispositions to join in marriage with those who are more phlegmatic, and the more phlegmatic with the hasty—besides being laughable, would stir up the spiritedness of many. For it's not easily understood that a city should be mixed, just like the drinker's bowl: the wine, when poured in, is throbbing with madness, but under the chastening of another, sober god, it forms a noble partnership that creates a good and measured drink. No one, so to speak, can perceive that this also holds for the commingling that produces children. That is why it is necessary to leave such things out of the law, and instead try to use enchanting song to persuade them that each should value more the similarity of their children than the equality in marriage which is insatiable for money. One must also use blame to dissuade anyone who is seriously bent on getting money through marriage; but one shouldn't apply force through written law.

So let these be the things said to encourage marriage, in addition to what was said a while ago, to the effect that one must partake of the eternal coming-into-being of nature by always leaving behind children of children, whom one leaves as one's successors in serving the god. So someone would say all these things and yet more about marriage, about how it is necessary to marry, if one were giving a prelude in the correct way.

If,, despite this, someone voluntarily disobeys, estranging himself and not sharing in the city, but persisting in an unmarried state at the age of thirty-five, let him pay a penalty each year: one hundred drachmas if he belongs to the class with most property, seventy if to the second, sixty if to the third, and thirty if to the fourth. Let this be sacred to Hera. Anyone who fails to make the yearly payment will have to pay ten times the penalty. It will be up to the Treasurer of the goddess to collect the fine; if he fails to do so he himself will incur the obligation to pay it, and everyone must give an accounting of such things at the audits. As far as money goes, then, these are the penalties everyone unwilling to marry must pay; in addition, let him be excluded from every honor paid by those who are younger, and let none of the young voluntarily pay him any heed. If he raises his hand to punish someone, everyone should come to the aid of and defend the one who is being treated unjustly, and if any bystander fails to come to his aid, let the law call him a coward and also a bad citizen.

The subject of dowries has already been discussed, but let it be repeated that there is no reason why the poor should reach old age having been unable, because of a lack of money, to take a wife or give away a daughter. For in this city everyone is to possess the necessities. Thus there would be less insolence on the part of wives and less humble and illiberal slavery because of money on the part of husbands.

He who obeys will have done one of the noble things. He who disobeys and gives or receives for the trousseau an amount worth more than fifty drachmas, or one mina, or one and one-half minas, or two minas for someone in the class possessing the most property, must pay to the public an amount equal to whatever excess he spent, and the sum given or received is to be consecrated to Hera and Zeus. The treasurers of these two gods are to take care of things in this case just as the treasurers of Hera were said to take care of things each time in the case of those who don't marry, and if they fail to do so, each of them is to pay the fine out of their own funds.

The authority to make the marriage pledge should belong first to the father, second to the grandfather, and third to brothers sprung from the same father. If one of these is not available, then the authority should pass to the same line of relatives on the mother's side. If some unusual mischance should intervene, then the authority should pass to the nearest relatives in each case, together with the guardians.

In regard to rites preliminary to marriage, or any other such sacred ceremonies that are appropriate to celebrate before, during, and after the marriage, a person should make inquiries with the Interpreters and, by obeying whatever they say, everyone may believe that he has done everything in a well-measured way.

As for the marriage feasts, no more than five male and five female friends should be invited on each side, and a similar number from each family and household. The expenditure should in no case be more than the property will bear—a mina for the class with the most money, half that much for the next, and so on, in proportion, as the property of each class is less. He who obeys the law should be praised by everyone, but he who disobeys should be punished by the Guardians of the Laws as one who lacks experience in things beautiful and who is uneducated in the laws of the Muses of marriage.

Drinking to the point of drunkenness presumably befits no other occasion except the festivals of the god who has given wine, nor is such behavior safe, above all for someone who takes getting married seriously. Prudence is. especially fitting in this time for the bride and groom, who are making no small transformation in their lives, and, at the same time, it's needed for the sake of the child to be engendered, to insure that it is conceived by parents who are as much as possible in possession of their senses at all times. For it's quite hard to tell just what night or day, with the god's help, the child will be conceived. Moreover, children shouldn't be made in bodies saturated with drunkenness. What is growing in the mother should be compact, well attached, and calm, but someone who's been drinking carries himself and is carried every which way, raging with frenzy in body and soul; as a result, a drunk is a clumsy and bad sower of seed, and is likely to beget at such a time offspring who are irregular, untrustworthy, and not at all straight in character or body. That's why one should strive throughout the whole year and all one's life, but especially at the time when one is engendering children, to be careful and to avoid doing anything that voluntarily brings on sickness or involves insolence or injustice. Otherwise, one will necessarily stamp these effects on the souls and bodies of the embryos, and create children who are in every way inferior. One must especially avoid such things that day and night. For the beginning, which among human beings is established as god, is the savior of all things—if She receives the proper honor from each of those who make use of Her.

Considering the other of the two allotted households as a sort of nest where the young will be born and raised, the bridegroom must separate from his father and mother and go there to make the marriage and a new home and nursery for himself and the children. For in the case of endearing attachments, a certain amount of longing cements and binds together all the dispositions, while excessive intercourse, without the longing that time produces, makes people drift apart through satiety. On this account they should leave mother and father and the wife's family in their own homes and, like colonists who have gone abroad, see them only on visits or when receiving them as visitors at home, where they are bearing and raising children, as if passing the lamp of life on from one generation to the next, always devoted to the lawful gods.

After this comes the question of property: what sort would one possess if one's belongings were to be most harmonious? There are many things that are not difficult either to understand or to acquire; but with regard to domestic servants there is every sort of harsh difficulty. The cause of this is the fact that we speak of them in ways that are somehow incorrect and yet in a certain manner correct. For our speech about slaves sometimes contradicts the ways we use them, while at other times our speech is consistent with the ways we use them.

Clinias:: What's this again that we're saying? We certainly do not understand, stranger, what things you're pointing out now.

Athenian Stranger:: That's surely not surprising, Megillus. For among almost all the Greeks the Helot system of the Lacedaimonians provokes the most perplexity and strife—some holding that it is good, others that it is not good. There would be less strife about the enslavement of the Mariandynoi to the Heracleans, or again about the serf nation of the Thessalians. But considering these and all such systems, what ought we to do about the possession of domestic servants? You quite reasonably asked whatever I meant to indicate by the remark I happened to make as I proceeded through the argument, and it was this: presumably we're aware that we all would say that one should own slaves who are as well disposed and good as possible. Indeed, there have been many slaves superior in every virtue to their owner's brothers and sons, slaves who have saved their masters' lives, their property, and their entire households. These things, we presumably know, are said about slaves.

Megillus:: Doubtless.

Athenian Stranger:: But also the opposite—how no slave's soul is healthy, how no one who has intelligence should ever trust any of their race? In fact, our wisest of the poets has made the following pronouncement, referring to Zeus: "half of one's intelligence," he declares;

> far-seeing Zeus takes away
> From men, whom the day of slavery seizes.

Everyone chooses between these ways of thinking. Some decide they will trust no one who belongs to the race of domestic servants, and, treating them as if they had the nature of wild animals, they use goads and whips to reduce the souls of domestic servants to a threefold and much more than threefold state of slavery. Others, again, do entirely the opposite of these things.

Megillus:: Doubtless.

Clinias:: So then given these different policies, what should we do in our land about possession and punishment of slaves, stranger?

Athenian Stranger:: What, indeed, Kleinias? It’s obvious that the human animal is a difficult possession; for it is stiff-necked, and evidently not willing at all to be or become easily managed in terms of the inevitable distinction in deed between slave, free man, and master. It has often been demonstrated in deed how many evils result—by the regular and frequent revolts of the Messenians, by the cities which possess many domestic servants who speak one language, and also by the robberies and other ills suffered at the hands of the so-called Peridinoi around Italy. Looking at all this, one would find oneself at a loss as to what should be done about all such things. The fact is, there are only two devices that remain: those will more easily serve as slaves who aren’t compatriots and whose languages are as discordant as possible; and one should train slaves correctly by treating them with dignity—not only for their sakes but even more for our own. The training of people in such a condition avoids a certain sort of insolence, and does domestic servants even less injustice, if that is possible, than is done to equals. For a man shows clearly that he reverences justice naturally, and not artificially, and that he really hates injustice, when he does so in his dealings with human beings whom he might easily treat unjustly; he who in his disposition and actions toward slaves remains undefiled by what is impious or unjust, would be a man who is fully capable of sowing the natural seed of virtue. The same thing can be said, and correctly said, about a master and a tyrant, and about one who exercises any sort of absolute rule over someone weaker than himself. Of course, it is necessary to punish slaves, in a just way, and not spoil them by mere chiding, as if they were free men. And in speaking to a domestic servant one should almost always use a straightforward command; one should never joke with domestic servants in any way, whether they be females or males, and the many who are very thoughtlessly fond of this playfulness with slaves spoil them—thereby making life more difficult both for those who are ruled and for themselves who do the ruling.

Clinias:: What you say is correct.

Athenian Stranger:: Now when every effort has been made to provide a mass of domestic servants adequately trained in every way to assist in action, shouldn’t what comes next, in speech, be the housing plans?

Clinias:: By all means.

Athenian Stranger:: It’s likely that in the new and hitherto uninhabited city there must be supervision of the way in which everything, so to speak, is constructed—including the temples and walls. These things come before marriage, Kleinias; but since now the thing is coming into being in speech, it’s quite all right if it proceeds in this order, for now. When it comes into being in deed we can put these things prior to marriage, if the god is willing, and can at last complete the latter business after all the architectural details. For now let’s just go through a brief sketch of them.

Clinias:: By all means.

Athenian Stranger:: The temples should be constructed all around the marketplace and in a circle around the city, on the highest ground—for the sake of both defense and cleanliness. Near them should be buildings for the magistrates and for the courts. Thus cases will be accepted and judgments dispensed on the most sacred soil, reflecting not only the questions of piety involved in the cases but also the fact that the buildings belong to such gods. In the same buildings will be housed those courts in which it would be fitting to hear homicide trials and all charges of injustice involving the death penalty.

As for walls, Megillus, for my part I would go along with Sparta, and leave the walls sleeping in the earth, and not set them up. The reasons are these. It's a fine poetic argument that people sing about them, to the effect that walls should be made of bronze and iron rather than earth. What is more, our plan would justly incur much ridicule—the plan to send the young out into the countryside in yearly relays, making trenches and ditches and certain buildings to thwart enemies, as if they weren't going to let them cross the borders—if we were still to put up a wall, when a wall is, first, not at all beneficial to cities from the point of view of health, and, in addition, usually instills a certain habit of softness in the souls of those who dwell within it. The wall tempts men to flee within it instead of standing against the enemies, and makes them think they needn't always keep up a guard, night and day, in order thus to obtain safety, but can have the means for real security by going to sleep fenced in behind walls and gates. They think they were born not to toil, not knowing that ease really comes as the result of toils. And the fact is, I believe, that toils naturally reappear as a result of shameful ease and softness of spirit.

But, if some wall is necessary for humans, then it ought to be created by constructing the private homes at the beginning so as to form the whole city into one wall, with the evenness and uniformity of all the houses as they face the street providing good defense. In presenting the appearance of one house it would not be unpleasant to look at, and would on the whole make a difference in every way as regards the ease of guarding and providing security.

It would be fitting that the responsibility for maintaining the buildings in accordance with the original plan lie mainly with the inhabitants, but the City Regulators ought to exercise supervision, using penalties to compel anyone who becomes careless. They should see to it that everything in the city is kept clean, and should insure that no private individual encroaches in any way on what belongs to the city when constructing buildings or ditches. These same officials should see to it that there is good drainage for the water that comes from Zeus, and should oversee any construction pertaining to the water that would be fitting within the city or outside. The Guardians of the Laws should take cognizance of all these matters and make additional laws as needs arise—and the same goes for anything else the law might, in its perplexity, omit.

Now that these buildings, the buildings of the marketplace, the buildings of the gymnasia, and all the school buildings, stand ready for those who will frequent them, now that the theater stands ready for the spectators, let’s proceed to the matters that come after marriage, following the order of lawgiving.

Clinias:: By all means.

Athenian Stranger:: Let’s suppose then that our marriages have been made, Kleinias. After this, a length of time of not less than a year would elapse before children were born. What way of life the groom and the bride ought to pursue during this time, in a city which will differ so greatly from the many, is the subject that comes next after the things just now discussed. But it is not exactly the easiest thing to say. In fact, although there have been more than a few things of this kind already, this is even less acceptable to the majority than all of them. Nevertheless, whatever seems correct and true should be spoken in its entirety, Kleinias.

Clinias:: By all means.

Athenian Stranger:: Whoever intends to promulgate laws for cities, and regulate how men should act in regard to public and common actions, but supposes he need not apply a degree of compulsion to the private things, supposing that each can live his daily life as he wishes, that it's not necessary for everything to be ordered—whoever leaves the private things unregulated by law and believes the people will be willing to live with the common and public things regulated by the laws—is incorrect in his thinking.

Why have these things been said? For the following reason: we are going to assert that our grooms must participate in the common meals no differently, and no less, than in the time before marriage. This institution aroused amazement at the beginning when it was first introduced in your territories—when some war, as is likely, or some other affair of equal power legislated it because of the great difficulty created by a scarcity of human beings—but once you had tasted and had been compelled to use the common meals, the custom seemed to you to make a great contribution to security. In some such way the practice of common meals was instituted among you.

Clinias:: That's likely, at any rate.

Athenian Stranger:: What I said about it, that this practice was once an amazing, and for some a frightening, thing to institute, would no longer hold in the same way now, or present the same difficulty for the one undertaking to legislate it. But there is another practice that follows from this one, and which would be correct according to nature if it came into being. Because it exists nowhere now, the lawgiver effects little and finds himself in the situation they tell of in the joke: he cards his wool into a fire and engages in ten thousand other such fruitless efforts. Yet the practice is not an easy thing to talk about nor, having been discussed, to carry into execution.

Clinias:: What is this, stranger, that makes you seem to hesitate so, as you try to explain it?

Athenian Stranger:: You shall hear, to prevent a great deal of discussion being wasted on it. Everything that partakes of order and law in the city has entirely good effects, while most things that lack order or are badly ordered weaken the other things that are well ordered. This principle applies directly to the subject under discussion. For among your peoples, Kleinias and Megillus, the common meals for men were established in a fine and, as I said, amazing way by some divine necessity; but women’s affairs were in an altogether incorrect way left without legislative regulation, and the practice of common meals for them never saw the light. That race of us humans that is by nature more secretive and cunning because of its weakness—the female—was incorrectly left in disorder by the legislator’s failure to be firm. On account of this neglect there are many things that have gotten out of hand among you that would have fared better than they do now, if they had happened to be regulated by laws. When one overlooks the disorderliness of women’s affairs, what is affected is not only, as one might suppose, a half; in fact, to the degree that our female nature is inferior to that of the males as regards virtue, by so much would the harm approach being more than double. So, if this were revised and corrected, if it were ordained that every practice is to be shared in common by women as well as men, it would be better for the happiness of the city.

As things stand, the human race has so failed to be fortunate in this respect that in other places and cities, where common meals are not at all officially accepted customs in the city, it’s not possible for someone of intelligence even to mention it. How then, without being laughed at, will someone attempt in deed to force women to take their food and drink in the open, where they can be clearly seen? There is nothing that would be harder for this race of women to bear, for it is habituated in a retired, indoor way of life; it’ll use every means to resist being dragged by force into the light, and will prove much superior to the legislator. Thus, anywhere else, as I said, they wouldn’t tolerate the utterance of the correct argument without much screaming, but perhaps they would here. If it doesn’t seem unlucky for the discussion of the whole regime to unfold—for the sake of the argument, anyway—I am willing to state how this practice is both good and fitting, if you two agree to listen. But if not, let’s just let it go.

Clinias:: But stranger, the two of us are amazingly and in every way agreeable to hearing about it, at any rate!

Athenian Stranger:: Let’s indeed hear it. But don’t be amazed if I seem to you to undertake the subject by going way back. After all, we’re enjoying leisure, and there’s nothing pressing that prevents us from making a complete inquiry into every aspect of the laws.

Clinias:: What you’ve said is correct.

Athenian Stranger:: Let’s go back again to the first things that were discussed. Every man ought to have a good understanding of this much at least: either the coming into being of humans had no beginning at all and will never have an end, but existed always and will exist always, in every respect, or an immeasurable time would have elapsed since the beginning, when it came into being.

Clinias:: But of course.

Athenian Stranger:: What then? Don't we think that every part of the earth, in every sort of way, has had foundings and destructions of cities, every kind of practice orderly arid disorderly, and every sort of desire for food, both liquid and solid? And don't we think that there have been climatic revolutions of all types, in which it is likely that the animals underwent very many transformations?

Clinias:: How could this not be so?

Athenian Stranger:: What then? Presumably we believe that the vines appeared at a certain time, when they had not existed before? Doesn't the same hold for olive trees, and the gifts of Demeter and Kore? Wasn't a certain Triptolemus the one who brought such things? During the time when these things didn't exist, don't we think that animals used one another for food, as they do now?

Clinias:: But of course.

Athenian Stranger:: In fact, we see that even now the practice of human beings sacrificing one another still persists among many peoples. And we hear just the opposite about other peoples: how there was once a time when we did not dare to taste cattle, and sacrificed to the gods no animals, but instead gruel and fruits soaked in honey and other such hallowed sacrifices. They abstained from flesh on the grounds that it wasn't pious to eat it or to pollute the altars of the gods with blood. Those of us who existed then had ways of life that were what is called "Orphic": we partook of everything that lacked soul but abstained from the opposite, from everything possessed of soul.

Clinias:: What you've described is certainly what people say, and can be trusted.

Athenian Stranger:: "But," someone would ask, "with a view to what, have all these things been said by you now?"

Clinias:: You are correct in supposing that, stranger.

Athenian Stranger:: And now then, if I can, I’ll try to explain what follows after these things, Kleinias.

Clinias:: Say on.

Athenian Stranger:: I observe that for human beings everything depends on a threefold need or desire, and that if they are guided correctly by these, virtue results, while if they are guided badly, the opposite. Of these, the need for food and the need for drink are present as soon as they’re born. In all this regard, every animal has a natural erotic longing, is full of frenzy, and refuses to listen if someone says it ought to do anything except satisfy the pleasures and desires connected with all these things, and always avoid for itself all the pain connected with them. Our third and greatest need or erotic longing is that which urges most sharply and comes latest, the one which makes human beings burn with complete madness: that most insolent flame involved in the engendering of offspring. What is needed is to turn the three illnesses toward what is best and away from what is said to be most pleasant, attempting to restrain them with the three greatest checks—fear, law, and true reason. These must be reinforced, of course, by the Muses and the gods of contests, in order to quench the growth and spread of the illnesses.

Let’s put the procreation of children after the subject of marriages, and, after procreation, upbringing and education. Perhaps if the discussion proceeded thus, each of our laws that pertain to the common meals would be completed later on, so that when we arrive at such occasions of fellowship and partake of them, we will be in a position to look closely and perhaps see whether they should be common to women too, or should be only for men. The preliminaries to these common meals still remain unlegislated for now, but later we will bring them into order and set them up. At that time, as was just said, we will see them more distinctly, and would lay down the laws that are appropriate and fitting for them.

Clinias:: What you say is very correct.

Athenian Stranger:: Let's guard in our memories the things that have been said just now; for perhaps we'll have need of all of them sometime.

Clinias:: Which in particular do you bid us to remember?

Athenian Stranger:: The things we distinguished by three terms. We spoke of food, did we not, and second of drink, and third of a certain fluttering excitement of sex.

Clinias:: We will doubtless remember all the things you now bid us to, stranger.

Athenian Stranger:: Fine. Let's proceed then to the newlyweds and teach them how and in what way they should procreate the children; if we can't persuade them, then we'll threaten them by means of certain laws.

Clinias:: How?

Athenian Stranger:: The bride, and the groom as well, must think about how they may do all they can to provide the city with the noblest and best children possible. All human beings who take a common share in any action perform everything nobly and well if they reflect intelligently upon themselves and upon the deed itself; but if they don't apply their intelligence to it, or if they lack intelligence, they do just the opposite. So the groom should reflect intelligently on the bride and the making of children, and the bride should do likewise—especially during the time when they don't yet have children. To supervise them, there are to be the women we have chosen, whose number, greater or less, and time of appointment will be left to the rulers to fix; each day they will meet together for up to a third of an hour at the temple of Eileithuia, and at their meetings they'll bring to one another's attention any man or woman among those engaged in the procreation of children whom someone has observed preoccupied with something other than what was enjoined upon them at the marriage sacrifices and the sacred rites.

If the flow of conception is strong, let the parents procreate children and keep a watch over themselves for ten years, but no longer. If some remain childless after this period of time, let them be divorced, after consulting with their families and the women magistrates about the terms that would be for the benefit of both parties. If some quarrel arises over what terms would be fitting and beneficial to both, they should choose ten of the Guardians of the Laws to whom they should turn the matter over, and abide by their ruling.

The women should go into the houses of the young people, and by exhortations and threats prevent them from doing anything wrong or foolish. If they are unable to do so, let them go and make a report to the Guardians of the Laws, who will proceed to prevent them. But if they also can't do it, let them report it to the public at large, by putting the matter in writing and swearing an oath to the effect that they have been unable to reform so-and-so. He who is written up, and fails to get a judgment against his accusers, must suffer dishonor in the following ways: he is not to attend weddings or the thanksgiving rites after a child has been born, and if he should attend them, let anyone who wishes punish him with blows and suffer no retaliation. Let the same customs apply to the wife: if her disorderliness leads to her being written up and she fails to get a court judgment, she is not to participate in the processions and honors of the women, nor attend weddings and the celebrations at the time of the birth of children.

When they have finished procreating children according to the laws, if someone has relations of this sort with another woman, or if a wife has them with another man, and if the other persons involved are still at the child-procreating age, they must suffer the same penalties that have been described for those who are still procreating children. But thereafter, the man or woman who behaves moderately in all such respects should be accorded an entirely good reputation; he who behaves in the opposite fashion should be honored in the opposite way—or rather dishonored. If most people live well-measured lives in such respects, let the subject be passed over in silence, without legislation; but if they get disorderly, let legislation be put into effect in this way, according to laws that'll be laid down at that time.

The first year is the beginning of each person's whole life, and each boy and girl should have it written down in the ancestral temples: "his or her life began on…" Written next to this, on the whitewashed wall for every clan, should be the number of the rulers, who are numbered according to the years. Nearby, the names of those in each clan who are alive at any given time should be written; the names of those who depart from life should be erased.

A girl should marry between the ages of sixteen and twenty, to state the longest time period, and a boy between thirty and thirty-five. A woman can enter office at forty, a man at thirty. A man is subject to service in war from the age of-twenty until the age of sixty; in whatever military services it seems women should be employed, each will be ordered to do what is possible and fitting for her, after she has borne children and until she is fifty years old.

## Book VII.

Athenian Stranger:: Now that the male and female children have been born, presumably the most correct procedure would be for us to turn next to a discussion of their upbringing and education. To avoid speaking about this is completely impossible; yet it would appear to us more reasonable to utter a kind of instruction and admonition rather than laws. For there are many little things, not visible to everyone, that take place in private and in the home, which, because of each person's pain, pleasure, and desire, go against the advice of the lawgiver, and would easily make the dispositions of the citizens diverse and dissimilar. This is bad for cities. For while the pettiness and frequency of these practices render it unfitting and unseemly to make laws imposing penalties, it nevertheless corrupts even the written laws to have human beings become accustomed to act against the law in petty, frequent ways. The result is that there's perplexity as to what to legislate about these things, and yet it's impossible to remain silent.

But I should try to clarify what it is I'm saying by sort of bringing to light examples; so far what's been said is pretty dark.

Clinias:: What you say is very true.

Athenian Stranger:: Presumably it was correct to say that an upbringing that is correct in every way must manifest the power to make bodies and souls the most beautiful and the best possible.

Clinias:: But of course.

Athenian Stranger:: And if they are to have the most beautiful bodies I suppose the simplest requirement, at least, is that the children grow with the straightest possible posture from youngest infancy.

Clinias:: Most certainly.

Athenian Stranger:: What then? Isn't this our understanding, that the first sprouting of every animal involves by far the greatest and most substantial growth, so that many people would strongly contend that humans,, at least, fail to attain, in the twenty years after the age of five, a size that is double the size attained in the first five years?

Clinias:: True.

Athenian Stranger:: What then? Aren't we aware that a great deal of growth, occurring without much well-measured exercise, produces myriad evils in the bodies?

Clinias:: Certainly.

Athenian Stranger:: Therefore it's when bodies are getting the most nourishment that they need the most exercise.

Clinias:: What's that, stranger? Are we going to assign the most exercise to the newborn and youngest?

Athenian Stranger:: Not at all, but to those even younger, those being nourished inside their mothers!

Clinias:: Best of men, what are you talking about? You mean the fetuses?

Athenian Stranger:: Yes. It's not surprising that you two are ignorant of the gymnastic art pertaining to that time of life; and although it's something strange, I'd like to explain it to you.

Clinias:: By all means.

Athenian Stranger:: My people can understand this sort of thing better because among us some play games more than they should. Some of us—and not only boys but certain elderly men as well—raise young birds for battles against one another. Those who raise beasts for such purposes are far from thinking that the creatures get sufficient exercise when they are stimulated to struggle with one another in gymnastic competition. In addition to these exercises, they each take their birds under their cloaks, smaller birds in the hands and bigger ones under the arm, and proceed to walk very many stades—not for the well-being of their own bodies, but for that of these young creatures. By such a practice they show, to anyone capable of understanding, that all bodies benefit from the invigorating stir produced by all sorts of shaking and motions, whether the bodies be moved by themselves, or in litters, or on the sea, or by being carried on horses or on any other body. These motions allow the bodies to digest the foods and drinks that nourish them, and make them capable of providing us with health, beauty, and the other sorts of strength.

If these things are so, what would we claim we ought to do next? Do you wish us to go ahead despite the laughter and set forth laws to the effect that a pregnant woman must go for walks, and that when the child is born she must mold it like wax so long as it remains moist, wrapping it in swaddling clothes until it is two years old? Shall we compel nurses, by legal penalties, to somehow carry the children about continually, to the fields, or the temples, or to relatives, until the babies have become capable of standing, and even then to be very careful lest the children, being still young, should distort their limbs by somehow putting too much weight on them? Shall we command the nurses to keep carrying the children until they've reached the age of three? Ought the nurses to be as strong as possible, and ought there be more than one? And shall we set down a written penalty accompanying each of these laws, applicable to those who fail to carry them out?

Or would this be far off the mark? After all, it would produce a very great deal of what was just mentioned.

Clinias:: What's that?

Athenian Stranger:: The great laughter we'd incur, in addition to the unwillingness to obey on the part of the nurses' womanly as well as slavish dispositions.

Clinias:: But then why have we claimed that these principles ought to be announced?

Athenian Stranger:: The reason is this: the dispositions of the masters and free men in the cities may perhaps listen, and if so, they would come to the correct understanding that unless private homes within cities are correctly regulated it is vain for someone to suppose the common things will stand on a firm legal footing. Once someone understood these things, he would adopt for himself the laws mentioned just now, and, by using them to make his own home and city well run, would become happy.

Clinias:: What you've said is very likely.

Athenian Stranger:: For this reason, we shouldn't leave such legislation until we've described which pursuits are appropriate to the souls of the very young children, proceeding in the very same way as when we began to go through the myths that were told about the bodies.

Clinias:: That is altogether correct.

Athenian Stranger:: Let's take this as a sort of fundamental principle that applies to both body and soul: in the very young, nursing and motion should be as continuous as possible, the whole night and day, because it is beneficial for all, and not least for the very youngest, to dwell—if it were possible—as if they were always on a ship at sea. As it is, what is needed in the case of newborn nursling creatures is to approach as close as one can to achieving this state.

Evidence for this principle is found in the facts that it has been adopted, and is known to be useful from experience, by the women who nurse little ones and by the women who perform the mystery-rite cures of the Corybantes. For presumably when mothers want to lull their restless children to sleep they don't provide stillness but just the opposite, motion; they rock them constantly in their arms, and not with silence but with some melody. It's exactly as if they were charming the children with aulos-playing, even as is done for the maddened Bacchic revelers, to whom they administer this same cure, which consists of the motion that is dance and music.

Clinias:: What are we to suppose is the principal cause of these things, stranger?

Athenian Stranger:: It's not very hard to understand.

Clinias:: How so?

Athenian Stranger:: In both cases the passion being experienced is presumably terror, and the terror is due to some poor habit of the soul. When someone brings a rocking motion from the outside to such passions, the motion brought from without overpowers the fear and the mad motion within, and, having overpowered it, makes a calm stillness appear in the soul that replaces the harsh fluttering of the heart in each case. This has wholly desirable effects. In the one case it makes them go to sleep; in the other case, with the help of the gods to whom each sacrifices and from whom each receives good omens, the process incites to dancing, and influences the dancers through the aulos music: it thereby replaces our mad dispositions with prudent habits. For a brief discussion, at least, these remarks convey an account that is plausible.

Clinias:: Indeed they do.

Athenian Stranger:: If, then, these procedures do thus have some such power, one is also led, by the example of these people, to understand the following: every soul that dwells with terror from the time of childhood would be especially likely to become accustomed to feeling fear; and presumably everyone would assert that this is practice in cowardice rather than courage.

Clinias:: How could it be otherwise?

Athenian Stranger:: And we would assert that the opposite, the practice in courage from earliest youth onward, consists in triumphing over the terrors and fears that come upon us.

Clinias:: Correct.

Athenian Stranger:: Then with regard to this one part of the virtue of the soul, let us assert that the use of the gymnastic of motions among the little children is of great assistance to us.

Clinias:: By all means.

Athenian Stranger:: Moreover, the absence or presence of ill-humor in the soul is no small factor in determining whether stoutness of soul or weakness of soul would result.

Clinias:: How could it not be?

Athenian Stranger:: Then in what way might we have naturally implanted in the newborn, at the outset, either of these dispositions we might want? We ought to try to explain how and to what extent someone would successfully handle this.

Clinias:: How could we not do so?

Athenian Stranger:: I say that this is the dogma accepted among us: luxury makes the dispositions of the young ill humored, irascible, and easily moved by minor matters, while the opposite—extreme, savage enslavement—by making them humble, illiberal, and misanthropic, renders them unsuited for living with others.

Clinias:: How then ought the city as a whole bring up those who cannot yet speak or partake of the rest of education?

Athenian Stranger:: Roughly as follows. Presumably every newborn animal customarily gives forth cries from the moment it’s born, and this applies not least to humankind. Indeed, it is more given to tears as well as cries than the others.

Clinias:: That is certainly so.

Athenian Stranger:: In fact, nurses judge by these very signs when they bring things and thus see what it desires; when they see it falls silent when something is brought, they think they’ve done fine in bringing the thing, and when instead it weeps and cries they think what they’ve done isn’t fine. Babies make manifest what they love and hate through their tears and cries—a way of communicating that is not at all fortunate. And yet this goes on for at least three years’ time (no small portion of life to spend in a condition that is either bad or not bad).

Clinias:: What you say is correct.

Athenian Stranger:: Doesn’t it seem to you two that the man who is ill humored and not at all gracious is more glum and, for the most part, more filled with complaints than a good man ought to be?

Clinias:: It seems that way to me, anyway.

Athenian Stranger:: What then? If someone were to apply every device in an attempt to make the three year period for our nursling contain the least possible of suffering and fears and every sort of pain, don't we suppose that he would give the soul of the one brought up this way a better spirit, and make it more gracious?

Clinias:: Clearly; and it would be especially the case, stranger, if someone should provide many pleasures for it.

Athenian Stranger:: In this I would no longer go along with Kleinias, you amazing man! That kind of behavior is for us the greatest of all corruptions. For it starts each time at the very beginning of the upbringing. But let's see if what we're saying holds up.

Clinias:: Say what you're asserting.

Athenian Stranger:: Our argument now is not about a matter of small importance; so you too, Megillus, must consider this and help us judge. My argument asserts that the correct way of life should neither pursue pleasures nor entirely flee pains. Instead, it enjoys the middle course, for which I just now used the name "gracious." Guided by some saying of an oracle, this is how we all characterize precisely the situation of god. And I assert that this is the habit that should be pursued by any one of us who is to be divine: one should not allow oneself to pursue pleasures headlong, thinking one can in this way avoid the experience of pain, nor allow anyone else among us—old or young, male or female—to suffer this. Least of all the newborn, if one can help it, for that is the age when, through habituation, the most decisive growth in the entire character occurs for everyone. Moreover, I at least would assert (if I could avoid the appearance of joking) that of all women the most special attention should be paid to those who are carrying children inside their stomachs, during that year, so as to prevent the pregnant woman's having many or violent pleasures—or pains—and to provide that she lives through the period honoring what is gracious, even, and gentle.

Clinias:: You don’t have to ask Megillus which of us has spoken more correctly, stranger: I myself grant you that everybody should avoid a life of unrestrained pain and pleasure, and should always cut it somewhere in the middle. So now both what you have said and what you have heard are noble.

Athenian Stranger:: Both are indeed very correct, Kleirtias. But let us, being three, turn our thoughts next, after these things, to the following.

Clinias:: To what?

Athenian Stranger:: To the fact that all these things we’re now going through are what the many call “unwritten customs.” Indeed, what they name “ancestral laws” are nothing other than all such things as these. What is more, the argument that has been poured over us now, to the effect that one shouldn’t ordain these in law, and yet also shouldn’t leave them unmentioned, has been nobly put. For these are the bonds of every regime, linking all the things established in writing, and laid down, with the things that will be set forth in the future, exactly like ancestral and in every way ancient customs; if nobly established and made habitual, they provide a cloak of complete safety for the later written laws, but when they perversely stray from the noble they are like props of the walls of houses which buckle in the middle and cause the whole edifice to fall, one part under another, the parts that were later constructed in a fine way collapsing after the props themselves, the ancient things, have collapsed. Keeping these things in mind, Kleinias, we must bind your new city together in every way, neglecting, so far as is in our power, neither the great nor small aspects of what are called “laws,” “habits,” or “practices.” For a city is bound together by all such things, and in the absence of either of them the other ceases to be stable. So it should not be surprising to find that the laws are made lengthier by an overflow of customs or even habits that seem numerous and minor to us.

Clinias:: But what you’re saying is correct, and we will keep it in mind.

Athenian Stranger:: With regard, then, to the first three years of life (whether for a boy or a girl), if someone would carry out these things punctiliously, and not treat what’s been said as peripheral, the benefit that would accrue to the young who are being raised would not be inconsiderable.

As for three-year-olds, and four-year-olds, and five-year-olds, and even six-year-olds, the character of their souls would require games, while punishment must be employed to detach them from luxury. The punishment should not be dishonorable, but should resemble the sort we just said was to be used on the slaves; they should punish in a way which is not insolent and hence does not instill anger in those who are punished, yet which doesn’t permit luxury by leaving them unpunished. This same approach should be used on those who are free. The games for children of this age spring up naturally, mostly discovered by the children themselves when they get together. And all the children of this age, three to six, should gather together in the district temples, the children of each district coming together in the same common place. The nurses should keep watch over the orderliness or lack of restraint of those who are still at this age, while supervision over the nurses themselves and over the whole herd should be the responsibility of one of the previously selected twelve women: the Guardians of the Laws should assign a woman to each herd, to keep order for a period of a year. The selection of these women is to be the responsibility of the women who are in charge of overseeing marriages, who will select one woman, of the same age as themselves, from each tribe. The one who is selected should pay an official visit to the temple each day and punish anyone she finds acting unjustly on each occasion. She can use some of the servants belonging to the city to punish, on her own authority, male or female slaves and male or female strangers, but if the accused is a citizen, and disputes the punishment, she must take him to court before the City Regulators. If he doesn't dispute her claim, let her punish even the citizen on her own authority.

The sexes should be separated after they reach the age of six—boys spending their time with boys, and, similarly, the virgins spending their time with one another. Both should turn to studies, the males going to teachers of horseback riding, archery, javelin throwing, and the sling. Females too, if somehow they will agree, should at least know about these things—and especially about the use of heavy arms. For almost everyone fails to recognize the prejudice that prevails about such matters at the present time.

Clinias:: What is that?

Athenian Stranger:: I refer to the belief that nature makes our right and left sides differ with respect to the way they are used in each of the actions done by our hands, whereas with respect to chores done by the feet and the lower limbs no difference is apparent. On account of the mindlessness of our nurses and mothers we have each become like cripples as regards our hands. For by nature the limbs on both sides are almost equally balanced; we have made them differ through habituation, by not using them correctly. In some activities where it doesn't make much difference—such as in playing the lyre, where the instrument is held in the left hand and the plectrum in the right, and in other such activities—no harm is done. But to use these activities as models for other activities, where such usage isn't necessary, is practically mindless. The Scythians have a convention that makes this evident: instead of holding the bow in the left hand and pulling the arrow back only with the right, they use either hand to the same extent for both. There are very many other such models—in chariot driving and other activities—from which one could learn that those who contrive to make the left weaker than the right do so against nature. As we said, when this affects plectrums made of horn and other such tools, it doesn't make a big difference; but in war, when one must employ tools made of iron, it does make a big difference, not only as regards bows and javelins, but especially when heavy arms must be used against heavy arms. At that point, there is a very great difference between one who has learned and one who hasn't, and between one who has been trained in gymnastic and one who hasn't been trained in gymnastic. Just as someone perfectly trained for the pankration, or for boxing, or for wrestling, is never unable to fight with his left side, and thus is not a cripple or a clumsy bumbler whenever someone, by switching over, compels him to fight on that side; in the very same way, I think, one should correctly expect that for fighting in heavy armor and all the rest, whoever possesses two limbs with which to defend himself and attack others should do all he can not to allow either to be idle or untrained. And if someone should grow up with the nature of even a Geryon or a Briareus, he ought to be able to throw a hundred javelins with his hundred hands. All these things should be supervised by the female rulers and the male rulers—the former keeping a watch over the games and the nurses, the latter over the studies—so that all the boys and all the girls will have feet and hands that are ambidextrous, and so that insofar as possible they won't harm their natures through habits.

It would presumably be useful if the studies were twofold, so to speak: the gymnastic would be those that pertain to the body, and the musical would be for the sake of stoutness of soul. The gymnastic, in turn, would be divided in two, into dancing and wrestling. One kind of dancing involves their imitating the speech of the Muse, while preserving a magnificent and free demeanor; the other kind, which is for the sake of health, agility and beauty, involves the proper bending and stretching of the limbs and parts of the body, and produces rhythmic motion in each of them as they adequately extend and retract themselves in every sort of dance.

As for the sort of wrestling techniques Antaeus or Cercyon developed in their arts, out of their useless love of victories, or the boxing techniques developed by Epeius or Amycus, since they're useless in the encounters of war, they're not worthy of being adorned by a discussion. But the things that fall under straight wrestling, including releases for the necks, hands, and sides, when practiced with a love of victory, when one is tough and graceful, and for the sake of strength and health, should not be neglected, since they are useful in every way. When we get to that stage in the laws we should, however, require the teachers to give all such lessons gently and the students to take them with a good grace.

Nor should one neglect whatever is appropriate in choral imitations, such as the armed games of the Kuretes that are held in this area, or those of the Dioscuri in Lacedaimon. And presumably our virgin mistress, who delights in the play of the chorus, doesn't think it proper to dance with empty hands; so she decks herself out with a complete set of armor and performs the entire dance that way. These are the sorts of things that would be entirely fitting for the boys and also the girls to imitate, as they honor the graciousness of the goddess, for the sake of their use both in war and in festivals. Presumably, it would be required that from the very beginning of their lives, and throughout all the time that passes until they go to war, the children always be arrayed with weapons and accompanied by horses as they make processions and ceremonial marches in honor of each of the gods. Thus with quick and slower steps, in the dances and processions, they will make their supplications to the gods and the children of the gods.

It is for no other ends—if for any—that contests and preparatory contests ought to be waged. For these are useful in peace and war, in the political regime and in private households; but the other sorts of playful and serious bodily exercises are not for free men, Megillus and Kleinias.

I have now given a pretty full elaboration of the gymnastic art that I said, in the first parts of the conversation, had to be elaborated: this is it, complete in every way. But if you two have something better than this to suggest, speak up, and set it before us in common.

Clinias:: It isn’t easy, stranger, to set aside these things and proceed to tell of other things that are better than these as regards both the gymnastic art and contests.

Athenian Stranger:: What follows next in order, then, is a discussion of the gifts of the Muses and Apollo. Earlier, indeed, we thought we had discussed all this, and had left only what pertains to the gymnastic art. Now, however, it is clear what things were omitted and that those things should be the first things one tells everyone. So let's proceed to discuss these very matters next in order.

Clinias:: This ought to be discussed, by all means.

Athenian Stranger:: Listen to me, then; even though you've listened before, still, care must be taken now too, as something very strange and uncustomary is spoken and heard. For I'm going to present an argument that is somewhat frightening to utter; yet by becoming bold, somehow, I will not flinch.

Clinias:: What is this, stranger, that you're talking about?

Athenian Stranger:: I assert that in all the cities, everyone is unaware that the character of the games played is decisive for the establishment of the laws, since it determines whether or not the established laws will persist. Where this is arranged, and provides that the same persons always play at the same things, with the same things, and in the same way, and have their spirits gladdened by the same toys, there the serious customs are also allowed to remain undisturbed; but where the games change, and are always infected with innovation and other sorts of transformations, where the young never call the same things dear, where good form and bad form—in the postures of their own bodies or in other things they use—are not always agreed upon, where instead they honor especially the man who continually innovates with something new and carries in shapes and colors and all such things that are different from the usual, we would be speaking in an entirely correct way if we were to assert this of such a man: there is no greater ruin than this that can come to a city. For, escaping notice, this man transforms the characters of the young, and makes them dishonor what is ancient and honor what is new. Of this man and his talk and dogma I say once again: there is no greater punishment for all cities. Hear how much evil I assert this is.

Clinias:: Are you referring now to the blame laid on the ancient things in the cities?

Athenian Stranger:: Yes, indeed.

Clinias:: Well, then, you'd find that we're by no means inattentive listeners to this part of your speech; nay, we'll be as receptive as we can.

Athenian Stranger:: That's to be expected.

Clinias:: So just say on.

Athenian Stranger:: Come then, let us surpass ourselves both in listening to the argument and enunciating it to one another.

Change, we shall find, is much the most dangerous thing in everything except what is bad—-in all the seasons, in the winds, in bodily habits, and in the characters of souls. It isn't the case that change is, so to speak, safe in some things and dangerous in others, except, as I just now said, in bad things.

Thus, if one were to look at bodies, one would see how they become accustomed to all foods and all drinks and exercises, even if at first they are upset by them; one would see how, with the passage of time, they grow, out of these very materials, flesh that is akin to these things, and come to like, be accustomed to and familiar with, a whole regimen—thriving on it in the best way from the point of view of both pleasure and health; one would see that if someone is ever compelled to change back to one of the reputable diets, he is at first upset-with sickness, but then once again with difficulty recovers, by regaining a habituation in the food. Now one must hold that this very same thing applies to the thoughts of human beings and the natures of their souls. If they're brought up under laws which by some divine good fortune have remained unchanged for a great length of time, if they neither remember nor have heard that things were ever otherwise than they are at present, then the entire soul reverences and fears changing any of the things that are already laid down. Somehow or other the lawgiver must think up a device by which this situation will prevail in the city. The following is what I at least have discovered: as we said before, everyone thinks that very great and serious harm can't follow from changes in the games of the young, on the grounds that these are really just games. As a result, they don't prevent such changes but give in to and follow them, not taking into account the fact that these boys who practice innovations in their games must necessarily grow up to be men who are different from those the earlier children grew into; being different, they seek a different way of life, and in seeking it they desire different practices and laws; from this it follows that none of them fears the arrival of what was now said to be the greatest evil for cities; There are, indeed, other changes—those affecting outward appearance—that would do less damage; but whatever brings about frequent change in the praise and blame accorded to dispositions is the greatest of all changes, I believe, and would require the most attentive watching.

Clinias:: How could it not?

Athenian Stranger:: What then? Do we trust the earlier arguments, where we said that things pertaining to rhythms and music as a whole are imitations of the characters of better and worse human beings? Or what?

Clinias:: Among us at least there would be no change in opinion whatsoever.

Athenian Stranger:: Do we assert, then, that every sort of contrivance should be contrived to prevent our boys from desiring to partake of other imitations, in dances or songs, and to prevent anyone from using all sorts of pleasures to persuade them?

Clinias:: What you say is very correct.

Athenian Stranger:: With regard to these matters, does any of us have an art better than that of the Egyptians?

Clinias:: What things are you referring to?

Athenian Stranger:: The sanctification of all dance and all songs. First comes the arranging of the holidays in a yearly calendar, showing what they are, when they occur, and to whom among the gods, the gods' children, or the demons they should be dedicated. After this, certain persons should first arrange which song is appropriately sung at each of the sacrifices to the gods, and which choruses should celebrate the sacrifice on each occasion; then all the citizens in common, by making sacrifices to the Fates and all the rest of the gods, and by pouring out libations, should sanctify each of the songs ordained for each of the gods and the others.

If anyone dedicates to one of the gods other hymns, or presents choruses, contrary to these, the Priests and Priestesses together with the Guardians of the Laws will be acting piously and lawfully if they exclude that person. If the one excluded refuses, voluntarily, to abide by the exclusion, he will for the rest of his life be subject to indictment for impiety by anyone who wishes to bring the charge.

Clinias:: Correctly spoken.

Athenian Stranger:: Now that we've entered into this discussion, let's undergo what is fitting for men like us.

Clinias:: What are you talking about?

Athenian Stranger:: Presumably every young man, not to speak of an elderly man, when he sees or hears something strange and utterly unaccustomed, would never, I suppose, rush to agree right away with whatever is puzzling in such things; instead he'd stand there, like someone confronted with the triple fork at a crossroads and not knowing the road very well. Whether he were alone or should happen to be travelling with others, he'd ask himself or the others about what is puzzling, and wouldn't hurry on before he'd somehow placed on firm ground the inquiry into which way the path leads. The same should certainly be done by us at the present juncture: it is necessary, presumably, to make a complete inquiry into the strange argument about laws that has now cropped up. At our age, and about such matters, we shouldn't make a facile claim to be able to say something clear at a moment's notice.

Clinias:: What you say is very true.

Athenian Stranger:: So we'll devote some time to this, and when we've investigated it sufficiently, we'll then put it on firm ground. But in order to avoid the possibility that we might be uselessly prevented from completing the sequence of regulations that goes with the laws we have before us now, let's proceed to the end of them. And maybe, if the god would be willing, the way itself as a whole, taken to its end, would reveal sufficiently the answer to what now is puzzling.

Clinias:: An excellent suggestion, stranger—let's do as you've said.

Athenian Stranger:: So, we assert, this strange dogma has been accepted: our songs have become "laws." This is in agreement with the name the ancients, as is likely, somehow gave to songs accompanied by the kithara, and so they probably wouldn't have disagreed entirely with what's being said now: someone prophesied it vaguely in a dream, either while asleep or while in a state of waking vision. At any rate, this is to be the dogma about it: let no one voice anything or make any dance movement contrary to the public and sacred songs, or the whole choral exercise of the young, any more than he would go against any of the other "laws." He who goes along may depart unpunished. He who disobeys will be punished, as was just now said, by the Guardians of the Laws, the Priestesses, and the Priests. Shall these things be laid down in speech by us now?

Clinias:: Let them be laid down.

Athenian Stranger:: Now in what way would someone legislating these things avoid becoming totally ridiculous? Let's consider something like the following additional point in regard to these matters: the safest thing to do is first to shape some molds for them in speech. I say one of the molds is something like this: suppose a sacrifice is taking place and the sacred meats are being burned as the law dictates, and let's say someone in a private capacity, a son or a brother, while standing near the altars and sacred things, breaks out in a total blasphemy. Wouldn't we assert that his utterance would fill his father and his other kinsmen with despondency, and a sense of bad omen and prophetic warning of evil?

Clinias:: How could it not?

Athenian Stranger:: Well, in our part of the world this happens in almost every city, so to speak. For whenever some official carries out some sacrifice in public, a chorus comes along afterwards—in fact not just one, but a mass of choruses—and standing not far from the altars, indeed sometimes right beside the altars, pours total blasphemy on the sacred things! They use words, rhythms, and very mournful harmoniae to get the souls of the hearers all worked up, and whoever can straightaway make the city that is engaged in sacrificing weep the most is the fellow who wins the victory prize! Won't we vote down this "law"? If it is sometimes necessary for the citizen to hear such wailings, on certain impure and ill-omened days, then there should rather be certain choruses of singers who come, hired from abroad, of the sort that are paid to walk before funeral processions, inspired by some Carian Muse. Presumably such would be the fitting occasion for songs of that kind. And presumably it wouldn't be fitting for the garb that goes with the funeral songs to be crowns or golden ornaments, but entirely the opposite—so as to leave off discussing these matters as quickly as I possibly can.

With regard to such a thing, I ask us ourselves once again: should we lay down this first instance as one satisfactory mold for songs?

Clinias:: Which?

Athenian Stranger:: Auspicious speech. Shouldn't our species of song be wholly auspicious in speech, on every occasion? Or shall I not ask, but shall I just ordain it this way?

Clinias:: Ordain it by all means; for this law wins by unanimous vote.

Athenian Stranger:: What would be the second law of music after auspicious speech? Is it not that there are to be prayers to the gods to whom we are sacrificing on each occasion?

Clinias:: What else, except this?

Athenian Stranger:: The third law, I believe, should be that the poets must realize that prayers are requests to the gods, and they must apply their intelligence to the utmost in order to avoid ever mistakenly requesting evil in place of good. For the situation becomes laughable indeed, I think, when such a prayer is made.

Clinias:: But of course.

Athenian Stranger:: Now weren't we convinced a little earlier by the argument that neither the Silver nor the Golden Pluto was to have an established dwelling place in the city?

Clinias:: Certainly.

Athenian Stranger:: What, then, shall we claim this argument illustrates? Isn't it this, that the race of poets is not entirely capable of understanding well what things are good and what things are not? Presumably, if some poet creates, through words or melody, a work that is erroneous in this, respect—if he creates prayers that are incorrect—he will make the citizens pray in a way opposed to what we ordain, in respect to the greatest matters. And as we said, we won't find many mistakes that are graver than this. So shall we set this down as one of the laws and outlines concerning the Muse?

Clinias:: Set down what? Tell us more clearly what you mean.

Athenian Stranger:: The poet is to create nothing that differs from the city's conventional and just version of the beautiful or good things; he may show none of his creations to any of the nonexperts before he has shown them to the judges appointed in these matters as well as to the Guardians of the Laws, and met with their approval. (We've practically selected these judges already, since we've chosen both those who are to legislate in musical affairs and the one who is to be Supervisor of Education.) What then? I ask again what I've often asked: shall we ordain this as the third law, outline, and mold? Or how does it seem?

Clinias:: Let it he ordained—why should it not be?

Athenian Stranger:: Next, after these things at any rate, it would be quite correct to sing to the gods hymns and encomia mixed with prayers. After the gods would come, in the same way, prayers, with encomia, to the demons and the heroes, whatever is fitting to every one of these.

Clinias:: How could it be otherwise?

Athenian Stranger:: Now after these things, at any rate, this law could immediately follow, without hesitation: it would be fitting for any citizens who have reached life's end, who have performed noble and laborious deeds with either their bodies or their souls, and who have been obedient to the laws, to obtain encomia.

Clinias:: How else?

Athenian Stranger:: But it isn't safe to honor through encomia and hymns those still living (before a person has run through the entire course of his life and arrived at a noble end). Among us let all these matters be applied to men and women in common, to all those of either sex who become conspicuous for their goodness.

The songs and dances should be ordained thus. From the ancients have come many ancient and beautiful creations in music, and also for the bodies, dances of the same quality. There should be no hesitation to pick out from these what is fitting and harmonious for the political regime that is being set up. To make the choice among these, examiners should be selected who are not younger than fifty years of age. They should decide what seems adequate among the ancient creations and what is either deficient or wholly unsuitable. In the latter case they should cast it entirely away, while in the former case they should take it up again and rework it, seeking the aid of the poetic and musical men. They should use the poetic powers of these men, but they shouldn't be guided by their pleasures and desires, except in the case of a few of them; instead, by interpreting the intentions of the lawgiver, they should put together dance and song and choral performance as a whole in a way that comes as close as possible to the intentions in his mind. Every disorderly pursuit involving the Muse becomes better ten thousand-fold when it attains order, even if it doesn't partake of the sweet Muse. Pleasure, after all, is common to all the Muses. If someone passes the time from childhood until the age of adulthood and prudence hearing a 'moderate and orderly Muse, then every time he hears the opposite he will hate Her and proclaim Her to be lacking in freedom; but if he's brought up with the common and sweet Muse, he'll assert the opposite to this is cold and unpleasant. So, as was just now said, from the point of view of pleasure or lack of pleasure, at least, neither side gets more; the big difference lies in the fact that one makes those brought up with Her better while the other always makes them worse.

Clinias:: You've spoken beautifully.

Athenian Stranger:: In addition, it would presumably be necessary to distinguish, in an outline, the songs fitting for females from those fitting for males, and it's necessary to harmonize them with the harmoniae and rhythms. For it's terrible to sing something discordant with the harmonia as a whole, or to use a meter that's unsuitable to the rhythm, by failing to assign to the songs what is appropriate in each of these respects. So it's necessary to legislate at least the outlines of these matters. Now both kinds of song must be assigned certain necessary accompaniments; and since what belongs to females is determined by the very way they differ in nature, one must make use of this difference in order to make clear the difference in the songs. Magnificence, then, and whatever inclines to courage, ought to be declared to be masculine looking; whatever leans rather toward the orderly and the moderate should be proclaimed, in legal convention and in speech, as belonging more to the feminine. This will be the arrangement.

What needs to be discussed next after this is the teaching and handing down of these very things—in what way, to whom, and when each of the subjects should be practiced.

It's evident to me that what I'm doing here myself is much the same as what a shipwright does in beginning to build ships, when he sketches the shape of ships in outline by laying down the keels. I'm trying to distinguish the outline of ways of life as they accord with characteristics of souls, and thus really "laying down their keels"—investigating, in the correct way, what device we should use and what characteristics we should at any time incorporate if we are going to be carried through this voyage of existence on the best way of life. Of course, the affairs of human beings are not worthy of great seriousness; yet it is necessary to be serious about them. And this is not a fortunate thing. But since we're here, if somehow we would carry out the business in some appropriate way it would perhaps be a well-measured thing for us to do. But whatever am I saying? Someone would perhaps be correct to take me up in this very way.

Clinias:: Indeed!

Athenian Stranger:: I assert that what is serious should be treated seriously, and what is not serious should not, and that by nature god is worthy of a complete, blessed seriousness, but that what is human, as we said earlier, has been devised as a certain plaything of god, and that this is really the best thing about it. Every man and woman should spend life in this way, playing the noblest possible games, and thinking about them in a way that is the opposite of the way they're now thought about.

Clinias:: How's that?

Athenian Stranger:: Nowadays, presumably, they suppose the serious things are for the sake of the playful things: for it is held that the affairs pertaining to war, being serious matters, should be run well for the sake of peace. But the fact is that in war there is not and will not be by nature either play or, again, an education that is at any time worthy of our discussion; yet this is what we assert is for us, at least, the most serious thing. Each person should spend the greatest and best part of his life in peace. What then is the correct way? One should live out one's days playing at certain games—sacrificing, singing, and dancing—with the result that one can make the gods propitious to oneself and can defend oneself against enemies and be victorious over them in battle. The sort of things one should sing and dance in order to accomplish both these things have been described in outlines, and the trails, as it were, have been blazed along which one should go, expecting that the poet speaks well when he says:

> Telemachus, some things you yourself will think of in your own thoughts,
> And some things a demon will suggest; for I do not think
> That you were born and raised against the will of the gods.

This is the way our nurslings should consider things: they should believe that what's been said has been adequately spoken, but that the demon and god will suggest things to them regarding sacrifices and choral performances, thus indicating those whom they should offer games and propitiate, and when they should play each game for each, so as to live out their lives in accordance with the way of nature, being puppets, for the most part, but sharing in small portions of truth.

Megillus:: Stranger, you are belittling our human race in every respect!

Athenian Stranger:: Don’t be amazed, Megillus, but forgive me! For I was looking away toward the god and speaking under the influence of that experience, when I said what I did just now. So let our race be something that is not lowly then, if that is what you cherish, but worthy of a certain seriousness.

With regard to what follows these things, it has already been said that buildings for gymnastics and for common instruction should be located at three places in the center of the city, and that outside, at three places again around the city, there should be gymnasia and open spaces arranged for horses as well as for archery and the other long-range weapons, where the young can learn and practice. If these things weren’t described adequately before, let them be described now, in speech and also in laws. In all these buildings there should dwell teachers of each subject, strangers persuaded by pay to teach those who attend all the things they should learn, with a view to war and with a view to music. And it will not be left up to the father’s wish to decide who shall attend and whose education shall be neglected, but rather, as the saying goes, “every man and child insofar as he is able” must of necessity become educated, on the grounds that they belong more to the city than to those who generated them. Indeed, my law would say all the very same things about females that it says about males, including that females should be trained on an equal basis. I would speak without being at all afraid of the argument that horseback riding and gymnastics are fitting for men but not fitting for women. For I am persuaded by the ancient myths I've heard, and at this very moment, so to speak, I know there are countless myriads of women around the Black Sea—the women called Sarmatians—who are enjoined to handle not only horses, but the bow and the other weapons as well, in equality with the men, and who practice them equally. Besides this, I make some such calculation as the following, in regard to these matters: I assert that if, indeed, it is possible for these things to turn out this way, then the way they're now arranged in our lands—where it's not the case that all the men with their entire strength, and united in spirit, practice the same things as the women—is the most mindless of all. For this way, almost every city is just about half of what it might be, when with the same expenditures and efforts it could double itself. And this would be an amazing mistake on the part of the lawgiver.

Clinias:: That's likely, anyway. Still, there are very many aspects of what we're now saying, stranger, that run counter to what is usual in political regimes.

But you spoke very reasonably when you said that the argument should be allowed to unfold, and that once it had unfolded well, one should then choose what one approved. As a matter of fact, what you said makes me rebuke myself now, for the things I just said. So say next after these things whatever you find pleasing.

Athenian Stranger:: What would please me, at least, Kleinias, is the following (something I've said before): if the possibility of what we're discussing hadn't been sufficiently demonstrated by deeds, one might perhaps say something against the argument, but now, presumably, he who cannot in any way accept this law will have to seek some other way of opposing it. He won't extinguish our insistence that one should say that our female race must, as much as possible, have a common share in education and in the other things along with the race of males. For that's about the way one should think about these matters. Look, if women don't share their entire lives in common with men, won't it be necessary to have some different regimen for them?

Clinias:: That will indeed be necessary.

Athenian Stranger:: So which of the regimens now in evidence would we set up, instead of this common regimen we are now establishing for them? Would it be that of the Thracians and many other tribes, who use their women to farm, tend cattle, herd sheep, and to serve no differently than slaves? Or our own practice and that of everyone in our area? For nowadays, among us, these things are done as follows: "bringing all our goods together in some one house," as the saying goes, we give to the women the responsibility of acting as stewards, setting them to rule over the shuttles and everything having to do with spinning. Or shall we, Megillus, prescribe the practice that is midway between these, the Laconic? Should the girls live partaking of gymnastics and music, while the women, without having to work at spinning, weave a rather laborious way of life that is neither mean nor cheap, and arrives at a middle ground between taking care of people, acting as steward again, and bringing up the children? But then they'd take no part in the things of war, so even if someday some chance should compel them to fight for their city and their children, they wouldn't be able to shoot arrows, like certain Amazons, nor ever be capable of partaking in the artful use of any other missile, nor be able to take up shield and spear in imitation of the goddess, and thus nobly oppose the sack of their own fatherland—being able to strike fear at least, if nothing more, in the enemy, by being seen in some battle order. Living this way of life, they wouldn't at all dare to imitate the Sarmatians, whose women would appear to be men in comparison with them.

With regard to these things, let whoever wishes to do so praise your lawgivers. For my part, I can only stand by what's been said: a lawgiver must be complete, and not half a lawgiver; to let the female live in luxury, spend money, and follow disorderly pursuits, while supervising the male, is to leave the city with only about half of a completely happy life instead of double that.

Megillus:: What are we going to do, Kleinias? Are we going to let the stranger run down Sparta in front of us this way?

Clinias:: Yes. Freedom of speech has been granted him, and we have to let him go on until we've gone through the laws in a way that is entirely sufficient.

Megillus:: What you say is correct.

Athenian Stranger:: Then probably I may try to explain the things that come next after these?

Clinias:: Why not?

Athenian Stranger:: What then would be the way of life of human beings for whom the necessities were taken care of in due measure, for whom matters pertaining to the arts were handed over to others, and whose farms, assigned to slaves, provided sufficient produce from the things of the land to allow human beings to live in an orderly way? Suppose there were separate common meals arranged for the men, and nearby common meals for the members of their families, including female children and their mothers; at all of these common tables there would be male and female rulers assigned to dismiss each of them, having observed and watched over the conduct of the common meals each day; then, after the ruler and the others had poured a libation to whichever gods the particular night and day might happen to be consecrated, they would thus make their way home. To lives ordered in this way, is there no necessary and wholly appropriate activity left, but is each of them to live out his life getting fattened up, like a cow? It isn't just, we assert, nor noble, nor is it possible for one who lives that way to avoid the appropriate fortune: for it's appropriate that an idle, soft-spirited, and fattened animal usually is ravaged by one of those other animals who have been worn very hard with courage and labors.

Of course, these things we're now seeking probably wouldn't ever be realized with adequate precision so long as women and children and homes are private, and all such things are arranged privately by each of us. But if the second-best arrangements after those would come into being for us as they've now been described, things would achieve due measure.

And for men who lived this way the activity that would be left is neither the smallest nor the humblest, we assert, but is in fact the greatest of all the tasks that can be assigned by a just law. For just as the life of a man who aims at victory in the Pythian or Olympian games wholly lacks leisure for all the other activities, so doubly or much more than doubly lacking in leisure is the life that's most correctly called a "life"—that of a man who is devoted to cultivating his body in all respects and his soul as regards virtue. Not even a small part of any of the other activities should be allowed to pose an obstacle to his giving the body its appropriate exercises and food, and the soul teachings and habits; the whole night and day are scarcely sufficient time for the man who's doing this to get the complete and adequate benefit from these things.

Given that this is the way things are by nature, it follows that there should be a schedule regulating how all the free men spend all their time, beginning almost at dawn and extending to the next dawn and rising of the sun. Of course, there are many little and frequent details regarding the management of a household that it would be unseemly for a lawgiver to speak of—including the provisions for curtailing sleep at night that would be needed by men who intend to keep a complete and accurate guard over the whole city. If any of the citizens spends the whole of any night slumbering, and fails to show himself always the first to be up and around, before any of his domestic servants, his behavior must be regarded by everyone as shameful and unworthy of a free man, whether such a provision be called a law or a practice. Indeed, if the mistress of a house is awakened by some of her maids and fails to get up first herself and wake the others, it should be talked of as something shameful among the slaves—male, female, and children—and, if somehow it were possible, by the whole house itself in its entirety. Moreover, everyone should be up during the night performing a good part of the business of politics as well as of the households—the magistrates acting in the city and the masters and mistresses in the private homes. A great deal of sleep does not by nature harmonize with our bodies or souls, or with the activities pertaining to all these things. For while a person sleeps he is worth nothing—no more than one who isn't living. But whoever among us cares for living and thinking to a special degree stays up the longest time, reserving only so much time as is useful for his health, and that isn't much, once a fine habit has been established. Again, where the magistrates are awake at night in cities they strike more fear in the wicked, both enemies and citizens, and are more prized and honored by the just and moderate men because they are beneficial both to themselves and to the city "as a whole. Now a night spent in such a way would, in addition to everything else that's been said, instill a certain courage in the souls of each of those in the cities.

As for the day, when dawn arrives and people are up, the children should presumably be turned over to their teachers; but just as sheep and every other herd animal shouldn't live without a herder, so children shouldn't live without certain tutors, nor slaves without masters. And the child is the hardest to handle of all beasts, because insofar as it has within it, to a high degree, a not yet disciplined source of thought, it becomes treacherous, sharp, and the most insolent of beasts. That's why it's necessary to fetter it with many sorts of bridles, as it were: at first, when it has just been separated from its nurses and mothers, one needs to use tutors for its playfulness and childishness; later one needs to use teachers and subject matters of all sorts, as befits a free man. But it's as befits a slave that the boy himself, and his tutor and his teacher should be punished, if any of them does wrong, by any of the free men who happen along. If someone should happen upon such wrongdoing and fail to give it a just punishment, let him first bear the greatest sort of blame, and then let the Guardian of the Laws who has been chosen to fill the office of the children watch this fellow, who happened upon what we're describing, but failed to punish one who needed punishment or carried out the punishment in an improper way. This same magistrate of ours should keep a sharp watch and exercise an especially careful supervision over the upbringing of the children, so as to keep their natures on a straight path, by always turning them toward what is good according to the laws.

Yet how would this man himself be educated adequately by our law? Up to this point it has mentioned some things, and omitted others, but has said nothing yet that is clear or sufficient. As nearly as possible, it should omit nothing that concerns this magistrate; the whole argument should be interpreted for him, so that he can become the interpreter and protector of the others.

“Now while chorus matters—the songs and dancing, and which kinds should be chosen, corrected, and consecrated—have been discussed, we haven’t talked about the writings that are not in meter, showing what sort they should be and how they should be handled by those whom you are bringing up, O best Supervisor of Children. You do of course have an account of what they should learn and practice for war, but you lack an account as regards first, the written things; second, the lyre; and then, arithmetical calculations—about which we declared everyone must grasp as much as is necessary for war, household management, and the management of the city. Moreover, they should learn whatever is useful, for these same purposes, of what pertains to the revolutions of the divine things, the stars and the sun and the moon: they should learn about the arrangements every city needs to make in respect to these things. But just what are we referring to? What we mean is the ordering of the days into the revolutions of the months, and the months in each year, so that each of the seasons, sacrifices, and festivals will receive its due for itself according to the sequence of nature, will keep the city alive and awake, will render honors to the gods, and will make the humans more prudent in these matters. All these things, my friend, have not yet been explained to you sufficiently by the lawgiver; so turn your mind to what is going to be said next after these things.

“We just said that, in the first place, you don’t have a sufficient explanation of the written things. Now just what were we finding fault with when we said this? The following: it hasn’t yet been explained to you whether someone who's going to become a well-measured citizen should pursue the subject to the point of precision or whether he should not pursue it at all. The same goes for the lyre. So at this point we do indeed assert that these subjects should be pursued. In the case of the written things, for about three years, commencing at the age of ten; in the case of lyre-playing, another three years, commencing at thirteen, would be a due measure of time. Neither for the father nor for the child himself, whether he be a lover of learning or a hater, will it be permissible to prolong or shorten, with more or less time, this lawful period of study. Anyone who disobeys will be excluded from the educational honors that will be mentioned a little later. What the children are to learn in these years, and what the teachers are to teach, you must first learn yourself. They should practice the written things until they are able to write and read; but it isn't required that some, whom nature doesn't urge during the appointed years, develop a precise capacity for speed and beauty. As regards lessons in poets' writings that are not accompanied by the lyre,, some of which are in meter and some of which are without rhythmical parts (writings that follow speech alone, and lack rhythm and harmony), there are harmful writings left among us by some of the many human beings who have composed such things. So what are you going to do about them, you best of all Guardians of Laws? Or rather, what, indeed, would be the correct regulations for the legislator to give you to use? I expect he's going to be very much at a loss."

Clinias:: What is this, stranger, that you're evidently speaking with yourself about in real perplexity?

Athenian Stranger:: You're correct in your surmise, Kleinias; and since you two are sharers in the laws, it's necessary to indicate when the path appears clear and when not.

Clinias:: What, then? What are you referring to in the present subjects, and what is it you’re experiencing?

Athenian Stranger:: I’ll tell you: it is not at all easy to take the path of speaking against what has been said often, by myriads of mouths.

Clinias:: Come now, you think what we’ve said before about laws is opposed to what the many say in a small way, or in a few matters?

Athenian Stranger:: This at least that you say is very true. You’re urging me, I think, since the very path that is hateful to the many is cherished by others who are perhaps no fewer—or, if fewer, not inferior at least—you’re urging me to go ahead in the company of these latter, to risk and dare the path of legislation now opened up by the present arguments, and not to hang back.

Clinias:: What else?

Athenian Stranger:: All right, I won’t hang back. I say, then, that we have very many poets, composing verses in hexameters, trimeters, and all the other meters that are spoken about, some of whom aim at what is serious and others at what is laughable; now tens of thousands of people often assert that the young who are educated correctly must be brought up and steeped in these poets, that they should learn whole poets by heart, and gain vast experience of hearing, and much learning, through their readings. Others, again, make a collection of excerpts from all the poets, including some complete poems, and assert that the collection must be learned by heart and stored in the memory, if any of our students is to become good and wise through much experience and much learning. Now isn’t it the case that you’re urging on me a freedom of speech that will permit me to show these people which part of what they say is fine and which is not?

Clinias:: What else but that?

Athenian Stranger:: What could I ever say in brief that would characterize all these men adequately? I think something like the following will about suffice: everyone would agree with me that each of these men has uttered many things in a noble fashion, but also many things in the opposite fashion. If that is so, then I assert that there is a danger in imbuing the children with much learning.

Clinias:: Then how and what would you recommend to the Guardian of the Laws?

Athenian Stranger:: About what, do you mean?

Clinias:: About what model he should look to, at any time, to decide what he would allow all the young to learn and what he would prevent them from learning. Speak up; don’t hesitate to say it.

Athenian Stranger:: Good Kleinias, in a way I may well have been rather lucky.

Clinias:: In what respect?

Athenian Stranger:: Inasmuch as I’m not altogether at a loss for a model. As I looked now to the speeches we’ve been going through since dawn until the present—and it appears to me that we have not been speaking without some inspiration from gods—they seemed to me to have been spoken in a way that resembles in every respect a kind of poetry. It’s probably not surprising for me to have had such a feeling, to have been very pleased at the sight of my own speeches, brought together, as it were; for compared to most of the speeches that I have learned or heard, in poems, or poured out in prose like what’s been said, these appeared to me to be both the most well-measured, at any rate, of all, and especially appropriate for the young to hear. I don’t think I would have a better model than this to describe for the Guardian of the Laws and Educator, or anything that would be better for him to bid the teachers to teach the children, other than these things and things that are connected to them and similar. He should work through the poems of poets, as well as prose writings and things that are simply recited without being written down, and if, as can be presumed, he comes across speeches that are the brothers of these, he should on no account let them pass by but should write them down. Then, in the first place, he should compel the teachers themselves to learn and to praise these writings; if there are any teachers who find the writings unpleasing, he should not employ them as his assistants, but should instead use those who vote with him in their praise. It is to these men that he should give the young, to be taught and educated.

Here and in this way let there be a conclusion to this myth of mine, that has told about instructors in the written things, and also about writings.

Clinias:: We don’t appear, to me at least, to have gone outside the bounds of the speeches proposed by the fundamental hypothesis, stranger; yet perhaps it is difficult to be sure whether or not our discussion is correct as a whole.

Athenian Stranger:: It’s likely, Kleinias, that this at least will itself be more evident when, as we’ve often said, we’ve arrived at the end of the whole discourse on laws.

Clinias:: That is correct.

Athenian Stranger:: Well, after the grammarian shouldn’t we address the kitharist?

Clinias:: Why not?

Athenian Stranger:: It seems to me that we should recollect the earlier arguments, as we allocate to the kitharists what is appropriate as regards their teaching and the education as a whole in such matters.

Clinias:: You’re referring to the arguments about what things?

Athenian Stranger:: We asserted, I believe, that the sixty-year-old Dionysian singers had to become especially perceptive about rhythms and the schemes of the harmoniae, in order that there would be someone who could pick out, as regards the imitation in songs that makes the soul feel passions (whether the imitation be well done or badly done), the resemblances to the good and the resemblances to the opposite; the one he was to cast away, while the other he was to produce in their midst, singing to and enchanting the souls of the young and calling upon each of them to join in pursuing the acquisition of virtue, by means of the imitations.

Clinias:: What you say is very true.

Athenian Stranger:: These, then, are the ends for which the kitharist and the person being educated should use the sounds of the lyre, because of the clarity of its strings: they should present notes that are like the notes sung by voices. But as for heterophony or variety in the lyre, with the strings emitting a tune different from that of the composer of the melody, either by presenting a consonance of notes close together in contrast to notes sting further apart, or by swift tempo in contrast to slow, or by sharp notes in contrast to flat, or as for using the sounds of the lyre to present all sorts of similar variations in rhythm—all such things will be inappropriate for those who are supposed to grasp quickly, in three years, what is useful in music. Things that contradict one another are disturbing, and produce difficulty in learning. But the young need to be as good at learning as possible, since they have before them necessary subjects of study that are neither minor nor few in number (and what these are the argument will show as it proceeds, with the passage of time). So that is the way our Educator should supervise these things concerning music.

As for the songs themselves and the words, which sort and which of them the chorus teachers should teach, that has all been elaborated by us before: we declared that the songs had to be sanctified, and each harmonized with the festivals, so as to benefit the cities by providing lucky pleasure.

Clinias:: Here again what you've explained is true.

Athenian Stranger:: It's indeed very true. Let the magistrate who is elected to be concerned with the Muse take these things from us and supervise them with the help of kindly luck; for our part, let us give additional guidance, beyond the things said before, as regards dancing and the whole gymnastic that has to do with the body. Just as we supplied what was left in regard to the teaching of music, so let us do the same for gymnastic. For surely the boys and girls must learn to dance, and to exercise in the nude. Isn't that so?

Clinias:: Yes.

Athenian Stranger:: With a view to their exercising, it would not be too unsuitable if the boys had male dancing teachers and the girls female.

Clinias:: Let it be arranged this way.

Athenian Stranger:: Once again let's call upon the man who'll have the most business to take care of, the Supervisor of the Children, who, with his supervision of the things pertaining to both music and gymnastics, won’t have much leisure.

Clinias:: How will a rather old man like that be able to supervise so many things?

Athenian Stranger:: Easily, my friend. The law has given and will give to him the power to take as his assistants in this supervision any men or women citizens he chooses. He’ll know whom to choose, and he won’t want to go astray in the choice, because he’ll feel a prudent awe for, and understand, the greatness of the office; he’ll keep in mind the calculation that when the young have been, and are being, brought up well, all sails correctly for us, but if not—well, it’s not worthwhile describing the consequences, and we won’t do it here in the presence of this novel city, out of our reverent respect for those who are especially attached to prophecy.

Now we’ve already said a great deal about these matters as well, about dances and the whole of gymnastic motion. For we’re setting up gymnasia and all the bodily exercises for war—for archery, for every sort of throwing, for skirmishing with the sling, for the whole of heavily-armed fighting, for tactical maneuvers, for all the movements of armies, including pitching camps, and for whatever one should learn that pertains to horseback riding. There should be common teachers for all these things, hired for pay by the city, and the boys and men in the city must become pupils of these subjects, while the girls and women must become knowers of all these subjects. So long as they’re still girls, they should practice all the dancing and fighting that goes with heavy armor; when they get to be women, they should have grasped maneuvers, battle orders, and how to put down and take up weapons. They should do this if for no other reason than for the sake of being fit to do this much at least: to take the responsibility of guarding the children and the rest of the city if the whole mass of the army with all its power should ever have to leave the city and fight outside. Or then again the opposite could happen (something that no one can swear is impossible): some enemies from abroad, whether barbarians or Greeks, might fall upon them with enormous strength and violence, compelling them to make a fight for the city itself. It would presumably show much evil in the political regime if the women had been so shamefully reared that they didn't do as the birds do (who are willing to run every risk, and even to die, fighting on behalf of their babies against even the strongest beasts), but instead rushed immediately to the temples and crowded around all the altars and inner shrines, bringing down on the race of humans the reputation of being by nature the most cowardly of all the beasts.

Clinias:: By Zeus, stranger, wherever this should happen in a city it would not look good at all, apart from the harm that would be done!

Athenian Stranger:: Well then, won't we establish this as a law, that the women must not neglect the business of war, to this extent, at least, and that it must be a concern of all male citizens and female citizens?

Clinias:: I, at least, go along with this.

Athenian Stranger:: With regard to wrestling we've talked about some things, but what I would declare the most important part we have not discussed, nor is it easy to do so without using bodily demonstrations to accompany one's explanation in speech. So let's pronounce our judgment on this later on, when speech can accompany deed and make clear other things that have been said, and especially that the wrestling we have in mind is really, of all motions, the most akin by far to fighting in war and that the former is to be practiced for the sake of the latter, and the latter is not to be learned for the sake of the former.

Clinias:: In this respect, at least, you speak nobly.

Athenian Stranger:: So let this much be said by us for now about the power of the wrestling school.

As for the rest of the motion of the body as a whole, one would be speaking correctly if one called the greatest part of this a kind of “dance.” It should be held to comprise two forms: one is the imitation of noble bodies in solemn movement, the other is the imitation of shameful bodies in low movement. Then again there are two forms of the low sort and two other forms of the serious sort. One of the serious forms is the imitation of noble bodies entangled in violent exertions during war, where the soul is manly; the other is the imitation where the soul is moderate, in prosperous settings and well-measured pleasures. If someone called such a dance “The Peaceful” he would speak according to nature. The warlike of these, whose essence is different from the peaceful, one would correctly call “The Pyrrhic.” It consists in imitating, on the one hand, movements that evade all kinds of blows and missiles—’by dodging, giving way completely, jumping up, humble crouching—and then again striving to imitate the opposites to these, aggressive postures involved in striking with missiles—arrows and javelins—and with all sorts of blows. In dances of this kind, when imitation of good bodies and souls takes place, correctness and vigor are achieved for the most part by keeping the limbs of the bodies straight; such a posture is correct, and the opposite sorts of postures are not considered right.

With regard to the Peaceful dance, one should in each case observe the following—whether in the choral dances a person succeeds in correctly keeping to the noble dance, in a manner that befits men of good conventions, or whether he does not succeed in doing so according to nature. Now first it is necessary to separate off the controversial dancing from the uncontroversial. What then is this, and how should it be separated off from the other? Whatever dances are Bacchic, and everything that goes with these—the dances in which, as they claim, they imitate as drunks the so-called “Nymphs,” “Pans,” “Silenuses,” and “Satyrs,” and thereby celebrate certain purifications and mystery-rites—this entire class of dance is not easily defined either as peaceful or as warlike, or indeed as to just what it intends at any time. To me it seems that just about the most correct way to define it is this: it must be distinguished from the warlike, and distinguished from the peaceful, and one must say that this class of dancing is not political. Let it be, lying in that region, while we return now to the warlike and peaceful dances, since there is no controversy as to whether they are our business.

With regard, then, to what belongs to the unwarlike Muse who is manifested in the dances where men honor the gods and the children of the gods, one whole kind of dance would be that which portrays an opinion of prosperity. This in its turn we would subdivide: one sort, involving more pleasures, would represent people fleeing from certain toils and risks, into good things; the other sort would represent the preservation and augmentation of the aforementioned good things, involving pleasures gentler than those of the others. In such circumstances every human being presumably moves his body more when the pleasures are greater, and less when they are lesser; moreover, the human being who is more orderly and who has a better gymnastic training in courage moves his body less, while the coward and the one who lacks gymnastic training in moderation presents greater and more violent changes in his motion. In general, no one who is using his voice—whether in songs or in speeches—can remain very calm in his body. That is why, as the imitation through gestures of what is being said came into being, it gave rise to the whole art of dancing. With regard to all these gestures, one of us moves harmoniously, while another moves in ways that are not in harmony. Now we should understand that many of the ancient names are well assigned and according to nature, and therefore deserve our praise: one of these is the name given to the dances of men in prosperity who are themselves handling pleasures in a well-measured way. Whoever it was at that time who named the dances, he spoke correctly, musically, and reasonably, when he gave them all the name "Harmonies," and established two forms of noble dances—the warlike or "Pyrrhic" and the peaceful or "Harmony." In each case he assigned a name that is fitting and harmonious. The lawgiver should go through these dances in outline, while the Guardian of the Laws should seek them out, and, once he has discovered them, should put the dances together with the rest of the music and distribute them among all the holidays, assigning what is suitable to each of the sacrifices. When he has thus sanctified all these things in an ordered arrangement, he should no longer make any change in what pertains to either dance or song. Thus the same city, with citizens that are as similar to one another as possible. should experience the same pleasures, and live well and happily.

This brings to a conclusion the discussion of how beautiful bodies and well-born souls behave in the choral performances that have been prescribed; but it is necessary to look at and get to know what pertains to shameful bodies and thoughts, as well as those who turn themselves to laughter-provoking comedies—through speech and song, dance, and the comic imitations all these contain. For someone who is going to become prudent can’t learn the serious things without learning the laughable, or, for that matter, anything without its opposite. Yet one can’t create in both ways if one is to partake of even a small portion of virtue, and indeed one should learn about the ridiculous things just for this reason—so that he may never do or say, through ignorance, anything that is ridiculous, if he doesn’t have to. The imitation of such things should be assigned to slaves and to strangers who work for hire. There should never be any seriousness whatsoever about these things, nor should any free person, woman or man, be observed learning these things; in fact, these imitations should always manifest something new. Let the play that provokes laughter, the play we all call “comedy,” be thus ordained in law and in argument.

As for what they call the “serious” poets, our tragic poets, suppose some of them should at some time come to us and ask something like this: “Strangers, shall we frequent your city and territory or not? And shall we carry and bring along our poetry, or what have you decided to do about such matters?” What kind of a reply regarding these matters would we correctly give to the divine men? For my part, I think it should be as follows: “Best of strangers,” we should say, “we ourselves are poets, who have to the best of our ability created a tragedy that is the most beautiful and the best; at any rate, our whole political regime is constructed as the imitation of the most beautiful and best way of life, which we at least assert to be really the truest tragedy. Now you are poets, and we too are poets of the same things; we are your rivals as artists and performers of the most beautiful drama, which true law alone can by nature bring to perfection—as we hope. So don’t suppose that we’ll ever easily, at any rate, allow you to come among us, set up your stage in the marketplace, and introduce actors whose beautiful voices speak louder than ours. Don't suppose we'll easily let you make public speeches to the children and the women and the whole mob, speaking of the same pursuits that we speak of, but saying things that are in great part the most opposite to what we say. For we'd be almost completely mad—we and every city, if it allowed you to do what's just been described, before its rulers had passed a judgment on whether or not the words and practices you had created were to be spoken in its midst or not. Now then, you children descended from the soft Muses, we will first display to the rulers your songs alongside ours; if the things said by you are evidently the same, at least, or better, we will give you a chorus. But if not, friends, we could never do it."

Let these be the lawfully ordained customs as regards the entire choral art and the learning connected with it, the things appropriate for the slaves being kept separate from the things appropriate for the masters—if this is acceptable.

Clinias:: At this point, at any rate, how could it not be acceptable?

Athenian Stranger:: For the free men there are in addition three subjects to be learned. One subject is calculation and what pertains to numbers; second is measurement of length, surface, and volume, considered as one subject; third is the way the stars revolve, in their natural relation to one another as they move. The many need not labor at all these things to the point of precise accuracy; that will be required of a certain few (who they are we will explain when we get to the end, for that would be fitting). But as for the majority, though it's shameful for the many not to know as many of these things as are in a sense very correctly called "necessary," it isn't easy, in fact it isn’t at all possible, for everyone to pursue these studies to the point of precise accuracy. Of course, the necessity that inheres in these subjects can’t be dispensed with, and it’s likely that whoever first formulated the proverb about god was looking to these when he said that “even a god is never seen to fight against necessity”—meaning, I believe, whatever necessities are divine. But as applied to human necessities, which the many look to when they utter such a thing, this is by far the most naive of all sayings.

Clinias:: What are the necessities in these subjects, stranger, that are not of this sort, but are instead divine?

Athenian Stranger:: In my opinion, they are those which one cannot avoid acting according to and knowing something about if one would ever become, among human beings, a god or a demon or a hero capable of exercising serious supervision over humans. A human being, at any rate, would fall far short of becoming divine if he couldn’t learn about one and two and three and in general the even and odd things, or if he didn’t know anything about counting, or if he couldn’t number the nights and the days, and lacked familiarity with the orbits of the moon and the sun and the other stars. It is a great stupidity to think that all these aren’t necessary subjects of learning for anyone who is going to know almost any of the noblest subjects of learning. What parts of each of these should be learned, and how much, and when, and which should be learned in conjunction with which, and which apart from the others, and in general the way of mixing them all—these are things that should first be grasped correctly, before going on to learn the other subjects to which these subjects lead. For thus has it been established according to natural necessity, which we assert none of the gods fights against now, nor will ever fight against.

Clinias:: It’s likely at least, stranger, that what’s just now been said has been said correctly somehow, and that what you say is in accordance with nature.

Athenian Stranger:: That is indeed the case, Kleinias—though it is difficult to legislate about these matters in this way beforehand; if it is all right with you, let’s legislate in a more precise way at some other time.

Clinias:: You seem to us, stranger, to be frightened off by our habitual lack of familiarity with such things. But you are incorrect in this fear; try to speak up, and hide nothing on this account.

Athenian Stranger:: I do indeed fear what you’re now describing, though I fear even more those who have had some contact with these studies but in a bad way. After all, extreme lack of experience in everything is not at all a terrible thing, nor is it the greatest evil; a far greater penalty is incurred by much experience, and much learning, acquired under a bad course of study.

Clinias:: What you say is true.

Athenian Stranger:: So one should declare that the free men must learn, in each of these subjects, as much as the whole mob of children in Egypt learns along with their reading lessons. In the first place, as regards calculations, lessons have been invented even for little children that involve them in play and pleasure as they learn: distributions of certain fruits and garlands so that the same numbers harmonize with more and with less, or distributions of boxers and wrestlers into byes and pairs, in turn and in sequence according to the natural order. Also, in play, they mix together flat bowls of gold, bronze, silver, and other such materials, and then divide them into wholes in various ways. Thus, as I said, by harmonizing the play with the use of numerical necessities they help their students in the ordering of army camps, in marches, and in military campaigns, as well as in their households, and in general make them both more useful to themselves and more alert human beings. Then after these things they go on to measurements in length and surface and volume, dispelling a certain ridiculous and shameful ignorance which exists by nature in all human beings, as regards all these subjects.

Clinias:: What sort of ignorance is this you're referring to?

Athenian Stranger:: Kleinias my friend, when I myself heard about this at a rather late date, I too was utterly amazed to find what our situation is, in respect to these matters; it seemed to me it was one that belonged not to humanity but to the offspring of certain pigs. I was ashamed not only for myself but for all the Greeks.

Clinias:: About what? Say what it is you're claiming, stranger.

Athenian Stranger:: I'm doing so. Or rather I'll show by questioning you. Answer me a small question: presumably you know about length?

Clinias:: How not?

Athenian Stranger:: What then? About surface?

Clinias:: In every way.

Athenian Stranger:: And that these are two things, and that there is a third thing besides these, namely volume?

Clinias:: How could there not be?

Athenian Stranger:: Now don't all these seem to you to be commensurable with one another?

Clinias:: Yes.

Athenian Stranger:: Length, I believe, seems commensurable with length, and surface with surface, and volume, in the same way, seems by nature capable of commensurability.

Clinias:: Very much so.

Athenian Stranger:: But if some are not capable of it at all—neither "very much so" nor even a little bit—and some are commensurable and some are not, while you hold that all are, what do you think of your situation in respect to these things?

Clinias:: It's clear that it's wretched.

Athenian Stranger:: And what then? What about length and surface in relation to volume, or surface and length in relation to one another? Don't all we Greeks think about these things this way, as though they are somehow or other commensurable one with another?

Clinias:: Completely.

Athenian Stranger:: But if, again, they are not at all, in any way, and yet, as I said, all we Greeks think they are, wouldn't it be proper to feel ashamed of us all, and say to us "O best of the Greeks, isn't this one of those things which we declared it shameful not to know, although knowing such necessities is not very noble?"

Clinias:: How could it not be?

Athenian Stranger:: And there are, in addition, other matters akin to these, which again involve us in many errors that are the brothers of those errors.

Clinias:: Which matters?

Athenian Stranger:: The relations commensurables and incommensurables have to one another because of a certain nature. For it is necessary to investigate and get to know the difference between these, if one is not to be utterly wretched. By constantly proposing problems of this kind to one another, they should pass their time in a manner much more graceful for old men than playing at draughts, and thus indulge their love of victory in leisure pursuits that are worthy of them.

Clinias:: Perhaps. It is likely, anyway, that draughts and these subjects of learning are not very widely separated from one another.

Athenian Stranger:: For my part, Kleinias, I assert that the young should learn these things. For they aren't harmful or difficult, and if they're learned during play they'll bring benefit, while in no way harming our city. But if someone says otherwise, he should be heard.

Clinias:: How else?

Athenian Stranger:: Well then, if these activities evidently proceed thus, it's clear that we'll judge them acceptable; but if it should appear that they don't proceed in this way, they'll be judged unacceptable.

Clinias:: Clearly, how else?

Athenian Stranger:: So now, stranger, shall these things be laid down as belonging to the required subjects of study, so that there won't be gaps in our laws? Let them be laid down like deposits, outside the rest of the political regime, redeemable in case either we, the depositors, or you, the holders, find the pledge in no way welcome.

Clinias:: You are describing a just deposit.

Athenian Stranger:: Next after these things see if what the young are to learn about the stars suits us, as it's stated, or the opposite.

Clinias:: Just state it.

Athenian Stranger:: Well, there's something very amazing involved in these things, something that's simply intolerable in every way.

Clinias:: What's that?

Athenian Stranger:: With regard to the greatest god, and the cosmos as a whole, we assert that one should not conduct investigations nor busy oneself with trying to discover the causes—for it is not pious to do so. Yet it's likely that if entirely the opposite of this took place it would be correct.

Clinias:: What do you mean?

Athenian Stranger:: The thing being said is paradoxical, and one may think it unfitting for older men. But when someone thinks there's a subject of learning that is noble, true, beneficial to the city, and dear in every way to the god, it is in no way possible for him to refrain from telling about it.

Clinias:: What you say is likely; but what subject of this sort will we find in what pertains to the stars?

Athenian Stranger:: Good sirs, all of us Greeks, so to speak, nowadays tell a falsehood about the great gods, Sun and also Moon.

Clinias:: What falsehood?

Athenian Stranger:: We claim they never keep to the same path, and we say there are other stars that also don't, which we name "wanderers."

Clinias:: By Zeus, stranger! This is true, what you say! For in my lifetime I myself have often seen the Morning Star and the Evening Star, and certain others, never going along the same course, but wandering all over the place; and I suppose we all know that the sun and the moon do these things all the time.

Athenian Stranger:: These are the things, Megillus and Kleinias, I now assert that our citizens and our young people, at least, ought to learn about the heavenly gods; they should learn enough about all of these things so that they won't utter blasphemies about them, but will always speak of them auspiciously, while sacrificing or engaged in reverent prayer.

Clinias:: That is correct—if, that is, it is first possible to learn about what you refer to. If so, and if we now say something about them that is incorrect, and through learning will speak correctly, then I too agree that to this extent, at least, this kind of thing should be learned. These things being so, you try to explain fully what you mean, and we'll try to learn by following you.

Athenian Stranger:: But it isn't easy to learn what I'm speaking of. On the other hand, it isn't totally difficult, nor does it require a great deal of time. The proof is that I, who heard about this when I was no longer young—in fact not so long ago—could make it clear to you two without taking up much time. If the subject were a difficult one, I would never be able, at my age, to make it clear to men of your age.

Clinias:: What you say is true. But what do you claim this subject matter is, that you say is amazing, and appropriate for the young to learn, but that we are ignorant of? Try to explain this much about it, at least, as clearly as possible.

Athenian Stranger:: It ought to be attempted. Best of men, that dogma is incorrect which holds that the moon, the sun, and other stars sometimes wander. The case is entirely the opposite to this: each of them always moves in the same circular path, which is one and not many—though each appears to move in many. Moreover, the swiftest of them is incorrectly opined to be the slowest, and vice versa. If this is the way these things are by nature, but our opinion holds things to be otherwise—well, if in the races of horses or long-distance runners at Olympia we considered things in this way, announcing the fastest as the slowest and the slowest as the fastest, and creating encomia in which we sang of the defeated as though he were victor, I think we would be singing encomia that were both incorrect and not pleasing to the runners, who would be human. But now, when it's the gods that we're making the same mistakes about, don't we suppose that what was laughable and incorrect in the earlier case will be not at all laughable in the present case, and as applied to these—for surely it is not at all pleasing to the gods for us to be singing hymns about gods that contain a false report?

Clinias:: That is very true, if indeed this is the way these things are.

Athenian Stranger:: So if we do demonstrate that this is the way these things are, then all such things should be learned, to this extent at least, but if the demonstration fails, these things ought to be left alone? Shall we agree in this way about these matters?

Clinias:: By all means.

Athenian Stranger:: At this point one should declare that the legal customs regarding the subjects of learning that pertain to education have reached their end. But about hunting and all things of that sort one should think in the very same way. For there is a risk that the task of the legislator involves yet more than just the laying down of laws and thus being finished, and that there is something else in addition to laws, something that by nature lies in the middle between admonition and laws. We have come across this often in our discussions, as in those concerning the rearing of very young children. We assert that these things shouldn't be left unmentioned, but that to suppose, in speaking about them, that they are being laid down as laws would be great folly. Indeed, even when the laws and the whole political regime have been thus written down, the praise accorded to the citizen distinguished as regards virtue is not complete when someone declares that he serves the laws best and is especially obedient to them, and that this constitutes a good man. A more perfect sort of praise is that which speaks of a man who has passed his life in unbroken obedience to those writings in which the lawgiver legislates, praises, and blames. This is the speech that is most correct as regards praise of a citizen. And what is really required of a lawgiver is that he write not only laws, but, in addition to laws, things interwoven with the laws, writings that reveal what seems noble and ignoble to him. The highest citizen is limited by these things no less than by the things sanctioned by legal penalties. We would make clearer what we mean if we brought forward as a sort of witness the present subject matter.

For hunting is a very widely extended activity even though it is now comprehended, for the most part, in a single name. There is much hunting of things in water, and much of winged things, and very much of beasts who move on their feet, which includes not only wild beasts but also a hunting of human beings which is worth reflection. One sort occurs in warfare, but there is also a great deal of hunting—sometimes praiseworthy, sometimes blamable—that occurs through friendship. The assaults of robbers and of armies against armies are hunts. Now the lawgiver who is laying down the laws about hunting can’t avoid clarifying these things, and yet he can’t establish threatening legal customs that give orders and penalties to every sort of hunting. So what should be done about such matters? The one party, the lawgiver, ought to praise and blame what pertains to hunting with a view to the exercises and practices of the young; the other party, the young man, should obey what he hears, without allowing himself to be deflected either by pleasure or by toil. At the same time, he should honor more, and carry out more fully, the orders uttered in praises than either the threats accompanied by penalties or the things legislated.

Having said these things as a preliminary, what would come next is a measured praise and blame as regards hunting; there should be praise for the sort that makes the souls of the young better and blame for the opposite sorts. So let's say what comes next in order, addressing the young through prayer:

"O friends, may you never be seized by a desire or an erotic love for hunting on the sea, for angling, or in general for hunting of the animals that dwell in water, or for those basket-traps that perform the toil of a lazy hunt, whether the hunters are awake or asleep! May there never come over you a longing for the catching of humans by sea, and piracy, and may you never thus be made cruel and lawless hunters! May it never enter your minds in the least to engage in theft, in the countryside or in the city! May a seductive, erotic love of bird-hunting, which is hardly a liberal pursuit, never come over any of the young!

"What is left for our athletes is only the hunting and catching of animals that move on their feet. One branch of this, practiced by men who take turns sleeping, is called night-hunting; it belongs to idle men and is not worthy of praise. The same holds for the sort of hunting that provides periods of rest from toils because the hunters depend on nets and snares, instead of on the victory of a soul that likes struggle, to handle the fierce strength of the wild beasts. What alone remains and is best for everyone is the hunting of four-footed prey that employs horses, dogs, and the bodies of the hunters themselves. In this type the hunters use running, blows, and missiles thrown by their own hands to prevail Over all their prey, and this is the type that should be practiced by whoever cultivates the courage that is divine.”

Let the speech just uttered constitute the praise and blame pertaining to all these things; the law is as follows:

No one is to prevent these hunters, who are really sacred, from hunting with dogs whenever and however they please, but no one is ever to allow the night-hunter, who trusts in nets and traps, to hunt anywhere. The bird-hunter is not to be hindered on land that is not in use or on mountainsides, but anyone who happens along should put a stop to it on cultivated or sacred land. The water-hunter is not to be hindered, except in harbors, sacred streams, ponds, and reservoirs. Elsewhere he is permitted to hunt, so long as he doesn’t muddy the waters with juices.

So now at this point one should declare that all the legal customs that pertain to education have reached their end.

Clinias:: And nobly would you say it.

## Book VIII.

Athenian Stranger:: Following on these things, the festivals need to be arranged and legislated. Delphic oracles will help indicate which sacrifices, to which of the gods, it would be better and more agreeable for the city to perform; but as for when they should take place, and what their number should be, that legislation is probably up to us—at least in the case of some of the festivals.

Clinias:: Probably as regards the number.

Athenian Stranger:: The number, then, is what we should speak of first. Let there be three hundred sixty-five without any omissions, so that there will always be at least one magistrate performing a sacrifice to some god or demon, on behalf of the city, the people, and their possessions. The Interpreters, Priests and Priestesses, and Diviners should get together with the appointed Guardians of the Laws to arrange whatever the lawgiver is forced to leave incomplete in regard to these matters. These same persons are the ones who must determine just what he has left incomplete. The law itself will proclaim twelve festivals for the twelve gods, each of whom has a tribe named after him. They'll make sacred monthly sacrifices to each of these, along with choruses, musical contests, and gymnastic contests, distributing them in a way that befits both the gods themselves and each of the seasons. They'll also distribute women's festivals, both those that are appropriately celebrated apart from the men and those that are not. Furthermore, what pertains to the underworld gods should not be mixed with what pertains to the gods whom we ought to call "heavenly" or with what belongs to them; these underworld rites they should keep separate and assign, according to law, to Pluto's month, the twelfth month. Nor should warlike human beings abhor such a god; they should rather honor him as being always the best for the human race, because, I would seriously affirm, for soul and body, community is not superior to dissolution.

In addition to these things, those who are going to make adequate distinctions in these affairs should keep in mind some such things as the following: one wouldn’t find, nowadays, another city the equal of ours in its provision of leisure time or of the necessities, but it is nonetheless necessary for this city, just as for a single human being, to live well. Now those who live happily must first avoid doing injustice to others and suffering injustice themselves at the hands of others. Of these two, the former is not very difficult, but what is very difficult is acquiring the power that prevents being done injustice—this cannot be completely achieved unless one becomes completely good. This very same thing applies to a city: if it becomes good it lives a life of peace, but it lives a life of external and internal war if it is evil. Since this is just about the way things are, no one should wait until wartime to exercise the gymnastic of war, but all should do so while living at peace. So any city that possesses intelligence should engage in army maneuvers not less than one day every month, and even more if the rulers think it advisable. They should exercise paying no heed to cold or hot weather—themselves and their women and children as well—whenever the rulers think it fitting to lead the whole populace out; then at other times they’ll be led out in sections. They should always be devising noble games to accompany the sacrifices, so that there’ll be certain festival battles that imitate as clearly as possible the battles of war. On every such occasion prizes should be distributed for victory or prowess, and they should compose for one another poems of praise and blame that reflect what sort of person each is becoming both in the contests and in life as a whole, adorning the one who seems to be best and blaming the one who does not. And the poet who composes such things shouldn’t be just anyone. First of all, he must be at least fifty years of age; then again, he can’t be one of those who possess poetry and the Muse within themselves in an adequate way, but have never performed a noble and conspicuous deed. What should be sung are the poems of those who are good and honored in the city, those who are artists of noble deeds, even if their compositions are not by nature musical. The selection of these men will belong to the Educator and the other Guardians of the Laws. They will give to these men the prize of being the only ones who may have freedom of speech in musical compositions, while all the others will lack this privilege. Let no one dare to sing a Muse judged unseemly by the Guardians of the Laws, not even if She is sweeter than the hymns of Thamyrus or Orpheus; instead, let them sing the poems that have been judged sound and consecrated to the gods, as well as the songs of blame or praise composed by good men who are judged to have spoken in a well-measured way. As regards both the military and the freedom of speech in poetry, I say that the same regulations should apply equally to women and to men.

Now there are some other considerations the lawgiver ought to alert himself to, by reasoning with himself: “Come now, what sort of people am I rearing by putting together this entire city? Aren’t they athletes in the greatest of contests, in which they are confronted with tens of thousands of competitors?”—”Certainly,” someone who spoke correctly would reply.—”What then? If we had been rearing boxers, or pankratists, or athletes in some other of such contests, would we have entered the competition without having spent the time before in daily fighting practice against someone? If we were boxers, at any rate, wouldn’t we for very many days before the contest have been learning to fight and practicing, imitating all those things we intended to use later on when we fought for victory, and coming as close as we could to resemblance, putting on padded gloves instead of thongs in order to do what we could to practice in an adequate way the striking and eluding of blows? And if we ran short of gymnastic sparring partners would we fear the laughter of mindless people, and not dare to hang up a dummy lacking any soul, and carry out our gymnastic against that? And if we then ran short of both all the opponents with souls and opponents without souls, in the absence of gymnastic partners wouldn’t we dare to literally shadowbox against ourselves? Or what else would someone ever call the sort of practice where one just gesticulates?”

Clinias:: Probably nothing other than what you’ve just said, stranger.

Athenian Stranger:: What then? Will the fighting force of our city dare to enter the greatest of contests, each time, with a preparation inferior to that of the contests just mentioned? Is this the way it would enter the contest where what is at stake is the soul, children, property, and the whole city? Will their lawgiver, because he fears that the way they carry on these gymnastic exercises with one another might appear ridiculous to some, fail to legislate military exercises of a minor sort, without heavy arms, for nearly every day? Will he fail to aim at this in setting up choruses and the whole gymnastic art? Won t he order that certain major gymnastic exercises with heavy arms be held no less than once a month, where they must struggle with one another over every point of the territory, competing to capture “positions and set ambushes? Won’t he have them imitate the whole art of war so that they are actually “fighting with padded practice gloves,” using missiles that come as near as possible to true ones, though with less risky weapons? That way, the play they engage in with one another will not be altogether lacking in fear, and through the fear it will in a certain way make apparent who has a stout soul and who does not; as a result, couldn’t he correctly assign honors to the former and dishonor to the latter, thereby equipping the whole city to be serviceable in the true contest it must wage throughout life? And moreover, if someone should die as a result of these exercises, wouldn’t the murder be considered involuntary, and wouldn’t the lawgiver decree that the killer’s hands are clean once he’s undergone the lawful purification, figuring that not many human beings will die this way, and that others no worse will grow to take their place, but that if fear should, as it were, die, then he could not find another way of testing, in all such exercises, who is better and who is worse, and that for the city this would be a much greater evil?

Clinias:: We at least would go along in declaring, stranger, that such things should be legislated and practiced by the whole city.

Athenian Stranger:: Do we all know the reason why in cities nowadays such choral activity and contests are almost in no way practiced, except perhaps to a very small degree? Shall we assert that the situation is due to the ignorance of the many and of those who give them their laws?

Clinias:: Probably.

Athenian Stranger:: Not at all, O blessed Kleinias! One should assert there are two quite sufficient causes of these things.

Clinias:: What are they?

Athenian Stranger:: One is the erotic love of wealth, that prevents a person from having leisure to look after anything except his private possessions; hanging on these, the entire soul of every citizen would never be capable of caring for anything other than daily gain. Whatever learning or practice conduces to this, everyone in private is most eager to learn or pursue—but the rest he laughs at. This single thing, then, is one reason that should be stated to explain why a city is unwilling to undertake in a serious way this or any other noble and good activity, but, on account of an insatiable greed for gold and silver, every man is willing to put up with every art and contrivance, whether it be more noble or more unseemly, if it will make him wealthy, and is willing to perform without disgust any action, whether pious, or impious, or utterly shameful, if only it gives him, like a beast, the power to eat and drink all sorts of things and provides him with total gratification of every sexual lust.

Clinias:: That is correct.

Athenian Stranger:: Let this, then—which I'm stating—be set down as one cause that prevents cities from practicing everything else noble and in particular the adequate preparations for war; it turns those; human beings who are orderly by nature into merchants, commercial ship traders, and complete servants, and makes those who are courageous into pirates, housebreakers, temple; robbers, warriors, and tyrannical types—and sometimes they: aren't deficient in nature, but-only in luck.

Clinias:: What do you mean?

Athenian Stranger:: How could I not speak of them as totally unlucky—those, at any rate, who are compelled to live out their lives with their; own souls always hungry?

Clinias:: So this is one—now what do you say the second cause is, stranger?

Athenian Stranger:: It’s fine of you to remind me.

Clinias:: This is one, you’re saying—a lifelong, insatiable quest that leaves each man without leisure, and becomes an obstacle to each man’s noble preparation for war. So be it. Now say what the second cause is.

Athenian Stranger:: Do I give the impression that I’m failing to speak and taking up time because I’m at a loss?

Clinias:: No, but you do give us the impression that you’re so filled with hatred that you chastise this sort of disposition more than is required by the present argument.

Athenian Stranger:: You have rebuked me in a very fine way, strangers. And it’s likely that you would like to hear what comes next.

Clinias:: So speak!

Athenian Stranger:: I at least affirm that the causes are the nonregimes which I’ve often mentioned in the earlier arguments—democracy and oligarchy and tyranny. None of these is a regime, but all would most correctly be termed “factions.” For none of them constitutes a voluntary rule over voluntary subjects, but instead a voluntary rule, always with some violence, over involuntary subjects. Since he is afraid, the one ruling will never voluntarily allow the one ruled to become noble, or wealthy, or strong, or courageous, or in any way warlike. These, then, are the two principal causes of nearly everything, and certainly of the things just mentioned. Now the present regime, which we are legislating, has escaped both of the causes we’ve described. For it presumably dwells in the greatest leisure, and they are free as regards one another, and because of these laws they would be the least likely, I think, to become lovers of money. So it’s likely and reasonable that the establishing of such a regime would, alone of all existing regimes, allow for the warrior education and play that has been elaborated, once the elaboration has been correctly completed in speech.

Clinias:: Nobly spoken.

Athenian Stranger:: Following on these things, shouldn't it be borne in mind, in regard to all the gymnastic contests, that any which are for the sake of war are to be practiced and to have victory prizes, but any which are not are to be passed over? But it would be better if their character were described and legislated from the beginning. First of all, shouldn't one set up the contests in running and in speed generally?

Clinias:: Yes, that's what should be set up.

Athenian Stranger:: Surely the most important thing for war is total bodily keenness, one part of which pertains to the feet and the other to the hands. Keenness of the feet allows one to flee and to effect captures, while the other is for the dose, stand-up fighting that requires sturdiness and strength.

Clinias:: But of course.

Athenian Stranger:: Neither is of very great use, however, without weapons.

Clinias:: How could it be?

Athenian Stranger:: First, then, our herald will call the stade runner to the contests, just as is done nowadays, but the runner will come forth fully armed: we won't establish prizes for an unarmed contestant. So first will come the contestant who runs the stade with heavy weapons, second the double-stade runner, third the horse-length runner, fourth the long-distance runner, and fifth will be a race in which the first, armed, runner is called "heavily-armed" because of the weight of arms he carries, and whom we'll require to run a length of sixty stades over more level ground to some temple of Ares and back, while his competitor, an archer fully equipped in archer's gear, is required to run one hundred stades over hills and all sorts of ground to some temple of Apollo and Artemis, and then back. Having set up the contest we'll await their return and then give the victory prizes to each of the winners.

Clinias:: Correctly spoken.

Athenian Stranger:: We should think of these contests as divided into three categories, one for children, one for the beardless boys, and one for the men. For the beardless boys we should set races of two-thirds length and for the children races of half-length, whether they contend as archers or in full armor. As for the women, girls who have not reached puberty should compete naked in the stade, double-stade, horse-length, and long-distance run, within the racing stadium itself; unmarried girls over thirteen should continue to take part at least until they are eighteen, but not after they have reached twenty, and they should come down to compete in these races clothed in suitable garments. Let these be the arrangements for races, for men and women.

With regard to contests of strength, instead of the wrestling matches and all those other sorts of difficult contests held nowadays, there'll be combat in heavy armor—one against one, and two against two, and so on up to ten against ten competing with one another. What it is one needs to avoid or to inflict in order to win, and how much of this one must succeed in doing, is something that should be determined just as is done now in wrestling, where those who are involved in wrestling have themselves established laws regulating what action belongs to fine wrestling and what to wrestling that isn't fine: in the same way, those who are the top fighters in heavy armor should be called in and asked to help lay down laws determining who is justly the victor in these battles and what it is such a victor should avoid or inflict, and similarly what rules decide who is defeated. The same things should be legislated for the females who are not yet married.

The fighting part of the pankration should be replaced by the whole art of lightly-armed combat, with bows and arrows, light shields, javelins, and stones thrown by hand or by slings. There should be laws regulating these competitors also, distributing prizes and victories to the one who most nobly fulfills the conventions.

Next in order after these things would come legislation about contests with horses. But we don’t have much use for horses in any great number, inasmuch as we’re in Crete, so it’s inevitable that there’s not much serious attention paid either to their rearing or to contests for them. No one at all maintains a chariot among us, nor would there be any appreciable love of honor connected with these matters, so that to set up contests of this sort, not native to the land, would both seem and be mindless. But if we were to establish prizes for single horsemen—riding on colts who have not yet shed their foal teeth, horses whose age is between full-grown horses and such colts, and full-grown horses—we would be establishing a sport for horses that is suitable to the nature of the land. So let there be lawful contests and competitions for victory among such riders, and let the Tribe Commanders and Cavalry Commanders share in judging both all the races themselves and the dismounting armed competitors. We would legislate incorrectly if we were to establish contests for those without weapons either in gymnastics or in the present case; and since the mounted Cretan archer or javelin thrower is not without value, let there be strife and contests, for the sake of play, in these categories too. It isn’t worth the trouble to compel females, by laws and commands, to take a common share in these contests, but if from a habitual disposition developed in the earlier games their nature permits such activity and does not take it ill, then girls and virgins should be allowed to participate without incurring blame.

Now at this point contests, and the learning of the gymnastic art—both what pertains to contests and what we must work at each day in school—are subjects that have been entirely completed. Most of the subject of music has also been similarly completed, although the arrangements for rhapsodes, their retinue, and the necessary choral contests during the festivals will be made after the months and days and years have been assigned to the gods and those who accompany the gods; at that point it can be determined whether the festivals are to be held every third year or every fifth year, or how and in what way they are to be distributed, in accordance with the indications the gods may give of their preferences as to the order. On the same occasions it is to be expected that the musical contests will be held, each in turn. They will have been arranged by the Regulators of the Games, the Educator of the Young, and the Guardians of the Laws, who will have met together and become themselves legislators in these matters. They will decide, with respect to all choruses and choral contests, when they are to be held, who is to perform, and who is to accompany the performers. The first lawgiver has often explained what ought to be established for each contest as regards the words, the songs, and the harmoniae mixed with rhythms and dances; the lawgivers who come second should follow these guidelines as they take up the task, arranging, at appropriate times, contests that befit each sacrifice, and thus giving the city its festivals to celebrate.

It isn’t difficult to know how these and other such matters should be put in lawful order, and if they are altered here and there the city would neither gain much nor suffer much of a penalty. But there are other matters which make no small difference, about which it is difficult to be persuasive, and which are in fact the task of the god, if it were somehow possible to get the orders themselves from him; as things stand now, what is required, in all probability, is some daring human being, who by giving unusual honor to outspokenness will say what in his opinion is best for the city and the citizens. Speaking before an audience of corrupt souls, he will order what is fitting and becoming to the whole political regime; opposing the greatest desires, and having no human ally, all alone he will follow reason alone.

Clinias:: Just what argument is it again that we’re now pronouncing, stranger? For we don’t yet understand.

Athenian Stranger:: That’s not surprising; I’ll try to explain it to you yet more clearly. When I arrived, in the course of the argument, at education, I saw young men and young women mixing together affectionately. As might be expected, a fear came over me as I reflected on the problem of how someone will manage a city like this, in which young men and women are well reared, and released from the severe and illiberal tasks that do the most to quench wantonness; and where sacrifices, festivals, and choruses are the preoccupations of everyone throughout their whole lives. How, in this city, will they ever avoid the desires that frequently cast many down into the depths, the desires that reason, striving to become law, orders them to avoid? It won’t be surprising if the legal customs ordained earlier should predominate over the mass of desires: the fact that it’s impossible to get terrifically rich is. no small benefit to moderation; the education as a whole has well-measured laws that promote such things; and in addition, there is the trained eye of the rulers which never looks elsewhere but is always watching things, including the young themselves, so as to limit the other desires as much, at least, as is humanly possible. But with regard to the erotic love of and for children—both male and female—and the erotic love of women for men and of men for women, whence tens of thousands of things have happened to human beings in private and to whole cities, how could one take proper precautions? And what sort of medicine will one apply, in each of these cases, so as to find an escape from the danger? It is in no way easy, Kleinias. For although in quite a few other matters Crete as a whole and Lacedaimon have been decent enough to give us considerable aid as we establish laws that differ from the ways of many, in regard to erotic things—speaking now among ourselves—they are totally opposed to us. If someone were to follow nature and lay down the law that prevailed before Laius, if he were to say that it was correct to avoid, with males and youths, sexual relations like those one has with females, bringing as a witness the nature of the beasts and demonstrating that males don't touch males with a view to such things because it is not according to nature to do so, his argument would probably be unpersuasive, and not at all in consonance with your cities.

But in addition, these practices do not agree with what we assert should always be the object of the lawgiver's care. For we are always seeking which establishments are conducive to virtue and which are not. Come, suppose we were to agree that the present legislation says this sort of activity is noble or at least in no way shameful, to what extent would this help us promote virtue? Will a courageous disposition be nourished in the soul of the seduced, or will the offspring of the idea of a moderate man be nourished in the soul of the seducer? Or isn't it the case that nobody would ever be seduced by such claims, but rather everyone expects just the opposite, blaming the softness of the one who gives in to the pleasures and is incapable of mastering them, and reproving the resemblance in image presented by the one who undertakes the imitation of the female? What human being will ever legislate such a practice as this? Hardly anyone, at least if he has true law in his mind. But how then do we affirm that this is true? If someone is going to think these things through in a correct manner, he must necessarily examine the nature of friendship, of desire, and of what are called "the erotic desires." For there are two entities here, and from their combination comes yet a third form, but because they are all given just one name, total confusion and obscurity is created.

Clinias:: How so?

Athenian Stranger:: Well, presumably we use the term "friend" to characterize the relationship between similars in point of virtue, and also the relationship between equals; then again, the term "friend" also characterizes the needy in its relationship to the wealthy, where they are opposite in kind. And when either of these becomes vehement, we name it "erotic love."

Clinias:: That is correct.

Athenian Stranger:: Now the friendship between opposites is terrible and savage, and is seldom mutual among us, while the friendship between those who are similar is gentle and mutual throughout life. As for the friendship that is a mixture of these, it is in the first place not easy to learn what the one who has this third erotic attraction might ever want to obtain for himself. Moreover, because he's drawn in opposite directions by the two loves, he finds himself at a loss, with one bidding him to pick the bloom of youth and the other telling him not to. For the man who loves the body, hungering for the bloom as for ripe fruit, bids himself take his fill without honoring the disposition of soul of the beloved. The other sort of lover holds the desire for the body to be secondary; looking at it rather than loving it, with his soul he really desires the soul of the other and considers the gratification of body by body to be wantonness. He holds in awe and reverence what is moderate, courageous, magnificent, and prudent, and would wish to remain always chaste with a beloved who is chaste. This love mixed from these two is the one we characterized a moment ago as the "third."

Since this is how many categories there are, should the law exclude all of them and prevent them from arising among us, or isn't it obvious that we would want to have in our city the type which belongs to virtue and desires that the youth become as excellent as possible, while we would forbid the other two, if we could? What shall we say, Megillus, my friend?

Megillus:: What you have said now about these particular matters is in every way fine, stranger.

Athenian Stranger:: It looks like—as I guessed—I've obtained your harmonious assent, dear friend. I don't need to inquire what the law among your people thinks about such things—it's sufficient to accept your agreement to the argument. Later on I'll come back to these same matters and try to use incantations to persuade Kleinias. For now let's let it stand that you've both granted assent to me, and so proceed through all the laws.

Megillus:: Very correctly spoken.

Athenian Stranger:: In order to establish this law, I have now a certain art, which will be in one respect easy to employ but in another respect extremely difficult in every way.

Megillus:: What do you mean?

Athenian Stranger:: Presumably, we know that even at the present time most human beings, however lawless they may be, nevertheless punctiliously refrain from intercourse with beautiful persons, and do so not involuntarily, but with the greatest possible willingness.

Megillus:: When do you mean?

Athenian Stranger:: When the beautiful person is one’s brother or sister. Moreover, with regard to a son or daughter, the same unwritten law guards in a very effective way, as it were, against touching them—by open or secret sleeping together, or by any other sort of embracing. In fact, among the many there isn’t the slightest desire for this sort of intercourse.

Megillus:: What you’re saying is true.

Athenian Stranger:: And isn’t it just a little phrase that quenches all such pleasures?

Megillus:: What phrase are you referring to?

Athenian Stranger:: The phrase that declares these things are not at all pious, but are hateful to the gods and the most shameful of shameful things. Isn’t the cause the fact that no one ever says anything else, but from the moment of birth each of us hears people saying these things, always and everywhere? In jokes and in every serious tragedy isn’t it frequently said, and when they bring on Thyestes-figures or certain Oedipuses, or certain Macareuses, who secretly have intercourse with their sisters, isn’t it seen that they promptly inflict upon themselves the just punishment of death for their crime?

Megillus:: You are quite correct to this extent: when no one ever even tries to breathe against the law in any way, then the pronouncement has an amazing power.

Athenian Stranger:: So what was said a moment ago is correct: when a lawgiver wishes to enslave a certain desire which especially enslaves human beings, it’s easy to know, at least, how he should handle it. By having everyone—slaves, free men, children, women, the whole city in agreement together—hold this pronouncement to be something sacred, he will have succeeded in making this law very firm.

Megillus:: That’s certainly so. But now how it will ever be possible to arrange things so that everyone is willing to say such a thing—

Athenian Stranger:: —It’s fine of you to take me up this way. For this was the very thing I said, that in regard to this law I had an art that would promote the natural use of sexual intercourse for. the production of children—by abstaining on the one hand from intercourse with males, the deliberate killing of the human race, as well as from the wasting of sperm on rocks or stones where it will never take root and generate a natural offspring, and on the other hand by abstaining from any female field in which you wouldn’t wish your sperm to grow. If this law becomes permanent and holds sway (if it were justly victorious in the other cases, as it is now in regard to intercourse on the part of parents), tens of thousands of good things would result. For in the first place, it is laid down according to nature; then too, it will prevent erotic frenzy and madness, as well as all adulteries, and all excessive drinking and eating, and will make men familiar with and dear to their own wives. Indeed, there are very many other good things that would come to pass, if someone had enough control to pass this law. But if there were standing here some vehement young man full of a lot of sperm who had been listening to the laying down of the law, he would probably revile us for setting up mindless and impossible customs, and would fill the air with his clamor. It was with a view to such that I made my pronouncement, about a certain art I possessed, in one respect the easiest of all things to apply and in another respect the most difficult, which would promote the permanent establishment of this law. It's very easy to understand that it's possible and in what way: we assert that if this custom is sufficiently sanctified, it will enslave every soul and instill it with a fear that will insure its total obedience to the established laws. But a point has now been reached where it doesn't seem that this law would take hold even under those conditions. The same sort of thing occurs in the case of the practice of common meals—it's not believed that an entire city can live practicing this throughout its life. Yet the disbelief was refuted by the deed, by the fact that it actually came to pass among your people—although with regard to women it still doesn't seem natural to your cities. It's because of this, because of the strength such disbelief possesses, that I have described both these practices as things that are very difficult to make permanent in the law.

Megillus:: What you say is correct, at any rate.

Athenian Stranger:: But do you want me to try to present to you two a somewhat persuasive argument to the effect that it is not beyond human ability, but is in fact possible?

Clinias:: Sure, why not?

Athenian Stranger:: Would someone more easily refrain from sexual things, and be more willing to follow in a measured way the relevant ordinance, if his body were in good shape and not lacking in training, or if it were in poor shape?

Clinias:: Much more easily, I suppose, if he's not lacking in training.

Athenian Stranger:: Well, then, don't we know by hearsay about Iccus of Tarentum, because he competed in the Olympian and other contests? He was so filled with love of victory, and possessed in his soul such art, and such courage mixed with moderation, that he never touched a woman—or a boy, for that matter—during the entire time of his intensive training. So the account goes. The same account is presumably given of Crison, and Astylus, and Diopompus, and very many others. And their souls were much less well educated than the citizens that belong to me and you, Kleinias, while their bodies were much more full blooded.

Clinias:: It's true, as you say, that the ancient stories confidently report these things as really having happened with regard to these athletes.

Athenian Stranger:: What then? Those fellows, for the sake of victory in wrestling and running and that sort of thing, had the heart to refrain from an activity that the many say is happy; now will our children be unable to restrain themselves for the sake of a much nobler victory, whose great beauty we will have, it is likely, enchanted them with from the time they were babies, using spellbinding myths, speeches, and songs?

Clinias:: Which victory?

Athenian Stranger:: The victory over pleasures. If they master pleasures they will live happily, but if they're defeated by them they'll experience entirely the opposite. And besides, can't we expect that their fear that the thing is in no way pious will give us the capacity to master what people inferior to these have shown the capacity to master?

Clinias:: That’s likely, anyway.

Athenian Stranger:: Since we’ve come to such a pass with regard to this custom, having fallen into perplexity because of the depravity of the many, I assert that the only thing left for our custom to do is to plunge on, saying that our citizens must not be inferior to the birds and many of the other beasts, who are born amid great flocks and live celibate, pure, and chaste, until the time of child-rearing; then when they arrive at this age they pair off, male with female according to preference, and female with male, and live out the rest of their lives in pious and just fashion, remaining steadfast to the first agreements of friendship. Now surely they ought to be superior to the beasts, at least! But, if they become corrupted by the other Greeks and most of the barbarians, by seeing among themselves and hearing about the very great power of the so-called “disorderly Aphrodite,” and so are incapable of mastering it, then the Guardians of the Laws, becoming lawgivers, will have to devise for them a second law.

Clinias:: What law would you advise them to establish, if the one being laid down now escapes them?

Athenian Stranger:: Obviously the one that comes right after this one would be the second law, Kleinias.

Clinias:: Which do you refer to?

Athenian Stranger:: The strength of the pleasures should, as much as possible, be deprived of gymnastic exercise by using other exercises to turn its flow and growth elsewhere in the body. This would be the case if the indulgence in sexual things never occurred without a sense of awe. For if shame made their indulgence rare, the infrequency would weaken the sway over them Of this mistress. So let it be the custom laid down in habit and unwritten law, that among them it is noble to engage in these activities if one escapes notice, but shameful if one doesn't escape notice—though they are not to abstain entirely. Thus our law would come to possess a second-rank standard of the shameful and the noble, a second-rank correctness, and those whose natures have been corrupted—whom we proclaim to be "weaker than themselves"—being one tribe, would be surrounded and forcibly prevented from disobeying the law by three tribes.

Clinias:: Which are these?

Athenian Stranger:: Reverence for the gods, and also love of honor, and being desirous not of bodies but of the beautiful characteristics of souls. These things that have now been said, perhaps as if in a myth, are prayers; if they should come to pass they would bring about by far the best effects in all cities. But maybe, if a god would be willing, we could enforce one of two ordinances regarding erotic matters:

Either no one is to dare to touch any well-born and free person except the woman who is his wife, and no one is to sow unhallowed, bastard sperm in concubines or go against nature and sow sterile seed in males; or we should abolish erotic activity between males altogether, and in the case of women, if anyone should have sexual intercourse with a woman other than those who enter his house with the sanction of the gods and the sacred marriage ceremonies, whether they be purchased or secured in any other way, and fails to escape the notice of all men and women, we would probably seem to be legislating correctly if we legislated that he should be barred from all honors in the city on the grounds that he is really a stranger.

Let this law, whether it ought to be called one law or two, be laid down concerning sexual matters and all the erotic things: it regulates our mingling with one another caused by such desires, both when we act correctly and when we act incorrectly.

Megillus:: Stranger, I would readily accept this law from you, but Kleinias ought to express for himself what he thinks of these matters.

Clinias:: That will be done, Megillus, when I think an opportune time has arrived. For now, let's allow the stranger to go ahead still further with the laws.

Megillus:: Correctly spoken.

Athenian Stranger:: Well, if we go ahead we find that we're now just about at the point where the common meals have been set up. We assert that elsewhere this would create difficulty, but that in Crete nobody would suppose there ought to be any other arrangement. As to the way they are to be organized—whether as they are here or as they are in Lacedaimon, or whether there is yet some third form of common meals better than both of these two—I don't think it's a very difficult matter to figure out, and no great advantage is to be had by figuring it out: they're well arranged now.

Following upon these things is the arranging of the means of livelihood, and the way in which these meals are to be supplied. In other cities there would be many kinds of food from many sources, and they would have at least twice the resources of these people, since most Greeks get what pertains to nourishment from both the land and the sea, while these people get it from the land alone. For the lawgiver this makes things easier. They'll need only half as many laws, or even far less than half, and the laws are more fitting for free human beings. The lawgiver for this city can just say good-bye to most of what pertains to ship-owning, wholesale trading, retail merchandising, innkeeping, customs duties, mining, loans, compound interest, and tens of thousands of other such things, and proceed to give laws regulating farmers, herdsmen, beekeepers, and those who guard such things and take care of the tools. The most important things have already been taken care of in legislation—marriage, the generation and rearing of children, and then also education and the institution of ruling officers in the city. Now he is compelled to turn to the legislation concerning food and those who work to provide it.

In the first place, there should be laws named "The Farming Laws." The first, belonging to Zeus the god of boundaries, should run as follows:

No one is to move the boundary markers of the earth, neither when they belong to a neighbor who is one of his fellow-citizens nor when he possesses a boundary at the edge, adjoining another foreigner; one should hold that the saying about moving the immovable truly applies to this. Everyone should prefer to try to move an enormous rock that is not a boundary marker rather than move a little stone that marks the boundary—protected by an oath to the gods—between friendly and enemy land. In the former case, Zeus the god of tribal kinship is the witness, while in the latter case it is Zeus the god of strangers; when either is aroused, most hateful wars follow.

He who obeys the law would not experience the evils that attend it, but he who shows contempt for the law would become liable to two penalties—one, and the first, from the gods and the second from the law:

Let no one voluntarily move the boundary markers of his neighbors' land. If someone should move them, let anyone who wishes report him to the farmers involved, and they shall take him to court. If someone is convicted of such an offense, it will be up to the court to estimate what the loser should suffer or pay, as one convicted of attempting to redistribute the land in secret and by force.

Next after this are the many petty injuries neighbors do to one another which, because of repetition, instill immense hatred and bring about a harsh and very bitter relationship among neighbors. On this account every care must be taken by a neighbor to refrain from doing anything inimical to his neighbor, in other respects and especially as regards any encroachment; for it's not difficult but is in fact in the power of any human being to do harm, while it's by no means everyone who can do a benefit.

Anyone who oversteps boundaries and encroaches on a neighbor must pay for the damages and, in order to be cured of lack of awe and illiberality, must pay the injured party an additional amount equal to twice the damages. Field Regulators are to take cognizance of these and all such things and are to act as judges and assessors; in the case of graver offenses, as was said earlier, the entire twelfth part is to preside, while in the case of lesser offenses just the Commanders. If anyone lets his cattle graze on someone else's land, they are to inspect the damage and then arrive at a judgment and assessment. If anyone appropriates someone else's bee swarms, working on the pleasure bees take in certain noises and thus getting them to like him, he is to pay for the damages. If someone while burning wood is negligent of his neighbor's wood, he is to pay whatever penalty the magistrates think appropriate. If someone plants trees but fails to leave between them and his neighbor's land an adequate gap, such as has been adequately stated by many lawgivers—whose laws one ought to make use of, and not demand that the great orderer of the city legislate about everything, including all the numerous petty affairs that can be handled by any run-of-the-mill lawgiver.

For instance, with regard to the water supply for farms, there are some ancient and fine laws laid down that aren't worthy of irrigating the discussion; but still, anyone who wishes to draw water to his land may go ahead and do so, starting from the common streams; he must not tap the above ground springs of any private individual, but he can lead the water along any course he wants so long as he avoids houses, certain temples, and memorial markers, and does no damage except the actual digging of the channel. If there are some naturally dry districts where Zeus's water just runs off the land in streams and the necessary drinking water is lacking, one should dig down in his own land until he reaches clay earth, and if at that level he still fails to strike any water, he is to obtain from his neighbors the necessary drinking water for each member of his household. If the neighbors have only just enough for themselves, the Field Regulators should fix a ration of the water and he must go and get this each day, thus sharing water with his neighbors. When Zeus's water comes pouring down, if someone who lives below another or shares a boundary line with him does damage by not allowing excess water to flow off the farm of the one above, or if the opposite happens, if the one above is careless about the runoff and does damage to the one below, and on account of this they aren't willing to come to some common agreement between themselves about these matters, anybody who wishes can call in a City Regulator (in the city) or a Field Regulator (in the country); he is to arrange what each of the parties ought to do. If someone fails to abide by the arrangement, he is indictable for having an envious and ill-humored soul; if convicted he must pay double the damages to the injured party for not having been willing to obey the magistrates.

The Harvest should be shared by all in some such way as the following. This goddess in Her graciousness has given us two gifts, the plaything of Dionysus which is not stored, and the fruit which by nature is put away and kept. So this is the law that should be ordained regarding the Harvest:

Whoever tastes of field fruits, grapes or figs, before the vintage season that coincides with the rising of Arcturus—whether it be from his own lands or from that of others—must, if he plucked the fruit from his own fields, pay fifty drachmas sacred to Dionysus; if from the neighbors', a mina; if from others' two-thirds of a mina.

Whoever wishes to harvest what are now called "well-born" grapes or what are named "well-born" figs may do so in whatever way he wishes and whenever he wants, if he takes them from his own crop; but if he harvests without permission from other persons' he must always fall under the penalty of the law that says "one shouldn't move what one didn't set down." If a slave touches any such things without getting the permission of the master of the lands, he is to be whipped with a number of strokes equal to the grapes in the bunch or the figs in the fig tree. A resident alien who has purchased it may harvest the well-born fruit if he wishes. If a stranger who is visiting should desire some fruit to eat as he goes along the roads he may without penalty pick the well-born fruit if he wishes, enough for himself and for one attendant, and thus receive the hospitality accorded to strangers; but the law should prevent us from sharing the so-called "field" fruits and the like with strangers. If someone out of ignorance, or his slave, should pick this fruit, the slave is to be punished with blows and the free man is to be sent away after having been advised and instructed to pick the other fruit which is not suitable for storing, to make raisins for wine and dried figs.

With regard to pears, apples, pomegranates, and all such, there should be no shame if one takes them in stealth, but if someone under thirty is caught at it he is to be driven off by being struck, though without any wounding, and it will not be permissible for a free man to seek any judicial redress for such blows. A stranger may partake of such fruits just as he could partake of the harvest. If an elderly man picks such fruits to eat on the spot, and doesn't carry any away, he should be allowed in all such things the same share the stranger has; but if he disobeys this law, he will risk losing the right to be a competitor in the contest for virtue, if on a later occasion someone recollects such conduct on his part and at that time brings it to the attention of the judges.

Water is the most nourishing of all the things that contribute to gardening, but it is easily polluted. In the case of the earth, sun, and winds, which together with water nourish the things that grow up from the earth, it isn't easy to do harm by means of poisons or diversions or thefts—but the nature of water is such that all these things are possible. Therefore it needs the help of a law, which should run as follows:

If anyone should voluntarily pollute someone else's water, whether it be a spring or a cistern, using poisons or excavations or thefts, let the injured party file charges with the City Regulators, including a written estimate of damages; if someone should be convicted of doing such damage through the use of poisons, he must not only pay the penalty but also purify the water in the springs or reservoir, according to whatever rites of purification are prescribed, for each occasion and each person, by the Interpreters' laws.

As regards the bringing home of all the harvest fruits: Anyone who wishes may bring home what belongs to him by any route whatsoever, provided that he penalizes no one else in any way, or that he himself profits in an amount that is three times that of the penalty inflicted on the neighbor. The magistrates are to be the assessors bf these matters, and of all other cases where someone voluntarily uses his own property to harm—violently or stealthily—the person or property of another who is unwilling that the harm be done. In all such cases the injured party should show the damage to the magistrates and receive reparation, so long as the harm done amounts to three minas or less. But if someone accuses someone else of having done greater damage, he should take the case to the common courts and there exact judicial retribution from the unjust party. If one of the magistrates is thought to have rendered an assessment of penalty with unjust purpose, he is to be held liable for double the damages to the party he harmed. Anyone who wishes may bring the injustices of the magistrates, in the case of each particular complaint, before the common courts.

There are tens of thousands of these petty legal customs that regulate the imposing of retributions, and that pertain to written complaints, judicial summonses, the witnesses to a summons (whether there should be two, or how many there should be) and all such things. They can't be left unlegislated, and yet aren't worth the trouble of a legislator who is old; so the young men should take care of these aspects of the legislation, imitating what their predecessors have already laid down in law and patterning the petty matters after the great. They should profit from the experience they gain in the cases where it's necessary to use such arrangements, until they arrive at a point where all the details seem to have been satisfactorily laid down; then they should make the customs unchangeable, and live using these procedures that have attained the proper measure.

The rest of the craftsmen should be regulated as follows: First, no native inhabitant, nor any domestic servant of a man who is a native, is to labor at the craftsmen's arts. For the man who is a citizen possesses already a sufficient art, requiring much practice and many branches of learning: preserving and holding the common order of the city, which must not be a part-time pursuit. There's almost no human nature that is capable of laboring with precision at two pursuits or two arts, or even of practicing one adequately himself while overseeing someone else who is practicing another. This, then, is the first rule that should prevail in the city:

No one is to be a metal worker and at the same time a carpenter, nor again is a carpenter to supervise others who are working in metal instead of his own art, advancing the excuse that if he supervised many domestic servant artisans working for him, he could reasonably be expected to oversee them better, in order to get a bigger income than he would get from just his own art. Each single individual in the city is to have one art and make his living from that. The City Regulators must labor to maintain this law, and if one of the native inhabitants inclines to some art instead of cultivating virtue, they are to punish him with blame and dishonors until they have succeeded in putting him back on his own straight track. If a stranger practices two arts, they are to punish him with bondage, monetary penalties, and expulsions from the city and thus force him to be only one person and not many.

With regard to their pay, and refusals to take delivery of their work, and injustices done to them by another or done by them to another, the City Regulators are to judge in cases involving fifty drachmas or less, and the common courts are to have legal jurisdiction where the amount is more than this.

No one is to pay any duty on either exported or imported goods in the city. No one is to import frankincense or any other such foreign incenses that pertain to the gods, nor purple dye or any other dyeing ingredients that aren't produced in this country, nor substances from foreign lands that are needed for an unnecessary purpose in any other art. On the other hand, no one is to export anything in the country that needs to remain.

All these matters are to be under the cognizance and supervision of the twelve Guardians of the Laws who are next eldest after the five eldest are subtracted.

With regard to heavy arms and all the implements of war, if for such a purpose the importation of some art, or plant, or metal object, or binding material, or certain animals, becomes necessary, the Cavalry Commanders and Generals are to be in charge of the import and export of these things. The city itself should carry on such giving and taking, and these things will be regulated by fitting and adequate laws laid down by the Guardians of the Laws. But retail trade for the sake of money in this or any other merchandise will never be allowed in any part of the entire territory or city.

As regards the food supply and the distribution of the country's produce, it's likely that a method close to that of the Cretan law would possess some correctness:

Everybody must make a division of all the country's produce into twelve parts, according to the order in which it is to be consumed. Each of the twelve parts, such as of wheat and barley (and all the other harvests should be distributed following the same procedure, as well as all the animals which may be for sale in each district), is to be divided proportionally into three parts, one of which is for the free men and one of which is for their domestic servants. The third share is to go to the artisans and the strangers in general: some of them will be in need of necessary foodstuffs because they are living here together as resident aliens, and others will be visiting because of some need a city or a private individual has. Once all the necessities have been divided, they will be required to sell only this third part, and no one is to be compelled to sell any of the two parts.

But just what would be the most correct way to make these divisions? In the first place, it’s obvious that our division is in one sense equal but in another sense unequal.

Clinias:: How do you mean?

Athenian Stranger:: Presumably it’s necessary that for each of these things that grow and are nourished from the earth, some turn out worse, and some better.

Clinias:: How could this not be the case?

Athenian Stranger:: In this respect, then, none of the three parts ought to be greater, neither what is distributed to the masters and the slaves nor again what goes to the strangers; the distribution should assign to everyone the same—an equality in similarity. Each citizen, taking his two parts, is to be in charge of the distribution to slaves and free persons, and is to distribute as much and of whatever sort he sees fit. Any surplus should be distributed according to a measure and number arrived at in the following way: taking the number of all the animals that must be fed from the land, they are to make the distribution on this basis.

After this there must be the arrangement of their separate houses. The appropriate ordering of such houses is as follows: There ought to be twelve villages, each one located in the middle of one of the twelve districts. In each village there should first be a site for the temples and marketplace belonging to the gods, and to the demons who follow after the gods. If there are any local Magnesian deities, or shrines of some other ancients who have been preserved in memory, they should pay them the honors that were paid by humans in ancient times; but temples should be set up everywhere to Hestia, Zeus, and Athena, and to whichever of the other gods is the primary patron of each twelfth part. First, there should be buildings around these temples, on the highest ground, thus providing the guards with the best-defended barricades possible. Then all the rest of the land should be furnished with craftsmen, who are to be divided into thirteen groups. One of these groups will be settled in the city; it will in turn be divided into twelve parts, one for every section of the city, and will be settled in a circle outside. And in each village the farmers are to have the appropriate kinds of craftsmen living next to them. The Commanders of the Field Regulators are to be the supervisors of all these matters, deciding how many and what sort each place needs, and where they should be settled so as to be the least painful and the most beneficial to the farmers. Similarly, in the city the magistracy of the City Regulators is to take in hand and supervise these matters.

The Market Regulators presumably have the job of looking after each of the things that pertains to the market. Besides watching to see that no one does any injustice to the temples around the marketplace, they should, in the second place, watch over the human affairs, keeping an eye out for moderation and insolence, and punishing anyone who needs punishment. With regard to commodities, they must first see that each of the articles city dwellers are supposed to sell to strangers is sold according to law. Let there be one law:

On the first day of every month the portion that is to be sold to strangers should be brought forth by the selling agents (either strangers or slaves, who will act for the city dwellers). The first commodity is the twelfth-part of grain. Each stranger should at the first market buy the grain that he will need for the whole month, along with whatever else goes with grain. Then on the tenth day of the month the one party should sell, and the other buy, enough liquid goods to last the whole month. The third market, for livestock, should take place on the twentieth of each month. At that time there should be whatever selling and buying of animals is necessary for each, as well as the sale on behalf of the farmers of any equipment or other goods the strangers must acquire by purchase from others (such as animal skins and all sorts of clothing, woven goods, wool felt, and some other such things).

But as regards retail trade in any of these things, including barley, wheat turned into flour, and every other sort of food, no one is ever supposed to sell to or buy from the city dwellers or their slaves; it should be in the strangers' marketplaces that a stranger does his selling to craftsmen and their slaves, and performs those dealings in wine and grain that are termed "retail trade" by most people. Once animals have been slaughtered and cut up, the butchers should distribute them to strangers and craftsmen, or their domestic servants. And any stranger who wants to, can on any day buy any sort of firewood in bulk from agents out in the country, and then sell it himself to other strangers—in whatever amount and whenever he wishes.

All the other sorts of goods and equipment each needs should be brought to the common marketplace and sold in a location for each, where the Guardians of the Laws and the Market Regulators, along with the City Regulators, should mark out appropriate boundaries for stalls for the goods to be bought. In these allotted spaces they should exchange money for goods and goods for money, not allowing each other to get anything without gaining something in return. He who gives something on trust must be content whether or not he receives the thing, since there'll no longer be a just cause of action in such transactions.

If what's purchased or sold creates an excess or a deficiency contrary to the law that has said there must not be an increase or a decrease beyond a certain sum, then, in the former case, the excess should be recorded with the Guardians of the Laws and, in the opposite case, the shortfall should be cancelled. The same ordinances concerning registration of property apply to resident aliens.

Anyone who wishes may become a resident alien upon the following explicit conditions:

There is a place for strangers to live in, and anyone who is willing and able can settle there; he must possess an art; he can prolong his visit no longer than twenty years after the time of his enrollment; he will pay no resident alien tax, not even a small one, except for the requirement that he be moderate; he will pay no other tax on any purchases or sales. When the time has elapsed, he is to take his property and depart. But if in these years he has attained noteworthiness because of some sufficiently good deed done for the city, and he trusts he can persuade the

Council and the Assembly to respond to his •request by granting a sovereign delay of his departure, or even permission to stay for life, he should go ahead and make his case to the city, and whatever he succeeds in persuading it to agree to, should be fully carried out. The resident aliens’

children, if they are craftsmen and have attained the age of fifteen, should begin the period of their residency when they reach the age of fifteen. Each may remain twenty years on these conditions and then must depart for wherever he likes. If one of them wishes to remain he can do so if he persuades as has just been described. He who departs should go after having erased the written records which he previously wrote down and left with the magistrates.

## Book IX.

Athenian Stranger:: The judicial penalties that are consequent to all the earlier activities would come next after these things, according to the nature of the ordering of the laws. Some of the matters that require judicial actions have been discussed—those that pertain to farming and whichever follow them—but with regard to the greatest matters there has been as yet no discussion, showing in each single case what retribution should be attached and who the judges should be at the time. These are the things that should be stated next, after those others.

Clinias:: Correct.

Athenian Stranger:: It is indeed in a certain way shameful even to legislate all the things we are now about to lay down, in a city such as this, which we claim will be well administered and correctly equipped in every way for the practice of virtue. Even to assume that in such a city someone may grow up who shares in the wickedness of the greatest other places, so that it's necessary to have legislation that anticipates and threatens such a man, if he comes into being—to lay down laws to deter these men and punish them when they do arise, as if they are going to arise—is, as I said, in a certain way shameful. But we aren't in the same position as were the ancient lawgivers who gave their laws to heroes, the children of gods (as the present account has it, they were themselves sprung from gods and legislated for others who had such an origin); we're humans, and legislating now for the seed of humans. Therefore, there is no blame incurred by our fearing lest one of our citizens become, as it were, "home-struck"—so tough by nature that he wouldn't melt. Just as those seeds are unmelted by fire, so these men are unmelted by strong laws.

Thanks to these men I would first state an unpleasing law about temple robberies, in case someone should dare to do this. We wouldn't wish, and there isn't any great expectation, that one of the correctly brought up citizens will ever contract this disease, but their domestic servants, as well as the strangers and the slaves of strangers, would try many such things. Especially on account of them, but also as a precaution against the general weakness of human nature, I will pronounce the law about temple robberies and all other such things that are difficult to cure or incurable. According to the argument agreed on earlier, preludes (the briefest possible) should preface all these laws. Someone would say the following, by way of a dialogue and an encouragement to that man who is urged during the day and awakened at night by an evil desire to despoil something of the sacred things:

"You amazing man, the evil that now moves and turns you to temple robbery is neither human nor divine, but a certain, gadfly that grows naturally in human beings as a result of ancient and unexpiated injustices. It is an accursed thing that revolves around, which one must take precaution against with all one's strength. Learn now what the precaution is: When any of such opinions seize upon you, go partake of exorcisms; go as a suppliant to the temples of the gods who ward off evil; go and frequent the company of the men said to be good among you; hear, and try yourself to say, that every man must honor the noble and the just things. Flee, without turning back, the company of bad men. If by your doing these things the disease abates somewhat, well and good; but if not, look to death as something nobler, and depart from life."

These are the preludes we sing to those who are considering all these deeds that are impious and destructive of the city. For him who obeys, the law should be left silent; but for him who disobeys, it sings in a loud voice, after the prelude:

“Whoever is caught robbing a temple, if a slave or a stranger, is to have the misfortune written on his face and hands and, after having been whipped as much as the judges decide, is to be thrown naked out beyond the borders of the country.”

Perhaps by paying this penalty he would become better, by becoming moderate. For no judicial punishment that takes place according to law aims at what is bad, but for the most part accomplishes one of two other aims: it makes the one who receives the judicial punishment either better or less wicked.

If some citizen is ever detected doing such a thing, committing one of the grave and unspeakable injustices against gods or parents or city, the judge should think of this man as already incurable, considering that even though he happened to get such an education and upbringing from childhood, he didn’t refrain from the gravest evils. The judicial penalty for this man is to be death, the least of evils, and by which he’ll present an example that will benefit the others, once he’s disappeared, without fame, beyond the borders of the country. But let his children and family, if they avoid the paternal disposition, receive fame and be spoken of with honor, as persons who well and courageously fled from evil to good. It wouldn’t be fitting, for the regime in which the allotments are to remain always the same and equal, if the property of any such men were forfeited to the public. So when someone seems to commit an injustice that merits a monetary penalty, let him pay as much as he has in excess of an equipped allotment—let him pay so much, but no more. The Guardians of the Laws are to inspect the written records to get precise figures in this regard, and are to announce them clearly to the judges on each occasion, so that none of the allotments ever becomes idle because of a lack of funds. If someone seems to merit a greater penalty, and if some of his friends aren't willing to pledge security for him and give him his freedom by helping to pay, he is to be punished with conspicuous, lengthy imprisonment and with certain humiliations. But no one is ever to be completely dishonored for a single fault, not even if he is in exile beyond the borders. Let the punishments be death, or prison, or beating, or sitting or standing in certain disgraceful ways, or standing at temples on the frontiers of the country, or money paid in the way we earlier said this judicial penalty should be paid.

For a capital offense, the judges are to be the Guardians of the Laws and the court composed of those magistrates from the previous year who were selected because they were best. The younger lawgivers should attend to the indictments, summonses, and such matters in these cases, and how they should take place; but it's our task to legislate about the voting. Let the vote be taken openly, but before this let our judges sit down in a row right next to one another, in order of age, directly facing the accuser and the defendant, and let all the citizens, as many as are at leisure, stand as serious listeners to such trials. First one speech is to be spoken by the accuser, and then a second speech by the defendant. After these speeches, the oldest should begin his judging, making an adequate inquiry into the things that have been said; after the eldest, they should all one by one go through whatever someone finds wanting in some way in what was said or not said by either of the litigants. He who finds nothing wanting should turn the judging over to another. Whatever seems to them to be to the point in what was said should be ratified, by affixing the written signatures of all the judges, and deposited on the altar of Hestia. The next day they should assemble again in the same place, to go through a judicial inquiry into the case in the same way and to affix signatures again to the things said. When they've done this a third time, and have paid sufficient heed to the evidence and witnesses, each should give a sacred vote, swearing before Hestia to judge what is just and true to the best of his ability, and thus such a trial should be brought to its end.

After matters pertaining to gods come matters pertaining to the dissolution of the regime. Whoever enslaves the laws by bringing them under the rule of human beings, whoever makes the city subject to a faction, and does all this through violence and the stirring up of civil strife against the law, this man must be regarded as the greatest enemy of all to the whole city. And he who doesn't take part in any such things, but, holding one of the highest offices in the city, lets these things escape his notice—or, not because they escape his notice, but because of cowardice, fails to wreak retribution on behalf of his own fatherland—such a citizen must be held to be second in evil. Every man who's capable of even a little good should inform the magistrates by bringing any plotter to trial, on a charge of violent and also illegal overthrow of the regime. The judges for these men are to be those who judge temple robbers, and the whole trial for these men is to proceed just as it did for the latter. The victory by a majority of votes shall bring death.

To put it in one word, the blame and retribution exacted from a father is to fall on none of the children, except in the case of someone whose father, grandfather, and grandfather's father have one after the other been condemned to death. These the city is to send away to their ancient fatherland and city, along with their property, except for what is part of the fully equipped allotment. Then, of the sons of citizens who have more than one son not less than ten years of age, ten are to be chosen by lot from among those nominated by their father or their grandfather on their father's or mother's side. The names of those who draw lots shall be sent to Delphi, and the one whom the god selects shall be set up, with better luck, in the household of those who departed.

Clinias:: Fine.

Athenian Stranger:: Let the law concerning which judges are to preside and the procedure of the trials be common to yet a third case, that of the man whom someone brings to trial on a charge of treason. Likewise, as to whether the offspring are to remain or to leave the fatherland, let this one law regulate these matters in the three cases of the traitor, the temple robber, and the man who destroys the laws of the city through violence.

As to stealing, whether someone steals something great or something small, again let there be one law and one judicial retribution in all cases. First, double the value of the item stolen should be paid as a fine, if someone is convicted of such an offense and possesses enough other property, over and above the allotment, to pay; but if not, let him be imprisoned until he does pay or persuades the successful prosecutor. If someone is convicted of stealing from the public, if he persuades the city or pays double the value of the theft, let him be let out of prison.

Clinias:: How comes it, stranger, that we're saying it makes no difference to the thief whether he's convicted of stealing something great or something small, whether from sacred or profane places, or whatever other respects in which a theft can be entirely dissimilar? For crimes that are thus various, is the lawgiver in no way to follow with penalties of a similar variety?

Athenian Stranger:: Excellent, Kleinias! As I was being all but borne along you've collided with me and woken me up, reminding me of what I was thinking about earlier—namely, that what pertains to the laying down of laws has never been worked out correctly in any way, as in fact can be said on the basis of what has cropped up now. What, again, do we mean by this? We didn't make a bad image, when we compared all those living under legislation that exists now, to slaves being doctored by slaves. For it's necessary to know well some such thing as the following: if one of those doctors who practices medicine on the basis of experiences rather than reason should ever encounter a free doctor carrying on a dialogue with a free man who was sick—using arguments that come close to philosophizing, grasping the disease from its source, and going back up to the whole nature of bodies—he would swiftly burst out laughing and would say nothing other than what is always said about such things by most of the so-called doctors. For he would declare, "Idiot! You're not doctoring the sick man, you're practically educating him, as if what he needed were to become a doctor, rather than healthy!"

Clinias:: Well, wouldn't he be speaking correctly when he said such things?

Athenian Stranger:: Maybe—if, at any rate, he went on to reflect that this man who goes through laws in the way we're doing now, is educating the citizens but not legislating. Would he not appear to be saying this too in the right way?

Clinias:: Perhaps.

Athenian Stranger:: The present situation is fortunate for us.

Clinias:: In what way?

Athenian Stranger:: In that there is no necessity to legislate, but just that we ourselves, by becoming engaged in an inquiry about the whole regime, try to discern in what way the best and also the most necessary would each come into being. Indeed, it's likely that we can now, if we wish, inquire into what is best, or, if we wish, into what is most necessary, as regards the laws. So let's choose which it seems we'll do.

Clinias:: We're proposing a ridiculous choice, stranger, and we'd become exactly the same as lawgivers constrained by some great necessity to legislate immediately, because tomorrow it'll no longer be possible. But the fact is that for us—if god is in accord with what I say—it's possible, just as it is for masons or those beginning some other construction, to accumulate indiscriminately the materials from which well select what's to be used in the structure that is about to come into being, and indeed to make the selection at leisure. So let's assume that we are now house-builders who aren't working under constraint, but are in a leisurely way still accumulating some things and incorporating others. Thus it is correct to speak of some things pertaining to the laws as being established, and others as being accumulated.

Athenian Stranger:: That way, Kleinias, our synoptic review of the laws would be more in accordance with nature, at any rate. So then let's look—in the name of the gods!—at some such thing as the following, pertaining to legislators.

Clinias:: What's that?

Athenian Stranger:: Presumably there exist in the cities writings and written arguments of many others, and also the writings and arguments of the lawgiver.

Clinias:: How could there not?

Athenian Stranger:: Should we turn our minds to the writings of the others, of poets and of those who without meter or with meter have left a written record of their advice about life, but not pay attention to those of the lawgivers? Or should we pay attention to the latter most of all?

Clinias:: The latter, by far!

Athenian Stranger:: But is the lawgiver alone, among the writers, not supposed to give advice about the noble, good, and just things, teaching what sorts of things they are and how they must be practiced by those who are going to become happy?

Clinias:: How could that be?

Athenian Stranger:: But is it then more shameful for Homer, and Tyrtaeus, and the other poets to make bad written pronouncements about life and practices, and less so for Lycurgus, and Solon, and whoever has become a lawgiver and written down things? Or isn't it correct, at any rate, that of all the writings in the cities, the things written about the laws appear, when opened up, by far the noblest and best, and that the writings of the others either follow those or, if they speak in dissonance, be laughed at? How do we conceive writing about laws in the cities should be: should the writings appear in the shapes of a father and mother, caring dearly and possessing intelligence, or, like a tyrant and despot, should they command and threaten, post writings on the walls and go away? Let's consider now, ourselves, whether we're going to try to speak with this conception concerning laws—evincing an eager spirit at least, whether or not we have the capacity. And if by going this route we have to suffer something, let's suffer it! May it be a good thing, and, if god is willing, so it shall be.

Clinias:: You’ve spoken nobly, and let’s do as you say.

Athenian Stranger:: First then, there must be a precise inquiry, such as we have undertaken, into what pertains to temple robbers, and stealing in general, and all injustices; and we mustn’t take it ill if in the midst of giving laws, we’ve established some things and are inquiring further into others. For we’re becoming lawgivers but we aren’t yet lawgivers, though probably we may be. If it seems as though we should inquire into the things I’ve mentioned, and in the way I’ve mentioned, let’s carry out the inquiry.

Clinias:: By all means.

Athenian Stranger:: Then with regard to the noble things and all the just things, let’s try to see something like the following: to what extent we now agree, and to what extent we disagree with ourselves—we who would claim to be eager in spirit, if nothing else, to differ from most people—and then again to what extent the many agree and disagree among themselves.

Clinias:: What differences of ours do you have in mind when you say this?

Athenian Stranger:: I shall try to explain. With respect to justice as a whole and just human beings, deeds, and actions, we all somehow agree that all these are noble; so if someone would maintain that just human beings, even if they happen to be ugly in their bodies, were nevertheless entirely beautiful people in respect to their very just disposition considered by itself, in almost no case would the one who speaks thus seem to speak off key.

Clinias:: Isn’t that correct?

Athenian Stranger:: Maybe. But let’s observe how, if all things are noble which partake of justice, then the “all” includes the things we undergo, almost as much as the things we do.

Clinias:: So what then?

Athenian Stranger:: In the case of an action that is just, it partakes of the noble to about the extent to which it shares in the just.

Clinias:: But of course.

Athenian Stranger:: Then in the case of something one undergoes that shares in the just, to agree that it becomes noble, to the same extent, would not be to present a dissonant speech?

Clinias:: That is true.

Athenian Stranger:: But if, at any rate, we agree that something one undergoes is just, but shameful, the just and the noble will be in dissonance since the just things will be said to be most shameful.

Clinias:: What do you mean by this?

Athenian Stranger:: Nothing difficult to understand. For the laws established by us a little earlier would seem to pronounce things totally opposed to the things now being said.

Clinias:: To what things?

Athenian Stranger:: Presumably we established that the temple robber should die—justly—and the same for the enemy of well-made laws; and when we were about to establish very many such legal customs we stopped, seeing that these sufferings were limitless in number and severity, and that while they were the most just of all sufferings, they were also the most shameful. So don’t the just things and the noble things appear to us at one time to be all the same, and then at another time very opposed?

Clinias:: I’m afraid so.

Athenian Stranger:: It’s with regard to such things that the many proclaim, without consonance, that the noble things and the just things are separate.

Clinias:: So it appears anyway, stranger.

Athenian Stranger:: Let’s look again, Kleinias, to see how we have a harmony about these same matters.

Clinias:: What harmony, and in what respect?

Athenian Stranger:: In the earlier discussions I believe I said expressly somehow, or if I didn’t earlier, set me down now as saying …

Clinias:: What?

Athenian Stranger:: That the bad are all bad involuntarily in every respect. Since this is so, it is presumably necessary that the next argument follows upon this.

Clinias:: What do you mean?

Athenian Stranger:: That the unjust man is presumably bad, but the bad man is involuntarily so. Now it never makes sense that the voluntary is done involuntarily. Hence the man who does injustice appears involuntarily unjust to the one who sets down injustice as something involuntary. This is what I must agree to now. For I agree that everyone does injustice involuntarily. And if someone, out of love of victory or love of honor, asserts that the unjust are indeed involuntarily so, but that many voluntarily do injustice, my argument, at any rate, remains the former and not the latter. So then in what way would I, at least, speak in consonance with my own arguments? Suppose, Kleinias and Megillus, you were to ask me:

“If these things are so, stranger, what advice do you have for us concerning the legislation for the city of the Magnesians? Should we legislate or not?”

“Why not?” I’ll declare.

“Are you going to distinguish for them the involuntary from the voluntary injustices, and will we establish greater penalties for the voluntary faults and injustices, and lesser for: the former? Or equal penalties for all, on the grounds that there aren’t any voluntary injustices at all?”

Clinias:: Correctly spoken, stranger. What use, indeed, shall we make of these things that are now being said?

Athenian Stranger:: A noble question. First, let’s use them for the following.

Clinias:: What?

Athenian Stranger:: Let’s recollect that just now we made a noble remark to the effect that concerning the just things we were in a very great deal of confusion and disharmony. Seizing upon this, let’s question ourselves again: “Well, we haven’t found our way clear of the difficulty in these matters, nor defined what the difference is between these things, which in all the cities, by all the legislators who have ever existed, have been held to be two forms of injustices, voluntary and involuntary, and have been so legislated. Is the argument now being uttered by us going to say only this much and depart, as if it were being spoken by a god, giving no argument as to why it has spoken correctly, and just legislating in defiance of the difficulty in some way?”—that’s impossible. Before legislating, it’s necessary to make clear somehow that these things are two, and what the other difference is, so that whenever someone imposes the judicial penalty on either of them, everyone may follow the things that are being said and may be able to judge, somehow or other, what is fittingly laid down and what is not.

Clinias:: You appear to us to be speaking in a noble way, stranger. For we ought to do one of two things—either refrain from saying that injustices are all involuntary, or make clear how this is the correct thing to say, by first making a distinction.

Athenian Stranger:: Well, of these two alternatives presumably one is wholly unacceptable to me—refraining from saying it, when I believe it to be the truth. For that would be neither according to legal custom nor pious. But in what way are they two, if they don't differ from one another by being involuntary and voluntary? Somehow or other then, one must try to make it clear on the basis of some other distinction.

Clinias:: There's simply no other way we can think about this, at least, stranger.

Athenian Stranger:: So it shall be. Come, then: it's likely that many injuries are done by the citizens to one another in their associations and minglings, and that these involve an abundance of the voluntary, as well as the involuntary.

Clinias:: How could it be otherwise?

Athenian Stranger:: Let not someone set down all the injuries as injustices, thus supposing that the injustices in them become, in this way, double—some voluntary and some involuntary. For of all injuries, the involuntary are not less in number or severity than the voluntary. But consider whether I'm saying anything in saying what I'm about to say, or whether I'm saying nothing at all: for I at least do not assert, Kleinias and Megillus, that if someone injures somebody in some way, not intending to do so, but involuntarily, that he does injustice involuntarily. And I won't legislate in this fashion, legislating to the effect that this is an involuntary injustice; I'll set such an injury down as being not an injustice at all, whether it be greater or smaller. Indeed, if my view, at least, is victorious, we'll often assert that when a benefit comes to pass that is not correct, the one responsible for the benefit is committing an injustice. Generally speaking, friends, if someone gives something to somebody, or, on the contrary, takes something away, such a thing shouldn’t thus be called simply just or unjust, but what the lawgiver should observe is whether someone employs a just disposition and character in doing some benefit or injury to somebody. The lawgiver should look to these two things, injustice and injury; he should do what he can through the laws to redress the injury—by preserving what may be destroyed, setting upright again what has fallen, and making sound what has been killed or wounded—and once compensations have made atonement for each of the injuries, he should always try through the laws to create friendship in place of discord between the doers and sufferers.

Clinias:: In doing these things, at least, he’d be acting nobly.

Athenian Stranger:: On the other hand, in the case of unjust injuries, and gains as well—when someone makes somebody gain by doing him an injustice—as many of these as are curable, being regarded as diseases in the soul, should be cured. And it should be declared that our cure for injustice proceeds in the following direction.

Clinias:: In which?

Athenian Stranger:: Toward making it so that whatever injustice, great or small, someone might commit, the law will teach and compel him in every way either never again to dare voluntarily to do such a thing or to do it very much less; this is in addition to paying compensation for the injury. To accomplish these things by deeds or words—with pleasures or pains, by honors or dishonors, even by monetary penalties or gifts, and in general by whatever procedure someone may use to bring about hatred of injustice and desire, or lack of hatred, for the nature of the just—it is this that is the task of the noblest laws. But what about the one whom the lawgiver perceives to be incurable in these respects: what judicial penalty and law will he lay down ‘for these people? Because he knows, presumably, that in the case of all such men it isn’t better for them if they go on living, and that by departing life they would confer a double benefit on the others (becoming examples to the others of why not to do injustice, and emptying the city of bad men), the lawgiver must necessarily assign to such men the punishment of death for their faults, though this must not be done in any other case.

Clinias:: It’s likely that the things you’re saying are in some way very well measured, but nevertheless we’d be more pleased to hear these things put still more clearly, indicating how it is that the difference between injustice and injury has gotten mixed up with the difference between the voluntary and the involuntary in these matters.

Athenian Stranger:: One must try to do and say what you ask. Now it’s clear that you say and hear from one another at least this much about the soul: that one thing in its nature, either a passion or a part, is spiritedness—a possession that is by nature quarrelsome and pugnacious, overturning many things with uncalculating violence.

Clinias:: But of course.

Athenian Stranger:: And pleasure, we proclaim, is not the same as spiritedness, but, we assert, holds absolute rule through a strength opposite to it: through persuasion and forceful trickery she does whatever her intention wishes.

Clinias:: Very much so.

Athenian Stranger:: Someone wouldn’t speak falsely if he said that ignorance is the third cause of faults. It would be better for the lawgiver however, to divide this in two, holding the simple version of it to be responsible for light faults. The double version occurs when someone lacks understanding because he partakes not only of ignorance but also of the opinion that he is wise, and believes he knows completely things about which he knows nothing; if this is accompanied by strength and force, the lawgiver sets such things down as the causes of great and unmusical faults, while if this is accompanied by weakness, leading to the faults of children and the elderly, he’ll set such things down as faults indeed, and will establish laws, as for those who are at fault, but the laws will be the gentlest, at any rate, of all and the most forgiving.

Clinias:: What you say is reasonable.

Athenian Stranger:: Now with regard to pleasure and spiritedness, we almost all say that one of us is “stronger,” while another is “weaker”; and this is the way it is.

Clinias:: Entirely so.

Athenian Stranger:: But with regard to ignorance, at least, we’ve never heard that one of us is “stronger,” while another is “weaker.”

Clinias:: Very true.

Athenian Stranger:: And we assert that all these things, at least, often turn each man in directions opposite to that toward which his intention at the same time draws him.

Clinias:: Very often indeed.

Athenian Stranger:: Now at this point I would clearly define for you what I say is the just and the unjust, without complication. The tyranny in the soul of spiritedness, fear, pleasure, pain, feelings of envy, and desires, whether it does some injury or not, I proclaim to be in every way injustice. When, on the other hand, the opinion about what is best (however a city or certain private individuals may believe this will be) holds sway in souls and brings order to every man, then, even if it is in some way mistaken, what is done through this, and the part of each man that becomes obedient to such a rule, must be declared to be entirely just and best for the whole of human life—even though many are of the opinion that such injury constitutes involuntary injustice. We aren't now involved in a quarrelsome argument about names, but since the three forms of faults have been made clear, these ought first to be still more firmly fixed in the memory. So, then, one of our forms is that of pain, which we name "spiritedness" and "fear."

Clinias:: By all means.

Athenian Stranger:: A second, again, is that of pleasure and desires; third and distinct is the striving for expectations and true opinion concerning what is best. When this last is divided into three by being cut twice, there come to be five forms, as we now assert, and for these five forms there should be laws established that differ from one another, and that are of two kinds.

Clinias:: What are these?

Athenian Stranger:: One concerns what is done through violence and open deeds on each occasion, the other concerns what takes place secretly, with darkness and trickery; then sometimes what is done combines both of these, and the laws dealing with this case would be the harshest, if it is to receive its appropriate share.

Clinias:: That makes sense.

Athenian Stranger:: After these things let's go back to the point from which we digressed to get here, and complete the laying down of the laws. I believe we had set down what pertains to those who plunder the gods and what pertains to traitors, and also what pertains to those who corrupt the laws with a view to the dissolution of the existing regime. Now someone might perhaps do one of these things while insane, or while so afflicted with diseases or extreme old age or while still such a child as to be no different from such men. If, on the plea of the doer or of the doer's advocate, it should become evident to the judges chosen for the occasion that one of these circumstances obtains, and he should be judged to have broken the law while in such a condition, let him pay to the full exact compensation for the injury he has done someone, but let him be released from the other judicial sentences, unless he has killed someone and has hands that are not unpolluted by murder. In the latter case, he is to go away into another country and place, and dwell away from home for a year; if he comes back prior to the time which the law has ordained, or sets foot at all in his own country, he is to be incarcerated in the public prison by the Guardians of the Laws for two years, and then released from prison.

Let's not hesitate to proceed just as we began, and lay down laws that cover completely every form of murder. Let's speak first about violent, involuntary murders.

If someone in a contest and in the public games has involuntarily killed somebody dear to him, whether it happens immediately or at a later time as a result of the blows, or if this happens during war or during the preparation for war—when they practice the javelin without using body armor, or imitate the activity of war with certain heavy arms—let him be free from pollution once he has been purified according to the law brought from Delphi for these purposes.

In the case of all doctors, if the person being cared for by them should die against their intention, they are to be held unpolluted according to law.

If with his own hands, but involuntarily, one man should kill another, whether it be with his own unarmed body, or with an instrument, or missile, or by giving some drink or food, or by applying fire or cold, or by deprivation of air—whether he acts with his own body or through other bodies—in all cases let it be as if by his own hands, and let him pay something like the following judicial penalties. If he should kill a slave, he must render the master of the dead slave free of injury and penalty by reckoning what it would cost him to be deprived of a slave of his own, or else sustain a judicial penalty equal to twice the value of the deceased—the value to be assessed by the judges. He is to employ purifications that are greater and more numerous than those employed by persons who kill during the games, and the Interpreters whom the god selects are to be sovereign in these matters. If it's his own slave, he is to be released under law from the murder once he's undergone purification. If someone should involuntarily kill a free man, let him purify himself by the same purifications as in the case of one who kills a slave, and let him not underestimate a certain old saying of the ancient myths. It is said that he who dies a violent death after having lived with the outlook of a free man feels, when freshly dead, spirited rage against the perpetrator. Filled with fear and horror on account of his violent experience, and seeing his own murderer going about in his own accustomed haunts, he feels horror; being himself disturbed, he does all he can, having Memory as an ally, to disturb the perpetrator and his doings. That is why the perpetrator must go away from the sufferer during all the seasons of a year, and desert all his accustomed places throughout the entire fatherland.

And if the one who has died should be a stranger, the perpetrator must also keep away from the stranger's country for the same amount of time. If someone voluntarily obeys this law, the nearest of kin to the one who has died, who is the one who watches to see that all these things have come to pass, should be forgiving—and it would be entirely well measured for him to have peaceful dealings with the man. But if someone is disobedient—if, first, he dares to frequent the sacred places and sacrifice while being unpurified, and then if he isn't willing to go away as a stranger and fulfill the stated time period, the nearest of kin to-the one who has died should prosecute the killer for murder, and all the retributions are to be doubled for the man who is convicted. And if the nearest kinsman doesn't prosecute for what has been suffered, it shall be as if the curse has gone on to him because he who has suffered makes supplication in the name of what he has suffered; anyone who wishes should prosecute this man and compel him under law to stay away from his own fatherland for five years. If a stranger involuntarily kills one of the strangers who are in the city, let anyone who wishes prosecute under the same laws: if he's a resident alien, let him go away for a year; if he's a total stranger, in addition to the purification, whether he's killed a stranger or a resident alien or a member of the city, he must spend all the rest of his life away from the country that is sovereign over these laws. If he comes back illegally, the Guardians of the Laws are to penalize him with death, and, if he has some property, are to give it to the nearest of kin of the one who suffered. If he comes back involuntarily, if he's shipwrecked at sea near the country, he must camp where his feet will be moistened by the sea and watch for a sailing opportunity; if certain persons violently drag him in by land, the first of the city's magistrates who happens along should release him and give him safe-conduct across the border.

If someone kills a free man with his own hands, but the deed was done out of spirited anger, it is necessary first to distinguish between two versions of such an act. For sometimes it is done out of spirited anger by those who act on a sudden impulse, who all at once and without intending to kill beforehand destroy someone with blows or some such thing, and feel regret immediately after the deed is done. On the other hand, killing is also done out of spirited anger by those who have been insulted by words or dishonorable deeds, who seek retribution, and who later kill someone, intending to kill and feeling no regret once the deed is done. So it's likely that they should be set down as two sorts of murder, both pretty much done out of spiritedness, and it would be most just to say that they are somewhere in the middle between the voluntary and the involuntary. Nevertheless, each of them is an image of one of the other two: he who guards his spiritedness and doesn't immediately get retribution at the moment, but does so at a later time after deliberating, resembles the voluntary; he who doesn't hoard his rages and immediately employs them at the moment, without prior deliberation, is similar to the involuntary—though this man again is not wholly involuntary, but an image of the involuntary. That's why it's difficult to define murders done out of spiritedness, to decide whether one ought to legislate for them as voluntary or as in a sense involuntary. The best and most truthful thing to do is to set them both down as images, and make a division between them on the grounds of the presence or absence of prior deliberation: one should legislate harsher retributions for those who kill with prior deliberation and in anger, and gentler for those who kill without prior deliberation and all of a sudden. For one should assign greater retribution to the image of the greater evil, and less to that of the lesser. And that’s the way our laws should do.

Clinias:: In every respect.

Athenian Stranger:: Let’s go back again, then, and say:

If, then, someone kills a free man with his own hands, and the deed was done out of a certain anger, without prior deliberation, let the killer suffer the other things that were assigned the one who kills without spirited anger, but let him also be compelled to spend two years in exile, restraining his own spiritedness. He who kills out of spirited anger, but with prior deliberation, is to suffer in other respects the same again as the former, except that he is to spend three years in exile instead of the two years for the other. Thus he’ll pay a greater retribution of time because of his greater spiritedness. The return from exile in these cases should be as follows. (This is difficult to legislate with precision. For there would be times when the one the law defines as the harsher of the two is rather gentle, and when the “gentler” is rather harsh, having committed a more savage act of murder, or when the former would have committed a gentler. But the procedure will for the most part follow what is now being said.) The Guardians of the Laws ought to take cognizance of all these things, and when the time of exile in either case has elapsed, they should send twelve of their number out to the borders of the country as judges: during this time they should have carried out a more minute investigation of the actions of the exiles, and should be judges as regards forgiving them and allowing them to come back. The exiles must abide by the verdicts of such magistrates. In either of the two cases, if, after his return, the exile ever again commits the same act because he is overcome by anger, he must go into exile and never return; if he should return, let him suffer the same thing as the stranger who returns. If it's a slave that someone has killed, and it's his own, he is to undergo rites of purification; if it's someone else's slave that he's killed out of spirited anger, he is to pay twice the value of the injury to the owner.

If any of all those who kill should disobey the law and defile the marketplace, the athletic games, and the other sacred places by frequenting them while unpurified, anyone who wishes may prosecute the dead man's kinsman who is permitting this, and the killer, compelling them to exact and pay double the money and the other actions, and taking the fine for himself according to the law.

If some slave should kill his own master out of spirited anger, the kinsmen of the dead man are to do whatever they wish to the killer and remain unpolluted, so long as under no circumstances they let him continue to live in any sense. If some other slave should kill a free man out of spirited anger, his masters are to hand the slave over to the kinsmen of the dead man, and they must necessarily kill the perpetrator, in whatever manner they wish. If a father or mother should out of. spirited anger kill a son or daughter, with blows or in some violent fashion—something that does occur, though rarely—they are to undergo the same rites of purification as the others and go into banishment for three years; when the killers return, the wife is to separate from the husband, and the husband from the wife, and they are never again to share in creating children, nor is the perpetrator ever to become part of the hearth or a sharer in the sacred things with those whom he has deprived of a son or brother. He who is impious about these matters and disobeys is to be subject to prosecution for impiety by anyone who wishes. If some man out of rage should kill some woman who is his wife, or if a woman should do this same thing in the same way to her husband, let them undergo the same purification rites and complete three years in banishment. When he who has done such a thing returns, he is not to share in the sacred things with his children, and is never to become part of the same dining table. If the parent or the progeny disobeys, here again he is to become subject to prosecution for impiety by anyone who wishes. If a brother should kill a brother or sister out of spirited anger, or if a sister should kill a brother or sister, let it be said that these must undergo the purification rites and banishment in the same way as was said for parents and offspring: let him never become part of the hearth or a sharer in the sacred things with those whose brothers he has deprived of brothers and whose children he has deprived of parents. If someone should disobey, he would correctly and with justice become subject to prosecution under the law' that has been described regarding impiety in these matters. If someone becomes so unrestrained in his spirited anger towards his parents that he dares, in an insanity of rage, to kill one of his parents, then, if the one who has died voluntarily absolved the perpetrator of murder before he died, the perpetrator is to undergo purification of the same sort as those who carry out an involuntary murder. Once he has done whatever other things those do, he is to be free of pollution. But if he was not absolved, the one who has done such a thing is to be liable to many laws. For he would become liable to the most severe judicial penalties for assault, and, likewise, impiety and temple robbing (for having plundered the soul of his parent). So if, indeed, it were possible for the same man to die often, the parricide or matricide, who committed this deed out of spirited anger, would very justly undergo many deaths. In this case alone (where a man is about to be killed by his parents), no law will permit killing to defend oneself against death; with regard to father or mother, the ones who brought one’s nature into the light, the law will legislate that one must endure, suffering everything rather than doing such a deed. So how would it be fitting for this man to receive a judicial penalty under the law in any other way? Let the punishment be death for him who kills his father or mother out of spirited anger.

Should a brother kill a brother in a battle that takes place during civil strife or in some such fashion, defending himself with his hands against the other who started it, let him be unpolluted just as if he had killed an enemy. The same holds for a citizen who kills a citizen, or a stranger who kills a stranger. If a member of the city should kill a stranger in self-defense, or a stranger a member of the city, he is to be unpolluted in the same way. The same holds for a slave who kills a slave. But if a slave should kill a free man in self-defense, he is to be liable to the same laws as the man who kills his father. Let what was said about being absolved of murder by the father apply in the same way to every absolution in such cases: if anyone voluntarily absolves somebody of this, let it be as if the murder was involuntary, let there be purification rites for the perpetrator, and let the law impose one year of exile.

Now what pertains to murders that involve violence and the involuntary, and that occur because of spiritedness, has been discussed with due measure. Next after these matters we should discuss what pertains to those that are voluntary and totally unjust, as well as the plotting involved—which spring from weakness in the face of pleasures, desires, and envies.

Clinias:: Correctly spoken.

Athenian Stranger:: First let’s again do our best to say how many such things there would be. The greatest is desire, that dominates a soul driven wild by longings. This occurs especially where there is the yearning that is most frequent and strongest among the many: because of the wickedness due to nature and lack of education, money has the power to engender tens of thousands of erotic desires for its insatiable and limitless acquisition. The cause of the lack of education is the wicked praise of wealth that is spread abroad by both the Greeks and barbarians. For by judging it to be first among the goods when in fact it is third, they ruin their posterity as well as themselves. The noblest and best thing of all for every city is that the truth be told about wealth, namely, that it is for the sake of the body, and the body is for the sake of the soul. Since, therefore, there are goods for the sake of which wealth by nature exists, it would come third after virtue of the body and of the soul. Thus this argument would become a teacher, showing that he who is to be happy shouldn’t seek to be wealthy, but to be wealthy justly and moderately; and then there wouldn’t occur in cities murders that require murders to purge them. But now, as we said when we began to discuss these things, this is one, and the greatest, thing that brings about the most severe judicial penalties for voluntary murder. The second is the habit of the honor-loving soul. This breeds envies, which are harsh companions, especially for the one who possesses the envy, but secondly for the best among those in the city. The third cause is the cowardly and unjust fears that stir up many murders, in a situation where someone is doing or has done something that he wants no one to become or to have become knowledgeable about. They remove those who would inform about these things by killing them, when they can do so in no other way.

Let these things that have been said be the preludes for all these cases, and in addition the argument many earnestly believe because they've heard it from those who are seriously involved in the mystery-rites concerning such matters, to the effect that vengeance is exacted for such things in Hades, and that when they return back here again they must necessarily pay the just penalty according to nature, which is that of suffering whatever he himself inflicted on the victim and having his life brought to an end this time by the same fate at another's hands. For him who believes and is wholly fearful of such a penalty, because of the prelude itself, it isn't necessary to sing the law in addition to this; but for him who doesn't believe let the following law be stated in writing:

He who with forethought, unjustly, and with his own hands kills any of his fellow tribesmen must, in the first place, stay away from the places conventionally proscribed: he must not pollute the temples, or the marketplace, or the harbors, or any other common place of meeting, whether or not one of the human beings has pronounced this prohibition to the perpetrator. For the law prohibits it, and is always seen prohibiting it, and will always be seen prohibiting it, on behalf of the whole city. And anyone related to the deceased as closely as a cousin, on either the male or female side, who fails to prosecute as he ought, or fails to proclaim to the perpetrator his banishment, would, in the first place, have the pollution and the enmity of the gods fall on himself—for the enmity of the law urges, the omen on. Then, in the second place, he is to be liable to prosecution by anyone who is willing to seek retribution on behalf of the deceased. He who is willing to seek retribution should carry out everything, in the way of attention to rites of lustration for these matters and whatever other things the god prescribes for these conventional proceedings, and, after proclaiming the warning, should proceed to compel the perpetrator to submit to the lawful execution of the judicial penalty.

That these things should be accompanied by certain prayers and sacrifices, to certain gods who make such matters their concern, so that murders won't occur in cities, would be easy for the lawgiver to show. But which are the gods, and what manner of initiating such trials would be most correct with a view to the divine, are matters that will be legislated by the Guardians of the Laws, together with the Interpreters, the Diviners, and the god, and thus they shall initiate these trials.

The judges in these trials are to be the same as were said to have sovereign judgment over those who plunder the temples. He who is convicted is to be given the death penalty, and he is not to be buried in the country of the one who suffered, in order to show he is not forgiven, as well as with a view to the impiety. If he flees and isn't willing to stand trial, let him remain in perpetual flight. If one of these people should set foot in the country of the man who was murdered, the first member of the deceased's household or the first citizen who comes across him, should kill him with impunity, or bind him and hand him over to be killed by the magistrates who judged the trial. He who is prosecuting should at once demand guarantees from the one he's prosecuting, and the latter should present guarantors who are judged substantial by the judicial magistracy in charge of these matters—he should present three substantial guarantors, who guarantee his presence at the trial. If someone is either unwilling or unable to do so, the magistracy is to take him, guard him in bonds, and present him for judgment at the trial. If someone didn't kill with his own hands, but planned death for another, and after having killed by the planning and plotting is dwelling in the city as one responsible for the murder, and impure in his soul, let the same judicial proceedings be followed in these cases, except for the guarantee. If the man is convicted, he is to be allowed his own tomb, but in other aspects the same things are to happen to him as were described for the previous case. These same things are to apply to strangers in relation to strangers, and to city dwellers and strangers in relation to one another, and again to slaves in relation to slaves, whether the murder be by one's own hands or by plotting—except for the guarantee. As regards this, those who kill with their own hands must give guarantees, as was said, but he who makes the public accusation of murder should in these cases at the same time demand guarantees. If a slave should voluntarily kill a free man and be convicted at a trial, whether it be with his own hands or by planning, the common executioner of the city should take him near the memorial marker of the deceased, to a spot from where he can see the tomb, and whip him as many times as the one prosecuting prescribes; if the murderer is still alive after the beating, he is to put him to death. If someone should kill a slave who was doing no injustice, out of fear lest he inform about his shameful and wicked deeds, or for some other such reason, then, just as he would have submitted to judicial proceedings for murder if he had killed a citizen, so let him submit to the same things for the death of such a slave.

If there should come to pass cases about which it is terrible and is no way pleasing even to legislate, but which it is impossible not to legislate for—voluntary and wholly unjust murders of kinsmen, that take place either by one's own hands or through plotting, and which occur for the most part in cities with bad organization and rearing, but which presumably would also occur in some way in a country where someone wouldn't ever expect them—the account that was uttered a little while ago should be restated again, in case someone who hears us might become better able, on account of such things, to refrain voluntarily from murders that are in every way the most impious. For indeed the myth, or argument, or whatever it ought to be called, has been stated clearly, as it has come down from ancient priests:

It is to the effect that watchful Justice, the avenger of the blood of kinsmen, uses the law mentioned just now, and ordains for the perpetrator of such a deed that he must necessarily suffer the very same things he has perpetrated. If someone -ever kills his father, he must endure to suffer violently this same thing at the hands of his children at some time; if he should kill his mother, it is necessary that he himself be born partaking of female nature, and having become such, must at a later time depart life at the hands of the offspring. For there is no other purification for the shared polluted blood, nor is the pollution willing to be washed away, until the soul that perpetrated the deed pays for murder with murder, like for like, and thus, by appeasing, lays to rest the spiritedness of the entire family.

These things should restrain someone who fears such retributions from the gods; but if some should be overtaken by such a miserable condition that they dare voluntarily, with forethought, to take the soul from the body of father, mother, brothers, or children, the law of the mortal lawgiver will legislate about such persons as follows:

The warnings about staying away from places customarily proscribed, and the guarantees, are to be the same as those stated for the earlier cases. If someone is convicted of such a murder, of having killed one of these, the magistrates who are servants of the judges shall kill him; then they are to throw him down naked at a specified crossroads outside the city and all the magistrates, on behalf of the whole city, are each to bring a stone and throw it at the head of the corpse, to remove the impiety from the whole city. After this they are to carry him to the borders of the country and cast him out unburied, according to law.

But what of one who kills the person that is most of all his own, and is said to be dearest to him—what should he suffer? I'm speaking of one who kills himself, violently robbing his Fate-allotted share, when he isn't ordered to do so by the city's judicial decree, nor compelled by some terribly painful and inescapable bad luck that's befallen him, and hasn't been allotted some baffling shame that he can't live with, but out of lack of effort and unmanly cowardice inflicts an unjust judicial penalty upon himself.

In other respects the god knows what the legal conventions of purifications and burials ought to be in this case, and the nearest of kin should inquire about them with the Interpreters and also with the laws concerning these matters, and then act as these prescribe. But the tombs for those destroyed in this way should, in the first place, be off by themselves without a single companion tomb; then they should be buried without any fame, in uncultivated and nameless boundary regions of the twelve districts, without tablets or name markers indicating the tombs.

If a beast of burden or any other living thing should murder someone, except in the case where it does such a thing when competing for the prizes established in a public contest, the kinsmen should prosecute the killer for murder, and the judges are to be whichever and as many of the Field Regulators as the next of kin shall ordain. The convicted party they should kill and cast out beyond the borders of the country. If some soulless thing should take away the soul from a human being, except in cases where it's a lightning bolt or some such missile coming from a god, but in the case of any of the other things that may kill someone through his falling upon it or its falling upon him—the next of kin should appoint the closest neighbor to be judge, and thus remove the impious impurity from himself and the whole family. The convicted party they should cast beyond the borders, just as was stated in the case of the class of living things.

If someone has evidently died, and the killer remains uncertain and undetected even after they seek him in a way that is not careless, there should be the same warnings as in the other cases, but proclaimed "for the perpetrator of the murder." After the prosecution is successful; they should announce in the marketplace to the killer of so-and-so, who has been convicted of murder, that he is not to set foot in the temples nor in the whole country of the one who has suffered, because, if he should be detected and known, he will be killed and thrown unburied outside the country of the one who has suffered.

Let this then be our one law that stands sovereign in regard to murder, and what's been said until this point is what covers such things. But the cases and circumstances in which the killer would correctly be unpolluted are to be as follows:

If at night he should catch and kill a thief entering his house to steal goods, let him be unpolluted. If he should kill while defending himself against a highwayman, let him be 'unpolluted. If someone should use violence for sexual purposes against a free woman or boy, he may be killed with impunity by the violently outraged party, or the father, or the brothers or sons. If a man should come upon his wedded wife being violently attacked, let him be unpolluted under the law if he kills the violent attacker. If someone should kill somebody while defending his father from death, when his father is doing nothing impious—or his mother, his children, his brothers, or his fellow procreator of children—let him be entirely unpolluted.

Let this be the legislation concerning the living soul's nurture and education—whose presence makes life livable for it and whose absence does the opposite—and concerning the retributions that should follow violent deaths. What concerns the nurture and education of the bodies has also been discussed. Following on these things, one ought to define as well as one can the acts of violence they do to one another involuntarily and voluntarily, showing what they are, how many they are, and what retribution would be appropriate for each to obtain. It's likely that these are the things that it would be correct to legislate next.

Even the lowliest of those who turn to arranging laws would treat wounds and maimings that arise from wounds second after deaths. Now wounds should be distinguished just as murders were distinguished, into those that are involuntary, those that occur because of spirited anger, those that occur because of fear, and those that occur voluntarily out of forethought.

Something like the following preliminary statement should be made about all such cases, to the effect that it's necessary for human beings to establish laws for themselves and live according to laws, or they differ in no way from the beasts that are the most savage in every way. The cause of these things is this, that there is no one among human beings whose nature grows so as to become adequate both to know what is in the interest of human beings as regards a political regime and, knowing this, to be able and willing always to do what is best. For, in the first place, it is difficult to know that the true political art must care not for the private but the common—for the common binds cities together, while the private tears them apart—and that it is in the interest of both the common and the private that the common, rather than the private, be established nobly. Secondly, even if someone should advance sufficiently in the art to know that this is the way these things are by nature, and after this should rule the city without being audited, and as an autocrat, he would never be able to adhere to this conviction and spend his life giving priority to nourishing what is common in the city, while nourishing the private as following after the common; mortal nature will always urge him toward getting more than his share and toward private business, irrationally fleeing pain and pursuing pleasure, and putting both of these before what is more just and better. Creating a darkness within itself, it will completely fill both itself and the whole city with everything bad. Of course, if ever some human being who was born adequate in nature, with a divine dispensation, were able to attain these things, he wouldn't need any laws ruling over him. For no law or order is stronger than knowledge, nor is it right for intelligence to be subordinate, or a slave, to anyone, but it should be ruler over everything, if indeed it is true and really free according to nature. But now, in fact, it is so nowhere or in any way, except to a small extent. That is why one must choose what comes second, order and law—which see and look to most things, but are incapable of seeing everything.

These things have been said for the sake of what follows: we are now going to ordain what someone who wounds or does injury to someone else other than himself ought to suffer or pay.

Of course, it's available to anyone, in regard to anything, to interrupt and correctly ask, "What sort of wounding, inflicted on whom, or how, or when, are you talking about? For each of these has ten thousand varieties, which are very different from one another." Now it's impossible either to turn all of these things, or none of them, over to the judicial courts for judgment. There is indeed one thing, that applies to every case, that must necessarily be turned over to them to judge: whether each of these things happened or not. Then again, to turn over nothing about what penalty should be paid by the one who has been unjust in one of these respects, or what he ought to suffer, and to legislate about everything, small and great, oneself, is almost impossible.

Clinias:: So what is to be said after this?

Athenian Stranger:: This: that some things ought to be turned over to the judicial courts and some things shouldn't be turned over, but one should legislate them oneself.

Clinias:: What then ought to be legislated and what things ought to be given to the judicial courts to judge?

Athenian Stranger:: After these things, it would be most correct to say the following things: in a city in which the judicial courts are wretched and inarticulate, keep hidden their opinions, deliver their judgments in secret, and, what is more terrible than this, when they aren't silent but are full of noise just like a theater, judging each of the orators in turn with shouts of praise and blame, then the whole city is wont to undergo a harsh experience. To be led by some necessity to legislate for such judicial courts is not a lucky thing, but nevertheless, if led by necessity, one ought to turn over to them the authority to fix the penalties in the smallest possible matters, and one should legislate most matters expressly oneself—if someone should ever legislate for such a regime. But in a city in which the judicial courts were set up correctly, insofar as possible, and where those who are going to judge have been well brought up, and tested with complete precision, there it would be correct, good, and noble to turn over to such judges the judgment of most things pertaining to what those who are convicted ought to suffer or pay. In the present situation, we'll incur no blame if we don't legislate for them concerning the greatest and most frequent matters, in regard to which even rather wretchedly educated judges would be able to discern and assign to each fault the value of what is suffered and done. Since we believe those we're legislating for are not the most poorly fitted to become judges of such matters, most ought to be turned over to them. Nonetheless, what we've often said and done in legislating the earlier laws—describing an outline and sketches of retributions, to give examples to the judges of how always to avoid going beyond the bounds of justice—was very correct at that time, and indeed this same thing should be done now, as we return once again to the laws. Our writing about wounding should go as follows:

If someone should in his thought intend to kill somebody dear—except in cases where the law directs him to do so—but only wounds, and is unable to kill, the one who has wounded with this thought in mind is unworthy of pity; he is not to be forgiven any more than if he had killed, and is to be compelled to submit to a judicial trial for murder. Yet out of reverence for his not entirely bad luck, and for the demon, who from pity for him and the person wounded prevented the wound from becoming incurable for the latter, and warded off the accursed luck and outcome for the former—to show gratitude to this demon and not oppose it—the one who did the wounding is to be spared death, and is to be removed to some neighboring city to spend his life, continuing to reap the benefits of all his property. But as for the injury done, if he has done some injury to the person wounded, he must pay the one injured, the value to be set by the judicial court which judged the trial—and the judges are to be those who would have judged the murder case if the man had died from the blow that inflicted the wound. If a child should thus wound his parents from forethought, or a slave his master, death is to be the penalty. And if a brother should thus wound a brother or sister, or a sister a brother or sister, and he be convicted of wounding from forethought, death is to be the penalty. If a wife should wound her own husband with the intention of killing, or a husband his own wife, the person is to go into perpetual exile. If they should have sons or daughters who are still children, the guardians are to take care of the property and look after the children as if they were orphans. If they're grown men, it shall not be necessary for the offspring to take care of the exile, and they are to acquire the property. In the case where someone who has no children falls into such straits, the family relations of the exile as far removed as the children of cousins on both sides, men and women, are to meet together arid, in consultation with the Guardians of the Laws and the Priests, are to appoint a lot holder for this five thousand fortieth household in the city. They should think about this in a way and in terms of an argument that is something like the following: none of the five thousand forty households is the property of the occupier or of his entire family so much as it is the property of the city, in both a public and a private sense. And it is necessary for the city, at least, that the households it owns be as pious and as lucky as they can possibly be. So whenever one of the households is rendered unlucky and at the same time impious, with the result that the owner leaves in it no children, dying a bachelor, or a married man without children, who has been convicted of voluntary murder or of some other fault pertaining to gods or citizens for which death is the penalty expressly stated in the law, or when someone without grown male children has gone into perpetual exile, the house must first be purified and cleansed of this, according to the law. Then, as we said just now, the relatives should meet together with the Guardians of the Laws to look for the family that has the best reputation of those in the city for both virtue and also good luck, and in which there are several children. They should take one from that family and give him to the father and family forebears of the man who has died, as their son, and should name him after them for the sake of the omen; praying that he will become a begetter of children for them, a guardian of the hearth, and a minister of the profane and sacred things with better luck than his father, they should appoint him lot holder according to law, and let the man who was at fault lie nameless and without children or estate, when such disasters overtake a man.

It is likely that not all the beings have a boundary that is contiguous with the boundary of another, but for those in which there is an area between the boundaries, this would lie in the middle of both, stretching in between the boundaries and encountering each of them. And indeed, what takes place out of spiritedness we asserted to be just such a thing, between the involuntary and the voluntary. Let the same hold for wounds that occur because of rage.

If someone is convicted, he is in the first place to pay twice the value of the injury, if the wound turns out to be curable; for incurable wounds he is to pay four times the value. If it’s curable, but casts some great shame and disgrace on the wounded party, he is to pay triple the value. And insofar as someone who wounds somebody injures not only the one who suffers but also the city, by rendering the victim incapable of helping the fatherland against enemies, in this case he is to pay for the injury to the city along with the other penalties. For in addition to his own military services he is to serve for the one who is incapacitated, and carry out the military duties on behalf of that man; or if he fails to do these things let him be subject under the law to prosecution, by anyone who wishes, for failing to perform his military service. The value of the injury, whether double, triple, or quadruple is to be paid, should be determined by the judges who voted on the conviction. If one member of a family should wound another member of the same family, in the same way as this person just discussed, the family and kin as distant as children of cousins on the women's and men's sides, both women and men, should meet together and, after arriving at a judgment, hand over to the natural parents the estimation of the injury. If the estimation is in dispute, those on the male side are to have sovereign authority to make the estimation; if they are unable to do so, they must finally turn the matter over to the Guardians of the Laws. The judges for those offspring who inflict such wounds on their parents must necessarily be men over sixty years of age who have children—not created by adoption, but truly. If someone is convicted, they must decide if such a person ought to die, or suffer something else greater than this or something not much less. None of the perpetrator's family are to serve as judges, not even if one should have lived as long a time as the law has stated. If some slave should wound a free man out of rage, the owner should hand the slave over to the person wounded, to use as he wishes. If he should fail to hand him over, he himself is to cure the injury. If someone accuses the slave and the wounded party of having agreed to contrive what happened, he should dispute the case: if he should fail to win, let him pay three times the value of the injury, but if he should win he shall hold the one who artfully colluded with the slave liable for kidnapping.

He who involuntarily wounds another should pay simply for the injury—for no lawgiver is sufficient to rule over chance—and the judges are to be those who were said to judge in cases of offspring who wound their parents: let them estimate the value of the injury.

All the sufferings we've discussed so far are violent, and the whole class of assault is also violent. So every man, child, and woman ought always to think about such things in the following way:

The elder is to no small degree more venerable than the younger, in the eyes of gods and of human beings who are going to be saved and become happy. It is therefore shameful, and hateful to the gods, to see in the city an assault by a younger man on an elder. And it's reasonable for every young man who is beaten by an old man to endure his rage with a soft spirit, thereby laying up for himself in old age this same honor. So let it be as follows. Every one of us is to evince awe, in deed and word, toward one elder than himself. Whoever exceeds us by twenty years in age, male or female, should be considered as a father or a mother, and care must be taken accordingly: one must always abstain from the entire generation that is capable of having begotten or borne one, for the sake of the gods who preside over childbirth. One should abstain in the same way from a stranger, whether he's lived here from old or is newly arrived. One shouldn't at all dare to chastise such a person with blows, whether one initiates the attack or is defending against it. If someone thinks a stranger should be punished for having licentiously and brazenly struck him, he should seize him and take him before the magistracy of the City Regulators, but should abstain from beating him, so that he will be far from daring ever to strike a native inhabitant. The City Regulators should take him and judge him, paying due regard to the god of strangers; if the stranger then should seem to have struck a native inhabitant unjustly, they are to give the stranger as many blows with the whip as he himself struck, and thus put a stop to the brazenness of strangers. But if he hasn't done an injustice, they are to threaten and blame the one who brought him before them, and dismiss both. If a man of a certain age should strike a man of the same age, or a man more advanced in age than himself but childless—an old man against an old man, or a young man against a young man—let the man defend himself according to nature, without a weapon and using his bare hands. But if a man over forty years of age should dare to fight, whether he initiates it or is on the defensive, he is to be spoken of as boorish, illiberal, and slavish, and it would be fitting if he incurred a degrading judicial penalty.

If someone should become obedient to such admonitions, he would be a docile man. But he who obeys poorly and thinks nothing of the prelude would have a law such as the following waiting for him:

If someone should strike somebody elder than himself by twenty years or more, then, in the first place, the one who comes upon this, if he isn't of the same age or younger than the combatants, must try to separate them or else be a bad man according to law. If he is of the same age or yet younger than the man being beaten, he must defend him as if the one being done the injustice were a brother or a father or a more senior relative. Then, in addition, the one who, as was said, dared to strike an elder must submit to a trial for assault, and if he should be convicted in the trial is to be imprisoned for not less than a year. If in the judges' estimation the time should be longer, let the time the court decides be authoritatively binding. If a stranger or one of the resident aliens should strike someone elder than himself by twenty years or more, the same law concerning help from bystanders is to have the same power. He that loses such a trial, if he's a stranger and not a resident, must pay the judicial penalty of spending two years in prison; if he's a resident alien and has disobeyed the laws he must spend three years in prison—unless in the court's estimation the judicial penalty for him should be a longer period of time. He who was a bystander in any of these cases and failed to give help according to the law must pay a penalty: if he's a member of the highest class, a mina, if of the second, fifty drachmas, if of the third, thirty, and twenty if of the fourth. The judicial court for such cases is to be constituted by the Generals, Rank Commanders, Tribe Commanders, and Cavalry Commanders.

The laws, it is likely, come into being partly for the sake of the worthy human beings, in order to teach them the way in which they might mingle with one another and dwell in friendship, and partly for the sake of those who have shunned education, who employ a certain tough nature and have been in no way softened so as to avoid proceeding to everything bad. It is these who have brought about the words that are going to be uttered. On their account the lawgiver would legislate the laws, from necessity, wishing that the need for them would never arise. For whoever will dare at any time to touch in some violent assault his father or mother, or yet their progenitors, terrified neither by the wrath of the gods above nor by the retributions said to be beneath the earth, but holding in contempt the ancient sayings repeated by everyone, as if he knew things he doesn't know at all, and breaking the law—this man requires some ultimate deterrent. Now death is not the ultimate, and the toils said to await these people in Hades, though they're closer than this to being ultimates, and though they speak very truly, do not succeed as a deterrence for such souls. If they did, there would never be assaults on mothers or daring, impious, attacks on the other progenitors. It is necessary, then, that the punishments here for such things, inflicted on these men while they are living, be no less than those in Hades, insofar as possible. Let what is said after this be as follows:

If someone should dare to strike his father or mother, or their fathers or mothers, and should do so while not afflicted with madness, then, in the first place, one who happens along should help just as in the earlier cases. If a stranger who's a resident alien helps, he is to be invited to take a front seat at the contests, while if he hasn't helped, he is to be exiled perpetually from the country; he who is not a resident alien should receive praise if he helps, and blame if he doesn't help. A slave who has helped is to become a free man, while if he hasn't helped, he is to be beaten a hundred strokes with the whip—by the Market Regulators, if the incident occurred in the marketplace. If it occurred outside the marketplace but in the city, the resident City Regulator will inflict the punishment, while if it occurred somewhere in the fields of the country, it will be inflicted by the Officers of the Field Regulators. If the person who happens along should be some native inhabitant, whether it be child or man or even a woman, everyone must come to the defense, crying out against the impious one. He who fails to come to the defense must according to law bear the curse of Zeus who watches over kinship and fatherhood. If someone should be convicted in a judicial trial for assault on his parents, he must in the first place be perpetually exiled from the city, into the rest of the country, and must avoid all sacred places. If he doesn't avoid them, the Field Regulators are to punish him with blows and entirely as they wish, while if he comes back from exile, he is to be penalized with death. And if someone among the free men should eat with such a man, or drink with him, or partake in common with him in some other such community, or even if he should only touch him in greeting, voluntarily, when encountering him somewhere, he is not to go into any temple, nor into the marketplace, nor into the city as a whole, until he has been purified, believing that he has partaken of accursed luck. But if in disobedience to the law he should illegally pollute the temples and the city, and any of the magistrates should be aware of the fact and doesn't bring to trial such a man, then in the audits this is to be one of the gravest accusations against the magistrate.

If, again, a slave should strike a free man, whether he be a stranger or a member of the city, the bystander is to help or pay a fine according to his class, as has been stated. Those who happen along, together with the one beaten, should tie up the culprit and hand him over to the one who has been done the injustice. The latter shall take him, bind him in fetters, and whip him as much as he wishes, so long as he does no injury to the master, to whom he shall turn him over to be kept according to law. The law should be: Whoever, being a slave, should strike a free man when the magistrates haven't commanded it, should be taken in bonds by his owner from the person beaten, and shouldn't be released until the slave persuades the one who was beaten that he is worthy of living released. The same legal customs are to apply to women in all such relations with one another, and to women in relation to men, and men in relation to women.

## Book X.

Athenian Stranger:: After assaults, let a single legal custom such as the following be pronounced concerning acts of violence in general: no one is to carry or drive away anything belonging to others, or use anything belonging to a neighbor, if he hasn't persuaded the owner. For such behavior has been, is, and will be a source of all the evils that have been mentioned.

Of the evils that are left, the gravest are the unrestrained and insolent things done by the young. These offend the worst when they offend the sacred things, and are especially grave when they offend things that are public as well as hallowed—or are common to a part (being shared by members of a tribe or some other such groups). Second and second-worst is when they offend private sacred things and tombs. Third is when someone is insolent against his parents, apart from the cases discussed earlier. A fourth kind of insolence is when someone, heedless of the rulers, drives or carries away or uses something belonging to them without persuading them. A fifth would be insolence against the political right of each of the citizens, of a sort that calls for judicial penalty. A law should be given to all these in common.

As to temple robbery, what ought to be suffered, whether the robbery takes place violently or by stealth, has been stated in summary fashion. But as regards the ways by which someone may in speech and in deed be insolent toward the gods either by speaking or by acting, what must be suffered should be stated after the exhortation has been laid down. Let the latter be the following:

No one who believes in gods according to the laws has ever voluntarily done an impious deed or let slip an illegal utterance unless he is suffering one of three things: either this, which I just said, he doesn't believe; or, second, he believes they exist but that they do not think about human beings; or, third, he believes they are easily persuaded if they are brought sacrifices and prayers.

Clinias:: So what should we do or even say to them?

Athenian Stranger:: My good man, let us first hearken to what I divine they say in a joking way, out of contempt for us.

Clinias:: What's that?

Athenian Stranger:: These are the things they would probably say, in a jocular speech:

"O Athenian stranger, and Lacedaimonian, and Knossian, the things you say are true. For some of us don't believe in the gods at all, and others believe them to be as you say. Now we demand, just as you demanded in regard to the laws, that before you direct harsh threats at us, you try to persuade and teach that there are gods, adducing adequate evidence, and that they are too good to be turned aside and beguiled from what is just by certain gifts. For as it is now, since we hear these and other such things from those who are said to be best among the poets, orators, diviners, and priests, as well as from myriads upon myriads of others, most of us don't turn to refraining from doing unjust things, but rather try to make healing amends after we've done them. From lawgivers who are claiming to be not savage but gentle, we demand that persuasion be used on us first. And perhaps we would be persuaded by you, even if you didn't speak much better than the others about the existence of the gods, so long as you spoke better as regards the truth. But do try, if we're saying something well measured, to say what we're asking for."

Clinias:: Well, doesn’t it seem easy, stranger, to say that the gods exist and to be speaking the truth?

Athenian Stranger:: How?

Clinias:: First, there’s the earth, the sun, the stars, and all things, and this beautiful orderliness of the seasons, divided into years and months. Then there’s the fact that all Greeks and barbarians believe the gods exist.

Athenian Stranger:: I am afraid, at least, my blessed man—for I would never say that I am in awe—lest the wicked will somehow be contemptuous of us. For you don’t know about what is responsible for our difference with them, but believe that it’s only because of a lack of self-restraint in the face of pleasures and desires that their souls are urged on to an impious life.

Clinias:: But what in addition to these things would be responsible, stranger?

Athenian Stranger:: Something you would hardly know of because you live entirely out of it, and which would escape your notice.

Clinias:: What is this you’re now explaining?

Athenian Stranger:: A certain very harsh lack of learning, that seems to be the greatest prudence.

Clinias:: How do you mean?

Athenian Stranger:: Among us there are accounts found in writings, which aren’t among you because of the virtue of the regime, as I understand. These are discussions about the gods, some with certain meters and others without meters. The most ancient discuss how the first nature of heaven and the other things came into being, and then, proceeding on to a point not much after the beginning, they go through how the gods came into being and how they mingled with one another once they had come into being. It’s not easy to pass judgment, in the case of writings so ancient, as to whether they have some other sort of noble or ignoble effect on the hearers, but as regards services and honors toward parents, I at least would never speak of them in praise, either as beneficial or as spoken entirely in accordance with reality. What pertains to the ancients should be left alone and bid good-bye, and spoken of in whatever way is pleasing to the gods; but what pertains to our new and wise men must be accused, insofar as it is responsible for bad things. Now the following is what is done by the arguments of such men: when I and you adduce evidence that the gods exist, bringing forward these very things—sun and moon and stars and earth—as being gods and divine things, those who are convinced by these wise men would say that these things are earth and stones, and incapable of thinking anything about human affairs, however well decked-out they may somehow be, with arguments that make them plausible.

Clinias:: You happen to have uttered an argument that is indeed difficult, stranger, even if it were alone and single; but now when there are very many arguments, it is still more difficult.

Athenian Stranger:: So what then? What do we say? What must we do? Will we pronounce a defense as if someone were accusing us before impious human beings, who say to those defending themselves in regard to the legislation that we are doing terrible things when we legislate that gods exist? Or shall we let it go, bidding good-bye and turning back again to the laws, lest our prelude become longer than the laws? For the argument once unfolded would not be short, if we would use arguments of due measure and demonstrate to those desiring to be impious the things they indicated had to be discussed, and if we would convert him to fear, and then, having created a sense of repugnance, would legislate whatever was fitting after these things.

Clinias:: But stranger, we've often—considering the short time anyway—said this very thing, that in the present circumstances there's no need to honor brevity of speech over length. For there's no one, as the saying goes, in pressing pursuit of us. Indeed, to show that we choose the shorter in preference to the best would be ridiculous and petty. Moreover, it makes no small difference, if somehow or other there is some persuasiveness in our arguments that the gods exist and are good, honoring justice differently from human beings. For this would be just about our noblest and best prelude on behalf of all the laws. So without feeling repugnance or being in a hurry, mustering whatever capability we have for making such arguments persuasive, let's go through the arguments in as adequate a way as we can, holding back nothing.

Athenian Stranger:: Prayer is what it seems to me your present speech is calling for, so zealous are you, and eager in spirit! There's no room for further delay in speaking. Come then, how would someone speak without spirited anger about the gods, and that they do exist? For it's inevitable that we be harshly disposed toward, and hate, those who have been and are now responsible for our getting involved in these arguments: they refuse to believe the myths which they heard from their nurses and mothers since the time they were still young children being nourished on milk, hearing them spoken as if in incantations, playfully and seriously. And they heard them in prayers that go with sacrifices, and saw them accompanied by spectacles, executed during the sacrifices, that are most pleasant for the young man, at least, to see and hear. They saw their own parents evincing the greatest seriousness, on behalf of themselves and them, as they carried on a dialogue in prayers and supplications with gods who were assumed to exist in the highest degree. At the rising of the sun and moon, and at their settings, they heard of and saw Greeks and all the barbarians, in every sort of disaster and in prosperity, kneeling and prostrating themselves—not as if those things didn't exist, but as if they existed to the highest degree and gave no hint that they are not gods. Those who now compel us to say what we're saying are people who have contempt for all these things, and not on account of a single adequate argument—as would be affirmed by those who possess even a small amount of intelligence; how could someone use gentle arguments to admonish, and at the same time to teach, these people about gods, and first that they exist? Yet it must be dared. For it shouldn't be that both are maddened at the same time, at least—some of us by gluttony for pleasure, and others by spirited anger at such men. Let some such preliminary speech as the following proceed, without spiritedness, for those who are thus corrupted in their thinking, and let's speak gently, quenching spiritedness, as if we were carrying on a dialogue with one such man:

"Lad, you are young, and the passage of time will make you alter many of the opinions you now hold, and exchange them for their opposites. So wait until then to judge the greatest things—and the greatest thing, which you now consider nothing, is thinking correctly about the gods and thus living nobly or not. If I first reminded you of one great thing about them, I would never be asserting a falsehood, and it is to the following effect: neither you alone nor your friends are the first and foremost to have this opinion about gods, but there always arise people, sometimes more, sometimes less, who have this illness. And having encountered many of them, I would declare to you the following: no one has ever adopted from his youth this opinion about the gods, that they don’t exist, and continued until old age remaining in this frame of mind.

“The other two states of mind do remain (not for many people, but they do remain for some)—that the gods exist, but think nothing of human things, and the one after this, that they do think about them, but are easily persuaded by sacrifices and prayers. If you should be persuaded by me, you’ll wait until you have a doctrine about these matters that has become as clear as it can be, and meanwhile you’ll investigate whether things are thus or are otherwise, and will inquire from others, and especially from the lawgiver. During this time you would not dare to do anything impious concerning the gods. The one who establishes the laws for you should try, now and in the future, to teach how these very things are.”

Clinias:: What’s been said until now at least, stranger, is very fine with us.

Athenian Stranger:: In every way, Megillus and Kleinias. But without our realizing it, we’ve fallen into an amazing argument!

Clinias:: Which one do you mean?

Athenian Stranger:: The one that in the opinion of many is the wisest of all arguments.

Clinias:: Explain yet more clearly.

Athenian Stranger:: Presumably, certain people say that all affairs come into being, have come into being, and will come into being, by nature, by art, and through chance.

Clinias:: Isn’t that finely expressed?

Athenian Stranger:: It’s likely, at any rate, that men who are presumably wise speak correctly. Let’s follow them, anyway, and investigate whatever it is that those people over there happen to think.

Clinias:: By all means.

Athenian Stranger:: It's likely, they assert, that the greatest of them, and the finest, are produced by nature and chance, and the smaller by art, which, taking from nature the genesis of the greatest and first deeds, molds and constructs all the smaller things which we all call artificial.

Clinias:: How do you mean?

Athenian Stranger:: I'll express it still more clearly, as follows. Fire, water, earth, and air are all by nature and by chance, they claim, and none of these is by art; and the bodies that come after these—of the earth, sun, moon, and stars—came into being through these, which are beings completely without soul. They are each carried about by the chance of the power each has; when they fall together with things that somehow harmonize with what is proper to them—hot things with cold things, or dry things in relation to wet things, and soft things in relation to hard things, and all things that are mixed together, by the mixing of opposites according to chance, that arises out of necessity—then in this way and according to these means, the whole heaven and all things in heaven, and also the animals and all the plants have come into being, once all the seasons had come into being out of these things: not through intelligence they claim, nor through some god, nor through art, but, as we're saying, by nature and chance. Art is later, coming into being later from these; being itself mortal and from mortals, it later has brought into being certain playthings that don't partake much of truth, but are certain images that are akin to one another—such as the things brought into being by painting and music and whatever arts are fellow workers with these. But some of the arts do bring into being something serious, and these are the ones that have their power in common with nature—such as, again, medicine and farming and gymnastics. And indeed, as for the political art, they claim that there is a small portion of it that is in partnership with nature, but that most of it is by art; and thus the whole of legislation, whose assumptions are not true, is not by nature but by art.

Clinias:: How do you mean?

Athenian Stranger:: The gods, blessed one, are what these people first assert to exist by art—not by nature but by certain legal conventions, and these differ from one place to another, depending on how each group agreed among themselves when they laid down their laws. They claim that the noble things by nature are different from those by convention, and that the just things are not at all by nature, but that men are continually disputing with one another and are always changing these things, and whatever changes they've made at a given time are each at that time authoritative, having come into being by art and by the legal conventions, but not, surely, by any nature.

All these things, friends, are put forward by men considered wise by young people, private men who write in prose and poets, who explain that what is most just is whatever allows someone to triumph by force. This is the source of the impieties the young people contract, to the effect that the gods are not such as the law commands they must be conceived; by means of these things civil strife is instigated, by those who draw people toward the way of life that is correct according to nature—which is, in truth, to live dominating the rest and not to be a slave to others according to legal convention.

Clinias:: What an argument you've gone through, stranger! And what ruin for young people, in the public life of cities and in private homes!

Athenian Stranger:: What you say is indeed true, Kleinias. So what do you think the lawgiver ought to do, seeing how these men have been preparing in this way for a long time? Is he merely to stand up in the city and threaten all the human beings, that if they don’t affirm that the gods exist and don’t conform their thoughts to the opinion that they are such as the law affirms—and about noble things and just things and all the greatest matters, the same speech, and about whatever aims at virtue and vice, that it is necessary to act in these respects while thinking in the way the lawgiver has instructed in writing—is he to say that whoever does not show himself obedient to the laws must in one case die, and in another case be punished with blows and prison, and in another case with dishonors, or, in other cases, with poverty and exile? Is he to present no persuasion for the human beings, mixed in with his speeches as he gives them laws, so as to make them as tame as he can?

Clinias:: Not at all, stranger! If there happens to be even some small bit of persuasion as regards such matters, the lawgiver of even slight merit should in no way grow faint, but should lend his whole voice, as they say, in assistance to the ancient law’s argument to the effect that there are gods, and the rest that you just now went through; indeed, he should take the field on behalf of law itself and art, showing that they are by nature, or by something not inferior to nature, if they are offspring of intelligence—according to the correct argument, which you appear to me to be pronouncing, and on the basis of which I put my trust in you now.

Athenian Stranger:: O most eager-spirited Kleinias! What now? Isn’t it difficult to follow arguments of this kind spoken before crowds, and, in addition, aren’t they of enormous length?

Clinias:: What, stranger? About drunkenness and music we put up with ourselves talking at such length, and we're not going to put up with it when it comes to gods and such matters? Besides, at least for legislation that is to proceed with prudence, it is presumably a very great help when the prescriptions pertaining to the laws are set down in writing and are entirely stable, because they provide for all time an opportunity for questioning; as a result, if they're difficult to listen to at the beginning, there's no need to fear, so long as the slow learner can go and examine them often. Even if they're lengthy, if the arguments are beneficial, it doesn't appear to me, at least, to be at all reasonable or pious for any man to fail, on this account, to help these arguments as best he can.

Megillus:: What Kleinias says seems excellent to me, stranger.

Athenian Stranger:: And certainly, Megillus, one ought to do as he says. Of course, if such arguments weren't spread about among the whole of humanity, so to speak, there'd be no need for arguments in defense of the gods' existence. But now they're necessary. When the greatest laws are being undermined by bad human beings, who is a more appropriate defender than the lawgiver?

Megillus:: Nobody is.

Athenian Stranger:: But now you tell me again, Kleinias (for you must share in the arguments): the one saying these things ventures to hold that fire, water, earth, and air are the first of all things, and ventures to name these very things "nature," and to say that soul is something that comes later, out of these things. But it's likely that he doesn't "venture," but really makes these things manifest to us in his argument.

Clinias:: By all means.

Athenian Stranger:: Well then, in the name of Zeus! Haven't we discovered something like a source of the mindless opinion of those human beings who have at any time engaged in investigations into nature? Consider and investigate the whole argument. For it would make no small difference if those who handle impious arguments, and initiate others into them, were evidently using the arguments not well, but erroneously. And such seems to me to be the case.

Clinias:: Well spoken, but try to explain how this is.

Athenian Stranger:: It's likely that rather unfamiliar arguments are going to have to be handled now.

Clinias:: There shouldn't be hesitation, stranger. For I understand that you think it's necessary to go outside the realm of legislation, if we are to handle such arguments. But if there is no other way whatsoever, except this, by which there can be consonant agreement that what are now called gods by legal convention are correctly so called, then this is the way the discussion must proceed, you amazing man!

Athenian Stranger:: It's likely, then, that at this point I may present something like the following rather unfamiliar argument. The arguments which have shaped the soul of the impious have asserted that what is in fact the first cause of the coming into being and passing away of all things is not first, but has come into being later, and that what in fact comes later comes earlier. That is why they have fallen into error concerning the real existence of gods.

Clinias:: I don't yet understand.

Athenian Stranger:: It is soul, comrade, that almost all of them have dared to misunderstand: what sort of thing it happens to be, what power it has, and, among other things about it, how it comes into being—how it is among the first things, how it comes into being before all bodies, and how it is, more than anything, the ruling cause of their change and of all their reordering. And if these things are so, isn't it necessarily the case that the things akin to soul would come into being before the things belonging to body, since it is elder than body?

Clinias:: Necessarily.

Athenian Stranger:: Opinion, then, and supervision, intelligence, art, and law would be prior to hard things, soft things, heavy things, and light things. And, indeed, the great and first deeds and actions would be those of art, since they're among the first things, while the things that are by nature, and nature, which they incorrectly name in this way, would be later and would have as their ruling causes art and intelligence.

Clinias:: How do you mean "incorrectly"?

Athenian Stranger:: Nature, they mean to say, is the coming into being connected with the first things. But if soul is going to appear first, and not fire or air, and it's soul that has come into being among the first things, it would be most correct, almost, to say that it is especially by nature. These things are so if someone should demonstrate that soul is a being elder than body, but otherwise not at all.

Clinias:: What you say is very true.

Athenian Stranger:: So, after these things, shall we address ourselves to this very task?

Clinias:: But of course.

Athenian Stranger:: Let us be on our guard against an argument that is wily in every way, lest with its youthful vigor it cajole us, who are elderly, and get away, making us laughable, and seem like people who reached for great things but failed to obtain even the smaller. Consider therefore: suppose it was necessary for us, being three, to cross a very swift flowing river, and I, happening to be the youngest of us and experienced in many currents, said that I ought to try it first by myself, leaving you in safety and investigating whether it is fordable for more elderly men such as you, or just how it is. If it appeared to be, I would then call to you and help you across with my experience, while if it were unfordable for you, the risk would be mine. I would have seemed to speak in a well-measured way. Now the argument coming up is rather swift and perhaps almost unfordable for your strength. Lest it create in you a dizziness and whirling, sweep you away by asking unfamiliar questions, and engender an unpleasant unsightliness and unseemliness, it seems to me that I ought now to proceed thus: first I should question myself, while you listen in safety, and then after this I again should answer myself, and go through the entire argument this way, until what pertains to soul is completed and it has been demonstrated that soul is prior to body.

Clinias:: You seem to us, stranger, to have spoken in an excellent way. Do as you suggest.

Athenian Stranger:: Come then, if ever we should invoke the aid of a god, it’s now that this should happen—at the demonstration of their own existence let their aid be invoked in all seriousness—and holding on as if to some safe cable, let’s set forth into the present argument.

If I am examined about such matters through some such questions as the following, it appears to me to be safest to answer as follows. When someone should ask, “O stranger, do all things stand still then, and is there nothing in motion? Or is the case entirely the opposite to this? Or are some of the things in motion, and some remaining still?”—”Some things are presumably in motion,” I will declare, “and some things remain still.”—”And then isn’t it in a certain place that the standing things stand and the things in motion move?"—"How could it be otherwise?"—"And some, at least, would presumably do this in one location, but some in many."—"Are you speaking of those that obtain the power of things that stand still in the middle," we will declare, "and thus move in one place, just as the circumference turns in circles that are said to stand still?"—"Yes."—"And we learn, at any rate, that in this rotation such motion carries the largest and smallest circles around together, distributing itself proportionally to the small and the large, being less and more according to proportion. That is how it has become a source of all wonders, conveying the large and small circle at the same time, at slow and fast speeds that are in agreement, an effect that someone would expect to be impossible."—"What you say is very true."—"And in speaking of things that move in many locations, at least, you appear to me to refer to whatever moves in a course by which it always changes to another place: sometimes they possess one axis of support, and sometimes more, because they roll. Each time they encounter each other, if they encounter things that stand still> they are split, and if they encounter the others, coming from opposite directions, they coalesce and become one, in the middle and in between such things."—"Now I do say that these things are this way, as you are saying."—"And when things coalesce there is growth, while when they are separated, then there is decay, so long as the established character of each thing lasts; if it doesn't last, both processes are destructive. Now the coming into being of all things takes place when what experience occurs? Clearly, when the original cause, obtaining growth, proceeds to the second transformation, and from this to the next, and, when it arrives at the third, it allows of perception by perceivers. By this transformation and change everything comes into being. And it is really in being, so long as it lasts, but when it is transformed into another character, it is completely destroyed."

So then haven't we enumerated in forms all motions, except, friends, for two?

Clinias:: Which two?

Athenian Stranger:: Those two, my good man, for the sake of which just about our entire investigation is now taking place.

Clinias:: Speak more clearly.

Athenian Stranger:: Presumably it was for the sake of soul?

Clinias:: Certainly.

Athenian Stranger:: Let there be a motion that is capable of moving others, but incapable of moving itself, and that is always one; and let there be another, that is always capable of moving itself as well as others, in coalescences and separations, growths and the opposite, generations and destructions—another one motion among all the motions.

Clinias:: Let it be so.

Athenian Stranger:: So then the one that always moves another and is transformed by another we will set down as the ninth, and the one that moves itself as well as others, in harmony with all actions and all experiences, and which is called the real transformation and motion of all the beings, this we will call just about the tenth.

Clinias:: By all means.

Athenian Stranger:: Which of our roughly ten motions would we most correctly judge to be the strongest of all and especially active?

Clinias:: Presumably it’s necessary to declare that the one capable of moving itself differs ten thousand-fold, and that all the others are later.

Athenian Stranger:: Well spoken. So then shouldn’t one or even two of our statements just now that were incorrect, be changed?

Clinias:: Which do you claim are so?

Athenian Stranger:: What was said about the tenth was pretty incorrect.

Clinias:: How?

Athenian Stranger:: It is first, in generation and in strength, according to reason. And the one we have after this is second to this, though it was just said, strangely, to be ninth.

Clinias:: What do you mean?

Athenian Stranger:: The following. When we always have one thing transforming another, and this another, will one of such transformations ever be first? How will that which is set in motion by another ever be first of the things that are altered? It’s impossible. But when there’s something that, having moved itself, alters another, and that other another, and thus thousands upon tens of thousands of things moved come into being, what will be a ruling cause of all their motion other than the transformation of what has moved itself?

Clinias:: What you’ve said is very fine, and there ought to be agreement to these things.

Athenian Stranger:: Let us go on to speak in the following way, and again answer ourselves. If somehow all the things that have come into being should stand still, as most of those men dare to say, which then of the motions mentioned would necessarily come into being first among them? Doubtless, the motion that moves itself. For it would never be changed by another before it, there being no prior change among them. Therefore we will assert that the motion which moves itself, since it is the ruling cause of all motions, as well as the first to have come into being among things standing still and the first to exist among things moving, is necessarily the eldest and the strongest transformation of all, while the motion that is altered by another and moves others is second.

Clinias:: What you say is very true.

Athenian Stranger:: Now that we're at this point in the argument, let's answer the following.

Clinias:: What?

Athenian Stranger:: If we should see that this had come into being somewhere, in something composed of earth, or of water, or in something having the form of fire—whether separated or mixed—what then will we ever claim is the condition of such a thing?

Clinias:: Would you be asking me if we'll speak of it as alive, when it moves itself?

Athenian Stranger:: Yes.

Clinias:: Alive. How could it not be?

Athenian Stranger:: What then? When we see soul in certain things, do we say anything other than this same thing? Shouldn't it be agreed that they're alive?

Clinias:: Nothing else.

Athenian Stranger:: Hold it, in the name of Zeus! Wouldn't you be willing to think about each thing in three ways?

Clinias:: What do you mean?

Athenian Stranger:: One is the being, one is the definition of the being, and one is the name. And indeed there are two questions about every being.

Clinias:: How two?

Athenian Stranger:: Each of us sometimes presents the name itself and seeks the definition, and sometimes, again, presents the definition itself and asks for the name. So do we mean, then, something like the following here?

Clinias:: Which?

Athenian Stranger:: There is presumably a division into two in other things and also in number. The name for this in number is “even,” and the definition is, “a number divisible into two equal parts.”

Clinias:: Yes.

Athenian Stranger:: It’s such a thing that I’m explaining. Aren’t we speaking of the same thing in either case, whether we are asked about the definition, and give the name, or asked about the name, and give the definition? By the name, “even,” and by the definition “number divisible in two,” aren’t we speaking of the same being?

Clinias:: In every way.

Athenian Stranger:: Now what is the definition of this thing to which the name “soul” is given? Do we have another besides what was just now said, “the motion capable of moving itself”?

Clinias:: Do you claim that the definition, “to move itself,” belongs to the same being as that to which we all give the name “soul”?

Athenian Stranger:: That’s what I claim, at least. And if this is so, are we yet lacking an adequate demonstration that soul is the same being as that which is the first generation and motion of the things that exist, that have come into being, and that will be, and of all the opposites to these, since it has come to sight as the cause of all transformation and motion in all things?

Clinias:: No, but it has been very adequately demonstrated that soul is the eldest of all things, having come into being as the ruling cause of motion.

Athenian Stranger:: And isn't the motion that comes into being in one thing on account of another, but that never allows anything to move itself in itself, second—or as many numbers down as someone would wish to count, being really a transformation of soulless body?

Clinias:: Correctly spoken.

Athenian Stranger:: So then we would have spoken correctly, authoritatively, very truly, and most perfectly, when we said that for us soul has come into being prior to body, and that body is second and later, being ruled, while soul rules, according to nature.

Clinias:: That is indeed very true.

Athenian Stranger:: Now we of course remember what we agreed to earlier, that if soul should be evidently elder than body, then the things pertaining to soul would be elder than the things pertaining to the body.

Clinias:: By all means.

Athenian Stranger:: Temperaments, then, and dispositions, wishes, calculations, true opinions, supervisions, and memories would have come into being prior to lengths of bodies, widths, depths, and strength—if, indeed, soul came into being prior to body.

Clinias:: Necessarily.

Athenian Stranger:: Well now, after this, isn't it necessary to agree that soul is the cause of things good and bad, noble and shameful, just and unjust, and of all the opposites, if indeed we are going to set it down as the cause of all things?

Clinias:: How could it not be?

Athenian Stranger:: Isn’t it also necessary to assert that since soul manages and resides in all things that are in motion everywhere, it also manages heaven?

Clinias:: But of course.

Athenian Stranger:: One or several? Several; I will answer for both of you. Presumably we should assume no less than two, anyway—one that does good, and another capable of doing the opposite.

Clinias:: What you’ve said is surely correct.

Athenian Stranger:: So be it. Soul then drives all things in heaven, on earth, and in the sea through its motions—which are named wishing, investigating, supervising, deliberating, opining correctly and falsely, rejoicing, being pained, being bold, being fearful, hating, and desiring—and through all the motions that are akin to these or primary; these take over the secondary motions of bodies and drive all things to growth and decay, separation and coalescence, and to what follows these—heat, cold, heaviness, lightness, hard and soft, light and dark, bitter and sweet; soul makes use of all these and, every time it takes as a helper Intelligence—god, in the correct sense, for the gods—it guides all things toward what is correct and happy, while when it associates with lack of intelligence it produces in all things just the opposite to these. Are we to set down these things as being so, or are we still in doubt lest it is somehow otherwise?

Clinias:: Not at all.

Athenian Stranger:: Then which kind of soul are we to assert has become master of heaven and earth and of the whole orbit? The one full of prudence and virtue, or the one that possesses neither? Do you wish us to answer these questions as follows?

Clinias:: How?

Athenian Stranger:: If, you amazing man (we should declare), the entire path and motion of heaven and of all the beings in it has the same nature as the motion, revolution, and calculations of Intelligence, and proceeds in a kindred way, then it is clear that one ought to affirm that the best soul supervises the entire cosmos and drives it along such a path as that.

Clinias:: Correctly spoken.

Athenian Stranger:: But the bad soul, if they move in a mad and disordered way.

Clinias:: These things are also correct.

Athenian Stranger:: So what nature does the motion of Intelligence possess, then? Now this, friends, is a question that's difficult to answer while speaking in a prudent way. That's why it's just, at this point, for you to take me as a helper in answering.

Clinias:: Well spoken.

Athenian Stranger:: Let's not make our reply by looking straight on, and thereby, as if we were looking at the sun, create night at midday—because we supposed Intelligence were ever visible and adequately knowable by mortal eyes. One can see in more safety by looking at an image of what is being asked about.

Clinias:: How do you mean?

Athenian Stranger:: Let's take as the image that one among those ten motions which Intelligence resembles. Recollecting it for you, I'll make our common reply.

Clinias:: You would say what is most beautiful.

Athenian Stranger:: Do we still remember this much, at least, of what was said earlier: we set it down that of all things, some are in motion and some at rest?

Clinias:: Yes.

Athenian Stranger:: And again, of the things in motion, some move in one place, and some in several.

Clinias:: That is so.

Athenian Stranger:: Now of these two motions, the one that moves always in one place must necessarily move around some center, being an imitation of circular things turned on a lathe, and it must in every way have the greatest possible kinship and resemblance to the revolution of Intelligence.

Clinias:: How do you mean?

Athenian Stranger:: Surely, if we said that moving according to what is the same, in the same way, in the same place, around the same things, toward the same things, and according to one proportion and order characterized both Intelligence and the motion that moves in one place—speaking of them as images of the motions of a sphere turned on a lathe—we'd never appear to be poor craftsmen of beautiful images in speech.

Clinias:: What you say is very correct.

Athenian Stranger:: On the other hand, wouldn't the motion that never moves the same, nor according to what is the same, nor in the same place, nor around the same things, nor toward the same things, nor in one place, nor in regularity, or order, or some proportion, be akin to complete lack of Intelligence?

Clinias:: It would, most truly.

Athenian Stranger:: Now, indeed, it's no longer difficult to say explicitly that, since soul is what drives everything around for us, it ought to be affirmed that the revolution of heaven is necessarily driven around under the supervision and ordering of either the best soul or the opposite.

Clinias:: But stranger, from what has now been said at any rate, it isn't pious to say anything other than that the soul—whether it be one or several—that has every virtue drives things around!

Athenian Stranger:: Kleinias, you've attended to the arguments in a very fine way. But attend also to this.

Clinias:: To what?

Athenian Stranger:: If indeed sun and moon and the other stars are all driven around by soul, isn't each one of them?

Clinias:: But of course.

Athenian Stranger:: Let's take the case of one and make the arguments, which will then seem, to us, to apply harmoniously to all the stars.

Clinias:: Which one?

Athenian Stranger:: In the case of the sun, every human being sees the body, but no one the soul. And the same holds for the soul of any other living body, either while it's alive or when it's dying. It is very likely, rather, that this entire class of things grows by nature all around us, imperceivable through any of the bodily senses, but intelligible through intelligence alone. Let us, indeed, use intelligence and thought to grasp something of the following sort concerning it.

Clinias:: What?

Athenian Stranger:: If soul does drive the sun around, we will hardly be wide of the mark if we say it does this in one of three ways.

Clinias:: Which ways?

Athenian Stranger:: Either it resides within this spherical-appearing body and conducts it, being such, everywhere, just as our soul carries us around everywhere; or it provides itself with some outside body of fire or some kind of air, as the account of some people has it, and pushes the body with bodily force; or, third, being itself without body, it possesses certain other exceedingly amazing powers, and exercises guidance.

Clinias:: Yes: this is necessary, that soul drives all things by doing some one, at least, of these things.

Athenian Stranger:: Now hold it right there. This soul, whether it carries light to all of us by being in the chariot of the sun, or by acting from the outside, or however and in whatever way it does it, ought to be held to be a god by every man. Or how should it be?

Clinias:: Yes—at least, I suppose, by every man who hasn't arrived at the ultimate in lack of intelligence!

Athenian Stranger:: And with regard to all the stars, and the moon, the years, months, and all the seasons, what other account will we give except this same one, to the effect that since soul or souls are evidently the causes of all these things, and souls good with respect to every virtue, we will declare that they are gods—whether they order the entire heaven by existing within bodies, as living beings, or in whatever way and however they do it? Is there anyone who will agree to these things and maintain that all things are not full of gods?

Clinias:: There is no one so bereft of sense, stranger.

Athenian Stranger:: Then let's state terms to the one who didn't believe in gods earlier, Megillus and Kleinias, and be done with him.

Clinias:: What terms?

Athenian Stranger:: Either to teach us how we aren't speaking correctly when we set down soul as the primal generation of all things, and whatever else we said followed from this, or, if he's not able to speak better than us, to believe us and live believing in gods for the rest of his life. So let's see whether what we've said to those who don't believe in gods—showing that there are gods—is sufficient at this point, or whether it is lacking.

Clinias:: It is the least lacking of all, stranger!

Athenian Stranger:: Then let our arguments with these people be concluded. But the one who does believe the gods exist, and that they don’t think about human affairs, must be persuaded.

“Best of men,” let us declare, “the fact that you believe in gods probably indicates some kinship with the divine that draws you to what is of a like nature, to honor and believe in its existence. But the private and public fortunes of bad and unjust human beings, not happy in truth, but very happy according to mistaken opinions, draw you toward impiety by the way in which they’re sung about through incorrect Muses and in all sorts of accounts. Or perhaps you see human beings approaching the end of old age, leaving behind children of children in the highest honors, and you are now disturbed when you see in all these cases—either by hearing of it or by seeing it all yourself—that there are some who have partaken of many terrible impieties and by means of these very things have risen from low positions to tyrannies and the highest stations. Then, on account of all such things, since you are obviously unwilling, because of kinship, to blame the gods as being responsible for such things, you are drawn by ill reasoning and an incapacity to hold the gods in contempt to the condition you have now come to: it is your opinion that they exist, but that they despise and don’t care about human affairs. In order, therefore, to prevent your present belief from impelling you toward an even graver condition of impiety, let’s try, if somehow we can possibly exorcise it by arguments when it approaches, to connect the next argument to the one we went through from the beginning against the person who didn’t believe in gods at all, making use of the latter in the present circumstances.” But you, Kleinias and Megillus, take the part of the young man in answering, just as you did in the previous arguments; if something troubling comes up in the arguments, I’ll take over from you two and ford the river as I did just now.

Clinias:: What you say is correct. You do these things, in this way, and we’ll do our best to do what you say.

Athenian Stranger:: But there’d probably be no difficulty in demonstrating to this fellow, at least, that the gods supervise the small matters not less, but more, than the especially big matters. For presumably he heard and was present at the things that were said just now, to the effect that since they are good, at least, with respect to every virtue, they possess, as very proper to them, the supervisory care of all things.

Clinias:: He certainly heard.

Athenian Stranger:: After this let them join in examining what virtue of the gods was referred to when we agreed they were good. Come, do we assert that being moderate and possessing Intelligence belong to virtue, and the opposites to vice?

Clinias:: We do assert that.

Athenian Stranger:: What then? That courage belongs to virtue, and cowardice to vice?

Clinias:: By all means.

Athenian Stranger:: And will we assert that some of these are shameful, and some noble?

Clinias:: Necessarily.

Athenian Stranger:: And will we say that whichever of those qualities are low befit us, if anyone, but that the gods partake neither in the great nor the small aspects of such things?

Clinias:: Everyone would agree that these things too are so.

Athenian Stranger:: What then? Will we set down carelessness, idleness, and luxury as belonging to the soul's virtue, or what do you say?

Clinias:: How could we?

Athenian Stranger:: But as belonging to the opposite?

Clinias:: Yes.

Athenian Stranger:: Then the opposites to these as belonging to the opposite?

Clinias:: The opposite.

Athenian Stranger:: So what then? Wouldn't everyone who is luxurious, without care, and idle become for us such as the poet explains: "resembling especially stingless drones"?

Clinias:: And he speaks very correctly, at least.

Athenian Stranger:: Then the god, at least, shouldn't be said to have such a disposition, which he, at least, himself hates; and he who tries to say such a thing is not to be tolerated.

Clinias:: Indeed not. How could he be?

Athenian Stranger:: Suppose it belongs to someone to act and exercise special supervision over something, and his intelligence supervises the great things but neglects the small: according to what argument would we in praising such a one not err in every way? Let's consider it as follows: doesn't the action of one who acts in such a way, whether god or human, take one of two forms?

Clinias:: Which two are we speaking of?

Athenian Stranger:: Either he neglects the small things, thinking it makes no difference to the whole, or he neglects them out of softness of spirit and luxury—if it does make a difference. Or is there some other way that neglect comes about? For surely when it's impossible, at any rate, to supervise all things, then it won't be neglect of small or great matters, in the case of that god or low person who fails to supervise things because he lacks the power and is incapable of supervising them.

Clinias:: How could it be?

Athenian Stranger:: At this point let the two of them reply to the three of us (they both agree that gods exist, and the other of them says they're appeasable, while this one says they're careless of the small things): "In the first place, do you both claim that the gods know, see, and hear all things, and that nothing of which there are perceptions and knowledge can escape their notice?" Is this the way these things are said to be, or how?

Clinias:: Thus.

Athenian Stranger:: What then? Are they, again, capable of all those things that mortals and immortals are capable of?

Clinias:: How will they not agree that these things too are so?

Athenian Stranger:: And we, being five, have agreed that they are good, at least, and even the best.

Clinias:: Emphatically.

Athenian Stranger:: Well then, since they are, at any rate, such as we agree, isn't it impossible to agree that they do anything at all out of softness of spirit and luxuriousness? For in us, at any rate, idleness is an offspring of cowardice, and softness of spirit of idleness and luxury.

Clinias:: What you say is very true.

Athenian Stranger:: Then no one among the gods is careless because of idleness or softness of spirit; for surely he doesn't share in cowardice.

Clinias:: What you say is very correct.

Athenian Stranger:: Then what is left—if indeed they do neglect the small and few things pertaining to the whole—is either that they would do this because they know it's not at all necessary to supervise any of such things, or, ... what else, except the opposite of knowledge?

Clinias:: Nothing else.

Athenian Stranger:: Well then, most excellent and best of men, are we to set you down as saying they are ignorant, and neglect what ought to be supervised because of ignorance, or that they know what is necessary, and, like the lowest of human beings are said to do, they know it is better to act otherwise than the way they're acting, but they don't do so on account of certain weaknesses in the face of pleasures or pains?

Clinias:: How could that be?

Athenian Stranger:: Don't human affairs, at any rate, partake of the nature of what has soul, and isn't the human being the most god-revering of all living things?

Clinias:: That's likely, anyway.

Athenian Stranger:: Surely we assert that all mortal, living things are possessions of gods, to whom the whole heaven belongs.

Clinias:: How could this not be so?

Athenian Stranger:: So at this point someone may assert that these are either—small or great—to the gods: because in neither case would it be appropriate for our owners to neglect us, since they're the most careful supervisors, at any rate, as well as the best. For let's just consider the following, in addition to these matters.

Clinias:: What?

Athenian Stranger:: Take what pertains to perception and power: are the two not by nature opposite to one another as regards ease and difficulty?

Clinias:: How do you mean?

Athenian Stranger:: Presumably it's more difficult to see and hear the small things than the big, while it's easier for everyone to carry, master, and supervise the small and few things rather than their opposites.

Clinias:: Very much so.

Athenian Stranger:: If some whole is given to a doctor to care for, and he wishes and is able to supervise the big parts, but neglects the small, will the whole ever turn out in a fine way for him?

Clinias:: Not at all.

Athenian Stranger:: Nor for pilots or generals or household managers, nor even certain statesmen, nor for any other such person: the many or great things won't turn out in this way without the few and small. For the stonemasons claim that the big stones don't lie well without little stones.

Clinias:: How could they?

Athenian Stranger:: Let's never judge the god, at least, to be less than mortal craftsmen, who, the better they may be, just so much the more exactly and perfectly do they use one art to carry out both the small and large aspects of the work that is appropriate to them—nor that the god, being very wise, and willing and able to exercise supervision, won't in any way supervise the things that are easily supervised, being small, but just the big things, like some idle or cowardly fellow whose spirit becomes soft in toils.

Clinias:: Let's by no means accept- such an opinion about gods, stranger; for we would be thinking a thought that is in no way pious or true.

Athenian Stranger:: We seem to me at this point to have carried on a very well-measured dialogue with the one who is fond of accusing the gods of neglect.

Clinias:: Yes.

Athenian Stranger:: And it was done by forcing him, through arguments, to agree that he wasn't speaking correctly; but it seems to me that there are still needed, in addition, some mythic incantations.

Clinias:: Which, my good man?

Athenian Stranger:: Let's persuade the young man, through arguments, that "He who supervises everything has put all things together with a view to the safety and virtue of the whole and each part suffers and does what befits it, insofar as it can. Rulers have been set up over the suffering and activity of each of these at any time, down to the smallest aspect, and they have achieved perfection to the last detail. And one of these is your part, stubborn one, and it constantly strives and looks toward the whole, even though it is entirely small; but it has escaped your notice, in this very regard, that all generation comes into being for the sake of this: that a happy existence might characterize the life of the whole—it hasn't come into being for your sake, but you for the sake of it. For every doctor and every artful craftsman does everything for the sake of a whole, creating a part which strives for what is best in common, for the sake of the whole, and not the whole for the sake of the part. But you complain, ignorant of how what is best in your case for the whole turns out to be best for you as well, by the power of the common generation. Now since soul is always put together with body, sometimes with one, sometimes with another, and undergoes all sorts of transformations caused by itself or by another soul, no other task is left for the draughts player except that of transferring the disposition that has become better to a better place, and the worse to the worse place, according to what befits each of them, so that it obtains the appropriate fate."

Clinias:: In what way do you mean?

Athenian Stranger:: In the way that would make sense of the gods having the greatest ease of supervision over all the things—this is what it seems to me I'm explaining. For if someone would mold and change the shape of all things without always looking to the whole, and had something like cold water coming out of fire, instead of many things from one or from many, one, after the first or second or third generation there would be a limitless number of changes in the rearranged cosmos. But now it is amazingly easy for the one who supervises the whole.

Clinias:: How do you mean this again?

Athenian Stranger:: As follows. "Since, indeed, our King saw that all actions are involved with souls, and that there is much virtue in them, though much vice, and that soul with body, once it has come into being, is indestructible but not eternal—just like the gods who exist according to legal convention—(for if either of these two had been destroyed there would never have been generation of living things), and since he understood that whatever is good in soul is always beneficial by nature, while the bad is harmful; since he saw all these things, he presumably contrived the situation of each part so that in the whole, virtue would very much triumph, and vice meet defeat, in the easiest and best way. For the sake of the whole he has, in fact, contrived it so that when a certain sort of thing comes into being it must always take a certain place, and then dwell in certain regions. And he has assigned to the wishes of each of us the responsibility for what sort of person comes into being: the way one desires and what one is in one's soul just about determines each time, the type and character every one of us, for the most part, becomes."

Clinias:: That is likely, at any rate.

Athenian Stranger:: "So all things that partake of soul are transformed, possessing within themselves the cause of the transformation, and, undergoing transformation, are moved according to the order and law of destiny: for smaller and lesser transformations of dispositions there is lateral regional movement; when the transformations are greater and more unjust, there is a fall into the depths and the places said to be below, to which in their fear people give the name 'Hades' and others connected to this, both while they're alive and dreaming, and when they've become separated from their bodies. But when a soul's own wishing and familiarity with others have become strong, and as a result it obtains a large share of vice or virtue—then, when by mingling with a divine virtue it comes to be such in an exceptional degree, it undergoes an especially great transformation in locale and is borne along a hallowed path to some other, better place; and when the opposite things occur, it transfers its own life to the opposite sorts of places. 'This, indeed, is the justice of the gods who hold Olympus,' O lad and young man who suppose yourself neglected by the gods: he who becomes more vicious is transported among the more vicious souls, while he who becomes better is transported among the better, and in life and in every death suffers and does the things that are appropriate for similars to do to similars. Neither you nor anyone else who has become unfortunate will ever boast of having eluded this justice of the gods. Those who ordained it have ordained it to be preeminent among all justices, and one ought to be careful in every way as regards it. For you will never be neglected by it—not if you should be small enough to sink into the depths of the earth, not if you should become high enough to fly up into heaven—but you will pay them the appropriate retribution, either while remaining here, or after having been transported to Hades, or after having been moved to some place still fiercer than these. You'll find that the same account would hold for those you observe having risen from pettiness to greatness through acts of impiety or some such thing, whom you supposed to have become happy, from being miserable, and in whose actions, as in mirrors, you believed you had seen the carelessness of all the gods—not knowing how their contribution ever assists the whole. But how can you suppose, O most courageous of all men, that it isn't necessary to know this? If someone doesn't know it, he would never see an outline, nor become capable of contributing an account, of life, as regards happiness and an unhappy fortune.

"Now if Kleinias here and our entire Council of Elders persuade you of these things, that you don't know what you're saying about gods, god himself would aid you nobly; but if you should be still in need of some argument, hearken to us as we speak to the third party—if you have any intelligence."

For that gods exist, and exercise supervision over human beings, I at least would claim has been demonstrated by us, in a not altogether paltry fashion. But that gods can be appeased by the unjust, if they get gifts, is something one ought not go along with, and that ought also to be refuted by every means in one's power.

Clinias:: What you've said is very fine, and let's do as you say.

Athenian Stranger:: Come then, in the name of the gods themselves! In what way would they become appeasable by us, if they were to become so? And what, or what sort, would they be? Presumably they must necessarily be rulers, since they manage the entire heaven perpetually.

Clinias:: That is so.

Athenian Stranger:: But then to which of the rulers are they similar? Or which are similar to them from among those we can compare to them, lesser to greater? Would it be certain drivers of competing teams, or pilots of ships? But perhaps they might be compared to certain rulers of armies; it might even be that they are like doctors taking care of a war against diseases in bodies, or farmers fearfully awaiting seasons that are usually difficult for the generation of plants, or those set over flocks. For since we've agreed among ourselves that heaven is full of many good things, and also of the opposite, and that there are more of the latter, we assert that there is an immortal battle of this kind going on, requiring an amazing guard, and that the gods; and demons are our allies, while we in turn are the property of the gods and demons. Injustice and insolence, together with lack of prudence, destroy us, while what saves us are justice and moderation, together with prudence—qualities which dwell in the soul-imbued powers of the gods, but a small portion of which someone would also discern clearly dwelling here in us. Now there dwell on earth certain souls which have acquired unjust gain and are obviously beastly in form; they fawn upon the souls of the guards—the dogs, shepherds, or those who are in every way the highest masters—persuading them, with speeches of flattery or through certain prayerful incantations, of what the claims of the bad men assert, that it is possible for them to get more than their share among human beings and suffer no harshness. But we presumably assert that the fault just now named, getting more than one's share, is the thing called "disease" in the flesh of bodies, "plague" in seasons and years, and, in cities and regimes, having had its name refashioned, is injustice.

Clinias:: That is altogether the case.

Athenian Stranger:: This, indeed, is the argument that must necessarily be made by the one who says the gods always forgive unjust human beings and those who act unjustly, so long as one distributes to them a share of the unjust gains: it's just as if wolves were to distribute to the dogs small portions of what they've pillaged, and the latter, rendered gentle by the gifts, were to go along with the pillaging of the flocks. Isn't this the argument of those who claim the gods are appeasable?

Clinias:: This is it indeed.

Athenian Stranger:: To which of those mentioned before could any human being whatsoever compare the gods as guards who are similar, and avoid becoming ridiculous? Could it be pilots, who are "turned aside by the libation and aroma" of wine, and overturn ship and sailors?

Clinias:: In no way.

Athenian Stranger:: But surely not drivers lined up together for competition, persuaded by a gift to betray the victory to the other teams.

Clinias:: You would describe a terrible image in uttering this speech!

Athenian Stranger:: And not generals, surely, nor doctors, nor farmers, nor herdsmen, nor yet certain dogs softened by wolves.

Clinias:: Hush! How could they be?

Athenian Stranger:: But isn't it our view that all the gods are the greatest of all guards, and of the greatest thing?

Clinias:: By far.

Athenian Stranger:: Are we going to assert that those who guard the noblest affairs, and are themselves preeminent in the virtue of guarding, are inferior to dogs and ordinary human beings, who would never betray what is just in return for gifts bestowed impiously by unjust men?

Clinias:: Not at all; this speech is intolerable, and of those involved in every sort of impiety, every man who maintains this opinion risks being very justly judged the worst and most impious of all the impious.

Athenian Stranger:: Shall we not assert, then, that the three propositions—that the gods exist, exercise supervisory care, and are in every way not to be appeased in a manner contrary to what is just—have been sufficiently demonstrated?

Clinias:: How could we not? We vote, at least, in accordance with these arguments.

Athenian Stranger:: Yet they were spoken, at any rate, rather vehemently somehow, on account of a fondness for victory over bad human beings. The reason, dear Kleinias, why they were animated by a fondness for victory was a concern lest the bad should believe that if they ever were stronger in arguments, they could act in the ways they wish, according to the sorts of notions they have about gods. It's on account of these things that an eagerness of spirit has prompted us to speak with youthful vigor; but if we've made some brief contribution to persuading the men in some sense to hate themselves, and to desire somehow the opposite dispositions, the prelude to the laws about impiety would have been spoken by us in a noble way.

Clinias:: But there is hope; and if not, the character of the argument will at least not discredit the lawgiver.

Athenian Stranger:: After the prelude it would be correct for us to have a speech that is like an interpreter of the laws, proclaiming to all the impious that they should change their ways into pious ones. For those who don't obey, let the law concerning impiety be as follows:

If someone should be impious in words or deeds, the one who comes across such behavior is to help defend by reporting the occurrence to the magistrates, and the first magistrates that learn of it are to bring the accused before the judicial court designated to judge these matters according to the laws. If some magistracy hears of such a thing and should fail to do this, it shall become liable to prosecution for impiety by anyone who wishes to seek retribution on behalf of the laws. If someone should be convicted, the court is to impose one penalty for each one of those who are impious. Imprisonment is to be imposed in every case.

And there will be three prisons in the city: one around the marketplace, the common jail for most prisoners, and the place where the bodies of the many are secured; one around the meeting place of the councilmen who meet at night, named the "Moderation-Tank"; and one, again, in the middle of the country, in some spot that is deserted and as wild as possible, having for its name some term of retribution. Moreover, since the matters involving impiety have three causes, which we've gone through, and each of such causes gives rise to two kinds, there would be six kinds of faults worth distinguishing, concerning the divine things, which do not call for equal or similar judicial penalties. For a naturally just disposition may come to characterize the man who doesn't believe-the gods exist at all; such people do come to hate bad men, and out of disgust at injustice won't submit to doing such actions; they flee the human beings who aren't just and seek the just. But there are those who, in addition to the opinion that all things are bereft of gods, may be afflicted by lack of restraint as regards pleasures and pains, and may also possess strong memories and sharp capacities to learn. The disbelief in gods would be a disease that inheres in both, but as regards the ruin of other human beings, the one would do less, the other more, harm. For the former would be full of frankness in his speech about gods, as well as about sacrifices and oaths, and by his ridicule of the rest would perhaps make others like himself, if he didn't get a judicial penalty; the latter, on the other hand, while having the same opinion as the other, has what is called a "good nature," and is full of guile and trickery. From this type come many diviners and men equipped in all of magic, and sometimes tyrants, demagogues, and generals, and those who plot by means of private mystery-rites, and the contrivances of those called "sophists." There would be many forms of these things, but just two that are worthy of establishing laws about: one, the ironic, commits faults that deserve not one nor two deaths; the other needs admonishment and imprisonment. In the same way, the belief that the gods are careless breeds two, and the belief that they can be appeased, another two.

Of these which have been distinguished in this way, the ones who have come to be such because of lack of intelligence, without evil anger or disposition, the judge is to place, according to law, in the Moderation-Tank for no less than five years. During this time no one else among the citizens is to have intercourse with them except those who share in the Nocturnal Council, who are to associate with them for the purposes of admonishment and the salvation of the soul. When the time of their imprisonment is up, if someone among them should seem to be moderate, he is to dwell among the moderate, but if not, and he should be convicted at such a trial again, let him be punished with death.

Then there are those who, in addition to not believing in the gods, or believing them to be careless, or appeasable, become like beasts: they hold human beings in contempt and entice the souls of many of the living while pretending to entice the souls of the dead; they promise to persuade gods by charming them with sacrifices, prayers, and incantations; thus, for the sake of money, they try utterly to destroy private individuals and whole households and cities. He who should appear convicted of being one of these, the court is to imprison according to law, in the jail that lies in the middle of the country, and no free man is ever to go to visit him; the Guardians of the Laws are to arrange for them to get their food from the domestic slaves. When he dies he is to be cast out beyond the borders unburied. And if some free man should take part in burying him, he is to be put on trial for impiety by whoever wishes. If the convict should leave behind children who are adequate to become members of the city, the supervisors of orphans are to supervise these as if they were orphans, treating them in no way as inferior to the rest, from the day when their father is convicted in the trial.

There should be a law that applies in common to all these people, that would make many of them commit fewer offenses in deed or in word concerning the gods, and that would in fact render them less unintelligent, by making it impermissable to traffic in divine matters contrary to law. Let the following law deal with all of them in compendious fashion:

Not a single person is to possess shrines in private dwellings. When someone is minded to sacrifice, he is to go and sacrifice at the public shrines, and hand the sacrificial offerings over to the priests and priestesses, whose responsibility it is to purify these things.

Let he himself and whomever he wants to accompany him join in the prayers. These arrangements are to be made for some such reasons as the following. It isn't easy to establish temples and gods, but to do such a thing correctly requires a certain amount of deep thought. It's a habit of all women especially, and indeed of people who are sick in any way, or in danger, or at a loss, however someone may be at a loss—and also in the opposite circumstances, when they prosper in some way—to sanctify whatever happens to be around at the time, to vow sacrifices, and to promise to establish shrines to gods, demons, and children of gods. Moreover, having been stirred awake by the fears they experience in apparitions and dreams, and, in the same way, recalling many visions, they make remedies against each of them by filling every house and every district with altars and temples, establishing them in places free of pollution and wherever someone happened to have such experiences. On account of all these things, one should act according to the law now being pronounced. In addition to these considerations, one should do so because of the impious, to prevent them from committing fraud in these matters by setting up shrines and altars in private homes, supposing they can in secret make the gods propitious through sacrifices and prayers. They thus foster a limitless growth in injustice, bringing down on themselves and on those who tolerate them (and who are better than them) accusations on the part of the gods, and thus involving the whole city—justly, in a way—in the results of their impieties. The lawgiver, however, will not incur the god's blame, for this law is to hold:

There is to be no possession of shrines to the gods in private homes. If someone is found possessing shrines and worshipping in rituals other than the public ones, and if the man or woman possessing them has committed none of the great and impious sorts of injustice, the one who discovers this is to report it to the Guardians of the Laws; they are to command that the private sacred things be carried away to the public shrines, and those who disobey are to be penalized until they are carried away. But if someone should be detected having committed an impiety that is not of the childish sort but of the sort that characterizes impious grown men, either by establishing private shrines, or by sacrificing at the public shrines belonging to any of the gods whatsoever, let the penalty be death, on the grounds that he sacrificed while being polluted. The Guardians of the Laws are to judge whether it be childish or not, and, introducing the accused into the judicial court accordingly, are to carry out the judicial penalty for impiety in these cases.

## Book XI.

Athenian Stranger:: Next after these matters, our business transactions with one another would require an appropriate ordering. Presumably a compendious statement, at any rate, would go like this: insofar as possible, one should refrain from touching my goods, and should not move them even the shortest distance, if he has in no way persuaded me at all. And should do likewise, according to the same principles, with things belonging to the others, if I possess a prudent intelligence.

Among such things, let us first discuss treasure which someone has laid in a hoard for himself and his people, in the case where he was not among my forefathers. I should never pray to the gods that I may find it; nor, if I do find it, should I move it; nor, again, should I take counsel about it with the so-called diviners, who in one way or another will advise me to take what was deposited in the earth. Because I would never benefit as much in money by taking the property as I would increase in substance as regards virtue of the soul and what is just by not taking it, I would thereby have acquired a better possession than that possession, and in a better part of me, by honoring the acquisition of justice in the soul before that of wealth in property. Indeed, the saying “do not move the immovable” applies well to many things, and one should speak of this as one of those things. One ought to believe the myths spoken about these matters, to the effect that such behavior does not promote the generation of children. But what of he who may become indifferent to children and, heedless of the one who established the law, takes up what neither he himself nor, again, some father of his fathers set down, without persuading the person who did set it down?

He thereby corrupts the noblest of laws—a most compendious act of legislation, by a man who was in no way ill born, who said, “what you didn’t set down, don’t take up.” What ought the man suffer, who holds in contempt these two lawgivers, and takes up what he himself did not put down, when it isn’t something small, but is sometimes a very great mass of treasure?

What he is to suffer at the hands of the gods, is known to the god. But he who is first to detect such a thing is to report it: if it should occur in the city, to the City Regulators; if somewhere in the marketplace of the city, to the Market Regulators; if somewhere in the rest of the country, he is to reveal it to the Field Regulators and their Officers. Once such things have been revealed, the city is to send to Delphi: whatever the god should ordain concerning the money and the person who moved it, this the city, in service to the divinations, shall do on behalf of the god. If the one who has informed should be a free man, he is to acquire a reputation for virtue, but if he has failed to inform, for vice; if he should be a slave, it would be correct for the city to make him free for having informed, and to give his price to his master; but if he failed to inform, he is to be punished with death.

Following after this in order would come the same thing concerning small as well as great matters, so that this legal custom would follow:

If someone should voluntarily or involuntarily leave something that belongs to him somewhere, he who comes across it must leave it lying, believing that the demoness of the roads guards such things, as made sacred to the goddess by law. If, contrary to these injunctions, someone should disobey by taking it up and carrying it home, then, if he’s a slave and the object is something of small value, he is to be whipped many times by anyone who happens along who is not less than thirty years of age. But if he's a free man, besides being held to be illiberal, and one who doesn't share in laws, he must pay ten times the value of the object moved to the person who left it. If someone accuses somebody of having some amount of his goods, great or small, in his possession, and the accused agrees that he has it, but not that it belongs to the other; then, if the property be registered with the magistrates according to law, he should summon the possessor before the magistracy and the possessor must produce it. Once the object has been brought to light, if it should appear as registered in the written lists under either of the disputants, he is to have it and go away. But if it should appear under someone else (among those who aren't present), whichever of the two should present a worthy guarantor is to carry it away on behalf of the absent party, to hand it over to him in accordance with his right to take it away. And if the disputed object should not be - registered with the magistrates, it is to lie, until the trial, with the three eldest among the magistrates; if the pledged object be a beast, the one who is defeated in the trial concerning it shall pay the magistrates for its upkeep. The judicial decision is to be rendered by the magistrates within three days.

He who wishes, if he be of sound mind, may seize his own slave and do to him what he wants, so long as it is within the limits of what is pious. He may also seize a runaway, to keep him safe, on behalf of another who is a relative or friend. But if someone should try to remove into freedom someone being taken as a slave, the one who's taking him must give him up, while the one trying to remove him must provide three worthy guarantors, and effect the removal on these conditions, but otherwise not. If someone should effect removal contrary to these conditions, he is to be liable for violent assault, and if convicted must pay to the party injured by the removal double the damages.;

A freed man may be seized if he doesn't pay the freed man's homages or does so insufficiently. The homage is to consist in the freed man's attending the hearth of the man who freed him three times a month, offering to do whatever he ought that is just and of which he is capable, and his marrying in a way that may meet with the approval of his former master. Moreover, he will not be permitted to become more wealthy than the man who freed him, and whatever he has in excess is to go to the master. The man who has been released is not to remain more than twenty years, but, just like the other strangers, is to go away, taking all his property, unless he should persuade the magistrates and the one who freed him. If a freed man or one of the other strangers should come to have property in an amount greater than that of the third class, he must depart, taking his property, within thirty days of the day on which this comes to pass—and there is to be no request to stay put to the magistrates in this case. If someone should be brought into court and convicted of having disobeyed these injunctions, he is to be punished with death and his goods are to go to the public. The trials of these matters are to take place in the tribal courts, if they don't resolve the accusations against one another earlier, before neighbors and chosen judges.

If someone lays hold of anybody's animal as his own, or of any other of his goods, the one who possesses it should return it to the warrantor or to the deliverer (if he's solvent and can be sued), or to the person who conveyed it in some other authoritative way; if it was a citizen or resident alien in the city, he's to do so within thirty days, while if it was a foreign delivery he's to do so within five months, of which the middle month shall be that in which the sun turns from summer toward winter.

Whatever one man may exchange with another by way of some purchase or sale is to be exchanged by making delivery at the location assigned to each commodity in the marketplace and receiving value on the spot, but nowhere else, and no one is to make a sale or purchase on credit. If one person should exchange with another in another way or in any other places whatsoever, trusting the one he's exchanging with, he is to do these things on the understanding that there are no lawful judicial suits for things that are not sold under the conditions now being stated. As regards club contributions, he who wishes may make collections as a friend from friends; but it should be done on the understanding that if some difference should arise concerning the collection, there are to be no suits of any kind for anyone concerning these matters. Whoever has sold something and received a price of not less than fifty drachmas is to remain in the city for a necessary period of ten days, and the buyer is to know the house of the seller, on account of the accusations that regularly arise in such matters and for the sake of lawful returns.

Lawful return and refusal is to be as follows. If someone should sell a slave-captive who is sick with phthisis, or stones, or strangury, or the so-called "sacred disease," or some other long-lasting and hard-to-cure disease of the body or mind that is unapparent to the many, then, if the sale is to a doctor or gymnast, there is to be no right of return in such a case for this ~ man, nor if someone made the sale to somebody after having told them the truth. But if someone who's a craftsman should make some such sale to a layman, the buyer may make a return within six months, except in the case of the "sacred" disease, and for this he may make the return within a year. The judicial decision is to rest with three doctors chosen in common by the parties. He who is convicted in the trial shall pay twice the price for which he sold. If some layman sells to a layman, there is to be right of return and judgment just as in the cases mentioned before, but he who is convicted shall pay simply the selling price. If someone should knowingly sell a manslayer to someone who also knows it, there is to be no right of return for the purchase of such a slave; but if it’s to someone who doesn’t know about it, there’s to be a right of return whenever one of the buyers finds out. The judgment is to rest with the five youngest Guardians of the Laws, and if it should be decided that the seller acted knowingly, he shall purify the households of the buyer according to the law of the Interpreters and pay triple the price to the buyer.

He who exchanges currency for currency, or for anything else whatsoever, living or nonliving, must give and receive everything in an unadulterated state, in accordance with the law. But just as in the case of the other laws, let us receive a prelude concerning this vice as a whole:

Every man must understand that adulteration, lying, and deception constitute a single class, about which the many (speaking badly) are accustomed to make the pronouncement that such a thing may often be correct if it occurs each time at an opportune moment; but by leaving unregulated and undefined the where and when of the opportune moment, they inflict many penalties on themselves and others through this saying. The lawgiver, however, isn’t allowed to leave this undefined, but must always clarify what the boundaries are, great or small. So let this now be defined: No one who is not going to become most hateful to the gods shall commit in word or deed any lie, deception, or adulteration of something, when this kind of thing is done by invoking gods; and such a man is the one who in swearing false oaths thinks nothing of the gods, or, in the second place, who lies in the face of those superior to him. Now the better are superior to the worse, and the elder, generally speaking, to the young, and therefore parents are superior to offspring, men to women and children, and rulers to the ruled. It would be fitting for everyone to feel awe before all of these superiors, in the case of every other sort of rule and especially in the case of political offices, which occasion our present discourse. For everyone who adulterates something of the things in the marketplace lies and deceives, and, calling upon the gods, adds an oath in the face of the Market Regulators' laws and cautions—thereby evincing neither awe before human beings nor pious reverence before gods. Certainly it is in every way a fine practice not lightly to take the gods' names in vain, or to behave each time as most of us do in most matters concerning purity and what is hallowed in respect to the gods. But if someone would not obey, the law will be as follows:

The seller of anything whatsoever in the marketplace may never mention two prices for the things he may be selling, but must utter the price simply, and if he doesn't obtain this, he would act correctly if he took the item away again; and he may not set a greater or lesser price on this day. There is to be no praise supported by an oath concerning anything that is sold. If someone should disobey these injunctions, any city dweller who happens along and is not less than thirty years of age should inflict punishment on the one who swears by beating him, with impunity; but if he doesn't pay attention, and disobeys, he is to be liable to be blamed for betraying the laws. In the case of the man who sells some adulterated article and is unable to obey the present pronouncements, anyone who happens along who is among those knowledgeable and capable of proving it, and who does prove it in front of the magistrates, may, if he's a slave or a resident alien, take the adulterated article; if he's a citizen, and fails to prove it, he's to be proclaimed an evil man who robs the gods, but if he does prove it he's to dedicate the article to the gods who possess the marketplace. He who is detected selling such a thing, besides being deprived of the adulterated article, is to be beaten with a whip as many blows as the number of drachmas he asked as the price of the article for sale, after the herald has proclaimed in the marketplace the reasons why he is about to be beaten.

As regards the adulterations and evildoings of sellers, the Market Regulators and the Guardians of the Laws, inquiring from those who have experience in each matter, should write down what a seller ought and ought not to do, and shall post 'the written laws on a tablet in front of the Market Regulators' office, so that there'll be clear guidelines for those involved in the use of the marketplace. What pertains to the City Regulators has been sufficiently discussed at earlier points; but if something additional should seem required, they should consult the Guardians of the Laws, write down what seems to be left out, and post on a tablet at the City Regulators' office the first and second sets of legal customs pertaining to their magistracy.

Following on the heels of the practices of adulteration come the practices of retail trade. Let's first give advice and argument about this entire matter, and establish a law for it later.

Now all retail trade has come into being in the city not for the sake of injury—at least according to nature—but for entirely the opposite end. For how should everyone not be a doer of good deeds, who creates evenness and symmetry in the distribution of any sorts of goods that are asymmetrical and uneven in distribution? And this, we ought to declare, is achieved through the power of money; and we ought also to say that this is the task assigned to the merchant. The hireling, the innkeeper, and the rest, some of whom become more seemly, some less seemly, are all able to bring this about, to provide help for all the needs, and evenness in the distribution of property. So let us see what then has ever made this seem to be neither noble nor seemly, and what has brought it into discredit, so that we may remedy by law, if not the whole, then at least parts of it.

It's likely that the task is not a paltry one, and requires no small virtue.

Clinias:: How do you mean?

Athenian Stranger:: Dear Kleinias, it's a small class of human beings, few by nature and brought up with the highest upbringing, that is able to hold fast to what is measured when the need and desire for certain things comes over it, and which, when it can get a lot of money, is sober and chooses what is measured in preference to what is large. The bulk of human beings are entirely the opposite to these men: when in want, they want without measure, and when it's possible for them to gain measured amounts, they choose to gain insatiably. That is why every kind of retail trade, and wholesale trade, and innkeeping, has come to be discredited and held in shameful blame. Yet if someone—as should never take place nor ever will—were to compel (now it's laughable to utter this, but nevertheless it's going to be uttered) the best men everywhere to become innkeepers for a certain period of time, or to carry on retail trade, or do one of such things, or were even to compel the women, out of some necessity of fate, to partake of such a way of life, we would know how friendly and desirable each of these things is; and, if it were to be practiced according to an uncorrupted principle, all such activities would be honored in the guise of a mother and nurse. But now, when someone has established houses for the sake of retail trade in deserted spots having lengthy roads in every direction, and receives, with welcome resting places, those who have come to be at a loss, providing calm tranquility to those driven by the violence of savage storms, and refreshment in stifling heat, he doesn’t proceed after this to follow up his welcome as he would if he were receiving comrades, and give friendly guest-gifts, but instead, as if they were enemy prisoners who had fallen into his hands, he releases them on payment of very large, unjust, and impure ransoms! It is these and similar faults that have in all such cases correctly discredited the provision of assistance to those at a loss. So the lawgiver must always contrive medicine for these things. Now it has been correctly said of old that “against two from opposite quarters it is difficult to fight,” in the case of diseases and many other things; and indeed the present battle about and around these matters is against two, poverty and wealth, one of which corrupts the soul of human beings through luxury, and the other of which urges it to shamelessness through pains. What aid would there be then for this disease, in a city that possessed intelligence? The first’ is to make use of the class of retail traders as little as one can; then, human beings ought to be assigned to retail trade whose corruption would least affront the city; in the third place, a device should be found to prevent the dispositions of soul in those who partake of these practices from easily becoming unrestrainedly shameless and illiberal.

After the things that have now been said, let us, with good fortune, have some such law as the following for these matters: Among the Magnesians, whom the god is restoring and settling again, no one of those who hold a share of land among the five thousand forty hearths is ever voluntarily or involuntarily to become a retail trader, or a wholesale trader, or render any menial service whatsoever to private persons who do not return to him an equal service—except for his father and mother, and family members of a still earlier generation, and all those who are elder than he, who are free and whom he serves in a liberal way. It's not easy to legislate exactly what is liberal and what is illiberal, but let it be judged by those who have obtained recognition for excellence in hating the latter and embracing the former. He who should by some art partake of illiberal retail trade is to be indicted for shaming his family by anyone who wishes, before those who have been judged first in virtue, and if he should seem to be sullying his own ancestral hearth by an unworthy practice, let him be imprisoned for a year and thus desist from such a thing; if it happens again, for two years, and each time he's caught he's not to cease doubling the length of time of the earlier imprisonment.

Now the second law: He who is going to engage in retail trade must be a resident alien or a stranger.

In the third place, the third law: In order that such a fellow resident in the city may be for us the best possible, or the least bad possible, the Guardians of the Laws are to understand that they are not only guards of those whom, because they have been well educated by birth and upbringing, it is easy for them to guard against becoming lawless and bad, but also that they should guard even more those who are not such, but are engaged in practices that have a certain strong influence in prompting men to become bad.

With this end in view, the Guardians of the Laws ought; again to meet concerning these matters with those who have experience in each branch of retail trade, just as we earlier ordered them to do in the case of adulteration, which is a practice akin to this; with respect to those aspects of retail trade (which is extensive, and includes many practices of the sort just alluded to) which have seemed to be highly necessary in the city and have been allowed to remain, they should meet and see what receipt and expense balance at any time makes a well-measured gain for the retail merchant. The receipt and expense balance arrived at is to be posted in writing and guarded by the Market Regulators, City Regulators, and Field Regulators. In this way, what pertains to retail trade would be pretty beneficial to each person, and would do pretty much the smallest injury to those in the city who make use of it.

As regards cases in which someone agrees to cooperate in doing something and fails to act according to what he agreed, except when laws or a decree stands in the way, or where he was forced by unjust compulsion to agree, or where he's involuntarily prevented by unforeseen chance, trials for unfulfilled agreements in the other situations are to be held in the tribal courts, if the parties weren't able to resolve their differences earlier in the courts of the arbitrators or neighbors.

Sacred to Hephaistos and Athena is the class of craftsmen, who have furnished our life with arts, and sacred to Ares and Athena are those who preserve the deeds of the craftsmen through other, defensive, arts; and it is just that this class too, be sacred to these gods. Indeed, all these men continually take care of the country and the populace—the latter by ruling over the contests of war, the former by bringing into being tools and works for pay. In regard to such matters, because of their awe for the gods who are their progenitors, it wouldn't be fitting for them to lie. So if someone who is a craftsman should, because of vice, fail to complete work within the specified time, and should lack a sense of awe before the god who gives him his livelihood (believing that his own god is forgiving), and should not look at the matter with his intelligence, he must first pay a judicial penalty to the god and, in the second place, a law shall await him:

He is to owe the price of the works about which he lied to the person giving the commission and produce them again from the beginning, within the stated time, for free.

And to him who undertakes work the law is a counselor, giving the same advice it gave to the one who sells: not to try to take advantage by setting a greater price, but to set just simply what it is worth. This same advice the law enjoins upon him who undertakes work; for the craftsman, at any rate, knows the worth. In cities of free men the craftsman himself ought never to use his art (which is by nature an activity that is above board and not dishonest) to try to take artful advantage of laymen, and the one who has been done an injustice in these matters may bring a lawsuit against him who does the injustice. If, on the other hand, someone who has given a commission to a craftsman should fail to pay him the correct amount according to the lawful agreement, thus dishonoring Zeus, the Protector of the City, and Athena, who share in the regime, and out of desire for a small gain loosens great ties of community, the law together with the gods must come to the defense of the bond that holds the city together:

He who has received work in advance and fails to give pay within the agreed time period must pay double. If a year has elapsed, although all other monies that someone may contribute as a loan are to be without interest, this man must pay one obol on the drachma per month; and the trials for these matters shall take place in the tribal courts.

Because we reminded ourselves of craftsmen in general, it is just to speak in passing about the craftsman of security through war—the generals and whoever are artful in these matters. These are like the former, but a different sort of craftsmen; and the law will never tire of praising him who gives just honors, which are the pay for men of war, if one of these should perform nobly a public work he has undertaken either voluntarily or in following orders. But if he has received, in advance, work that is part of the noble works of war, and should fail to give payment, it will blame him. So let this law be laid down, intermingled for us with the praise that concerns these matters, and counseling, rather than forcing, the bulk of the citizens to honor in the second rank those good men who are saviors of the whole city, either by acts of courage or by warlike contrivances. For the greatest prize should be given to those who rank first, those who are preeminently capable of doing honor to the writings of the good lawgivers.

We have just about arranged the most important business transactions human beings have with one another, except for what pertains to orphans and the supervision of orphans by their guardians; and, after what has now been discussed, it is necessary that these matters be arranged, somehow or other. The ruling beginnings in all matters of this kind are the desires on the part of those who are about to die to effect a distribution by will, and the chance accidents that leave some without having made any wills at all. And I said it was "necessary," 'Kleinias, with a view to the trouble and difficulty that characterize these things. It's impossible to leave this unregulated; for everyone would set up many instructions that are in discord with one another as well as contrary to the laws, to the dispositions of the living, and even to their own prior dispositions in the time before they were about to make the will, if someone gives permission for that will to be unqualifiedly authoritative which someone may set up, no matter what condition he's in, as he approaches the end of life. The fact is, most of us are in some sense mindless and weak at the time when we believe we're about to die.

Clinias:: What do you mean by this, stranger?

Athenian Stranger:: A human being who is about to die is difficult, Kleinias, and full of a speech that is for lawgivers very frightening and hard to handle.

Clinias:: How so?

Athenian Stranger:: Seeking to have authority over everything, he usually speaks with anger.

Clinias:: Saying what?

Athenian Stranger:: "Gods! It is indeed a terrible thing," he declares, "if I'm not at all allowed to give my own belongings to whomever I wish or not, and more to one, less to another, of those who have proved miserable or good to me, having been adequately tested in periods of sickness and, in the case of some, in old age and all sorts of other twists of fortune!"

Clinias:: Well, stranger, don't they seem to you to speak in a fine way?

Athenian Stranger:: To me at least, Kleinias, those who became lawgivers of old seem to have been soft, and to have looked at and thought about a small range of human affairs when they made laws.

Clinias:: How do you mean?

Athenian Stranger:: Fearing this speech, my good sir, they made a law that allowed a man to distribute his belongings by will simply and entirely as he might wish; but I and you will reply more suitably, somehow, to those in your city who are about to die.

“Friends,” we will declare, “and really, creatures of a day, it is difficult for you at the present time to know your own property and, what is more, to know yourselves, as even the Pythian writing explains. I at any rate, being the lawgiver, ordain that neither yourselves nor this property belong to you, but that they belong rather to your entire family, both past and future, and that to an even higher degree the entire family, as well as the property, belong to the city. Since this is the way things are, I will never voluntarily go along if someone imposes upon you through flattery when you’re sick or tottering with old age, and persuades you to make a will contrary to what is for the best; instead, I will legislate with a view to what is best for the entire city and family, and, with a view to all this, will justly assign a lower rank to what belongs to each individual. But you, being gracious and well disposed toward us, proceed along the way which you’re now going, according to human nature; we’ll take care of the rest of your belongings, looking after them to the very best of our powers—not looking after some but not others.” Let these be the encouragements and preludes for the living, Kleinias, as well as for the dying; the law shall be the following:

He who writes a will distributing his belongings, and is a father of children, must in the first place indicate in writing which of his sons he has decided is worthy to become the allotment holder, and with regard to the other children, if he should be giving one to someone else to take and adopt, he must indicate this too in writing; if there should be in addition some son of his who hasn’t been adopted as heir to any allotment, and who it is hoped will be sent away to some colony according to law, the father may give this one as much of the rest of his property as he may wish, except for the ancestral allotment and the entire equipment of the allotment; if there should be more sons, the father may distribute the surplus over and above the allotment in any proportion he may wish. If one of the sons should have a house, he is not to distribute property to him, and the same for a daughter—if she should be betrothed to a man, he is not to distribute to her, but if that is not the case, he may distribute to her. If it should appear later, after the will has been made, that one of his sons or daughters owns a native allotment, the latter should leave what he received to the one who is heir to the allotment of him who made the will. If the man making the will should leave no males, but females, he is to leave as his son the husband of whichever daughter he wishes, indicating in writing the allotment heir. If the born or adopted son should have died while still a child, before he could take his place among the men, in this unfortunate circumstance also, the man writing the will should indicate in writing which of his children should come second, with better fortune. If someone who is entirely without children should write his will, he may pick out one-tenth of his property over and above the allotment, if he should wish to give it to someone, and give it away. All the rest he is to hand over to the adopted heir, whom he must adopt as his son according to law—he being blameless and the son gracious.

In the case of a man whose children need guardians, if he should die having indicated guardians in his written will, if those whom he wished and as many as he wished will agree voluntarily to serve as guardians for the children, the authoritative choice of the guardians is to proceed according to these written instructions. But if someone should die either without any will at all, or having omitted a choice of guardians, then the authoritative guardians shall be the nearest of kin on the father’s and the mother’s sides, two from the father’s and two from the mother’s, and one from the friends of the deceased: these the Guardians of the Laws shall appoint for the orphan in need. Guardianship in general and the orphans shall always be supervised by the fifteen eldest among all the Guardians of the Laws, who shall divide themselves into threes according to seniority: three are to serve for a year, and then another three for another year, until the five orbits make a circle. And this is never to cease insofar as possible. In the case of a man who dies having made no will at all, and who leaves children in need of a guardian, his children's need shall share in these same laws. If someone should meet with an unforeseen chance and leave females, he is to forgive the one laying down the law if the latter looks to just two of the three concerns he would have had, as he arranges the giving away in marriage of the daughters: the closeness of kinship and the preservation of the allotment. The third, which the father would have considered—looking to see who among all the citizens would in dispositions and ways be appropriate as his son as well as his daughter's groom, this shall be left aside because of the impossibility of carrying out the investigation. The following law should stand, as the best that can be done in such situations:

If a man who hasn't made a will should leave daughters after he has died, a brother from the same father, or from the same mother and without an allotment, is to have the daughter and the allotment of the deceased. If there should be no brother, but the son of a brother, the same shall hold for him, if the spouses are of an age with one another. And if there should be not one of these, but the son of a sister, the same shall hold. Fourth shall be a brother of the deceased's father; fifth, a son of this latter; sixth, a son of the father's sister. Thus let the family always proceed according to degree of kinship, if someone should leave female children: ascending through brothers and the children of brothers, males coming before females in any one generation. The symmetry or lack of symmetry in the time of marriage for these shall be determined by an inspecting judge, who is to see the males naked and the females naked to the navel. If the family lacks relatives as far as grandsons of brothers, and children of a grandfather as well, then whomever of the other citizens the child may choose in consultation with her guardians, she and he acting voluntarily, is to become heir to the deceased’s allotment and groom for his daughter. Still, many things require many resources, and times occur when there would be a lack of enough such men in the city itself. So if someone who is at a loss for men on the spot should see somebody who has emigrated to a colony whom it would please her to have become heir to her father’s allotment, then, if he should be kin, let him proceed to the inheritance of the allotment according to the arrangement in the law; if he should be outside the family, and there’s no one in the city who is part of her family, then in accordance with the choice of the guardians and the child of the deceased, he shall be authorized to come home, marry, and receive the allotment of the man who failed to make a will.

In the case of a man without any male or female children at all who should die without having made a will, what pertains to such a man in other respects should be governed by the aforementioned law, but a female as well as a male from the family shall proceed as mates to the deserted house each time, and the allotment shall become legitimately theirs—a sister first, a brother’s daughter second, third, the offspring of a sister, fourth, the sister of the father, fifth, the child of the father’s brother, and sixth would be the child of the father’s sister. These females are to dwell together with the males, according to consanguinity and justice, in the way we have legislated earlier.

Let’s not overlook the oppressiveness of such laws, the harshness sometimes involved in their ordering the next of kin of the deceased to marry his kinswoman, and their apparent failure to consider the tens of thousands of impediments that come into being among human beings and make one unwilling to obey such commands, and indeed make them ready to suffer anything whatsoever rather than obey, when diseases or maimings of the bodies or the mind arise in some of those they are commanded to marry or be married to. It might seem to some people that the lawgiver gives no thought to these things, but that impression would be incorrect. So let there be something spoken on behalf of the lawgiver and on behalf of the man to whom the law is given, almost as a common prelude, requesting those who are given the orders to forgive the lawgiver, because in his supervision of the common things he would never be able at the same time to manage the private calamities of each man, and on the other hand requesting forgiveness for those to whom the legislation is given, because it’s likely that sometimes they are unable to carry out fully the orders of the lawgiver, which he issued in ignorance.

Clinias:: What, stranger, would be the most well measured thing for someone to do in regard to such matters?

Athenian Stranger:: It’s necessary to choose arbitrators, Kleinias, for such laws and for the persons who are the objects of the legislation.

Clinias:: How do you mean?

Athenian Stranger:: Sometimes a nephew whose father is wealthy would not voluntarily be willing to accept the daughter of his uncle, because he luxuriates, and has his mind set on a grander marriage; but sometimes one would be compelled to disobey the law because what the lawgiver commands involves a very great calamity—compelling them to take spouses who are mad or afflicted with some other terrible calamities of body or soul, which render life unlivable for the one who acquires them. So our present statement about these matters shall be established in law as follows:

If some people should complain about the established laws in regard to a will, either with respect to any other aspects whatsoever or, with respect to marriages, to the effect that if the lawgiver himself were present and alive, he would never have compelled those who are now being compelled, to marry or to be married, to do either, while, on the other hand, someone in the family or some guardian asserts that he would have, it must be declared that the lawgiver has left the fifteen Guardians of the Laws as arbitrators and fathers for the male and female orphans. Those who are in dispute about some such matter must appeal to these for a decision, and carry out their opinions as authoritative. But if it should seem to someone that this is a great power to confer on the Guardians of the Laws, he is to take them before the court of select judges and obtain a decision about the matters in dispute. The losing party is to incur the blame and censure of the lawgiver—a more oppressive penalty than a large sum of money, for him who possesses intelligence.

Now for orphan children there should be, as it were, a certain second birth. The upbringing and education for each of them after the first have been described; after the second, which has taken place through the loss of fathers, some way must be devised whereby the fortune of orphanhood for those who have become orphans will involve the least possible pity for their calamity. In the first place, legislation gives them Guardians of the Laws as fathers, instead of, and not inferior to, those who begot them; and indeed we assign them to the orphans each year, to supervise them as if they were their own, having presented a prelude about the upbringing of orphans that is attuned to these men as well as to the guardians:

For opportune indeed, it appears to me, was our elaboration of the earlier speeches, to the effect that the souls of the dead have a certain power after they have died, by which they look after the affairs of human beings. These things are true, though the accounts concerning them are lengthy; one ought to trust the other pronouncements concerning such things, since they are so numerous and so very ancient, but also trust those who legislate that these things are so—if, that is, they don't appear wholly senseless. And if, in this way, these things are according to nature, then they ought to fear first the gods above, who perceive the bereavement of the orphans, then the souls of those who have passed away, for whom it is natural to care especially for their own offspring and to be well disposed toward those who honor them and ill disposed toward those who dishonor them, and then the souls of the living, who are in old age and held in the highest honors. Where a city is happy under good laws, their grandchildren live, loving them fondly and with pleasure; and they hear sharply and see sharply what pertains to these matters, and are well disposed toward those who are just in regard to them, but are very indignant, on the other hand, toward those who are insolent to orphans and the bereaved, holding this to be the greatest and most sacred deposit. To all these the guardian and the magistrate ought to turn his mind—if he should have any—and take care with the upbringing and education of orphans: as if he were doing a favor to himself and his own, he should do them all the good he possibly can, in every way.

He, then, who obeys the myth that precedes the law, and does nothing insolent to an orphan, will not know definitely the lawgiver's anger in such matters; but he who disobeys, and does an injustice to someone bereft of father or mother, shall pay double the total damages paid by someone who has been bad to a child with both parents living.

As to the other legislation for guardians, concerning orphans, and for magistrates, concerning the supervision of the guardians, if they didn't have examples of the upbringing of free children through bringing up their own and supervising their own properties, and moreover if laws pertaining to these very matters hadn't been discussed in due measure, it would make some sense to lay down certain guardians' laws, as being very different in their own way, and as differentiating, by means of their peculiar practices, the life of the orphans from the life of the non-orphans. But now, in regard to all such matters, the status of our orphans doesn't call for anything that's very different from a father's duty, although the task is prone to be not at all equal in honors and dishonors, or supervisory responsibilities. That, indeed, is why the law has been serious in its exhortations and threats concerning this subject—the legislation concerning orphans. Yet some such threat as the following would be very timely:

Whoever should be the guardian of a female or male, and whoever among the Guardians of the Laws should stand guard over and supervise a guardian, shall prize the one whose fortune it is to be an orphan no less than his own children, and supervise the goods of the ward no worse than his own, or, indeed, better than his own, with a spirited zeal. Everyone is to serve as guardian keeping this single law regarding orphans.

But if someone should act otherwise in such matters, contrary to this law, the magistrate shall punish the guardian, or the guardian shall bring the magistrate before the court of the select judges, and exact a fine that is twice the damages estimated by the court. And if a guardian should seem to the kinsmen or to any of the other citizens to be careless or to be doing evil, they are to take him before the same court; whatever injury he should be convicted of, he is to pay four times this amount, half of which is to go to the child and half to the person who successfully prosecuted. At the time when one of the orphans comes of age, if he believes he has been treated badly by his guardian, he may bring a judicial action concerning the guardianship within five years after the guardianship has ended. If one of the guardians should be convicted, the court is to estimate what he ought to suffer or pay; if it should be one of the magistrates, if it seems he’s done the evil to the orphan on account of carelessness, the court is to estimate what he ought to pay to the child, but if it seems on account of injustice, then in addition to the fine he is to be removed from the magistracy of the Guardians of the Laws, and the common authority of the city is to appoint another Guardian of the Laws in this man’s place, for the land and the city.

To a greater degree than they should, quarrels occur, on the part of fathers toward their own children, and children toward their parents, in which the fathers would hold that the legislator ought to legislate permission for them, if they wish, to have a herald proclaim in front of everyone that they henceforth disown the son according to law; and in which sons, on the other hand, hold that they should be given permission to indict their fathers for derangement when they are in a shameful condition on account of diseases or old age. These are prone to arise out of the dispositions of human beings who are really altogether bad, since if just half are bad—as where the father isn't the bad one, but the son, or the opposite—calamities that are the offspring of such a degree of enmity don't occur. Now in another political regime, a child who was proclaimed disowned would not necessarily be without a city; but in this one, for which these laws will hold, a person who lacks a father must necessarily go and dwell in another land. For there is not to be a single addition to the five thousand forty households. That is why he who is to undergo these things in a trial should be disowned not just by one father, but by the entire family. And in such affairs it is necessary to proceed according to something like the following law:

He who, justly or not, is urged by a spirited anger that is in no way fortunate, to desire to remove from his own family the person he begot and brought up, is not to be allowed to do this in a paltry or hasty fashion. Rather, first he is to call together his own kinsmen as distant as cousins, and the same kinsmen of the son on the mother's side, and is to present his accusation before them, teaching how the son deserves to be proclaimed by all of them expelled from the family; and he is to give the son equal time to speak and show why he doesn't deserve to suffer any of these things. If the father should persuade and obtain the votes of more than half of all the kinsmen—excluding the father, mother, and defendant from the voting, but including the rest of the adult women and men—then in this way and according to these procedures it-shall be permissible for a father to proclaim his son disowned, but in no other way. If one of the citizens should wish to adopt as his son the man proclaimed disowned, no law is to prevent his doing so—for the dispositions of the young naturally undergo many transformations during the lifetime of each—but if after ten years no one should have desired to adopt as his son the man proclaimed disowned, the supervisors of the excess offspring who are to be sent to a colony are to take charge of these also, so that they may take a suitable share in the same colonization.

If some disease, or old age, or harshness of character, or all of these together, should unhinge someone's mind to a greater degree than is the case with the many, and it should escape the notice of the others—except those who live with him—and he should be destroying his household under the sovereign authority he has over what belongs to him, and the son should be at a loss and should shrink from bringing a written indictment for derangement, the law in his case shall be that first he is to go and explain his father's calamity to those who are eldest among the Guardians of the Laws; after they've looked into the matter adequately, they are to advise whether or not he should bring the written indictment, and if they do advise it, they are to become witnesses and fellow plaintiffs for the one who brings the indictment. The man who is convicted shall for the rest of his life lack sovereign authority to dispose of his belongings in even the smallest detail, and is to be supervised for the rest of his life like a child.

If a husband and a wife should be in no way in agreement, because of their unfortunate characters, ten middle-aged men among the Guardians of the Laws should constantly supervise them, along with ten of the women who are concerned with marriages and are of a similar age. If they should be able to effect a reconciliation, these arrangements are to be authoritative; but if the souls seethe all the more with passion, then they should do their best to seek partners who will be suitable for each of the parties. It's likely that such persons are not possessed of gentle dispositions; they should try to harmonize these with mates of more phlegmatic and gentle dispositions of character. And where those without children or with just a few children should have a falling-out, the domestic union should be made for the sake of children. Where it's those who have enough children, then the separation and the joining should be made for the sake of growing old together and caring for one another.

If a woman should die leaving female and male children, the established law would counsel, but not compel, one to bring up the children without introducing a stepmother; but if there aren't children, one must necessarily marry, until one begets enough children for the household and the city. If a man should die leaving enough children, the mother of the children should stay there and bring them up. But if she should seem to be younger than she ought to be for healthy living without a man, the relatives should communicate with the women who supervise marriages and do what seems appropriate to themselves and to those women in such cases. If there should be a lack of children, they should act for the sake of children as well; and a barely sufficient number of children by law shall be a male and a female.

When it is agreed who the creators of an offspring are, but a judgment is needed as to which the offspring should follow, then, if a slave woman should mate with a slave, or free man, or freed man, the offspring is to belong entirely to the master of the slave woman, but if some free woman should have intercourse with a slave, the offspring is to belong to the master of the slave. And if the offspring should be from a man's own slave, or a woman's own slave, and this should become evident, the women shall send the offspring of the woman, together with its father, to another land, and the Guardians of the Laws shall do likewise with the offspring of the man, together with she who bore it.

No god or human being who possesses intelligence would ever advise anyone to neglect their parents; and one should have the prudence to see that it is correct to apply a prelude of the following sort, concerning the solicitude due the gods, to the honors and dishonors rendered to parents:

The ancient laws established among all men concerning the gods are twofold. Some of the gods we see clearly and honor; for others we set up images as objects of worship, which delight us even though they are without souls, and on account of which we believe those gods, having souls, feel great goodwill and gratitude. Now no one who has a father and mother, or the fathers or mothers of these, lying as treasures in the house and weakened by old age, should ever think that a statue will be more authoritative than such a shrine established on the hearth of the home—if, indeed, the possessor cares for it in the correct way.

Clinias:: What do you explain to be the correct way?

Athenian Stranger:: I will say. For such things are surely worth hearing, friends.

Clinias:: Just say on.

Athenian Stranger:: Oedipus, we assert, when he was dishonored, invoked upon his children those things which, according to what everyone sings, were fulfilled and heeded by the gods; and Amyntor in his spirited anger brought a curse upon his own child Phoenix, as did Theseus upon Hippolytus, and myriad others upon myriad others; from which it became clear that the gods pay heed to the curses of parents against children. For a parental curse against offspring is as no other curse against others, and it is most just that it be so. So let no one believe that a god by nature pays heed to the prayers of an especially dishonored father or mother toward children, but to one who is honored and has become exceedingly glad, and on account of such things generously beseeches the gods with prayers for good things for his children—will we believe that they don't listen with equal attentiveness, and thus distribute things to us? Why, in that case they would never be just in the distribution of goods, which is something we claim is least fitting for gods to be.

Clinias:: Very much so!

Athenian Stranger:: So then let us understand, as we said a little earlier, that we could not possess any statue more honorable in the eyes of the gods than a father or forefather in their old age, or mothers having the like capacity, and when one takes delight in them with honors, the god rejoices. For otherwise he would not pay heed to them. Surely, the shrine that is our ancestors' is marvelous to us, and preeminent over that of soulless figures. The former, which have souls, pray for us whenever they're cared for by us, and do the opposite when they're dishonored, whereas the latter do neither; as a result, if someone were to treat his father and forefather and all such persons correctly, he would possess the most-efficacious of all statues for securing a destiny befriended by gods.

Clinias:: You've spoken in a most noble way.

Athenian Stranger:: Everyone who has intelligence fears and honors prayers of parents, knowing that they have often been fulfilled for many people. Since this is the way these things are arranged by nature, for good men old progenitors are a godsend while they live, up to the very last moments of their life, and if they depart while still young, they're especially missed; but for bad men they are a source of great fear. So let everyone, believing these words, honor his own parents with all lawful honors. But if word should have it that someone is deaf to such preludes, to these men the following law would correctly apply: If someone in this city should be more neglectful of his parents than he ought to be, and, heedless of them, should fail to fulfill their wishes in every respect more than those of his sons, all his offspring, and himself, let the one who is suffering such treatment report it—either in person or by sending someone—to the three eldest Guardians of the Laws and to three also of the women who supervise marriages. They are to look after this, and punish with blows and imprisonment those committing injustice who are still young (that is, in the case of the men, those who are under thirty, but in the case of the women, they are to use the same punishments on those who are up to ten years older). And if, when they are past these ages, they should not desist from the same sorts of neglect toward parents, but in some cases should do evil to them, they are to take them before a court composed of the one hundred and one eldest among all the citizens. If someone should be convicted, let the court determine what he ought to suffer or pay, ruling out nothing which a human being is capable of suffering or paying. If someone should be unable to report that he is being treated badly, anyone among the free men who learns of it should report it to the magistrates, or be an evil man and subject to prosecution for the injury by anyone who wishes. If a slave should report it, he is to become free: if he's the slave of one of those doing or suffering the evil, the magistracy shall let him go, while if he belongs to some other citizen, the public shall pay his price on his behalf to the owner. The magistrates are to see to it that no one does an injustice to such a man as retribution for his informing.

With regard to the ways in which one person harms another with poisons, the fatal cases have been discussed fully, but none of the other injuries which someone voluntarily and with forethought effects, either through drinks, or foods, or unguents, have yet been fully discussed. The discussion is arrested by the fact that poisons are twofold, in accordance with the character of the human race. The kind we expressly mentioned just now works its evil on bodies by bodies, according to nature. But another kind uses certain sorceries, incantations, and so-called “binding spells” to persuade those who dare to injure people that they can do such a thing, and others that they are injured worst of all by these men who can practice magic. Now it isn’t easy to know how these and all such things are by nature at any time, nor, if one should know, is it easy to persuade others; it’s not worth trying to persuade the souls of human beings who are suspicious of one another in regard to such things that, if they should ever see molded waxen images at doorways, or at places where three roads meet, or at the images of their own parents, they must pay little attention’ to all such things, and to urge them to do so because they lack a clear opinion about them. But, dividing in two the law concerning poisoning, according to whichever of the ways someone might try to poison, one ought first to beseech, exhort, and advise them that they should not try to do such a thing, nor frighten the many among human beings who are as terrified as children, nor, again, to compel the: lawgiver and the judge to cure human beings of such fears; since, in the first place, he who tries to poison doesn’t know what he might do—in regard to the bodies, if he doesn’t happen to be a doctor and hence a knower, and in regard to sorceries, if he doesn’t happen to be a diviner or wizard. So let reason present the following law about poisoning:

A man who poisons someone so as to cause injury that is not mortal either to the man himself or to his human beings, or so as to cause a mortal or other injury to his livestock or beehives, if he should happen to be a doctor, and should be convicted in a trial for poisoning, is to be punished with death; but if he should be a layman, the court is to assess in his case what he ought to suffer or pay. If he should seem to be the same as one who injures by using binding spells, or charms, or certain incantations, or any such poisons, and is a diviner or wizard, he is to die; but if someone should be convicted of the poisoning without possessing the art of divining, the same thing is to happen to this man: for in the case of this man too, the court is to assess what they think he ought to suffer or pay.

With regard to the ways in which one person may harm another by theft or violence, if the harm be greater, he is to pay a greater indemnity to the one harmed, and if it be lesser, he is to pay a smaller penalty, but above all the person is to pay each time an amount sufficient to cure the injury. In addition, each must pay the judicial penalty attached to each evil deed for the sake of instilling moderation: he who has done evil because of another's lack of intelligence—giving way to persuasion on account of his youthfulness or some other such thing—shall pay a lighter penalty; he who has done evil because of his own lack of intelligence, on account of lack of self-restraint in the face of pleasures or pains—in cowardly fears, or certain desires, or feelings of envy, or spirited angers that are hard to cure—shall pay a heavier. He shall pay the judicial penalty not for the sake of the evildoing—for what has been done will never be undone—but so that he and those who see him suffering justice will in future time either hate the injustice altogether, or refrain in large part from such a calamity. For the sake of all these things, and with a view to all such considerations, the laws should aim, just like an archer who is not bad, at the greatness and above all at the worthiness of the punishment for each of the offenses. And the judge must assist the lawgiver in performing this same task, whenever some law assigns to him the estimation of what the man judged guilty should suffer or pay; while the latter, like a painter, must sketch in outline deeds which follow what has been written. That, Megillus and Kleinias, is just what we ought to do now, in the noblest and best manner possible. The proper sorts of penalties for all thefts and acts of violence ought to be described, insofar as the gods and the sons of the gods allow us to legislate.

If someone should be mad, he is not to appear openly in the city. The relatives in each case are to guard the persons in their homes, using any method they know of, or they must pay a penalty: a man of the highest class one hundred drachmas, whether it be a slave or a free man that he's failing to look after; a man of the second class four-fifths of a mina; a third-class man three-fifths; and two-fifths in the case of a fourth-class man. Now many men are mad, in many ways. There are those whom we're now discussing, where it's on account of diseases, but there are some who are such because both the nature and the nurture of their spiritedness have become bad: in a minor dispute they give vent to loud-voiced, wicked slanders against one another, and no such behavior is in any way or on any occasion fitting in a city with good laws. So let the following be the single law that applies to all abusive talk:

No one is to abuse anyone in speech. He who is disputing with another in certain discussions is to teach and learn and wholly abstain from abusing the disputant and the bystanders. For from words (a light affair at first), from imprecating and cursing one another, and bringing down on each other the shameful epithets of women's cries, there arises, in deed, hatred and most weighty enmities. The one who speaks is gracious to a graceless thing—spiritedness—and gorges his anger with wicked feasts; making the part of his soul that was at one time tamed by education savage again he becomes a beast through living in ill humor, and receives as a gift in return the bitterness of his spiritedness. Moreover, it is often usual, somehow, for everyone in such situations to switch to uttering something that ridicules the opponent; and no one ever becomes accustomed to this behavior without either straying in some degree from a serious disposition, or destroying in large part his high-mindedness. That is why no one is ever to utter any such thing at all in a temple, or at publicly funded sacrifices, or again in the contests, or in the marketplace, or in a court, or in any common assembly. The magistrate in charge of each of these is to carry out the punishment, or else never desire to win a victory for excellence—on the ground that he neither cares for the laws nor does the things commanded by the lawgiver. And if in other places someone doesn't abstain from such words—whether he initiates the reviling or defends himself with it—any elder man who happens along is to defend the law by driving away with blows those who are kindly disposed toward spirited anger, that evil comrade, or else must undergo the prescribed penalty.

We are now saying that it is impossible for a man entangled in reviling to avoid trying to say something that evokes laughter, and we are reviling this practice, when it involves spirited anger. But what then? Do we accept the spirited eagerness of the comedians to say what is laughable about human beings, when they speak in such a way, trying to make comedies about our citizens, without spirited anger? Should we divide it in two, into what is playful and what is not, and allow someone to speak playfully in ridicule of another, without spirited anger, but allow no one to do so seriously and, as we said, with spirited anger? This must in no way be given up, but we should legislate who may do so, and who may not.

A poet of comedy, or of some iambic lampoon, or a melody of the Muses, may not in any way make a comedy about any citizen, through speech or image, whether with spirited anger or without spirited anger. If someone should disobey, those who preside over the contests must drive him completely out of the country on the very day, or else pay a penalty of three minas sacred to the god whose contest it is. Those, however, who were earlier said to have permission to do this concerning someone, may do so to one another, without spirited anger and in play, but may not do so in seriousness or in spirited anger. The judgment as to this distinction shall be left to the Supervisor of Education as a whole for the young; what this man judges approved, the poet may present in public, but what he judges disapproved, the poet may not himself show to anyone nor ever be seen teaching to any other, slave or free, without being held to be a bad man and one disobedient to the laws.

What is pitiable is not the man who is hungry, or suffering some such thing, but rather the man who is moderate, or has some virtue or some part of virtue, yet in addition to these has some calamity; so it would be amazing if someone like this, whether slave or free, were totally uncared for, and as a result arrived at a condition of utter beggary, in a regime and city that is even moderately well managed. That is why it is safe for the lawgiver to establish some such law as the following for such cases: -

No one is to become a beggar in our city, and if someone should try to do such a thing, to earn his living through endless prayers, the Market Regulators are to drive him from the marketplace, the magistracy of the City Regulators is to drive him from the city, and the Field Regulators are to send him out of the rest of the country and across the border, so that the country may become completely purged of such a creature.

If a male or female slave should injure anything that belongs I to someone else, and the one injured does not himself share the responsibility, on account of inexperience or some other imprudent usage, the master of the one who did the injury must either cure the injury, omitting nothing, or hand over the one who did the injury. But if the master brings a counterclaim, alleging that the claim has arisen as a result of the common craft of injurer and injured, with the aim of robbing the slave, let him prosecute the man claiming to have been injured, on a charge of conspiracy. If he should win, let him exact twice the value of the slave, which the court is to estimate; but if he should lose, let him both cure the injury and hand over the slave. And if a beast of burden, or a horse, or a dog, or some other animal, should do some harm to the belongings of a neighbor, let the injury be recompensed ac- cording to the same principles.

If someone should voluntarily refuse to testify, the man who needs him is to issue a summons, and the man summoned is to appear at the trial. If he should have knowledge and be willing to testify, let him testify; but if he should claim not to have knowledge, let him depart from the trial after having sworn in the name of the three gods Zeus, Apollo, and Themis that he doesn’t have knowledge. He who has been summoned to testify and fails to appear with the man who issued the summons is to be lawfully liable for the injury. If someone calls up as witness somebody who is a judge, the latter is not to vote on the case in which he has testified. It is permissible for a free woman to testify and support a pleading, if she should be over forty years of age, and to bring a judicial action, if she should be without a husband. If the husband is living she may only testify. A female or male slave and a child are to be permitted to testify and support a pleading only in a murder case, provided they furnish a worthy guarantee that they will remain until the trial, if their testimony should be denounced as false. And either of the parties may denounce the testimony as a whole or in part, provided he makes the assertion that they have testified falsely before the case has been decided. The magistrates shall guard the denunciations once they've been sealed by both parties, and present them at the trial for false testimonies. If someone should be convicted of false testimony twice, no law shall any longer compel this man to testify, and if he should be convicted three times, this man is no longer to be permitted to testify. If he should dare to testify after having been convicted a third time, let anyone who wishes expose him to the magistracy, and let the magistracy hand him over to the court; if he should be convicted, let him be punished with death. In the case of those whose testimony is condemned at the trial, and who seem to have testified falsely and brought about the victory for the party that won, if over half the testimony of such persons should be condemned, the case that was won by these testimonies is to be annulled, and there shall be a dispute and trial as to whether the case was decided on these testimonies or not; the final outcome of the earlier trials shall depend on which way this is decided.

There are many noble things in the life of human beings, but most of them are, as it were, naturally subject to defects which pollute and defile them. And indeed, is even justice, which has tamed all the human things, somehow not noble for human beings? But if this is noble, how would judicial advocacy not be noble for us? These things, being such, are discredited by a certain vice pretending to the noble name of art. It claims, first, that there is for judicial proceedings a certain contrivance—itself—which can carry on judicial cases and support the pleading of another, and can bring about victory, whether the things done in each judicial case be just or not; and it claims that the gift of this very art, and of the speeches that result from the art, is to be had if one gives money in return. Now this, whether it is an art or a certain experience and practice without art, certainly ought not to grow in our city. The lawgiver requests that one obey, and not utter what is opposed to justice, but go away to another country; to those who obey, the law is silent, but to those who disobey, this is the voice of the law:

If someone should seem to try to reverse the power of the just things in the souls of the judges, and to bring many suits or support the suits of others, when they aren't called for, he is to be prosecuted for evil, judicial procedure or evil judicial advocacy by anyone who wishes, and tried in the court of select judges. If he's convicted, the court is to decide whether he seems to do such a thing out of fondness for money or fondness for victory: if out of fondness for victory, the court shall determine in his case how long a time such a man ought not to undertake a suit against anyone or support anyone else's suit; but if it's out of fondness for money, in the case of a stranger he's to depart from the country and never come again, or be punished with death, while in the case of a member of the city he's to die, because of having honored in every way the fondness for money. And if someone should be judged to have done such a thing twice out of fondness for victory, he is to die.

## Book XII.

Athenian Stranger:: If someone acting in the capacity of ambassador or herald should convey a false message from the city to some city, or, when he is sent, should fail to convey the matters he was sent to convey, or if it should become evident that in his capacity as ambassador or herald he has not brought back correctly what was sent from the enemies or even from friends, these actions should be prosecuted as illegal acts of impiety against messages and commandments of Hermes and Zeus; and if he's convicted an assessment should be made of what he ought to suffer or pay.

Theft of money is illiberal, and rapacity is shameless. None of the sons of Zeus has practiced either of these, through delighting in guile or violence. So let no one be deceived and persuaded about such matters by poets, or in some other way by some discordant tellers of myths, and think that when he steals or uses violence he does nothing shameful, but just what is done by the gods themselves. For that is neither true nor likely: whoever should do such a thing against the law is never a god or the child of gods, and it is more fitting for the lawgiver to know about these things than it is for all the poets. He, therefore, who is persuaded by our argument has good fortune, and would have good fortune for all time; but he who doesn't believe must, after these remarks, enter into combat with some such law as the following:

If someone should steal some public thing, he must undergo the same judicial penalty, whether it be great or small. For he who steals something small has stolen under the influence of the same erotic passion, but with less power, while he who moves a greater thing that he didn't set down is unjust to the full extent. So the law would not decide to assign a lesser judicial punishment to either of them on account of the size of the theft, but only because one of them is perhaps still curable and the other incurable. In fact, if someone should convict in court a stranger or a slave of stealing something public, the judgment as to what the person ought to suffer, or what penalty he ought to pay, should be made on the grounds that it's likely that he's curable. But if a member of the city, brought up in the way he will have been brought up, should be convicted of pillaging or doing violence to the fatherland (whether he's caught in the act or not), he's to be punished with death, on the grounds that he's practically incurable.

Military organization appropriately calls for much consultation and many laws, but the most important thing is that no one, male or female, should ever be without a ruler, and that no one's soul should acquire the habit of doing something on its own and alone, either seriously or in play; at all times, in war and in peace, it should live constantly looking to and following the ruler, governed by that man in even the briefest matters—such as standing when someone gives the order, and walking and exercising in the nude and washing and eating and getting up at night to guard and carry messages, and in dangers, not pursuing someone or retiring before another without an indication from the rulers. In a word, one should teach one's soul by habits not to know, and not to know how to carry out, any action at all apart from the others; as much as possible everyone should in every respect live always in a group, together, and in common—for there is not nor will there ever be anything stronger, better, and more artful than this for producing security and victory in war. This ought to be practiced during peacetime, from earliest childhood: ruling the rest and being ruled by others. And anarchy ought to be removed from the entire life of all human beings and of all beasts that are subject to human beings. Indeed, all choral dances are to be danced with a view to feats of excellence in war, and good temper as a whole and fortitude are to be practiced for the sake of the same things, as is endurance with regard to foods, drinks, cold and the opposite, and hard beds; most important, they are not to corrupt the capacity of the head and feet by wrapping them with alien coverings, thus destroying the birth and growth of their own felt and shoes. For if these extremities are preserved they maintain a very great capacity in the body as a whole, while they do the opposite if the opposite occurs; the one is the most ministerial part for the entire body, and the other is the most magisterial, since by nature it possesses all the sovereign perceptions of the body. This is the praise that it was necessary for a young man to seem to be listening to concerning the military life, and the following are the laws:

He who is selected, or is commanded to take his turn, must serve in the military. But if someone out of a certain cowardice and without the Generals' permission should fail to do so, there are to be prosecutions before the war officers for failing to perform military service, when they come back from the military camp. The judges shall be each class of soldiers sitting separately—heavily-armed infantry, cavalry, and each of the other military classes in the same way. Heavily-armed infantrymen are to be brought before heavily-armed infantry, cavalrymen before cavalry, and the others, in the same way, before their own kind. If someone should be convicted, he shall never be a competitor for a prize in excellence as a whole, and shall never prosecute another for failing to perform military service, or be an accuser in these matters; in addition to these things, the court is also to estimate what he ought to suffer or pay. After this, when the trials for failing to perform military service have been decided, the officers are to call an assembly for each class again, and he who wishes shall be judged concerning the prizes for excellence, in their own tribes. The evidence he presents, and the confirmation from the speeches of witnesses, is not to be from an earlier war, but just from the expedition they've been on at that time. The crown of victory for each class shall be of olive branches, and this is to be hung up, with an inscription, in the temples of whichever gods of war the person may wish, as a witness during his entire life to the judgment concerning the prizes for excellence, or the second or third prizes. If someone should go on military service but return home prior to the time when the officers send him back, these men are to be prosecuted for deserting the ranks before the same persons as those who preside over cases of failure to perform military service; for those who are convicted, there are to be the same retributions as were exacted earlier.

Of course, every man who prosecutes a man on any charge must fear lest he bring about a false retribution, either voluntarily or involuntarily (insofar as is within his power). For Justice is said, and has been said really, to be the virgin daughter of Awe, and falsehood is naturally hated by Awe and Justice. So everyone must be careful about mistaking justice in other matters, and especially in the case of the throwing away of arms during war, lest one make an erroneous judgment about the occasions when it's necessary to throw them away, blaming these occasions as if they were shameful, and bringing unworthy judicial charges against a man who doesn't deserve them. Now it's not at all easy to define either of these situations, yet nevertheless the law must try somehow or other to distinguish them from each other. Let’s discuss it while making use of myth: if Patroclus had been carried to the tent without his weapons and had recovered, as has happened to tens of thousands while Hector was in possession of those arms which the poet claims had been given by the gods to Peleus as a dowry in his marriage with Thetis, it would have been possible for whoever was base among the men of that time to blame the son of Menoetios for throwing away his arms. And then there are those who have lost their weapons by being thrown down cliffs, or at sea, or when a sudden flood of water hits them in the toils of storms; indeed, there would be ten thousand such cases one might sing about in a comforting way, and thereby portray as noble an easily misrepresented evil. One must do what one can to separate the greater and more disgusting evil from the opposite. Now the application of these names in the course of blaming virtually contains a certain distinction; for it wouldn’t be just to use the name “shield-hurler” in all cases, but rather “arms-thrower.” The one who is deprived of his arms by a reasonable degree of violence wouldn’t be a “shield-hurler” in the same way as the one who voluntarily drops them: presumably they differ altogether, and in every way. So let it be put as follows in the law:

If someone overtaken by enemies possesses arms, and doesn’t turn to make a defense, but voluntarily drops them or hurls them away, striving to win a shameful life with cowardice rather than a noble and happy death with courage, then for such a throwing away of arms there is to be judicial punishment for the arms hurled away; but the judge is not to be careless in investigating the case described previously. Because it is always necessary to punish the bad man, so that he may become better, but not the unlucky man—for no more is to be gained. What then would be the appropriate penalty for the man who gave up such a power of defensive arms in the opposite way? It isn’t possible for a human being to do the opposite of what they claim was once done by a god, who transformed Caeneus the Thessalian from a woman’s to a man’s nature; but if the opposite change to that one, the transformation from man into woman, were the retribution for the man who is a shield-hurler, it would be in a way the most fitting of all. As it is, to come as near as possible to this, because of his love of his soul, and so that he may not run risks for the rest of his life, but may live for the maximum length of time in ill repute, let the following law apply to these men:

A man who should be convicted in a trial for shamefully throwing away his weapons of war is never to be used as a male soldier or assigned to any post whatsoever by any General or any other of the war officers. Otherwise, the Auditor shall condemn the officer at his audit, and if the one who gave the bad man an assignment should be of the highest class, he must pay a thousand drachmas, if of the second, five minas, if of the third, three minas, and if of the fourth, a mina. The one who was convicted in the trial, in addition to giving up manly risks, as befits his nature, must also pay a recompense: a thousand drachmas if he should be of the highest class, five minas if of the second, three if of the third, and likewise a mina, just as in the case of those discussed before, if he’s of the fourth class.

What account would it be fitting for us to give concerning the audits of magistrates, some of whom obtain office by the fortune of the lot for a period of a year, and some of whom obtain office for several years and come from a previously selected group? Who would be an adequate Auditor of such men, in case one of them should do something that is somehow crooked, because he’s been bent by the weight and on account of his own lack of capacity in regard to what the office requires? It’s not at all easy to find a ruler over rulers who is superior in virtue, but nevertheless an attempt must be made to find some divine Auditors. For this is the way it is: in the case of a regime, just as in the case of a ship or some animal, opportunities for dissolution are afforded by many things—stays, undergirdings, and the tendons of the sinews—which, being of one nature, are dispersed all around, and which we call by many names. And this provides one such opportunity, and not the smallest, for the preservation or the dwelling in dissolution of a regime. For if the ones who audit the magistrates are better than them, and evince this by applying a blameless justice in a blameless way, the entire country and city flourish and are happy. But if what pertains to the audits of the magistrates turns out otherwise, then the justice that binds all the political activities into one is dissolved, and in this way every office is split apart from the others: rather than assenting to the same thing they make the one city many, fill it with factions, and swiftly destroy it. That is why the Auditors must be in every way amazing men in regard to the whole of virtue. Let us contrive, then, to bring them into being in some such way as the following:

Each year, after the sun has turned from summer to winter, the entire city must assemble in the precinct common to the Sun and Apollo, to present to the god three men from among them. Each of them is to propose a man not less than fifty years of age whom he considers to be the best in every way (leaving aside himself). They are to pick out the half of the nominees who receive the most votes—if, that is, their number is even; if it’s odd, they’re to delete the one who received the least votes, and leave half of them after rejecting the others according to the plurality of votes.

If some should be equal in votes and make the half larger, they are to delete the surplus by rejecting those who are younger. They are to judge among the rest by voting again, until three are left with an unequal number of votes. But if either all or two of these should have an equal number of votes, they are to turn the matter over to good destiny and fortune, and use the lot to choose the victor, the second, and the third, whom they are to crown with olive branches. Giving the prizes for excellence to all of them, they are to proclaim that the city of the Magnesians, again finding security under god, presents to the Sun her three best men, and dedicates them as a common first-offering to Apollo, according to the ancient law, and the Sun, for as long a time as they pursue their task of judging. In the first year they are to elect twelve such Auditors, until each has attained the age of seventy-five, and afterward three are to be added each year. These are to divide all the offices into twelve parts and examine them by means of every test appropriate for free men. They are to dwell, for as long a time as they should conduct audits, in the precinct of Apollo and the Sun in which they were selected. When they've judged those who rule the city, some of whom each will judge in private and some of whom they'll judge in common with one another, they are to announce by written proclamations in the marketplace what must be suffered or paid by each magistracy, according to the sentence of the Auditors. Any of the magistracies that should not agree that it has been judged justly must take the Auditors before the select judges; if someone should win an acquittal from the Auditors' sentence, he is to bring an accusation against the Auditors themselves, if he wishes. But if he should be convicted, then if the Auditors have assessed the death penalty, he is to die and no more, necessarily; but in the case of the other assessments, which it’s possible to pay double, he’s to pay double.

One must also hear what the audits of these men themselves will be, and how they will come about. While they’re alive, these men whom the entire city has judged worthy of prizes for excellence shall occupy the front seats at every festival. Moreover, from them are to be sent out the officers in charge of each mission to observe the common sacrifices, spectacles, and other sacred ceremonies shared in common with the Greeks. These men, alone of those in the city, are to be adorned with a crown of laurel. All are to be priests of Apollo and the Sun, but the one who is judged to be first among those selected each year is to be the ruling priest that year, and the name of this man is to be inscribed each year, so that he might become the measure of the year’s number as long as the city should last. When they die, they are to have laying-outs, funeral processions, and groves that are distinguished from those of the rest of the citizens: all the clothing is to be white, and it is to take place without dirges and lamentations, and instead a chorus of fifteen girls and another of males are each to stand around the bier and sing in turn praise, in the form of a poetic hymn, to the priests—glorifying their happiness in song for an entire day. At dawn the next day, the bier itself is to be carried to the burial by a hundred of the young men from the gymnasia, chosen by the deceased’s relatives. First in the procession are to be the unmarried youths, each clothed in his military garb—cavalry with their horses, heavily-armed infantry with their heavy armor, and the rest similarly—and around the bier itself are to come, in front, boys singing the anthem of the fatherland, and following behind, girls and any of the women who may happen to have passed the age of child-bearing; after these, priests and priestesses are to follow, on the grounds that the tomb is unpolluted—even though they avoid the tombs of the rest—if, that is, the Pythian should vote thus and in this way. Their grave is to be constructed underground, in the shape of an oblong crypt made of stones that are porous and as lasting as possible, and it is to have stone couches lying next to one another; when they've laid him who has become blessed there, and heaped up dirt around in a circle, they'll plant a grove of trees around, except at one extremity, so that the tomb may for the rest of time increase in this direction, where dirt will be needed to cover those placed there. Each year they'll dedicate to them a contest in music, in gymnastics, and in horsemanship. These are the prizes for the men who have passed their audits.

But if one of these men, trusting to the judgment passed upon him, should display his human nature by becoming bad after the judgment, let the law command anyone who wishes to prosecute him; and let the contest in court take place in something like the following way:

Let this court be composed, first, of the Guardians of the Laws, and then of the living Auditors, and, in addition to these, the court of select judges; and let the prosecutor write an indictment, concerning the man he's prosecuting, saying that so-and-so is unworthy of the prizes for excellence and of the office. If the defendant should be convicted, he's to be deprived of the office, and the tomb, and the rest of the honors assigned to him; but if the prosecutor should fail to obtain a fifth of the votes, he is to pay a fine—a man of the highest class twelve minas, eight for a man of the second, a man of the third six, and of the fourth two.

Rhadamanthus is worthy of admiration as regards the way he is said to have judged judicial proceedings, because he saw -that the human beings of that time believed that there were evidently gods—as was reasonable, since the many at that time, of whom he was one, were sprung from gods, according to report at least. Indeed, it's likely that he thought he shouldn't turn the business over to any human judge but rather to the gods, from whom he obtained simple and swift judgments. For by administering an oath to the disputants about each of the matters in dispute he settled things swiftly and safely. But now a certain part of humanity, we claim, doesn't believe in gods at all, while others think they don't pay attention to us, and the opinion of most—the worst—is that if the gods receive small sacrifices and flatteries they'll aid in robbing great amounts of money, and release them from many sorts of great penalties: as a result, Rhadamanthus's art would no longer be fitting for the trials of present day human beings. So since the opinions of human beings about gods have changed, it's necessary that the laws change too. For in judicial trials of complaints, laws that are laid down with intelligence must remove the oaths from each of the contending parties, and he that brings some judicial action against someone should write the charges but not swear an oath, while the defendant, in the same way, should write the denial and hand it over to the magistrates without an oath. For presumably it's a terrible thing, since there are many judicial actions in a city, to know for sure that close to half the parties have sworn falsely and yet carry on easy intercourse with one another at common meals, at the other meetings, and at the private gatherings of each.

Let the law be, then, that a judge is to swear an oath when he's about to give judgment, and that he who appoints the common magistrates is to do such a thing each time, by voting with oaths or by carrying the votes from sacred places, and again that the same sort of thing is to be done by the judge of choruses and of every musical event, and by the supervisors and umpires of gymnastic and equestrian contests, and of all contests in which swearing falsely doesn't produce gain—according to the opinion of humanity. But in any contests where a great gain seems evidently to accrue to him who denies strongly and with an oath, in these all the persons bringing charges against one another are to be judged by trials without oaths. And in general, those who preside at a trial are not to allow someone to speak with oaths, for the sake of persuasiveness, or to curse himself and his family, or to use unseemly supplication or womanly wailings, but a person is always to state fully what is just, teaching and learning with auspicious speech; otherwise, as if the speaker had digressed from the speech, the magistrates are to bring him back to a speech that constantly refers to the business at hand. As for a stranger in his relations with strangers, they are to receive and give authoritative oaths to one another, if they should wish, just as is done now—for they won't grow old or, as a rule, make nests of young in the city, and leave others like themselves who have the right to dwell in the country—and in judicial trials of complaints against one another the judging shall proceed in the same way, for all of them.

With regard to the ways in which some free man is disobedient to the city, not in matters deserving of blows, imprisonment, or death, but with respect to certain attendances at choral performances, or at processions, or at certain other such common ceremonies or public services—such as are involved in sacrifices during peacetime or contributions for war—with respect to all such instances, what is necessary first is the healing of the damage. For those who fail to obey there must be a security deposit left with the men whom the city, and also the law, may appoint to exact pledges. Those who then disobey are to have their deposits sold, and the money is to go to the city. If a greater penalty is needed, the magistrates in each case shall impose the fitting penalties on the disobedient and bring them into court, until they are willing to do what has been ordered.

A city that isn't going to make money except for the money that comes from the land, and that isn't going to engage in commerce, must have deliberated about what it ought to do concerning both trips abroad, away from the country, on the part of its own people, and the reception of strangers from elsewhere. So the lawgiver should give advice about these matters, first by being as persuasive as he can:

By nature the intermingling of cities with cities mixes dispositions in every way, as strangers produce innovations in one another. For the cities that are well governed by means of correct laws this would bring the greatest of all injuries. But for most cities, since they're not at all well regulated by laws, it makes no difference if they mingle by receiving strangers among themselves or go gallivanting off to other cities, whenever someone might desire a trip abroad, anywhere and at any time, whether he be young or more elderly. Yet then again, not to receive others, or go abroad elsewhere themselves, is at once not entirely possible and in addition, would appear savage and hard to the other human beings, to whom they would seem to be adopting the harsh words of what are called "the expulsions of strangers," as well as stubborn and harsh manners. But one ought never to belittle the reputation one has among others for being good or not. For the many happen not to be as deficient in their judgment of who among the rest are wicked and good, as they are deficient in the essence of virtue; there is a certain divine shrewdness even in bad men, such that very many even of those who are especially bad can distinguish well, in their speeches and opinions, the better human beings and the worse. That is why the exhortation to give preeminence in honor to one's good reputation among the many is a noble exhortation for the many cities. But the most correct and greatest thing, at least for the man who is to be perfect, is to be truly good and thus to hunt for a life of good repute, but otherwise not to do so at all; and indeed, it would be fitting for the city being founded in Crete to obtain from the other human beings the noblest and best reputation possible, with respect to virtue. And there is every reasonable hope that if it should come into being according to plan, the Sun and the other gods will look upon it and a few others as being among the cities and countries with good laws. So in regard to travel abroad into other lands and places, and the reception of strangers, it is necessary to do as follows:

First, it shall not be permissible for a man younger than forty to go abroad anywhere in any way; moreover, no one is to go abroad in a private capacity, but heralds, ambassadors, and certain observation missions may do so in a public capacity. Military expeditions abroad in wartime aren't worth including among these political trips. There should be persons sent to the Pythian Apollo, the Olympian Zeus, to Nemea, and to the Isthmus, to take part in the sacrifices and contests dedicated to these gods; and they should do what they can to send the most numerous, beautiful, and best men possible, who will give the city a good reputation in the sacred and peaceful gatherings, and provide a supply of reputation that is the counterpart to what is gained in war. When they return home they will teach the young that the legal customs, pertaining to the regimes, of the others are in second place. There are also certain other observation missions they ought, with the permission of the Guardians of the Laws, to send out, such as the following. If certain citizens desire to observe the affairs of the other human beings at greater leisure, no law is to prevent them. For a city without experience of bad as well as good human beings would never be able, because of its isolation, to be sufficiently tame and perfect; nor, again, would it be able to guard its laws, unless it accepts them by knowledge and not solely by habits. The fact is, there are always among the many certain divine human beings—not many—whose intercourse is altogether worthwhile, and who do not by nature grow any more frequently in cities with good laws than in cities without. These the inhabitant of cities with good laws, if he's uncorruptible, must always seek and track down, by going out over sea and land, in order to place on a firmer footing those legal customs that are nobly laid down, and correct others, if they are lacking something. For without this observation and search a city will never remain perfect—nor will it do so if they should carry out the observational mission badly.

Clinias:: How then would both these things be accomplished?

Athenian Stranger:: As follows. First, our observer of this kind must be more than fifty years of age; then he should have become one of those with a good reputation in other respects and in war, if the Guardians of the Laws are to allow him to go to other cities as an exemplar. After he gets to be over sixty years of age he is no longer to go on observational missions. When he's spent as many of the ten years as he may wish observing, and has arrived back home, he's to go to the council of those who keep watch over the laws.

This council is to be composed of a mixture of young and elderly men, and shall be compelled to meet each day, from dawn until the sun has risen. It shall be composed, first, of the priests who have obtained the prizes for excellence, and then of the ten Guardians of the Laws who are eldest at any time, and then there will be the Supervisor of Education as a whole—the new one and those who have stepped down from this office. Each of these is not to attend alone, but with a young man between the ages of thirty and forty, having chosen the man who pleases him. The intercourse and speeches of these men are always to be about laws and their own city, and anything they may have learned elsewhere that is different and pertains to such matters, as well as whatever branches of learning might seem to contribute to this inquiry by making things clearer for the learners, while, for those who don't learn these, things pertaining to laws appear darker and unclear. Among these, the matters the older men judge approvingly, the younger are to learn with complete seriousness, and if one of those invited should seem to be unworthy, the whole council is to blame the man who did the inviting. But those who are of good repute among these young men the rest of the city shall guard, watching over and taking care of them in a special way, honoring them when they do what is correct but dishonoring them more than the others, if they should turn out worse than the many.

It is to this council, then, that the man who has been observing the legal customs among the rest of humanity is to go immediately after he has arrived, and if he's found some persons capable of explaining some utterance concerning the laying down of laws, or education, or upbringing, or if he himself should return having thought some things up, let him share this with the entire council. If he should seem to have returned no whit worse or better, let him be praised for the sake of his great eagerness of spirit, at any rate; but if he should seem much better, let him receive much more praise while he lives, and when he has died let him be honored with appropriate honors by the power of those in the council. If, however, he should seem to come back corrupted, he is not to associate with any young or elder man, making a claim to be wise. If he should obey the magistrates, he may live, as a private man, but if not, he is to die—if, that is, he should be convicted in court for being a busybody in some way concerning the education and the laws. And if he should deserve to be brought into court but none of the magistrates brings him, blame is to accrue to the magistrates on the occasion of the judging concerning prizes for excellence.

The man who goes abroad should go abroad in this way and be this sort of person; next, after this man has been dealt with, a friendly reception must be provided for the man who visits from abroad. There are four strangers whom it is necessary to discuss. The first, and perpetual, visitor mostly completes his visits in summer, like the migratory birds; the bulk of these simply carry on their traffic across the sea for the sake of money, flying as if they had wings, to other cities in the summer of the year. The magistrates assigned to these fellows must receive the man at the marketplaces, harbors, and public buildings outside the city but near the city, keeping guard lest any of such strangers introduce some innovation, and apportioning judicial matters to them in the correct way—having dealings with them as is necessary, but as little as possible.

The second is a real observer, with his eyes—and also with his ears, when it comes to the spectacles of the Muses. For every such person there must be lodgings prepared near the temples, with marks of humane hospitality, and the priests and temple custodians must look after and care for such persons until they have stayed a measured time; then, having seen and heard what they came for, they are to depart, having done and suffered no injury. And the priests are to be judges for them, if someone should do an injustice to one of them or if one of these should do an injustice to someone else of less than fifty drachmas' worth; but if some greater charge should be made concerning them, the trials for such persons must be held before the Market Regulators.

The third stranger, who arrives on some public business from another country, must be received publicly. He ought to be received only by Generals, Cavalry Commanders, and Rank Commanders, and such persons should be taken care of only by that man with whom one of them might be lodged and entertained as a guest, in conjunction with the Presidents.

The fourth, if ever one should arrive, is rare; but if ever someone should come who is the counterpart, from another country, of our observers, he must first be no less than fifty years of age, and in addition to this must ask either to see something beautiful which is different from the beautiful things in the other cities, or to reveal some such thing to another city. Now every such man may go uninvited to the doors of the rich and wise, he being another such himself. Indeed, let him go to the house of the Supervisor of Education as a whole, trusting that he is a suitable guest for such a host, or to the house of one of those who has won the victory in virtue; when he has kept company with some of these, teaching and learning, let him depart as a friend leaving friends, honored with gifts and fitting honors.

These are the laws that should regulate the reception of all male and female strangers from another country and their sending out of their own—honoring Zeus the god of strangers, and not using meats and sacrifices as a way of expelling strangers (as the nurslings of the Nile do now), nor savage proclamations.

Any security that someone may pledge is to be pledged explicitly, with the entire affair agreed upon in writing and in the presence of not less than three witnesses, if the amount is under a thousand drachmas, and not less than five if it's over a thousand. The previous seller is to stand as security for any seller who is not suable or is not at all solvent, and is to be liable to be sued to the same degree as the seller.

If someone should wish to conduct a search on anyone's premises, he is to conduct the search naked except for an ungirded undershirt, and after having sworn an oath to the conventional gods that he does indeed expect he will find the thing. And this other shall hand over the household, the things that have been sealed as well as the unsealed things, to be searched. If someone should fail to give leave to somebody who wishes to search, the one who's prevented is to go to court after having assessed the value of the thing he's looking for; if there should be a conviction, double the assessed value is to be paid in damages. If a master should happen to be away from home, the inhabitants of the house must allow the unsealed things to be searched, but the sealed things the searcher is to counterseal and put under the guard of whomever he may wish, for five days. If the master should be away a longer time, he is to call in the City Regulators and thus conduct the search, opening the sealed things as well and then sealing them again in the same way in the presence of the household members and the City Regulators.

The following is to be the time limit for disputed claims, after which it shall no longer be possible to dispute the possessor's claim: There is to be no dispute as regards lands and houses in this country; as regards the other things which someone may possess, if someone should openly make use of a thing in the city and in the marketplace and temples, and no one seizes it, but then somebody claims they've been looking for it during this time, while the man clearly wasn't hiding it—if they spend a year this way, with the one in possession of something, and the other searching, then after the passage of a year no one is to be permitted to seize such a possession. If someone should make use of a thing not in the city or the marketplace, but in the fields, openly, and someone doesn't confront him within five years, then when the five years have expired this person is no longer to be permitted to seize such a thing. If someone should make use of something in the houses in the city, the time limit is to be three years; if he should possess it in the fields in a way that isn't evident, ten years; if in another country, there is to be no time limit on the seizure, however long a time before it may be discovered somewhere.

If someone should forcibly prevent somebody from appearing at a trial, whether it be the party or the witnesses, then, if it's a slave—his own or someone else's—the trial is to be nullified and invalid; if it's a free man, in addition to the nullification the one who does this is to be imprisoned for a year and liable to prosecution for kidnapping by anyone who wishes. And if someone should forcibly prevent a rival competitor from appearing at some contest in gymnastic, in music, or in something else, anyone who wishes should report it to those who preside at the contest, and they shall allow the one who is willing to compete to enter the contest freely. If they're unable to do so, and the one who did the preventing should win the contest, they're to give the victory prizes to the man who was prevented, and inscribe his name as the victor in whatever temples he may wish; for the man who did the preventing there is never to be any votive offering or inscription concerning such a contest, and he is to be liable for the damages, whether he is defeated or is victorious in the contest.

If someone should knowingly receive anything stolen, he is to be liable to the same judicial penalty as the thief. The penalty for harboring a fugitive is to be death.

Everyone is to consider the same person a friend or enemy as the city does, and if someone should make peace or war with certain parties in private, apart from the community; the penalty is to be death in this case too. If some part of the city should by itself make peace or war with certain parties, the Generals are to bring those responsible for this action into court, and the judicial penalty for someone who is convicted shall be death.

Those who do some service to the fatherland ought to do the service without gifts, and it is no excuse, nor is it a praiseworthy saying, to aver that "for good deeds gifts should be received, but not for petty deeds." Now it isn't easy to know and, having knowledge, to be firm; the safest course is to pay heed and obey the law, and do no service for gifts. He who disobeys is simply to die, if he's convicted in a trial.

As regards communal money revenues, each man's property is to be evaluated (for many purposes), and in addition the tribes are to report the yearly harvest in writing to the Field Regulators; this way, the public treasury may deliberate and decide each year to use whichever of the two existing modes of revenue it might wish to use—either a portion of the whole assessed evaluation, or of the current annual income, apart from the contributions to the common meals.

As regards votive offerings to the gods, the well-measured man ought to bestow well-measured votive offerings. Now the earth and the household hearth are held sacred to all the gods by everyone. So no one should consecrate them a second time as sacred to the gods. In other cities, in private and in the temples, gold and silver are possessions that arouse envy; yet ivory, being from a body that has lost its soul, is not a pure votive offering, while iron and bronze are tools of war. Let a person dedicate any wooden thing made of one piece that he may wish, and likewise anything of stone for the common temples, or something woven that doesn't entail more than a month's work for one woman. The color white would befit gods, in something woven as well as in other things, and dyes are not to be added except in the case of the adornments for war. But the most divine gifts are birds, and figures that a single artist might complete in one day. The other votive offerings are to imitate such things.

When there has been a thorough discussion of the parts of the entire city—how many and what they should be—and the laws concerning all the greatest business transactions have been discussed as best they can be, what ought to remain is judicial procedure. The first of the judicial courts would be those of the chosen judges, whom the defendant and the prosecutor should choose in common, and for whom the name "arbitrators" is more fitting than "judges." The second would be those composed of villagers and tribesmen, divided into twelve parts, before whom they should contest the case if they haven't arrived at a judgment before the first judges—but with a greater penalty at stake. The defendant, if he should lose the second time, must pay another fifth part of the value of the written judicial penalty. If someone should complain of the judges and wish a third contest, he is to take the case before the select judges; if he should lose again, he must pay one and a half the assessed penalty. Where the prosecutor is dissatisfied after losing before the first judges and goes before the second, he shall take away another fifth part, if he wins; but if he's defeated he must pay the same portion of the judicial penalty. If they should go to the third court and not abide by the earlier trials, and the defendant is defeated, he is to pay one and a half times the penalty, as was said, while the prosecutor is to pay half the assessed penalty.

The drawing of lots for and the filling of the courts, the appointments of assistants for each of the offices, the times at which each of these things ought to be done, what pertains to the recording of votes and adjournments, and all such necessary details concerning judicial actions—earlier and later written complaints, requirements for answers and attendance, and everything akin to these things—have been discussed by us earlier, but it is noble to repeat what is correct, at least, twice or even thrice. Yet an elderly lawgiver may leave out all the legal customs that are minor and easily discovered, and the young lawgiver should fill them in. Indeed, the private courts would attain due measure if they were instituted in something like that way. But as for the public and common courts, and whatever courts magistrates must use in order to manage the tasks appropriate to each of the magistracies, there exist in many cities a number of pieces of legislation by decent men, which are not unseemly, from which the Guardians of the Laws ought to select what is fitting and equip the regime that is now being brought forth. They should consider these pieces of legislation, correct them, and test them by experience, until each of them should seem adequately established; then they should set them up as final, seal them as simply unchangeable, and employ them for the whole of the city's life. Whatever pertains to the silence and auspicious speech of the judges, and the opposite, and whatever matters differ from the many just, good, and noble things in the other cities, have in part been discussed and will in part be discussed later, near the end. He who is going to be a judge who is even handed, in accordance with justice, must look to all such things and learn the writings about them that he has acquired. For of all branches of learning, those which have the most sovereign influence in making the learner become better are the ones that pertain to the laws—if, that is, they should be correctly set up; and they would be, or else our divine and marvelous law [nomos] would in vain possess a name akin to intelligence [nous]. Moreover, as regards the other speeches, whatever praise or blame about certain men is uttered in poems, and whatever is uttered in prose—whether in writings or in all the other kinds of daily intercourse (where they dispute, out of fondness for victory, and agree, sometimes in very empty ways)—of all these, the clear test would be the writings of the lawgiver. These latter writings the good judge must have acquired within himself, as antidotes to the other speeches, and must use to correct both himself and the city: making the just things abide and grow in the good men, and effecting the greatest transformation he can in the bad men, away from lack of learning, lack of restraint, cowardice, and all injustice generally—that is, for whoever among the bad men seem to have curable opinions. As to those whose opinions have really been fixed by fate, if to souls thus disposed they assigned death as the cure (a remark that it would be just to make often), such judges and leaders of judges would become worthy of the entire city's praise.

When the judicial trials for a year have proceeded to a conclusion, the following laws ought to govern the execution of the verdicts:

First, immediately after the vote in each case has been announced by the herald, with the judges listening, the judicial magistracy shall assign to the victor all the goods of the convicted party, except for the goods that must necessarily be retained. When the month after the months during which trials are held has elapsed, if someone hasn’t voluntarily received a voluntary discharge from the victor, the magistracy that has tried the case shall, in accordance with the request of the victor, hand over the goods of the convicted party. If the goods should be insufficient, and there should be lacking no less than a drachma, this man is not to be able to undertake any judicial action against anyone else until he has paid in full everything owed to the victor. But judicial actions undertaken, by others against this man are to have authoritative force. If someone who has been judicially condemned should obstruct the magistracy that did the condemning, those who have been unjustly obstructed should bring the man before the court of the Guardians of the Laws, and if someone should be convicted in such a trial he is to be punished with death, on the grounds that he was subverting the whole city and the laws.

After this, for a man who has been born and brought up, and has begotten and brought up children, and has mingled in business transactions with due measure—paying judicial penalties if he has done someone an injustice and receiving the same from another—for a man who has aged according to destiny in the company of the laws, the end would come, according to nature. Now as regards those who have died, whether it be a male or a female, the legal customs concerning the divine things that belong to the gods beneath the earth and here—concerning whatever rites are appropriately celebrated—are to be authoritatively explained by the Interpreters. Graves, however, are not to be located on any land that is cultivable, whether the monument be great or small, but only where the nature of the land is suitable for this alone: to receive and hide, in a way that is the most painless to the living, the bodies of those who have died—these are the areas that should be filled. But with respect to those areas which Mother Earth by nature intends to produce food for human beings, no one either living or dead is to deprive those among us who are living of them. And they shall not heap up a mound higher than what can be completed by the work of five men in five days; nor shall they make stone markers larger than are required to contain at most four heroic lines of encomia on the life of the deceased. As for the laying out, first, it is not to be for a longer time than that which shows whether a man has fallen into a death-like swoon or has really died, and in dealing with human beings, the third day would be just about a well-measured time to carry the body out to the monument. One should be persuaded by the lawgiver in other respects, and also when he says that soul is altogether different from body; that in life itself, what constitutes each of us is nothing other than the soul, the body following each of us as a semblance; and that it is a noble saying that the bodies of the corpses are images of the dead, while the being that is really each of us—named “the immortal soul”—goes off to other gods to give an account, as the ancestral law says. To the good man this is heartening, but to the bad man very frightening. Furthermore, there is no great help available for the man who has died. All his relatives should have helped him while he was alive, so that he might have lived as justly and piously as possible while he was alive, and might have died without incurring retribution for evil faults, in the life after this one. Since this is the way things are, one ought never to squander one's substance, in the belief that this lump of flesh being buried especially belongs to one; instead, one should believe that that son or brother, or whoever it is one misses and strongly believes one has buried, has gone away to complete and fulfill his own destiny, and that one should make the best of the present circumstances, spending a measured amount, as if one were spending money on a soulless altar of the infernal ones. And it wouldn't be very unseemly if the lawgiver were to divine what is a measured amount. So let this be the law:

The expenditures would be measured if not more than five minas were spent on the whole funeral by a man of the highest class, three minas by a man of the second, two by a man of the third, and a mina by a man of the fourth.

The Guardians of the Laws must necessarily do many other things and supervise many matters, but not the least of these is that they should live supervising children and men and every age; and moreover at the end of everyone's life supervision should be exercised by some one Guardian of the Laws, whom the household of the deceased should take on as an overseer: let it be a noble thing to his credit if what pertains to the deceased proceeds nobly and with due measure, but a shameful thing if it proceeds ignobly. The laying out and the rest shall proceed in accordance with the convention concerning such matters, but something like the following measures must be conceded to the statesman-legislator:

To command that there be crying for the deceased, or that there not be, is unseemly, but the singing of dirges and the raising of the voice outside the house are forbidden. Carrying the corpse in the open on the roads is to be prevented, as is crying aloud while it proceeds along the roads, and the procession is to be outside the city before daybreak. These are to be the legal customs in regard to such matters, and he who obeys shall avoid penalty, but he who disobeys one of the Guardians of the Laws shall be punished by all, with a penalty that is approved by all in common. Whatever other actions take place concerning the dead, whether they have tombs or are without tombs (as in the case of parricides and temple robbers and all such), have been discussed earlier and set down in laws, so that our legislation would be just about at an end.

But in every case, the end each time is not quite the doing of something, nor the acquiring and settling; it's rather when one has discovered a perfect and permanent safeguard for what has been begotten that one should believe that whatever needs to be done has been done, and prior to that one must believe the whole is unfinished.

Clinias:: Nobly spoken, stranger. But explain more clearly what was aimed at in what was just now said.

Athenian Stranger:: Kleinias, many of the earlier things were sung beautifully, and it's likely that this applies not least to the designations given to the Fates.

Athenian Stranger:: Which designations?

Athenian Stranger:: That "Lachesis" is the first, "Clotho" the second, and "Atropos" the third savior of things fated, being likened to a woman who uses the third twist to give spun threads their capacity of irreversibility. And indeed, for a city and for citizens provision must be made in these respects not only for the health and safeguarding of the bodies, but also for a state of good lawfulness in the souls, or rather, for a safeguard of the laws. To me it seems evident that this is still lacking in our laws—the way in which the capacity of irreversibility ought naturally to be implanted in them.

Clinias:: You're not speaking of a minor matter, if it proves impossible to discover how everything would acquire some such thing.

Athenian Stranger:: But to me at least it appears altogether possible, from everything present.

Clinias:: Then let's in no way desist, until we've provided this very thing for the laws that have been discussed. For it's ridiculous to have labored in vain, by building on a foundation that's not at all firm!

Athenian Stranger:: What you urge is correct, and you'll find me to be another who's similarly disposed.

Clinias:: Nobly spoken. So then what, do you claim, would be the safeguard for our regime and laws, and how would it operate?

Athenian Stranger:: Well, didn't we say that in our city there should be some such council as the following? The ten Guardians of the Laws who are the eldest at any time, and, together with these, all those who have won prizes for virtue, are to meet together in the same place. Moreover, those who have gone abroad seeking to hear something, somewhere, that would perhaps be pertinent to the guarding of the laws, when they've returned home safe, are to be considered worthy attendants at the council, after they've been tested by those same men. In addition to these, each man is to select one of the young men not less than thirty years of age, after having first judged him to be worthy in nature and in upbringing, and is to introduce the young man thus selected to the others; if the candidate should meet with the approval of the others as well, he is to select him, but if not, the judgment that has taken place is to be kept secret from the rest, and especially from the man who was judged unacceptable. And the meeting should be at dawn, when everyone would have the most leisure from the rest of their private and common activities. Presumably some such thing was discussed by us in the earlier discussions?

Clinias:: Indeed it was.

Athenian Stranger:: Well, going back again to this council, I would say something like the following: I assert that if someone were to cast this like an anchor for the entire city, and it were equipped with everything that befits it, it would save all the things we wish for.

Clinias:: But how?

Athenian Stranger:: The moment is ripe for us to explain correctly what comes after this, without any abatement of spirited zeal.

Clinias:: Very nobly spoken: do as you think.

Athenian Stranger:: Now, in the case of everything, Kleinias, it is necessary to understand what is its appropriate savior in each of its activities—just as, in an animal, it is the soul and the head that are by nature such, to the greatest degree at least.

Clinias:: How do you mean, again?

Athenian Stranger:: Doubtless the virtue of these two provides every animal with safety?

Clinias:: How?

Athenian Stranger:: By the presence of intelligence in the soul, in addition to the other things, and by the presence of sight and hearing in the head, in addition to the other things. In short, when intelligence is mixed with the noblest senses and has become one, it would most justly be called the salvation of each.

Clinias:: That’s likely, anyway.

Athenian Stranger:: That’s likely, indeed. But what sort of intelligence, when mixed with senses, would become the salvation of ships in storms, at least, and in fair weather? Isn’t it the case on a ship that the pilot and the sailors mix the senses with the intelligence of the piloting art to save themselves and what pertains to the ship?

Clinias:: But of course.

Athenian Stranger:: There’s no need for many examples of such things. But let’s consider, in the case of armies, for instance, what goal generals—and the whole ministerial art of medicine as well—would set up, if they were to aim in the correct way at salvation. In the former case, wouldn’t it be victory and superiority over enemies, and in the case of doctors and their assistants wouldn’t it be the provision of health for the body?

Clinias:: What else?

Athenian Stranger:: Now would a doctor be ignorant about what pertains to body, which we just now said was health, or would a general ‘be ignorant of victory, or any of the other matters we’ve gone through, and still appear to have intelligence about some of these things?

Clinias:: How could he?

Athenian Stranger:: Then what about a city? If someone should be evidently ignorant of the goal at which the statesman should aim, would he, in the first place, be justly called a ruler, and then, would he be’ able to save this thing—whose goal he didn’t know at all?

Clinias:: How could he?

Athenian Stranger:: Then it’s likely that in the present case, if our founding of the country is to have an end, there must be something in it that knows, in the first place, this goal we’re speaking of (whatever our political goal might happen to be), and then in what way it ought to attain this, and who—first among the laws themselves, and then among human beings—gives it advice in a noble or ignoble way. But if some city is devoid of such a thing, it won't be surprising if, lacking intelligence and senses, it acts haphazardly each time in each of its actions.

Clinias:: What you say is true.

Athenian Stranger:: Now then in which of the parts or practices of our city is there ever such a guard adequately prepared in any way? Can we explain?

Clinias:: Surely not in a clear way, at least, stranger. But if it's necessary to guess, this argument seems to me to be leading toward the council which you just now said had to get together at night

Athenian Stranger:: You've caught on in a very fine way, Kleinias, and it is indeed necessary, as the argument that is with us now indicates, for this council to possess every virtue, the ruling principle of which is not to wander and have many aims, but to look to one aim, and always shoot all things, like shafts, at this.

Clinias:: By all means.

Athenian Stranger:: Now of course well understand that there's nothing surprising in the fact that the legal customs of the cities wander, since different parts of the legislated codes in each city look to different aims. And in most cases there's nothing surprising in the fact that for some, the definition of the just things is what allows some to rule in the city, whether they happen to be better or worse, while for others it's what allows them to become wealthy, whether they're slaves of certain people or not, and that others are set in motion by the spirited zeal for the free way of life. Others, again, have a twofold legislation that looks to both—that they may be free and may also be despots over other cities; then the wisest, as they suppose, look to these and all such aims, but not to any one, being unable to give an account of anything that is honored preeminently and toward which their other affairs should look.

Clinias:: So then wouldn't our principle, at any rate, have been set down in the correct way a long while ago, stranger? For we declared that everything pertaining to our laws ought always to be looking to one thing, and this, we presumably agreed, was very correctly said to be virtue.

Athenian Stranger:: Yes.

Clinias:: And virtue, now, we presumably set down as being four.

Athenian Stranger:: Indeed so.

Clinias:: And intelligence, now, as being the leader of all these, to which, indeed, everything else as well as the three of these ought to look.

Athenian Stranger:: You follow in a very fine way, Kleinias. Now follow the rest. For we said that intelligence in the piloting art, in the medical art, and in the art of generalship, looks to that one thing toward which it ought, and we're now examining here the intelligence that's in the political art; and let's ask just as if it were a human being, in which case we'd say: "Amazing one! Where do you aim? Whatever is that one thing, which intelligence in the case of the medical art can explain clearly, but which you, being indeed distinguished, as you claim, among all the prudent ones, are unable to describe?"—Or you, at least, Megillus and Kleinias, can you two articulate and explain for me, on its behalf, whatever you claim this thing is, just as I gave definitions on behalf of many others for you?

Clinias:: Not at all, stranger.

Athenian Stranger:: What then? Can you say that it’s necessary to be zealous in spirit to know the thing itself and the things it’s in?

Clinias:: Such as which things do you mean?

Athenian Stranger:: Such as when we claimed that there had come to be four forms of virtue: obviously, it’s necessary to claim that each of them is one, since they’re four.

Clinias:: But of course.

Athenian Stranger:: And yet we call all these one. For we claim that courage is virtue, and prudence is virtue, and also the two others, as if they’re really not many but only this one, virtue.

Clinias:: Certainly.

Athenian Stranger:: Now it’s not difficult to say how it is that these two (and the others) differ from each other, and take two names; but how it is that we give to both the same name, virtue, and also give it to the others, this is no longer easy.

Clinias:: How do you mean?

Athenian Stranger:: There’s no difficulty in clarifying what I’m saying. Let’s just divide between ourselves the questioning and answering.

Clinias:: What is it, again, that you’re explaining?

Athenian Stranger:: Ask me why, when we assert both to be the one, virtue, we then refer to them again as two, as courage and as prudence. For I’ll tell you the reason: it’s because the one—courage—is concerned with fear, and even the beasts share in it, as do the dispositions, at least, of the very young children. For soul becomes courageous without reason and by nature, but, on the other hand, without reason soul never has, does not, and never will become prudent and possessed of intelligence—for that is a different entity.

Clinias:: What you're saying is true.

Athenian Stranger:: Now you've received from me a reasoned account of how they're different and two; you give back to me in return how they're one and the same. And consider that you are going to tell how they're one when they're four, and then ask me—once you've demonstrated how they're one—to tell again how they're four. Moreover, after this let's investigate whether, for one who knows adequately any of the things for which there is both a name and a definition, it's sufficient to know only the name, and to be ignorant of the definition, or whether, for one who is anything, it isn't shameful to be ignorant of all such points in regard to things which are distinguished by their greatness and nobility.

Clinias:: That is likely, at any rate.

Athenian Stranger:: Now for a lawgiver and a Guardian of the Laws, and one who thinks he is distinguished from everyone in virtue, and who has received victory prizes in these very things, is there anything that is more important than these very matters about which we are now talking—courage, moderation, prudence, and justice?

Clinias:: How could there be?

Athenian Stranger:: Now in regard to these matters, are the interpreters, the teachers, the lawgivers, the guardians of the others—is the one who deals with the man who needs to know and understand, or with the man who needs to be punished and reproved, when he has committed a fault, not to be superior to the others in teaching and making entirely clear what power vice and virtue have? Is some poet who comes into the city, or somebody who claims to be an educator of the young, to appear better than the man who has won the victory in every virtue? In such a city, where there would be neither in word nor in deed adequate guardians, who had adequate knowledge about virtue, would it be surprising if this city, lacking a guardian, were to suffer what many of the present day cities suffer?

Clinias:: Not at all, it’s likely.

Athenian Stranger:: What then? Should we create what we’re now talking about, or what? Should the guardians be prepared so as to be more precisely accurate than the many, in deed and word, concerning virtue? Or in what way will our city be made similar to the head and senses of prudent men, by possessing within itself some such guard?

Clinias:: But how, and in what way, stranger, can we compare it to such a man when we speak of it?

Athenian Stranger:: Obviously, the city itself is the trunk, and the young among the guardians, who have been chosen as the ones who have the best natures, and who are the sharpest in every part of the soul, are, as it were, at the very top; they survey the whole city in a circle, and as they keep watch they hand over perceptions to the memories, and report everything in the city to the elders; the old men, who are an image of intelligence because they are distinguished by their prudent thinking about many matters worthy of discussion, deliberate, using the young as assistants in their collective deliberation. Thus both of them in common really save the whole city. Shall we say that this is the way we ought to arrange things, or some other way? Are we to have them all the same and not have some who are brought up and educated with greater precision?

Clinias:: But that’s impossible, you amazing man!

Athenian Stranger:: Then it's necessary to proceed to some more precise education than before.

Clinias:: Probably.

Athenian Stranger:: Wouldn't that which we just now almost touched on happen to be the one which we need?

Clinias:: By all means.

Athenian Stranger:: Didn't we say that the man who was at any rate the top craftsman and guardian in each thing must be able not only to look to the many, but also to pursue and know the one, and, knowing it, to order everything with a synoptic view to that?

Clinias:: Correctly spoken.

Athenian Stranger:: Is there any way in which there would be a more precise vision and seeing of anything than that which is the capacity to look to one idea from the many and dissimilar things?

Clinias:: Perhaps.

Athenian Stranger:: Not perhaps, but really, you demonic man! There is not a clearer way to proceed than this for any human being.

Clinias:: Trusting in you, stranger, I do indeed agree, and let's proceed in this way in our discussion.

Athenian Stranger:: Then it's necessary to compel, as is likely, even the guardians of our divine regime to see with precision, first, whatever is the same in all the four: what it is that we assert is one in courage, moderation, justice, and prudence, and is justly called by one name, virtue. This, friends—if we wish—let's not let up on now, but let's bear down hard on it, as it were, until we may express in an adequate way whatever it is that ought to be looked to—whether it be one, or a whole, or both of these, or however it is by nature. Or do we suppose that if this eludes us, we’ll ever be in a satisfactory situation as regards virtue, when we won’t be able to explain whether it’s many, or four, or one? No. In that case (if, at any rate, we would obey our own advice), we will contrive some other way by which this will come into being in our city. If, however, it seems that the topic should be completely abandoned, then it must be abandoned.

Clinias:: By the god of strangers, stranger! Surely such a topic ought least to be abandoned, since what you’re saying seems to us to be very correct. But now how would someone contrive this?

Athenian Stranger:: Let’s not discuss yet how we might contrive it. First let’s make sure, by agreeing among ourselves, if it’s necessary or not.

Clinias:: But surely it’s necessary—if, that is, it’s possible.

Athenian Stranger:: But what then? Do we think this same thing in regard to the beautiful and the good? Should our guardians know only that each of these is many, or also how and in what sense it is one?

Clinias:: It’s pretty likely that they must necessarily understand how it’s one.

Athenian Stranger:: But what? Must they understand it, while being unable to give a demonstration of it through argument?

Clinias:: What? Now you’re describing some habit that befits a slave!

Athenian Stranger:: What then? Is this not our argument concerning all the serious things, that those who are really to be the Guardians of the Laws must really know what pertains to the truth about them, and must be capable of interpreting it in speech and following it in deed, judging by the standard of nature what things come into being in a noble fashion and what things do not?

Clinias:: How could they be otherwise?

Athenian Stranger:: Now isn't one of the noblest things that which pertains to the gods (which, we, indeed, went through in a serious way)—to know, insofar as human power is capable of knowing these matters, that they exist, and how much power they are evidently masters of, and to make allowance for most of those in the city who only go along with what the laws proclaim; but, in the case of those who belong to the guardianship, refusing to admit anyone unless he has labored to grasp every proof that exists concerning gods? And isn't the import of this refusal to be that a man is never to be chosen as one of the Guardians of the Laws, nor again as one of those judged approvingly in regard to virtue, unless he is divine and has labored over these things?

Clinias:: It's just, at any rate, that—as you say—the man who is idle or lacks capacity in such matters is to be kept widely separated from the noble men.

Athenian Stranger:: Now don't we know that there are two things that lead to belief concerning the gods, which we went through in the discussions earlier?

Clinias:: Which two?

Athenian Stranger:: One is what we said about the soul, how it is the eldest and most divine of all the things which are provided with ever-flowing existence by a motion that receives its coming-into-being. And one is the point about the orderly motion of stars and of the other things which intelligence is master of, having arranged the whole in an order. For no human being who has looked at these things in a way that is not low or amateurish has ever been by nature so atheistic that he has not experienced the opposite of what the many expect. For they think that those who busy themselves with such matters, through astronomy and the other arts that necessarily go with it, become atheists, having seen that, as much as possible, actions come into being by necessities and not by the thoughts of an ¦ intention concerned with fulfillments of good things.

Clinias:: But then how would it be?

Athenian Stranger:: As I said, the situation now is entirely the opposite of what it was when those who think about such things thought they were without soul. Even at that time a sense of wonder crept -in about them, and those who studied them with precision suspected what is now really believed: that if the beings were without soul, they would never have used on them wonderful calculations of such precision—if the beings didn't possess intelligence. Indeed, there were some even then who dared to hazard this very claim, saying that it was intelligence that had ordered all of the things in heaven. But these same men erred again about the nature of soul, and how it is elder than bodies; by thinking that it was younger, they overturned everything again, so to speak, and themselves especially. For everything that moves in heaven and that appears to the eyes appeared to them to be full of stones and earth and many other soulless bodies, which provided the causes of the entire cosmos. These were the things which at that time caused many varieties of atheism and other disgusting views to infect such men; and indeed the poets took to reviling, and compared those who philosophize to dogs using vain howlings, and said other mindless things. But now, as was said, the situation is entirely the opposite.

Clinias:: How's that?

Athenian Stranger:: No mortal human being can ever become firmly pious towards gods unless he has grasped these two things that are now being mentioned: that soul is the eldest of all the things that have partaken of coming into being, and is immortal, and rules all bodies; and, in addition to these things, he should grasp that which has now been discussed often—that intelligence of the beings, which has been said to be in the stars—as well as the subjects of learning that necessarily precede these matters. He should see what is common to these things and the things that concern the Muse, and should apply this understanding, in a harmonious way, to the practices and customs that pertain to the habitual dispositions; and he should be able to give the reason for as many of these as have a reason. He who is incapable of acquiring these attributes in addition to the popular virtues would almost never become an adequate ruler of the city as a whole, but would be an assistant for the other rulers.

So now at this point, Kleinias and Megillus, it must be seen whether we shall add this to all the laws mentioned, which we've gone through: that the Nocturnal Council of Rulers, which will have shared an education such as we've discussed, is lawfully to become a guard, for the sake of security. Or what shall we do?

Clinias:: But best of men, how will we not add this, if we can do so to even a small extent?

Athenian Stranger:: And let's all strive, at any rate, for such a thing. In this, at least, even I would with an eager spirit become your helper, making use of my very extensive experience and inquiry concerning such matters. And I will perhaps find others besides myself.

Clinias:: But stranger, we must above all proceed in this direction, in which the god is virtually leading us! And what we should do now is discuss and look for the way in which this might correctly come into being for us.

Athenian Stranger:: It’s not possible at this stage to legislate laws about such men, Megillus and Kleinias, until the council has been arranged in order—and then they themselves should have the sovereign authority to legislate what is necessary. But the present preparation for such things would take place through teaching and much intercourse, if it were to proceed correctly.

Clinias:: How so? What is this, again, that we must claim has been said?

Athenian Stranger:: Doubtless there should first be a list compiled of those who fit the nature of the guardianship in age, capacity for learning, and characteristic dispositions and habits. But after this, it isn’t easy either to discover what things should be learned, or to become the student of someone else who has made the discovery. Then in addition to these things there is the question of the times—at what times and for how much time each subject should be taken up; it is vain to discuss these matters in writings, for it wouldn’t be clear to the learners themselves whether the subject were being learned at the right time, until knowledge of the subject had, presumably, come into being within the soul of each. Thus, while it would be incorrect to speak of all that pertains to these matters as indescribable secrets, they are incapable of being described beforehand because describing them beforehand would clarify nothing of what is being discussed.

Clinias:: If this is the way things are, stranger, what then ought to be done?

Athenian Stranger:: It’s likely, friends, that as the saying goes, “it lies in common and in the middle” for us, and if we’re willing to risk the entire regime and throw either three sixes, as they say, or three aces, then that's what must be done; and I'll share the risk with you, by explaining and giving an account of my opinions, at least, concerning the education and upbringing that have now again become the topic of the discussion. The risk would indeed not be small, nor even comparable to certain others. And I call on you, Kleinias, to take charge of this. For with respect to the city of the Magnesians—or after whomever else the god has it named—it is you who will achieve the greatest fame by setting it up correctly, or who will never avoid the reputation of being the most courageous, at least, in comparison to all later successors. Now if, indeed, this divine council should come into being for us, dear comrades, the city ought to be handed over to it; of the present day lawgivers, none, so to speak, have any quarrel with this. And what we touched on in speech a little while ago as a dream, when we somehow mixed together a certain image of a community of head and intelligence, will really be almost a perfected waking vision—if, that is, our men have been mixed with precision, fittingly educated, and, once educated, dwell in the country's acropolis as perfected guardians whose like, with regard to the virtue of safeguarding, we have not seen come into being in our lives previously.

Megillus:: Dear Kleinias, from all that has now been said by us, either the city's founding must be abandoned, or this stranger here must not be allowed to go, and by entreaties and every contrivance he must be made to share in the city's founding.

Clinias:: What you say is very true, Megillus, and I will do just these things, and you must help.

Megillus:: I'll help.

# Laws

Translated by Trevor J. Saunders.

PERSONS OF THE DIALOGUE.

An Athenian Guest, Clinias of Crete, and
Megillus of Lacedæmon.

## Book 1.

Athenian Stranger:: Tell me, gentlemen, to whom do you give the credit for establishing your codes of law? Is it a god, or a man?

Clinias:: A god, sir, a god—and that’s the honest truth. Among us Cretans it is Zeus; in Sparta—which is where our friend here hails from—they say it is Apollo, I believe. Isn’t that right?

Megillus:: Yes, that’s right.

Athenian Stranger:: You follow Homer, presumably, and say that every ninth year Minos used to go to a consultation with his father Zeus, and laid down laws for your cities on the basis of the god’s pronouncements?

Clinias:: Yes, that’s our Cretan version, and we add that Minos’ brother, Rhadamanthus—doubtless you know the name—was an absolute paragon of justice. We Cretans would say that he won this reputation because of the scrupulously fair way in which he settled the judicial problems of his day.

Athenian Stranger:: A distinguished reputation indeed, and one particularly appropriate for a son of Zeus. Well then, since you and your companion have been raised under laws with such a splendid ancestry, I expect you will be quite happy if we spend our time together today in a discussion about constitutions and laws, and occupy our journey in a mutual exchange of views. I’ve heard it said that from Cnossus to Zeus’ cave and shrine is quite a long way, and the tall trees along the route provide shady resting-places which will be more than welcome in this stiflingly hot weather. At our age, there is every excuse for having frequent rests in them, so as to refresh ourselves by conversation. In this way we shall come to the end of the whole journey without having tired ourselves out.

Clinias:: And as you go on, sir, you find tremendously tall and graceful cypress trees in the sacred groves; there are also meadows in which we can pause and rest.

Athenian Stranger:: That sounds a good idea.

Clinias:: It is indeed, and it'll sound even better when we see them. Well then, shall we wish ourselves bon voyage, and be off?

Athenian Stranger:: Certainly. Now, answer me this. You have meals which you eat communally; you have a system of physical training, and a special type of military equipment. Why is it that you give all this the force of law?

Clinias:: Well, sir, I think that these customs are quite easy for anyone to understand, at any rate in our case. You see the Cretan terrain in general does not have the flatness of Thessaly: hence we usually train by running (whereas the Thessalians mostly use horses), because our land is hilly and more suited to exercise by racing on foot. In this sort of country we have to keep our armor light so that we can run without being weighed down, and bows and arrows seem appropriate because of their lightness. All these Cretan practices have been developed for fighting wars, and that's precisely the purpose I think the legislator intended them to serve when he instituted them. Likely enough, this is why he organized the common meals, too: he observed that when men are on military service they are all obliged by the pressure of events, for their own protection, to eat together throughout the campaign. In this, I think, he censured the stupidity of ordinary men, who do not understand that they are all engaged in a never-ending lifelong war against all other states. So, if you grant the necessity of eating together for self-protection in war-time, and of appointing officers and men in turn to act as guards, the same thing should be done in peace-time too. The legislator's position would be that what most men call 'peace' is really only a fiction, and that in cold fact all states are by nature fighting an undeclared war against every other state. If you see things in this light, you are pretty sure to find that the Cretan legislator established all these institutions of ours, both in the public sphere and the private, with an eye on war, and that this was the spirit in which he gave us his laws for us to keep up. He was convinced that if we don't come out on top in war, nothing that we possess or do in peace-time is of the slightest use, because all the goods of the conquered fall into the possession of the victors.

Athenian Stranger:: You certainly have had a splendid training, sir! It has, I think, enabled you to make a most penetrating analysis of Cretan institutions. But explain this point to me rather more precisely: the definition you gave of a well-run state seems to me to demand that its organization and administration should be such as to ensure victory in war over other states. Correct?

Clinias:: Of course, and I think our companion supports my definition.

Megillus:: My dear sir, what other answer could one possibly make, if one is a Spartan?

Athenian Stranger:: But if this is the right criterion as between states, what about as between villages? Is the criterion different?

Clinias:: Certainly not.

Athenian Stranger:: It is the same, then?

Clinias:: Yes.

Athenian Stranger:: Well now, what about relations between the village's separate households? And between individual and individual? Is the same true?

Clinias:: The same is true.

Athenian Stranger:: What of a man's relations with himself—should he think of himself as his own enemy? What's our answer now?

Clinias:: Well done, my Athenian friend! (I'd rather not call you 'Attic', because I think it is better to call you after the goddess, as you deserve.) You have made the argument clearer by expressing it in its most elementary form. Now you will find it that much easier to realize that the position we took up a moment ago is correct: not only is everyone an enemy of everyone else in the public sphere, but each man fights a private war against himself.

Athenian Stranger:: You do surprise me, my friend. What do you mean?

Clinias:: This, sir, is where a man wins the first and best of victories— over himself. Conversely, to fall a victim to oneself is the worst and most shocking thing that can be imagined. This way of speaking points to a war against ourselves within each one of us.

Athenian Stranger:: Now let's reverse the argument. You hold that each one of us is either 'conqueror of' or 'conquered by' himself: are we to say that the same holds good of household, village and state? Or not?

Clinias:: You mean that they are individually either 'conquerors of' or 'conquered by' themselves?

Athenian Stranger:: Yes.

Clinias:: This again is a good question to have asked. Your suggestion is most emphatically true, particularly in the case of states. Wherever the better people subdue their inferiors, the state may rightly be said to be ‘conqueror of’ itself, and we should be entirely justified in praising it for its victory. Where the opposite happens, we must give the opposite verdict.

Athenian Stranger:: It would take too long a discussion to decide whether in fact there is a sense in which the worse element could be superior to the better, so let’s leave that aside. For the moment, I understand your position to amount to this: sometimes evil citizens will come together in large numbers and forcibly try to enslave the virtuous minority, although both sides are members of the same race and the same state. When they prevail, the state may properly be said to be ‘inferior to’ itself and to be an evil one; but when they are defeated, we can say it is ‘superior to’ itself and that it is a good state.

Clinias:: That’s a paradoxical way of putting it, sir, but it is impossible to disagree.

Athenian Stranger:: But now wait a minute. Let’s look at this point again: suppose a father and mother had several sons—should we be surprised if the majority of these brothers were unjust, and the minority just?

Clinias:: By no means.

Athenian Stranger:: We could say that if the wicked brothers prevail the whole household and family may be called ‘inferior to’ itself, and ‘superior to’ itself if they are subdued—but it would be irrelevant to our purpose to labor the point. The reason why we’re now examining the usage of the common man is not to pass judgment on whether he uses language properly or improperly, but to determine what is essentially right and wrong in a given law.

Clinias:: Very true, sir.

Megillus:: I agree—it’s been nicely put, so far.

Athenian Stranger:: Let’s look at the next point. Those brothers I’ve just mentioned—they’ have a judge, I suppose?

Clinias:: Of course.

Athenian Stranger:: Which of these judges would be the better, the one who put all the bad brothers to death and told the better ones to run their own lives, or the one who put the virtuous brothers in command, but let the scoundrels go on living in willing obedience to them? And we can probably add a third and even better judge—the one who will take this single quarrelling family in hand and reconcile its members, without killing any of them; by laying down regulations to guide them in the future, he will be able to ensure that they remain on friendly terms with each other.

Clinias:: Yes, this judge—the legislator—would be incomparably better.

Athenian Stranger:: But in framing these regulations he would have his eye on the exact opposite of war.

Clinias:: True enough.

Athenian Stranger:: But what about the man who brings harmony to the state? In regulating its life, will he pay more attention to external war, or internal? This ‘civil’ war, as we call it, does break out on occasion, and is the last thing a man would want to see in his own country; but if it did flare up, he would wish to have it over and done with as quickly as possible.

Clinias:: He'll obviously pay more attention to the second kind.

Athenian Stranger:: One side might be destroyed through the victory of the other, and then peace would follow the civil war; or, alternatively, peace and friendship might be the result of reconciliation. Now, which of these results would you prefer, supposing the city then had to turn its attention to a foreign enemy?

Clinias:: Everybody would prefer the second situation to the first, so far as his own state was concerned.

Athenian Stranger:: And wouldn't a legislator have the same preference?

Clinias:: He certainly would.

Athenian Stranger:: Now surely, every legislator will enact his every law with the aim of achieving the greatest good?

Clinias:: Of course.

Athenian Stranger:: The greatest good, however, is neither war nor civil war (God forbid we should ever need to resort to either of them), but peace and goodwill among men. And so the victory of a state over itself, it seems, does not after all come into the category of ideals; it is just one of those things in which we've no choice. You might just as well suppose that the sick body which has been purged by the doctor was therefore in the pink of condition, and disregard the body that never had any such need. Similarly, anyone who takes this sort of view of the happiness of a state or even an individual will never make a true statesman in the true sense—if, that is, he adopts foreign warfare as his first and only concern; he'll become a genuine lawgiver only if he designs his legislation about war as a tool for peace, rather than his legislation for peace as an instrument of war.

Clinias:: What you say, sir, has the air of having been correctly argued. Even so, I shall be surprised if our Cretan institutions, and the Spartan ones as well, have not been wholly orientated towards warfare.

Athenian Stranger:: Well, that’s as may be. At the moment, however, there’s no call for a stubborn dispute on the point. What we need to do is to conduct our inquiry into these institutions dispassionately, seeing that we share this common interest with their authors. So keep me company in the conversation I’m going to have. Let’s put up Tyrtaeus, for example, an Athenian by birth who became a citizen of Sparta. He, of all men, was particularly concerned with what we are discussing. He said:

‘I'd not mention a man, I'd take no account of him, no matter’ (he goes on) ‘if he were the richest of men, no matter if he had a huge number of good things’ (he enumerated pretty nearly all of them) ‘unless his prowess in war were beyond compare.’ Doubtless you too have heard the lines; Megillus here knows them backwards, I expect.

Megillus:: I certainly do.

Clinias:: And they have certainly got as far as Crete: they were brought across from Sparta.

Athenian Stranger:: Now then, let’s jointly ask our poet some such question as this: ‘Tyrtaeus, you are a poet, and divinely inspired. We are quite sure of your wisdom and virtue, from the special commendation you have bestowed on those who have particularly distinguished themselves in active service. On this point we—Megillus here, Clinias of Cnossus and I—find ourselves, we think, emphatically in agreement with you; but we want to be quite clear that we are talking about the same people. Tell us: do you clearly distinguish, as we do, two sorts of war? Or what?’ I fancy that in reply to this even a man far less gifted than Tyrtaeus would state the facts of the case and say ‘Two’. The first would be what we all call ‘civil’ war, and as we were saying just now, this is the most bitterly fought of all; and we shall all agree, I think, in making the other type of war the one we fight when we quarrel with our foreign enemies from outside the state, which is a much less vicious sort of war than the other.

Clinias:: I agree.

Athenian Stranger:: ‘Well now, Tyrtaeus, which category of soldiers did you shower with your praises and which did you censure? Which was the type of war they were fighting, that led you to speak so highly of them? The war fought against foreign enemies, it would seem—at any rate, you have told us in your verses that you have no time for men who cannot “stand the sight of bloody butchery

and do not attack in close combat with the foe.”

So here is the next thing we'd say: ‘It looks as if you reserve your special praise, Tyrtaeus, for those who fight with conspicuous gallantry in external war against a foreign enemy.’ I suppose he'd agree to this, and say ‘Yes’?

Clinias:: Surely.

Athenian Stranger:: However, while not denying the courage of those soldiers, we still maintain that those who display conspicuous gallantry in total war are very much more courageous. We have a poet to bear witness to this, Theognis, a citizen of Megara in Sicily, who says:

‘Cyrnus, find a man you can trust in deadly feuding:

He is worth his weight in silver and gold.’

Such a man, in our view, who fights in a tougher war, is far superior to the other—to just about the same degree as the combination of justice, self-control and good judgment, reinforced by courage, is superior to courage alone. In civil war a man will never prove sound and loyal unless he has every virtue; but in the war Tyrtaeus mentions there are hordes of mercenaries who are ready to dig their heels in and die fighting, most of whom, apart from a very small minority, are reckless and insolent rogues, and just about the most witless people you could find. Now, what conclusion does my argument lead to? What is the point I am trying to make clear in saying all this? Simply that in laying down his laws every legislator who is any use at all—and especially your legislator here in Crete, duly instructed by Zeus—will never have anything in view except the highest virtue. This means, in Theognis' terms, loyalty in a crisis'; one might call it 'complete justice'. The virtue that Tyrtaeus praised so highly is indeed a noble one, and has been appropriately celebrated by the poet, but strictly speaking, in order of merit it comes only fourth.

Clinias:: And that, sir, is to reduce our Cretan legislator to the status of a failure.

Athenian Stranger:: No, my dear fellow, it is not. The failure was entirely on our part. We were quite wrong to imagine that when Lycurgus and Minos established the institutions of Sparta and this country the primary end they had in view was invariably warfare.

Clinias:: But what ought we to have said?

Athenian Stranger:: We had no particular axes to grind in our discussion, and I think we ought to have told the honest truth. We ought not to have said that the legislator laid down his rules with an eye on only a part of virtue, and the most trivial part at that. We should have said that he aimed at virtue in its entirety, and that the various separate headings under which he tried to frame the laws of his time were quite different from those employed by modern legal draftsmen. Each of these invents any category he feels he wants, and adds it to his code. For instance, one will come up with a category on Inheritances and Heiresses', another with 'Assault', and others will suggest other categories ad infinitum. But we insist that the correct procedure for framing laws, which is followed by those who do the job properly, is precisely the one we have just embarked upon. I am delighted at the way you set about explaining your laws: you rightly started with virtue, and explained that this was the aim of the laws the legislator laid down. However, you did say that he legislated entirely by reference to only one part of virtue, and the most inconsiderable part at that. Now there I thought you were wrong: hence all these additional remarks. So what is this distinction I could have wished to hear you draw in your argument? Shall I tell you?

Clinias:: Certainly.

Athenian Stranger:: 'Now, Sir,' you ought to have said, 'it is no accident that the laws of the Cretans have such a high reputation in the entire Greek world. They are sound laws, and achieve the happiness of those who observe them, by producing for them a great number of benefits. These benefits fall into two classes, "human" and "divine." The former depend on the latter, and if a city receives the one sort, it wins the other too—the greater include the lesser; if not, it goes without both. Health heads the list of the lesser benefits, followed by beauty; third comes strength, for racing and other physical exercises. Wealth is fourth—not "blind" wealth, but the clear-sighted kind whose companion is good judgment—and good judgment itself is the leading "divine" benefit; second comes the habitual self-control of a soul that uses reason. If you combine these two with courage, you get (thirdly) justice; courage itself lies in fourth place. All these take a natural precedence over the others, and the lawgiver must of course rank them in the same order. Then he must inform the citizens that the other instructions they receive have these benefits in view: the "human" benefits have the "divine" in view, and all these in turn look towards reason, which is supreme. The citizens join in marriage; then children, male and female, are born and reared; they pass through childhood and later life, and finally reach old age. At every stage the lawgiver should supervise his people, and confer suitable marks of honor or disgrace. Whenever they associate with each other, he should observe their pains, pleasures and desires, and watch their passions in all their intensity; he must use the laws themselves as instruments for the proper distribution of praise and blame. Again, the citizens are angry or afraid; they suffer from emotional disturbances brought on by misfortune, and recover from them when life is going well; they have all the feelings that men usually experience in illness, war, poverty or their opposites. In all these instances the lawgiver's duty is to isolate and explain what is good and what is bad in the way each individual reacts. Next, the lawgiver must supervise the way the citizens acquire money and spend it; he must keep a sharp eye on the various methods they all employ to make and dissolve (voluntarily or under duress) their associations with one another, noting which methods are proper and which are not; honors should be conferred upon those who comply with the laws, and specified penalties imposed on the disobedient. When the lawgiver comes to the final stages of organizing the entire life of the state, he must decide what honors should be accorded the dead and how the manner of burial should be varied. His survey completed, the author of the legal code will appoint guardians (some of whom will have rational grounds for their actions, while others rely on "true opinion"), so that all these regulations may be welded into a rational whole, demonstrably inspired by considerations of justice and self-restraint, not of wealth and ambition.’ That is the sort of explanation, gentlemen, that I should have liked you to give, and still want now—an explanation of how all these conditions are met in the laws attributed to Zeus and the Pythian Apollo, which Minos and Lycurgus laid down. I wish you could have told me why the system on which they are arranged is obvious to someone with an expert technical—or even empirical—knowledge of law, while to laymen like ourselves it is entirely obscure.

Clinias:: Well then, sir, where do we go from here?

Athenian Stranger:: I think we ought to go back and start again. As before, we should consider first the activities that promote courage; then, if you like, we’ll work through the other kinds of virtue, one by one. We’ll take the way we deal with the first as a model, and try to while away the journey by discussing the others in the same way. Then after dealing with virtue as a whole, we shall show, God willing, that the regulations we have just listed had this in view.

Megillus:: A splendid idea! Our friend here is an admirer of Zeus, so try examining him, to start with.

Athenian Stranger:: I’ll try to examine not only him, but you and myself as well— we all have a stake in the discussion. Tell me, then, you two: do we maintain that the common meals and gymnastic exercises have been invented by your legislator for the purpose of war?

Megillus:: Yes.

Athenian Stranger:: What about a third such institution, and a fourth? To make a full list like this will probably be the right procedure in the case of the other ‘parts’ of virtue, too (or whatever the right terminology is: no matter, so long as one’s meaning is clear).

Megillus:: I—and any Spartan, for that matter—would mention the legislator’s invention of hunting as the third item.

Athenian Stranger:: Let’s have a shot at adding a fourth, and a fifth too, if we can.

Megillus:: Well, I might try to add a fourth: the endurance of pain. This is a very conspicuous feature of Spartan life. You find it in our boxing matches, and also in our ‘raids’, which invariably lead to a severe whipping. There is also the ‘Secret Service’, as it is called, which involves a great deal of hard work, and is a splendid exercise in endurance. In winter, its members go barefoot and sleep without bedclothes. They dispense with orderlies and look after themselves, ranging night and day over the whole country. Next, in the ‘Naked Games’, men display fantastic endurance, contending as they do with the full heat of summer. There are a great many other practices of the same kind, but if you produced a detailed list it would go on pretty well forever.

Athenian Stranger:: You’ve put it all very well, my Spartan friend. But what is to be our definition of courage? Are we to define it simply in terms of a fight against fears and pains only, or do we include desires and pleasures, which cajole and seduce us so effectively? They mold the heart like wax— even the hearts of those who loftily believe themselves superior to such influences.

Megillus:: Yes, I think so—the fight is against all these feelings.

Athenian Stranger:: Now, if we remember aright what was said earlier on, our friend from Cnossus spoke of a city and an individual as ‘conquered by’ themselves. Isn’t that right?

Clinias:: Surely.

Athenian Stranger:: Well, shall we call ‘bad’ only the man who is ‘conquered by’ pains, or shall we include the victim of pleasures as well?

Clinias:: The term ‘bad’ we apply, I think, to the victim of pleasures even more than to the other. When we say that a man has been shamefully ‘conquered by’ himself, we are all, I fancy, much more likely to mean someone defeated by pleasures than by pains.

Athenian Stranger:: But the legal code of those lawgivers (inspired as they are by Zeus and Apollo) certainly did not envisage a courage with one hand tied behind its back, able to hit out on the left, but powerless in face of the cunning and seductive blandishments from the right. Surely it was supposed to resist in both directions?

Clinias:: Yes, both, I think.

Athenian Stranger:: We ought to mention next what practices exist in your two cities that give a man a taste of pleasure rather than teach him how to avoid it—you remember how a man could not avoid pains, but was surrounded by them, and then forced, or persuaded by awards of honor, to get the better of them. Now where in your codes of law is the institution that does the same for pleasure? Could you say, please, what institution you have that makes one and the same body of citizens courageous in face of pains and of pleasures alike, so’ that they conquer where they ought to conquer and never fall victims to these their most intimate and dangerous enemies?

Megillus:: I was certainly able to point to a good many laws that were designed to counteract pains, stranger, but I doubt if I should find it so easy to give striking and clear examples in the case of pleasures. I might have some success, perhaps, in finding minor cases.

Clinias:: No more would I be able to find an obvious illustration of this sort of thing in the laws of Crete.

Athenian Stranger:: My dear sirs, this should not surprise us. (I hope, by the way, that if in his desire to discover goodness and truth any of us is led to criticize some legal detail in the homeland of either of his companions, we shall receive such criticism from each other tolerantly and without truculence.)

Clinias:: You have put it quite fairly, my Athenian friend. We must do as you say.

Athenian Stranger:: Truculence, Clinias, would be hardly the thing for men of our age.

Clinias:: No indeed.

Athenian Stranger:: The criticisms people bring against the way Sparta and Crete are run may be right or wrong: that is another issue. At any rate, I am probably better able than either of you to report what most people generally say. However, granted that your codes of law have been composed with reasonable success, as indeed they have been, one of the best regulations you have is the one which forbids any young man to inquire into the relative merits of the laws; everyone has to agree, with one heart and voice, that they are all excellent and exist by divine fiat; if anyone says differently, the citizens must absolutely refuse to listen to him. If an old man has some point to make about your institutions, he must make such remarks to an official, or someone of his own age when no young man is present.

Clinias:: That’s absolutely right, sir—you must be a wizard! You are far removed in time from the legislator who laid down these laws, but I think you have hit on his intentions very nicely, and state them with perfect accuracy.

Athenian Stranger:: Well, there are no young men here now. In view of our age, the legislator surely grants us the indulgence of having a private discussion on these topics without giving offense.

Clinias:: So be it: don’t hesitate to criticize our laws. There is no disgrace in being told of some blemish—indeed, if one takes criticism in good part, without being ruffled by it, it commonly leads one to a remedy.

Athenian Stranger:: Splendid. But criticism of your laws is not what I propose: that can wait until we have scrutinized them exhaustively. I shall simply mention my difficulties. Among all the Greek and foreign peoples who have come to my knowledge, you are unique in that you have been instructed by your lawgiver to keep away from the most attractive entertainments and pleasures, and to refrain from tasting them. Yet when it came to pains and fears, your legislator reckoned that if a man ran away from them on every occasion from his earliest years and was then faced with hardships, pains and fears he could not avoid, he would likewise run away from any enemies who had received such a training, and become their slaves. I think this same lawgiver ought to have taken this same line in the case of pleasures too. He ought to have said to himself: ‘If our citizens grow up without any experience of the keenest pleasures, and if they are not trained to stand firm when they encounter them, and to refuse to be pushed into any disgraceful action, their fondness for pleasure will bring them to the same bad end as those who capitulate to fear. Their slavery will be of a different kind, but it will be more humiliating: they will become the slaves of those who are able to stand firm against the onslaughts of pleasure and who are past-masters in the art of temptation—utter scoundrels, sometimes. Spiritually, our citizens will be part slave, part free, and only in a limited sense will they deserve to be called courageous and free.’ Just consider this argument: do you think it has any relevance at all?

Clinias:: Yes, I think it has, at first blush. But it is a weighty business, and to jump to confident conclusions so quickly may well be childish and naive.

Athenian Stranger:: Well then, Clinias and our friend from Sparta, let’s turn to the next item we put on the agenda: after courage, let’s discuss self-control. We found, in the case of war, that your two political systems were superior to those of states with a more haphazard mode of government. Where’s the superiority in the case of self-control?

Megillus:: That’s rather a difficult question. Still, I should think the common meals and the gymnastic exercises are institutions well calculated to promote both virtues.

Athenian Stranger:: Well, my friends, I should think the real difficulty is to make political systems reflect in practice the trouble-free perfection of theory. (The human body is probably a parallel. One cannot rigidly prescribe a given regimen for a given body, because any regimen will invariably turn out, in some respects, to injure our bodies at the same time as it helps them in others.) For instance, these gymnastic exercises and common meals, useful though they are to a state in many ways, are a danger in their encouragement of revolution—witness the example of the youth of Miletus, Boeotia and Thurii. More especially, the very antiquity of these practices seems to have corrupted the natural pleasures of sex, which are common to man and beast. For these perversions, your two states may well be the first to be blamed, as well as any others that make a particular point of gymnastic exercises. Circumstances may make you treat this subject either light-heartedly or seriously; in either case you ought to bear in mind that when male and female come together in order to have a child, the pleasure they experience seems to arise entirely naturally. But homosexual intercourse and lesbianism seem to be unnatural crimes of the first rank, and are committed because men and women cannot control their desire for pleasure. It is the Cretans we all hold to blame for making up the story of Ganymede: they were so firmly convinced that their laws came from Zeus that they saddled him with this fable, in order to have a divine 'precedent' when enjoying that particular pleasure. That story, however, we may dismiss, but not the fact that when men investigate legislation, they investigate almost exclusively pleasures and pains as they affect society and the character of the individual. Pleasure and pain, you see, flow like two springs released by nature. If a man draws the right amount from the right one at the right time, he lives a happy life; but if he draws unintelligently at the wrong time, his life will be rather different. State and individual and every living being are on the same footing here.

Megillus:: Well, sir, I suppose that what you say is more or less right; at any rate, we're baffled to find an argument against it. But in spite of that I still think the legislator of Sparta is right to recommend a policy of avoiding pleasure (our friend here will come to the rescue of the laws of Cnossus, if he wants to). The Spartan law relating to pleasures seems to me the best you could find anywhere. It has completely eliminated from our country the thing which particularly prompts men to indulge in the keenest pleasures, so that they become unmanageable and make every kind of a fool of themselves: drinking parties, with all their violent incitements to every sort of pleasure, are not a sight you’ll see anywhere in Sparta, either in the countryside or in the towns under her control. None of us would fail to inflict there and then the heaviest punishment on any tipsy merrymaker he happened to meet; he would not let the man off even if he had the festival of Dionysus as his excuse. Once, I saw men in that condition on wagons in your country, and at Tarentum, among our colonials, I saw the entire city drunk at the festival of Dionysus. We don’t have anything like that.

Athenian Stranger:: My Spartan friend, all this sort of thing is perfectly laudable in men with a certain strength of character; it is when they cannot stop themselves that it becomes rather silly. A countryman of mine could soon come back at you tit for tat by pointing to the easy virtue of your women. There is one answer, however, which in Tarentum and Athens and Sparta too is apparently thought to excuse and justify all such practices. When a foreigner is taken aback at seeing some unfamiliar custom there, the reply he gets on all hands is this: There is no need to be surprised, stranger: this is what we do here; probably you handle these things differently.’ Still, my friends, the subject of this conversation is not mankind in general but only the merits and faults of legislators. In fact, there is a great deal more we ought to say on the whole subject of drinking: it is a custom of some little importance, and needs a legislator of some little skill to understand it properly. I am not talking about merely drinking wine or totally abstaining from it: I mean drunkenness. How should we deal with it? One policy is that adopted by the Scythians and Persians, as well as by the Carthaginians, Celts, Iberians and Thracians—belligerent races, all of them. Or should we adopt your policy? This, as you say, is one of complete abstention, whereas the Scythians and Thracians (the women as well as the men) take their wine neat, and tip it down all over their clothes; in this they reckon to be following a glorious and splendid custom. And the Persians indulge on a grand scale (though with more decorum) in these and other luxuries which you reject.

Megillus:: Oh, but my fine sir, when we get weapons in our hands we rout the lot of them.

Athenian Stranger:: Oh, but my dear sir, you must not say that. Many a time an army has been defeated and routed in the past, and will be in the future, without any very obvious reason. Merely to point to victory or defeat in battle is hardly to advance a clear and indisputable criterion of the merits or demerits of a given practice. Larger states, you see, defeat smaller ones in battle, and the Syracusans enslave the Locrians, the very people who are supposed to be governed by the best laws you could find in those parts; the Athenians enslave the Ceians, and we could find plenty of other similar instances. It is by discussing the individual practice itself that we should try to convince ourselves of its qualities: for the moment, we ought to leave defeats and victories out of account, and simply say that such-and-such a practice is good and such-and-such is bad. First, though, listen to my explanation of the correct way to judge the relative value of these practices.

Megillus:: Well then, let’s have the explanation.

Athenian Stranger:: I think that everyone who sets out to discuss a practice with the intention of censuring it or singing its praises as soon as it is mentioned is employing quite the wrong procedure. You might as well condemn cheese out of hand when you heard somebody praising its merits as a food, without stopping to ask about what effect it has and how it is taken (by which I mean such questions as how it should be given, who should take it, what should go with it, in what condition it should be served, and the state of health required of those who eat it). But this is just what I think we are doing in our discussion. We have only to hear the word ‘drunkenness’, and one side immediately disparages it while the other praises it—a pointless procedure if there ever was one. Each puts up enthusiastic witnesses to endorse its recommendations: one side thinks that the number of its witnesses clinches the matter, the other points to the sight of the teetotalers conquering in battle—not that the facts of the case are beyond dispute even here. Now, if this is the way we are going to work one by one through the other customs, I for one shall find it goes against the grain. I want to discuss our present subject, drunkenness, by following a different—and, I think, correct—procedure, to see if I can demonstrate the right way to conduct an inquiry into such matters as these in general. Thousands and thousands of states, you see, differ from your pair of states in their view of these things, and would be prepared to fight it out in discussion.

Megillus:: Certainly, if a correct method of inquiry into such matters is available, we ought not to shy away from hearing what it is.

Athenian Stranger:: Let us conduct the inquiry more or less like this: suppose somebody were to praise goat-keeping, and commended the goat as a valuable article of possession; suppose somebody else were to disparage goats because he had seen some doing damage to cultivated land by grazing on it without a goatherd, and were to find similar fault with every animal he saw under incompetent control or none at all. What do we think of the censure of someone like that? Does it carry any weight at all?

Megillus:: Hardly.

Athenian Stranger:: If a man possesses only the science of navigation, can we say that he will be a useful captain on board a ship, and ignore the question whether he suffers from seasickness or not? Can we say that, or can’t we?

Megillus:: Certainly not, at any rate if, for all his skill, he’s prone to the complaint you mention.

Athenian Stranger:: What about the commander of an army? Is he capable of taking command just by virtue of military skill, in spite of being a coward in face of danger? The ‘seasickness’ in this case is produced by being, as it were, drunk with terror.

Megillus:: Hardly a capable commander, that.

Athenian Stranger:: And what if he combines cowardice with incompetence?

Megillus:: You are describing a downright useless fellow—a commander of the daintiest of dainty women, not of men at all.

Athenian Stranger:: Take any social gathering you like, which functions naturally under a leader and serves a useful purpose under his guidance: what are we to think of the observer who praises or censures it although he has never seen it gathered together and running properly under its leader, but always with bad leaders or none at all? Given that kind of observer and that kind of gathering, do we reckon that his blame or praise will have any value?

Megillus:: How could it, when he has never seen or joined any of these gatherings run in the proper way?

Athenian Stranger:: Hold on a moment. There are many kinds of gatherings, and presumably we'd say drinkers and drinking-parties were one?

Megillus:: Of course.

Athenian Stranger:: Has anyone ever seen such a gathering run in the proper way? You two, of course, find the answer easy: ‘Never, absolutely never’; drinking-parties are just not held in your countries, besides being illegal. But I have come across a great many, in different places, and I have investigated pretty nearly all of them. However, I have never seen or heard of one that was properly conducted throughout; one could approve of a few insignificant details, but most of them were mismanaged virtually all the time.

Clinias:: What are you getting at, sir? Be a little more explicit. As you said, we have no experience of such events, so that even if we did find ourselves at one we would probably be unable to tell off-hand which features were correct and which not.

Athenian Stranger:: Very likely. But you can try to understand from my explanation. You appreciate that each and every assembly and gathering for any purpose whatever should invariably have a leader?

Clinias:: Of course.

Athenian Stranger:: We said a moment ago that if it is a case of men fighting, their leader must be brave.

Clinias:: Yes, indeed.

Athenian Stranger:: And a brave man, surely, is less thrown off balance by fears than cowards are.

Clinias:: That too is true enough.

Athenian Stranger:: If there were some device by which we could put in charge of an army a commander who was completely fearless and imperturbable, this is what we should make every effort to do, surely?

Clinias:: It certainly is.

Athenian Stranger:: But the man we are discussing now is not going to take the lead in hostile encounters as between enemies, but in the peaceful meetings of friends with friends, gathering to foster mutual goodwill.

Clinias:: Exactly.

Athenian Stranger:: But we can assume that this sort of assembly will get rather drunk, so it won't be free of a certain amount of disturbance, I suppose.

Clinias:: Of course not—I imagine precisely the opposite.

Athenian Stranger:: To start with, then, the members of the gathering will need a leader?

Clinias:: Of course they will, more than anybody else.

Athenian Stranger:: Presumably we should if possible equip them with a leader who can keep his head?

Clinias:: Naturally.

Athenian Stranger:: And he should also, presumably, be a man who knows how to handle a social gathering, because his duty is not only to preserve the existing friendliness among its members, but to see that it is strengthened as a result of the party.

Clinias:: Quite true.

Athenian Stranger:: So, when men become merry with drink, don't they need someone put in charge of them who is sober and discreet rather than the opposite? If the man in charge of the revelers were himself a drinker, or young and indiscreet, he ought to thank his lucky stars if he managed to avoid starting some serious trouble.

Clinias:: Lucky? I'll say so!

Athenian Stranger:: Consequently, an attack on such gatherings in cities where they are conducted impeccably might not in itself amount to unjustified criticism, provided the critic were attacking the institution itself. But if he abuses the institution simply because he sees every possible mistake being made in running it, he clearly does not realize, first, that this is a case of mismanagement, and secondly that any and every practice will appear in the same light if it is carried on without a sober leader to control it. Surely you appreciate that a drunken steersman, or any commander of anything, will always make a total wreck of his ship or chariot or army, or whatever else he may be directing?

Clinias:: Yes, sir, there’s truth in that, certainly. But the next step is for you to tell us what conceivable benefit this custom of drinking parties would be to us, given proper management. For instance, to take our example of a moment ago, if an army were properly controlled, its soldiers would win the war and this would be a considerable benefit, and the same reasoning applies to our other instances. But what solid benefit would it be to individuals or the state to instruct a drinking party how to behave itself?

Athenian Stranger:: Well, what solid benefit are we to say it is to the state when just one lad or just one chorus of them has been properly instructed? If the question were put like that, we should say that the state gets very little benefit from just one; but ask in general what great benefit the state derives from the training by which it educates its citizens, and the reply will be perfectly straightforward. The good education they have received will make them good men, and being good they will achieve success in other ways, and even conquer their enemies in battle. Education leads to victory; but victory, on occasions, results in the loss of education, because men often swell with pride when they have won a victory in war, and this pride fills them with a million other vices. Men have won many ‘Cadmean victories’, and will win many more, but there has never been such a thing as ‘Cadmean education’.

Clinias:: It looks to us, my friend, as if you mean to imply that passing the time with friends over a drink—provided we behave ourselves—is a considerable contribution to education.

Athenian Stranger:: Most certainly.

Clinias:: Well then, could you now produce some justification for this view?

Athenian Stranger:: Justification? Only a god, sir, would be entitled to insist that this view is correct—there are so many conflicting opinions. But if necessary I am quite prepared to give my own, now that we have launched into a discussion of laws and political organizations.

Clinias:: This is precisely what we are trying to discover — your own opinion of the business we are now debating.

Athenian Stranger:: Well then, let that be our agenda: you have to direct your efforts to understanding the argument, while I direct mine to expounding it as clearly as I can. But first listen to this, by way of preface: you’ll find every Greek takes it for granted that my city likes talking and does a great deal of it, whereas Sparta is a city of few words and Crete cultivates the intellect rather than the tongue. I don’t want to make you feel that I am saying an awful lot about a triviality, if I deal exhaustively and at length with such a limited topic as drinking. In fact, the genuinely correct way to regulate drinking can hardly be explained adequately and clearly except in the context of a correct theory of culture; and it is impossible to explain this without considering the whole subject of education. That calls for a very long discussion indeed. So what do you think we ought to do now? What about skipping all this for the moment, and passing on to some other legal topic?

Megillus:: As it happens, sir—perhaps you haven’t heard—my family represents the interests of your state, Athens, in Sparta. I dare say all children, when they learn they are *proxeni* of a state, conceive a liking for it from their earliest years; each of us thinks of the state he represents as a fatherland, second only to his own country. This is exactly my own experience now. When the Spartans were criticizing or praising the Athenians, I used to hear the little children say, ‘Megillus, your state has done the dirty on us,’ or, ‘it has done us proud.’ By listening to all this and constantly resisting on your behalf the charges of Athens’ detractors, I acquired a whole-hearted affection for her, so that to this day I very much enjoy the sound of your accent. It is commonly said that when an Athenian is good, he is ‘very very good’, and I’m sure that’s right. They are unique in that they are good not because of any compulsion, but spontaneously, by grace of heaven; it is all so genuine and unfeigned. So you’re welcome to speak as long as you like, so far as I’m concerned.

Clinias:: I endorse your freedom to say as much as you like, sir: you’ll see that when you’ve heard what I have to say, too. You have probably heard that Epimenides, a man who was divinely inspired, was born hereabouts. He was connected with my family, and ten years before the Persian attack he obeyed the command of the oracle to go to Athens, where he performed certain sacrifices which the god had ordered. He told the Athenians, who were apprehensive at the preparations the Persians were making, that the Persians would not come for ten years, and that when they did, they would go back with all their intentions frustrated, after sustaining greater losses than they had inflicted. That was when my ancestors formed ties of friendship with you Athenians, and ever since then my forebears and I have held you in affection.

Athenian Stranger:: Well then, on your part you are prepared to listen, apparently; on my side, I am ready and willing to go ahead, but the job will certainly tax my abilities. Still, the effort must be made. To assist the argument, we ought to take the preliminary step of defining education and its potentialities, because we have ventured on a discussion which is intended to lead us to the god of wine, and we are agreed that education is as it were the route we have to take.

Clinias:: Certainly let's do that, if you like.

Athenian Stranger:: I am going to explain how one should describe education: see if you approve of my account.

Clinias:: Your explanation, then, please.

Athenian Stranger:: It is this: I insist that a man who intends to be good at a particular occupation must practice it from childhood: both at work and at play he must be surrounded by the special 'tools of the trade'. For instance, the man who intends to be a good farmer must play at farming, and the man who is to be a good builder must spend his playtime building toy houses; and in each case the teacher must provide miniature tools that copy the real thing. In particular, in this elementary stage they must learn the essential elementary skills. For example, the carpenter must learn in his play how to handle a rule and plumb-line, and the soldier must learn to ride a horse (either by actually doing it, in play, or by some similar activity). We should try to use the children's games to channel their pleasures and desires towards the activities in which they will have to engage when they are adult. To sum up, we say that the correct way to bring up and educate a child is to use his playtime to imbue his soul with the greatest possible liking for the occupation in which he will have to be absolutely perfect when he grows up. Now, as I suggested, consider the argument so far: do you approve of my account?

Clinias:: Of course.

Athenian Stranger:: But let’s not leave our description of education in the air. When we abuse or commend the upbringing of individual people and say that one of us is educated and the other uneducated, we sometimes use this latter term of men who have in fact had a thorough education— one directed towards petty trade or the merchant-shipping business, or something like that. But I take it that for the purpose of the present discussion we are not going to treat this sort of thing as ‘education’; what we have in mind is education from childhood in virtue, a training which produces a keen desire to become a perfect citizen who knows how to rule and be ruled as justice demands. I suppose we should want to mark off this sort of training from others and reserve the title ‘education’ for it alone. A training directed to acquiring money or a robust physique, or even to some intellectual facility not guided by reason and justice, we should want to call coarse and illiberal, and say that it had no claim whatever to be called education. Still, let’s not quibble over a name; let’s stick to the proposition we agreed on just now: as a rule, men with a correct education become good, and nowhere in the world should education be despised, for when combined with great virtue, it is an asset of incalculable value. If it ever becomes corrupt, but can be put right again, this is a lifelong task which everyone should undertake to the limit of his strength.

Clinias:: True. We agree with your description.

Athenian Stranger:: Here is a further point on which we agreed some time ago: those who can control themselves are good, those who cannot are bad.

Clinias:: Perfectly correct.

Athenian Stranger:: Let's take up this point again and consider even more closely just what we mean. Perhaps you'll let me try to clarify the issue by means of an illustration.

Clinias:: By all means.

Athenian Stranger:: Are we to assume, then, that each of us is a single individual?

Clinias:: Yes.

Athenian Stranger:: But that he possesses within himself a pair of witless and mutually antagonistic advisers, which we call pleasure and pain?

Clinias:: That is so.

Athenian Stranger:: In addition to these two, he has opinions about the future, whose general name is 'expectations'. Specifically, the anticipation of pain is called 'fear', and the anticipation of the opposite is called 'confidence'. Over and against all these we have 'calculation', by which we judge the relative merits of pleasure and pain, and when this is expressed as a public decision of a state, it receives the title 'law'.

Clinias:: I can scarcely follow you; but assume I do, and carry on with what comes next.

Megillus:: Yes, I'm in the same difficulty.

Athenian Stranger:: I suggest we look at the problem in this way: let's imagine that each of us living beings is a puppet of the gods. Whether we have been constructed to serve as their plaything, or for some serious reason, is something beyond our ken, but what we certainly do know is this: we have these emotions in us, which act like cords or strings and tug us about; they work in opposition, and tug against each other to make us perform actions that are opposed correspondingly; back and forth we go across the boundary line where vice and virtue meet. One of these dragging forces, according to our argument, demands our constant obedience, and this is the one we have to hang on to, come what may; the pull of the other cords we must resist. This cord, which is golden and holy, transmits the power of 'calculation', a power which in a state is called the public law; being golden, it is pliant, while the others, whose composition resembles a variety of other substances, are tough and inflexible. The force exerted by law is excellent, and one should always co-operate with it, because although 'calculation' is a noble thing, it is gentle, not violent, and its efforts need assistants, so that the gold in us may prevail over the other substances. If we do give our help, the moral point of this fable, in which we appear as puppets, will have been well and truly made; the meaning of the terms 'self-superior' and 'self-inferior' will somehow become clearer, and the duties of state and individual will be better appreciated. The latter must digest the truth about these forces that pull him, and act on it in his life; the state must get an account of it either from one of the gods or from the human expert we've mentioned, and incorporate it in the form of a law to govern both its internal affairs and its relations with other states. A further result will be a clearer distinction between virtue and vice; the light cast on that problem will perhaps in turn help to clarify the subject of education and the various other practices, particularly the business of drinking parties. It may well be thought that this is a triviality on which a great deal too much has been said, but equally it may turn out that the topic really does deserve this extended discussion.

Clinias:: You are quite right; we certainly ought to give full consideration to anything that deserves our attention in the ‘symposium’ we are having now.

Athenian Stranger:: Well then, tell me: if we give drink to this puppet of ours, what effect do we have on it?

Clinias:: What’s your purpose in harking back to that question?

Athenian Stranger:: No particular purpose, for the moment. I’m just asking, in a general way, what effect is had on something when it is associated with something else. I’ll try to explain my meaning even more clearly. This is what I’m asking; does drinking wine make pleasures and pains, anger and love, more intense?

Clinias:: Very much so.

Athenian Stranger:: What about sensations, memory, opinions and thought? Do these too become more intense? Or rather, don’t they entirely desert a man if he fills himself with drink?

Clinias:: Yes, they desert him entirely.

Athenian Stranger:: So he reverts to the mental state he was in as a young child?

Clinias:: Indeed.

Athenian Stranger:: And it’s then that his self-control would be at its lowest?

Clinias:: Yes, at its lowest.

Athenian Stranger:: A man in that condition, we agree, is very bad indeed.

Clinias:: Very.

Athenian Stranger:: So it looks as if it’s not only an old man who will go through a second childhood, but the drunkard too.

Clinias:: That’s well said, sir.

Athenian Stranger:: Now, is there any argument that could even begin to persuade us that we ought to venture on this practice, rather than make every possible effort to avoid it?

Clinias:: Apparently there is; at any rate, this is what you say, and a minute ago you were ready to produce it.

Athenian Stranger:: A correct reminder; I’m ready still, now that you have both said you would be glad to listen to me.

Clinias:: We’ll be all ears, sir, if only because of your amazing paradox that a man should, on occasions, voluntarily abandon himself to extreme depravity.

Athenian Stranger:: You mean spiritual depravity, don’t you?

Clinias:: Yes.

Athenian Stranger:: And what about degradation of the body, my friend—emaciation, disfigurement, ugliness, impotence? Shouldn’t we be startled to find a man voluntarily reducing himself to such a state?

Clinias:: Of course we should.

Athenian Stranger:: We don’t suppose, do we, that those who voluntarily take themselves off to the surgery in order to drink down medicines are unaware of the fact that very soon after, for days on end, their condition will be such that, if it were to be anything more than temporary, it would make life insupportable? We know, surely, that those who resort to gymnasia for vigorous exercises become temporarily enfeebled?

Clinias:: Yes, we are aware of all this.

Athenian Stranger:: And of the fact that they go there of their own accord, for the sake of the benefit they will receive after the initial stages?

Clinias:: Most certainly.

Athenian Stranger:: So shouldn’t we look at the other practices in the same light?

Clinias:: Yes indeed.

Athenian Stranger:: So the same view should be taken of time spent in one’s cups—if, that is, we may think of it as a legitimate parallel.

Clinias:: Of course.

Athenian Stranger:: Now if time so spent turned out to benefit us no less than time devoted to the body, it would have the initial advantage over physical exercises in that, unlike them, it is painless.

Clinias:: You’re right enough in that, but I'd be surprised if we could discover any such benefit in this case.

Athenian Stranger:: Then this is the point it looks as if we ought to be trying to explain. Tell me: can we conceive of two roughly opposite kinds of fear?

Clinias:: Which?

Athenian Stranger:: These: when we expect evils to occur, we are in fear of them, I suppose?

Clinias:: Yes.

Athenian Stranger:: And we often fear for our reputation, when we imagine we are going to get a bad name for doing or saying something disgraceful. This is the fear which we, and I fancy everyone else, call ‘shame’.

Clinias:: Surely.

Athenian Stranger:: These are the two fears I meant. The second resists pains and the other things we dread, as well as our keenest and most frequent pleasures.

Clinias:: Very true.

Athenian Stranger:: The legislator, then, and anybody of the slightest merit, values this fear very highly, and gives it the name ‘modesty’. The feeling of confidence that is its opposite he calls ‘insolence’, and reckons it to be the biggest curse anyone could suffer, whether in his private or his public life.

Clinias:: True.

Athenian Stranger:: So this fear not only safeguards us in a lot of other crucial areas of conduct but contributes more than anything else, if we take one thing with another, to the security that follows victory in war. Two things, then, contribute to victory: fearlessness in face of the enemy, and fear of ill-repute among one’s friends.

Clinias:: Exactly.

Athenian Stranger:: Every individual should therefore become both afraid and unafraid, for the reasons we have distinguished in each case.

Clinias:: Certainly.

Athenian Stranger:: Moreover, if we want to make an individual proof against all sorts of fears, it is by exposing him to fear, in a way sanctioned by the law, that we make him unafraid.

Clinias:: Evidently we do.

Athenian Stranger:: But what about our attempts to make a man afraid, in a way consistent with justice? Shouldn’t we see that he enters the lists against impudence, and give him training to resist it, so as to make him conquer in the struggle with his pleasures? A man has to fight and conquer his feelings of cowardice before he can achieve perfect courage; if he has no experience and training in that kind of struggle, he will never more than half realize his potentialities for virtue. Isn’t the same true of self-control? Will he ever achieve a perfect mastery here without having fought and conquered, with all the skills of speech and action both in work and play, the crowd of pleasures and desires that stimulate him to act shamelessly and unjustly? Can he afford not to have the experience of all these struggles?

Clinias:: It would seem hardly likely.

Athenian Stranger:: Well then, has any god given me a drug to produce fear, so that the more a man agrees to drink of it, the more the impression grows on him, after every draft, that he is assailed by misfortune? The effect would be to make him apprehensive about his present and future prospects, until finally even the boldest of men would be reduced to absolute terror; but when he had recovered from the drink and slept it off, he would invariably be himself again.

Clinias:: And what drink does that, sir? There’s hardly an example we could point to anywhere in the world.

Athenian Stranger:: No. But if one had cropped up, would a legislator have been able to make any use of it to promote courage? This is the sort of point we might well have put to him about it: ‘Legislator—whether your laws are to apply to Cretans or to any other people—tell us this: wouldn’t you be particularly glad to have a criterion of the courage and cowardice of your citizens?

Clinias:: Obviously, every legislator would say ‘Yes’.

Athenian Stranger:: ‘Well, you'd like a safe test without any serious risks, wouldn’t you? Or do you prefer one full of risks?’

Clinias:: They will all agree to this as well: safety is essential.

Athenian Stranger:: 'Your procedure would be to test these people's reactions when they had been put into a state of alarm, and by encouraging, rebuking and rewarding individuals you would compel them to become fearless. You would inflict disgrace on anyone who disobeyed and refused to become in every respect the kind of man you wanted; you would discharge without penalty anyone who had displayed the proper courage and finished his training satisfactorily; and the failures you would punish. Or would you refuse point-blank to apply the test, even though you had nothing against the drink in other respects?'

Clinias:: Of course he would apply it, sir.

Athenian Stranger:: Anyway, my friend, compared with current practice, this training would be remarkably straightforward, and would suit individuals, small groups, and any larger numbers you may want. Now if a man retreated into some decent obscurity, out of embarrassment at the thought of being seen before he is in good shape, and trained against his fears alone and in privacy, equipped with just this drink instead of all the usual paraphernalia, he would be entirely justified. But he would be no less justified if, confident that he was already well equipped by birth and breeding, he were to plunge into training with several fellow drinkers. While inevitably roused by the wine, he would show himself strong enough to escape its other effects: his virtue would prevent him from committing even one serious improper act, and from becoming a different kind of person. Before getting to the last round he would leave off, fearing the way in which drink invariably gets the better of a man.

Clinias:: Yes, sir, even he would be prudent enough to do that.

Athenian Stranger:: Let’s repeat the point we were making to the legislator: ‘Agreed then: there is probably no such thing as a drug to produce fear, either by divine gift or human contrivance (I leave quacks out of account: they’re beyond the pale). But is there a drink that will banish fear and stimulate over-confidence about the wrong thing at the wrong moment? What do we say to this?’

Clinias:: I suppose he’ll say ‘There is’, and mention wine.

Athenian Stranger:: And doesn’t this do just the opposite of what we described a moment ago? When a man drinks it, it immediately makes him more cheerful than he was before; the more he takes, the more it fills him with boundless optimism: he thinks he can do anything. Finally, bursting with self-esteem and imposing no restraint on his speech and actions, the fellow loses all his inhibitions and becomes completely fearless: he’ll say and do anything, without a qualm. Everybody, I think, would agree with us about this.

Clinias:: Certainly.

Athenian Stranger:: Now let’s think back again to this point: we said that there were two elements in our souls that should be cultivated, one of them in order to make ourselves supremely confident, its opposite to make ourselves supremely fearful.

Clinias:: The latter being modesty, I suppose.

Athenian Stranger:: Well remembered! But in view of the fact that one has to learn to be courageous and intrepid when assailed by fears, the question arises whether the opposite quality will have to be cultivated in opposite circumstances.

Clinias:: Probably so.

Athenian Stranger:: So the conditions in which we naturally become unusually bold and daring seem to be precisely those required for practice in reducing our shamelessness and audacity to the lowest possible level, so that we become terrified of ever venturing to say, suffer, or do anything disgraceful.

Clinias:: Apparently.

Athenian Stranger:: Now aren’t we affected in this way by all the following conditions—anger, love, pride, ignorance and cowardice? We can add wealth, beauty, strength and everything else that turns us into fools and makes us drunk with pleasure. However, we are looking for an inexpensive and less harmful test we can apply to people, which will also give us a chance to train them, and this we have in the scrutiny we can make of them when they are relaxed over a drink. Can we point to a more suitable pleasure than this—provided some appropriate precautions are taken? Let’s look at it in this way. Suppose you have a man with an irritable and savage temper (this is the source of a huge number of crimes). Surely, to make contracts with him, and run the risk that he may default, is a more dangerous way to test him than to keep him company during a festival of Dionysus? Or again, if a man’s whole being is dominated by sexual pleasures, it is dangerous to try him out by putting him in charge of your wife and sons and daughters; this is to scrutinize the character of his soul at the price of exposing to risk those whom you hold most dear. You could cite dozens of other instances, and still not do justice to the superiority of this wholly innocuous ‘examination by recreation’. In fact, I think neither the Cretans nor any other people would disagree if we summed it all up like this: we have here a pretty fair test of each other, which for cheapness, safety and speed is absolutely unrivaled.

Clinias:: True so far.

Athenian Stranger:: So this insight into the nature and disposition of a man’s soul will rank as one of the most useful aids available to the art which is concerned to foster a good character—the art of statesmanship, I take it?

Clinias:: Certainly.

## Book 2.

Athenian Stranger:: It looks as if the next question we have to ask is this: is the insight we somehow get into men’s natural temperaments the only thing in favor of drinking parties? Or does a properly run drinking party confer some other substantial benefit that we ought to consider very seriously? What do we say to this? We need to be careful here: as far as I can see, our argument does tend to point to the answer ‘Yes’, but when we try to discover how and in what sense, we may get tripped up by it.

Clinias:: Tell us why, then.

Athenian Stranger:: I want to think back over our definition of correct education, and to hazard the suggestion now that drinking parties are actually its safeguard, provided they are properly established and conducted on the right lines.

Clinias:: That’s a large claim!

Athenian Stranger:: I maintain that the earliest sensations that a child feels in infancy are of pleasure and pain, and this is the route by which virtue and vice first enter the soul. (But for a man to acquire good judgment, and unshakable correct opinions, however late in life, is a matter of good luck: a man who possesses them, and all the benefits they entail, is perfect.) I call ‘education’ the initial acquisition of virtue by the child, when the feelings of pleasure and affection, pain and hatred, that well up in his soul are channeled in the right courses before he can understand the reason why. Then when he does understand, his reason and his emotions agree in telling him that he has been properly trained by inculcation of appropriate habits. Virtue is this general concord of reason and emotion. But there is one element you could isolate in any account you give, and this is the correct formation of our feelings of pleasure and pain, which makes us hate what we ought to hate from first to last, and love what we ought to love. Call this ‘education’, and I, at any rate, think you would be giving it its proper name.

Clinias:: Yes, sir, we entirely approve of what you have just said about education and that goes for your previous account, too.

Athenian Stranger:: Splendid. Education, then, is a matter of correctly disciplined feelings of pleasure and pain. But in the course of a man’s life the effect wears off, and in many respects it is lost altogether. The gods, however, took pity on the human race, born to suffer as it was, and gave it relief in the form of religious festivals to serve as periods of rest from its labors. They gave us the Muses, with Apollo their leader, and Dionysus; by having these gods to share their holidays, men were to be made whole again, and thanks to them, we find refreshment in the celebration of these festivals. Now, there is a theory which we are always having dinned into our ears: let’s see if it squares with the facts or not. It runs like this: virtually all young things find it impossible to keep their bodies still and their tongues quiet. They are always trying to move around and cry out; some jump and skip and do a kind of gleeful dance as they play with each other, while others produce all sorts of noises. And whereas animals have no sense of order and disorder in movement (‘rhythm’ and ‘harmony’, as we call it), we human beings have been made sensitive to both and can enjoy them. This is the gift of the same gods whom we said were given to us as companions in dancing; it is the device which enables them to be our chorus-leaders and stimulate us to movement, making us combine to sing and dance—and as this naturally ‘charms’ us, they invented the word ‘chorus’. So shall we take it that this point is established? Can we assume that education comes originally from Apollo and the Muses, or not?

Clinias:: Yes.

Athenian Stranger:: So by an ‘uneducated’ man we shall mean a man who has not been trained to take part in a chorus; and we must say that if a man has been sufficiently trained, he is ‘educated’.

Clinias:: Naturally.

Athenian Stranger:: And of course a performance by a chorus is a combination of dancing and singing?

Clinias:: Of course.

Athenian Stranger:: And this means that the well-educated man will be able both to sing and dance well?

Clinias:: So it seems.

Athenian Stranger:: Now let’s see just what that word implies.

Clinias:: What word?

Athenian Stranger:: We say ‘he sings well’ or ‘he dances well. But should we expand this and say ‘provided he sings good songs and dances good dances’? Or not?

Clinias:: Yes, we should expand it.

Athenian Stranger:: Now then, take a man whose opinion about what is good is correct (it really is good), and likewise in the case of the bad (it really is bad), and follows this judgment in practice. He may be able to represent, by word and gesture, and with invariable success, his intellectual conception of what is good, even though he gets no pleasure from it and feels no hatred for what is bad. Another man may not be very good at keeping on the right lines when he uses his body and his voice to represent the good, or at trying to form some intellectual conception of it;

but he may be very much on the right lines in his feelings of pleasure and pain, because he welcomes what is good and loathes what is bad. Which of these two will be the better educated musically, and the more effective member of a chorus?

Clinias:: As far as education is concerned, sir, the second is infinitely superior.

Athenian Stranger:: So if the three of us grasp what 'goodness' is in singing and dancing, we have also a sound criterion for distinguishing the educated man from the uneducated. If we fail to grasp it, we'll never be able to make up our minds whether a safeguard for education exists, or where we ought to look for it. Isn't that so?

Clinias:: Yes, it is.

Athenian Stranger:: The next quarry we have to track down, like hounds at a hunt, will be what constitutes a 'good' bodily movement, tune, song and dance. But if all these notions give us the slip and get away, it will be pointless utterly to prolong our discussion of correct education, Greek or foreign.

Clinias:: Quite.

Athenian Stranger:: Good. Now, what is to be our definition of a good tune or bodily movement? Tell me—imagine a courageous soul and a cowardly soul beset by one and the same set of troubles: do similar sounds and movements of the body result in each case?

Clinias:: Of course not. The complexion is different, to start with.

Athenian Stranger:: You are absolutely right, my friend. But music is a matter of rhythm and harmony, and involves tunes and movements of the body; this means that while it is legitimate to speak of a 'rhythmical' or a 'harmonious' movement or tune, we cannot properly apply to either of them the chorus-masters’ metaphor ‘brilliantly colored’. But what is the appropriate language to describe the movement and melody used to portray the brave man and the coward? The correct procedure is to call those of brave men ‘good’ and those of cowards ‘disgraceful’. But let’s not have an inordinately long discussion about the details; can we say, without beating about the bush, that all movements and tunes associated with spiritual or bodily excellence (the real thing or a representation) are good? And conversely bad if they have to do with vice?

Clinias:: Yes, that’s a reasonable proposal. You may assume we agree.

Athenian Stranger:: Here’s a further point: do we all enjoy every type of performance by a chorus to the same degree? Or is that far from being true?

Clinias:: As far as it could be!

Athenian Stranger:: But can we put our finger on the cause of our confusion? Is it that ‘good’ varies from person to person? Or that it is thought to vary, although in point of fact it does not? No one, I fancy, will be prepared to say that dances portraying evil are better than those portraying virtue, or that although other people enjoy the virtuous Muse, his own personal liking is for movements expressing depravity. Yet most men do maintain that the power of music to give pleasure to the soul is the standard by which it should be judged. But this is an insupportable doctrine, and it is absolute blasphemy to speak like that. More likely, though, it’s something else that’s misleading us.

Clinias:: What?

Athenian Stranger:: Performances given by choruses are representations of character, and deal with every variety of action and incident. The individual performers enact their roles partly by expressing their own characters, partly by imitating those of others. That is why, when they find that the speaking or singing or any other element in the performance of a chorus appeals to their natural character or acquired habits, or both, they can't help applauding with delight and using the term 'good'. But sometimes they find these performances going against the grain of their natural character or their disposition or habits, in which case they are unable to take any pleasure in them and applaud them, and in this case the word they use is 'shocking'. When a man's natural character is as it should be, but he has acquired bad habits, or conversely when his habits are correct but his natural character is vicious, his pleasure and his approval fail to coincide: he calls the performances 'pleasant, but depraved'. Such performers, in the company of others whose judgment they respect, are ashamed to make this kind of movement with their bodies, and to sing such songs as though they genuinely approved of them. But in their heart of hearts, they enjoy themselves.

Clinias:: You are quite right.

Athenian Stranger:: Now, does a man's enjoyment of bad bodily movements or bad tunes do him any harm? And does it do him any good to take pleasure in the opposite kind?

Clinias:: Probably.

Athenian Stranger:: 'Probably'? Is that all? Surely there must be a precise analogy here with the man who comes into contact with depraved characters and wicked people, and who does not react with disgust, but welcomes them with pleasure, censuring them half-heartedly because he only half-realizes, as in a dream, how perverted such a state is: he just cannot escape taking on the character of what he enjoys, whether good or bad—even if he is ashamed to go so far as to applaud it. In fact we could hardly point to a greater force for good—or evil—than this inevitable assimilation of character.

Clinias:: No, I don’t think we could.

Athenian Stranger:: So, in a society where the laws relating to culture, education and recreation are, or will be in future, properly established, do we imagine that authors will be given a free hand? The choruses will be composed of the young children of law-abiding citizens: will the composer be free to teach them anything by way of rhythm, tune and words that amuses him when he composes, without bothering what effect he may have on them as regards virtue and vice?

Clinias:: That’s certainly not sensible; how could it be?

Athenian Stranger:: But it is precisely this that they are allowed to do in virtually all states—except in Egypt.

Clinias:: Egypt! Well then, you'd better tell us what legislation has been enacted there.

Athenian Stranger:: Merely to hear about it is startling enough. Long ago, apparently, they realized the truth of the principle we are putting forward only now, that the movements and tunes which the children of the state are to practice in their rehearsals must be good ones. They compiled a list of them according to style, and displayed it in their temples. Painters and everyone else who represent movements of the body of any kind were restricted to these forms; modification and innovation outside this traditional framework were prohibited, and are prohibited even today, both in this field and the arts in general. If you examine their art on the spot, you will find that ten thousand years ago (and I’m not speaking loosely: I mean literally ten thousand), paintings and reliefs were produced that are no better and no worse than those of today, because the same artistic rules were applied in making them.

Clinias:: Fantastic!

Athenian Stranger:: No: simply a supreme achievement of legislators and statesmen. You might, even so, find some other things to criticize there, but in the matter of music this inescapable fact deserves our attention: it has in fact proved feasible to take the kind of music that shows a natural correctness and put it on a firm footing by legislation. But it is the task of a god, or a man of god-like stature; in fact, the Egyptians do say that the tunes that have been preserved for so long are compositions of Isis. Consequently, as I said, if one could get even a rough idea of what constitutes 'correctness' in matters musical, one ought to have no qualms about giving the whole subject systematic expression in the form of a law. It is true that the craving for pleasure and the desire to avoid tedium lead us to a constant search for novelty in music, and choral performances that have been thus consecrated may be stigmatized as out-of-date; but this does not have very much power to corrupt them. In Egypt, at any rate, it does not seem to have had a corrupting effect at all: quite the contrary.

Clinias:: So it would seem, to judge from your account.

Athenian Stranger:: So, equally without qualms, we can surely describe the proper conditions for festive music and performances of choruses more or less like this. When we think things are going well for us, we feel delight; and to put it the other way round, when we feel delight, we come to think that things are going well. Isn't that so?

Clinias:: It is.

Athenian Stranger:: In addition, when we are in that state—I mean 'delight'— we can't keep still.

Clinias:: That's true.

Athenian Stranger:: Our youngsters are keen to join the dancing and singing themselves, but we old men think the proper thing is to pass the time as spectators. The delight we feel comes from their relaxation and merrymaking. Our agility is deserting us, and as we feel its loss we are only too pleased to provide competitions for the young, because they can best stir in us the memory of our youth and re-awaken the instincts of our younger days.

Clinias:: Very true.

Athenian Stranger:: So we'd better face the fact that there is a grain of truth in contemporary thought on the subject of holiday-makers. Most people say that the man who delights us most and gives us most pleasure should be highly esteemed for his skill, and deserves to be awarded first prize, because the fact that we are allowed to relax on such occasions means that we ought to lionize the man who gives most people most pleasure, so that, as I said just now, he deserves to carry off the prize. In theory that’s right, isn’t it? And wouldn’t it be equally right in practice?

Clinias:: Maybe.

Athenian Stranger:: Ah, my fine fellow, such a conclusion ‘may be’ rash! We must make some distinctions, and examine the question rather like this: suppose somebody were to arrange a competition, and were to leave its character entirely open, not specifying whether it was to be gymnastic, artistic or equestrian. Assume that he gathers together all the inhabitants of the state, and offers a prize: anyone who wishes should come and compete in giving pleasure, and this is to be the sole criterion; the competitor who gives the audience most pleasure will win; he has an entirely free hand as to what method he employs, but provided he excels in this one respect he will be judged the most pleasing of the competitors and win the prize. What effect do we think such an announcement would have?

Clinias:: In what way do you mean?

Athenian Stranger:: Likely enough, I suppose, one competitor will play the Homer and present epic poetry, another will sing lyric songs to music, another will put on a tragedy, and another a comedy; and it will be no surprise if somebody even reckons his best chance of winning lies in putting on a puppet-show. Now, with all these competitors and thousands of others entering, can we say which would really deserve to win?

Clinias:: That's an odd question! Who could answer it for you with authority before hearing the contestants, and listening to them individually on the spot?

Athenian Stranger:: Well then, do you want me to give you an equally odd answer?

Clinias:: Naturally.

Athenian Stranger:: Suppose the decision rests with the smallest infant children. They'll decide for the exhibitor of puppets, won't they?

Clinias:: Of course.

Athenian Stranger:: If it rests with the older children, they will choose the producer of comedies. Young men, ladies of cultivated taste, and I dare say pretty nearly the entire populace, will choose the tragedy.

Clinias:: Yes, I dare say.

Athenian Stranger:: We old men would probably be most gratified to listen to a reciter doing justice to the Iliad or Odyssey, or an extract from Hesiod: we'd say he was the winner by a clear margin. Who, then, would be the proper winner? That's the next question, isn't it?

Clinias:: Yes.

Athenian Stranger:: Clearly you and I are forced to say that the proper winners would be those chosen by men of our vintage. To us, from among all the customs followed in every city all over the world today, this looks like the best.

Clinias:: Surely.

Athenian Stranger:: I am, then, in limited agreement with the man in the street. Pleasure is indeed a proper criterion in the arts, but not the pleasure experienced by anybody and everybody. The productions of the Muse are at their finest when they delight men of high caliber and adequate education—but particularly if they succeed in pleasing the single individual whose education and moral standards reach heights attained by no one else. This is the reason why we maintain that judges in these matters need high moral standards: they have to possess not only a discerning taste, but courage too. A judge won’t be doing his job properly if he reaches his verdict by listening to the audience and lets himself be thrown off balance by the yelling of the mob and his own lack of training; nor must he shrug his shoulders and let cowardice and indolence persuade him into a false verdict against his better judgment, so that he lies with the very lips with which he called upon the gods when he undertook office. The truth is that he sits in judgment as a teacher of the audience, rather than as its pupil; his function (and under the ancient law of the Greeks he used to be allowed to perform it) is to throw his weight against them, if the pleasure they show has been aroused improperly and illegitimately. For instance, the law now in force in Sicily and Italy, by truckling to the majority of the audience and deciding the winner by a show of hands, has had a disastrous effect on the authors themselves, who compose to gratify the depraved tastes of their judges; the result is that in effect they are taught by the audience. It has been equally disastrous for the quality of the pleasure felt by the spectators: they ought to come to experience more elevated pleasures from listening to the portrayal of characters invariably better than their own, but in fact just the opposite happens, and they have no one to thank but themselves. Well, then, now that we have finished talking about that, what conclusion is indicated? Let's see if it isn't this—

Clinias:: What?

Athenian Stranger:: For the third or fourth time, I think, our discussion has come full circle. Once again, education has proved to be a process of attraction, of leading children to accept right principles as enunciated by the law and endorsed as genuinely correct by men who have high moral standards and are full of years and experience. The soul of the child has to be prevented from getting into the habit of feeling pleasure and pain in ways not sanctioned by the law and those who have been persuaded to obey it; he should follow in their footsteps and find pleasure and pain in the same things as the old. That is why we have what we call songs, which are really 'charms' for the soul. These are in fact deadly serious devices for producing this concord we are talking about; but the souls of the young cannot bear to be serious, so we use the terms 'recreation' and 'song' for the charms, and children treat them in that spirit. We have an analogy in the sick and ailing; those in charge of feeding them try to administer the proper diet in tasty foods and drinks, and offer them unwholesome items in revolting foods, so that the patients may get into the desirable habit of welcoming the one kind and loathing the other. That is just what the true legislator will persuade (or, failing persuasion, compel) the man with a creative flair to do with his grand and marvelous language: to compose correctly by portraying, with appropriate choreography and musical setting, men who are moderate, courageous and good in every way.

Clinias:: Good Heavens, sir, do you really think that’s how they compose nowadays in other cities? My experience is limited, but I know of no such proceeding as you describe, except among us Cretans or in Sparta. In dancing and all the other arts one novelty follows another; the changes are made not by law but are prompted by wildly changing fancies that are very far from being permanent and stable like the Egyptian tastes you’re explaining: on the contrary, they are never the same from minute to minute.

Athenian Stranger:: Well said, Clinias. But if I gave you the impression that I was speaking of the present day when I referred to the procedure you mention, I expect it was my own lack of clarity in expressing my thoughts that led you astray and caused me to be misunderstood. I was only saying what I want to see happen in the arts, but perhaps I used expressions that made you think I was referring to facts. It always goes against the grain to pillory habits that are irretrievably on the wrong lines, but sometimes one has to. So, seeing that we are agreed in approving this custom, tell me this, if you will: is it more prevalent among you Cretans and the Spartans than among the other Greeks?

Clinias:: Certainly.

Athenian Stranger:: And what if it became prevalent among the others as well? Presumably we'd say that that was an improvement on present practice?

Clinias:: Yes, I suppose it would be a tremendous improvement if they adopted the procedure of Crete and Sparta—which is also in accordance with the recommendations you made just now.

Athenian Stranger:: Now then, let’s make sure we understand each other in this business. The essence of the entire cultural education of your countries is surely this: you oblige your poets to say that the good man, because he is temperate and just, enjoys good fortune and is happy, no matter whether he is big and strong, or small and weak, or rich, or poor; and that even if he is ‘richer than Midas or Cinyras’, and has not justice, he is a wretch, and lives a life of misery. Td not mention a man’, says your poet, and how right he is, and Td take no account of him’, even if all his actions and possessions were what people commonly call ‘good’, if he were without justice, nor even if, with a character like that, he ‘attacked in close combat with the foe’. If he is unjust, I wouldn’t want him to ‘stand the sight of bloody butchery’ nor ‘outdo in speed the north wind of Thrace’, nor ever achieve any of the things that are generally said to be ‘good’. You see, these things men usually call ‘good’ are misnamed. It is commonly said that health comes first, beauty second, and wealth third. The list goes on indefinitely: keen sight and hearing, and acute perception of all the objects of sensation; being a dictator and doing whatever you like; and the seventh heaven is supposed to be reached when one has achieved all this and is made immortal without further ado. You and I, presumably, hold that all these things are possessions of great value to the just and pious, but that to the unjust they are a curse, every one of them, from health all the way down the list. Seeing, hearing, sensation, and simply being alive, are great evils, if in spite of having all these so-called good things a man gains immortality without justice and virtue in general; but if he survives for only the briefest possible time, the evil is less. I imagine you will persuade or compel the authors in your states to embody this doctrine of mine in the words, rhythms and ‘harmonies’ they produce for the education of your youth. Isn’t that right? Look here, now: my position is quite clear. Although so-called evils are in fact evil for the just, they are good for the unjust; and so-called ‘goods’, while genuinely good for the good, are evils for the wicked. Let me ask the same question as before: are you and I in agreement, or not?

Clinias:: In some ways I think we are, but certainly not in others.

Athenian Stranger:: I expect this is where I sound implausible: suppose a man were to enjoy health and wealth and permanent absolute power—and, if you like, I’ll give him enormous strength and courage as well, and exempt him from death and all the other ‘evils’, as people call them. But suppose he had in him nothing but injustice and insolence. It is obvious, I maintain, that his life is wretchedly unhappy.

Clinias:: True, that’s precisely where you fail to convince.

Athenian Stranger:: Very well, then, How should we put it now? If a man is brave, strong, handsome, and rich, and enjoys a life-long freedom to do just what he wants to, don’t you think—if he is unjust and insolent—that his life will inevitably be a disgrace? Perhaps at any rate you'd allow the term ‘disgrace’?

Clinias:: Certainly.

Athenian Stranger:: Will you go further, and say he will live ‘badly’?

Clinias:: No, we'd not be so ready to admit that.

Athenian Stranger:: What about going further still, and saying he will live ‘unpleasantly and unprofitably’?

Clinias:: How could we possibly be prepared to go as far as that?

Athenian Stranger:: ‘How’? My friend, it looks as if it would be a miracle if we ever harmonized on this point: at the moment your tune and mine are scarcely in the same key. To me, these conclusions are inescapably true— in fact, my dear Clinias, rather more true and obvious than that Crete is an island. If I were a lawgiver, I should try to compel the authors and every inhabitant of the state to take this line; and if anybody in the land said that there are men who live a pleasant life in spite of being scoundrels, or that while this or that is useful and profitable, something else is more just, I should impose pretty nearly the extreme penalty. There are many other things I should persuade my citizens to say, which would flatly contradict what Cretans and Spartans maintain nowadays, apparently— to say nothing of the rest of the world. Zeus and Apollo! Just you imagine, my fine fellows, asking these gods who inspired your laws, ‘Is the life of supreme justice also the life that gives most pleasure? Or are there two kinds of life, one being “the supremely just,” the other “the most pleasurable”?’ Suppose they replied There are two.’ If we knew the right question to ask, we might perhaps pursue the point: ‘Which category of men should we call the most blessed by heaven? Those who live the supremely just life, or the most pleasurable?’ If they said Those who live the most pleasurable life’, then that would be, for them, a curious thing to say. However, I am unwilling to associate the gods with such a statement; I prefer to think of it in connection with forefathers and lawgivers. So let’s suppose those first questions have been put to a forefather and lawgiver, and that he has replied that the man who lives the life of greatest pleasure enjoys the greatest happiness. This is what I'd say then: ‘Father, didn’t you want me to receive as many of the blessings of heaven as I could? Yet in spite of that you never tired of telling me to order my life as justly as possible’. In taking up that kind of position our forefather or lawgiver will, I think, appear in rather an odd light: it will look as if he cannot speak without contradicting himself. However, if he declared that the life of supreme justice was the most blessed, I imagine that everybody who heard him would want to know what splendid benefit, superior to pleasure, was to be found in this kind of life. What was there in it that deserved the commendation of the law? Surely, any benefit a just man got out of it would be inseparable from pleasure? Look: are we to suppose that fame and praise from gods and men are fine and good, but unpleasant (and vice versa in the case of notoriety)? (‘My dear legislator.’ we'd say, ‘of course not’.) Or, if you neither injure another nor are injured yourself by someone else, is that unpleasant, in spite of being fine and good? Is the opposite pleasant, but disgraceful and wicked?

Clinias:: Certainly not.

Athenian Stranger:: So the argument that does not drive a wedge between ‘pleasant’ on the one hand and ‘just’ and ‘fine’ and ‘good’ on the other, even if it achieves nothing else, will do something to persuade a man to live a just and pious life. This means that any teaching which denies the truth of all this is, from the lawgiver’s standpoint, a complete disgrace and his worst enemy. (Nobody would willingly agree to do something which would not bring him more pleasure than pain.)

Looking at a thing from a distance makes nearly everyone feel dizzy, especially children; but the lawgiver will alter that for us, and lift the fog that clouds our judgment: somehow or other—by habituation, praise, or argument—he will persuade us that our ideas of justice and injustice are like pictures drawn in perspective. Injustice looks pleasant to the enemy of justice, because he regards it from his own personal standpoint, which is unjust and evil; justice, on the other hand, looks unpleasant to him. But from the standpoint of the just man the view gained of justice and injustice is always the opposite.

Clinias:: So it seems.

Athenian Stranger:: And which of these judgments are we to say has a better claim to be the correct one? The judgment of the worse soul or the better?

Clinias:: That of the better, certainly.

Athenian Stranger:: Then it is equally certain that the unjust life is not only more shocking and disgraceful, but also in fact less pleasant, than the just and holy.

Clinias:: On this argument, my friends, it certainly looks like it.

Athenian Stranger:: But just suppose that the truth had been different from what the argument has now shown it to be, and that a lawgiver, even a mediocre one, had been sufficiently bold, in the interests of the young, to tell them a lie. Could he have told a more useful lie than this, or one more effective in making everyone practice justice in everything they do, willingly and without pressure?

Clinias:: Truth is a fine thing, and it is sure to prevail, but to persuade men of it certainly seems no easy task.

Athenian Stranger:: Yes, but what about that fairy story about the Sidonian? That was well-nigh incredible, but it was easy enough to convince men of it, and of thousands of other similar stories.

Clinias:: What sort of stories?

Athenian Stranger:: The sowing of the teeth and the birth of armed men from them. This remarkable example shows the legislator that the souls of the young can be persuaded of anything; he has only to try. The only thing he must consider and discover is what conviction would do the state most good; in that connection, he must think up every possible device to ensure that as far as possible the entire community preserves in its songs and stories and doctrines an absolute and lifelong unanimity. But if you see the matter in any other light, have no hesitation in disputing my view.

Clinias:: No, I don't think either of us would be able to dispute that.

Athenian Stranger:: Then it will be up to me to introduce the next point. I maintain that our choruses—all three of them—should charm the souls of the children while still young and tender, and uphold all the admirable doctrines we have already formulated, and any we may formulate in the future. We must insist, as the central point of these doctrines, that the gods say the best life does in fact bring most pleasure. If we do that, we shall be telling the plain truth, and we shall convince those whom we have to convince more effectively than if we advanced any other doctrine.

Clinias:: Yes, one has to agree with what you say.

Athenian Stranger:: To start with, it will be only right and proper if the children's chorus (which will be dedicated to the Muses) comes on first to sing these doctrines with all its might and main before the entire city. Second will come the chorus of those under thirty, which will call upon Apollo Paean to bear witness that what they say is true, and pray that he will vouchsafe to convince the young. Thirdly, there must be the songs of those between thirty and sixty. That leaves the men who are older than this, who are, of course, no longer up to singing; but they will be inspired to tell stories in which the same characters will appear.

Clinias:: You mention these three choruses, sir: what are they? We are not very clear what you mean to say about them.

Athenian Stranger:: But the greater part of the discussion we have had so far has been precisely for their sake!

Clinias:: We still haven't seen the point. Could you try to elucidate still further?

Athenian Stranger:: If we remember, we said at the beginning of our discussion that all young things, being fiery and mettlesome by nature, are unable to keep their bodies or their tongues still—they are always making uncoordinated noises and jumping about. No other animal, we said, ever develops a sense of order in either respect; man alone has a natural ability to do this. Order in movement is called 'rhythm', and order in the vocal sounds—the combination of high and low notes—is called 'harmony'; and the union of the two is called 'a performance by a chorus'. We said that the gods took pity on us and gave us Apollo and the Muses as companions and leaders of our choruses; and if we can cast our minds back, we said that their third gift to us was Dionysus.

Clinias:: Yes, of course we remember.

Athenian Stranger:: Well, we've mentioned the choruses of Apollo and the Muses; the remaining one, the third, must be identified as belonging to Dionysus.

Clinias:: What! You had better explain yourself: a chorus of elderly men dedicated to Dionysus sounds a weird and wonderful idea, at any rate at first hearing. Are men of more than thirty and even fifty, up to sixty, really going to dance in honor of Dionysus?

Athenian Stranger:: You are absolutely right—to show how this could be reasonable in practice does need, I think, some explanation.

Clinias:: It certainly does.

Athenian Stranger:: Are we agreed on the conclusions we have reached so far?

Clinias:: Conclusions about what?

Athenian Stranger:: About this—that every man and child, free-man and slave, male and female—in fact, the whole state—is in duty bound never to stop repeating to each other the charms we have described. Somehow or other, we must see that these charms constantly change their form; at all costs they must be continually varied, so that the performers always long to sing the songs, and find perpetual pleasure in them.

Clinias:: Agreed: that's exactly the arrangement we want.

Athenian Stranger:: This last chorus is the noblest element in our state; it carries more conviction than any other group, because of the age and discernment of its members. Where, then, should it sing its splendid songs, if it is to do most good? Surely we are not going to be silly enough to leave this question undecided? After all, this chorus may well prove to be consummate masters of the noblest and most useful songs.

Clinias:: No; if that's really the way the argument is going, we certainly can't leave this undecided.

Athenian Stranger:: So what would be a suitable method of procedure? See if this will do.

Clinias:: What, then?

Athenian Stranger:: As he grows old, a man becomes apprehensive about singing; it gives him less pleasure, and if it should happen that he cannot avoid it, it causes him an embarrassment which grows with the increasingly sober tastes of his advancing years. Isn’t that so?

Clinias:: Indeed it is.

Athenian Stranger:: So naturally he will be even more acutely embarrassed at standing up and singing in front of the varied audience in a theater. And if men of that age were forced to sing in the same condition as members of choruses competing for a prize—lean and on a diet after a course of voice-training—then of course they would find the performance positively unpleasant and humiliating, and would lose every spark of enthusiasm.

Clinias:: Yes, that would be the inevitable result.

Athenian Stranger:: So how shall we encourage them to be enthusiastic about singing? The first law we shall pass, surely, is this: children under the age of eighteen are to keep off wine entirely. We shall teach them that they must treat the violent tendencies of youth with due caution, and not pour fire on the fire already in their souls and bodies until they come to undertake the real work of life. Our second law will permit the young man under thirty to take wine in moderation, but he must stop short of drunkenness and bibulous excesses. When he reaches his thirties, he should regale himself at the common meals, and invoke the gods; in particular, he should summon Dionysus to what is at once the play-time and the prayer-time of the old, which the god gave to mankind to help cure the crabbiness of age. This is the gift he gave us to make us young again: we forget our peevishness, and our hard cast of mind becomes softer and grows more malleable, just like iron thrust in a fire. Surely any man who is brought into that frame of mind would be ready to sing his songs (that is ‘charms’, as we’ve called them often enough) with more enthusiasm and less embarrassment? I don’t mean in a large gathering of strangers, but in a comparatively small circle of friends.

Clinias:: Certainly.

Athenian Stranger:: As a method of inducing them to join us in our singing, there wouldn’t be anything you could particularly object to in this.

Clinias:: By no means.

Athenian Stranger:: But what sort of philosophy of music will inspire their songs? Obviously, it will have to be one appropriate to the performers.

Clinias:: Of course.

Athenian Stranger:: And the performers are men of almost divine distinction. What notes would be appropriate for them? Those produced by the choruses?

Clinias:: Well, sir, we Cretans, at any rate—and the same goes for the Spartans—would hardly be up to singing any song except those we learned to sing by growing familiar with them in our choruses.

Athenian Stranger:: Naturally enough. In cold fact, you have failed to achieve the finest kind of song. You organize your state as though it were a military camp rather than a society of people who have settled in towns, and you keep your young fellows together like a herd of colts at grass. Not a man among you takes his own colt and drags him, furiously protesting, away from the rest of the herd; you never put him in the hands of a private groom, and train him by combing him down and stroking him. You entirely fail to lavish proper care on an education which will turn him out not merely a good soldier but a capable administrator of a state and its towns. Such a man is, as we said early on, a better fighter than those of Tyrtaeus, precisely because he does not value courage as the principal element in virtue: he consistently relegates it to fourth place wherever he finds it, whether in the individual or the state.

Clinias:: I suspect, sir, you are being rather rude about our legislators again.

Athenian Stranger:: If I am, my dear fellow, it is entirely unintentionally. But if you don’t mind, we ought to follow where the argument leads us. If we know of any music that is of finer quality than the music of choruses and the public theaters, we ought to try to allocate it to these older people. They are, as we said, embarrassed at the other kind; but music of the highest quality is just what they are keen to take part in.

Clinias:: Yes, indeed.

Athenian Stranger:: The most important point about everything that has some inherent attractive quality must be either this very quality or some kind of ‘correctness’ or (thirdly) its usefulness. For instance, I maintain that eating and drinking and taking nourishment in general are accompanied by the particular attractive quality that we might call pleasure; as for their usefulness and ‘correctness’, we invariably speak of the ‘wholesomeness’ of the foods we serve, and in their case the most ‘correct’ thing in them is precisely this.

Clinias:: Quite.

Athenian Stranger:: An element of attractiveness—the pleasure we feel—goes with the process of learning, too. But what gives rise to its ‘correctness’ and usefulness, its excellence and nobility, is its accuracy.

Clinias:: Exactly.

Athenian Stranger:: What about the arts of imitation, whose function is to produce likenesses? When they succeed in doing this, it will be quite proper to say that the pleasure—if any—that arises out of and accompanies that success constitutes the attractive quality of these arts.

Clinias:: Yes.

Athenian Stranger:: Generally speaking, I suppose, the ‘correctness’ in such cases would depend not so much on the pleasure given, as on the accurate representation of the size and qualities of the original?

Clinias:: Well put.

Athenian Stranger:: So pleasure would be the proper criterion in one case only. A work of art may be produced with nothing to offer by way of usefulness or truth or accuracy of representation (or harm, of course). It may be produced solely for the sake of this element that normally accompanies the others, the attractive one. (In fact, it is when this element is associated with none of the others that it most genuinely deserves the name ‘pleasure’.)

Clinias:: You mean only harmless pleasure?

Athenian Stranger:: Yes, and it is precisely this that I call ‘play’, when it has no particular good or bad effect that deserves serious discussion.

Clinias:: Quite right.

Athenian Stranger:: And we could conclude from all this that no imitation at all should be judged by reference to incorrect opinions about it or by the criterion of the pleasure it gives. This is particularly so in the case of every sort of equality. What is equal is equal and what is proportional is proportional, and this does not depend on anyone’s opinion that it is so, nor does it cease to be true if someone is displeased at the fact. Accuracy, and nothing else whatever, is the only permissible criterion.

Clinias:: Yes, that is emphatically true.

Athenian Stranger:: So do we hold that all music is a matter of representation and imitation?

Clinias:: Of course.

Athenian Stranger:: So when someone says that music is judged by the criterion of pleasure, we should reject his argument out of hand, and absolutely refuse to go in for such music (if any were ever produced) as a serious genre. The music we ought to cultivate is the kind that bears a resemblance to its model, beauty.

Clinias:: Very true.

Athenian Stranger:: These people, then, who are anxious to take part in the finest possible singing, should, apparently, look not for a music which is sweet, but one which is correct; and correctness, as we said, lies in the imitation and successful reproduction of the proportions and characteristics of the model.

Clinias:: It does indeed.

Athenian Stranger:: This is certainly so in the case of music: everyone would admit that all musical compositions are matters of imitation and representation. In fact, composers, audiences and actors would register universal agreement on this point, wouldn't they?

Clinias:: Certainly.

Athenian Stranger:: So it looks as if a man who is not to go wrong about a given composition must appreciate what it is, because failure to understand its nature—what it is trying to do and what in fact it is a representation of— will mean that he gets virtually no conception of whether the author has achieved his aim correctly or not.

Clinias:: No, virtually none, naturally.

Athenian Stranger:: And if he cannot gauge the correctness of the composition, surely he won't be able to judge its moral goodness or badness? But this is all rather obscure. Perhaps this would be a clearer way of putting it.

Clinias:: What?

Athenian Stranger:: There are, of course, thousands of representations that strike the eye?

Clinias:: Yes.

Athenian Stranger:: Now, imagine someone who didn’t know the character of each of the objects that are imitated and represented. Would he ever be able to estimate the correctness of the finished article? This is the sort of point I have in mind: does it preserve the overall proportions of the body and the position of each of its various parts? Does it hit off the proportions exactly and keep the parts in their proper positions relative to one another? And what of their colors and contours? Have all these features been reproduced higgledy-piggledy? Do you think that if a man did not know the character of the creature represented he would ever be able to assess these points?

Clinias:: Of course not.

Athenian Stranger:: What if we knew that the thing molded or painted is a man, and that all his parts with their colors and contours have been caught by the artist’s skill? Suppose a man knows all that; is he without further ado necessarily ready to judge whether the work is beautiful or falls short of beauty in some respect?

Clinias:: In that case, sir, pretty well all of us would be judges of the quality of a representation.

Athenian Stranger:: You have hit the nail on the head. So anyone who is going to be a sensible judge of any representation—in painting and music and every other field—should be able to assess three points: he must know, first, what has been represented; second, how correctly it has been copied; and then, third, the moral value of this or that representation produced by language, tunes and rhythms.

Clinias:: Apparently so.

Athenian Stranger:: We ought not to fail to mention the peculiar difficulty about music, which is discussed much more than any other kind of artistic representation and needs much more careful handling than all the others. A man who goes wrong on this subject will suffer a good deal of harm because he feels attracted to evil dispositions; and his mistake is very difficult to detect, because the authors hardly have the same degree of creative ability as the actual Muses. The Muses would never make the ghastly mistake of composing the speech of men to a musical idiom suitable for women, or of fitting rhythms appropriate to the portrayal of slaves and slave-like people to the tune and bodily movements used to represent free men (or again of making rhythms and movements appropriate to free men accompany a combination of tune and words that conflicted with those rhythms). Nor would they ever mix up together into one production the din of wild animals and men and musical instruments and all kinds of other noises and still claim to be representing a unified theme. But human authors, in their silly way, jumble all these things together into complicated combinations; in Orpheus' words, anyone 'whose delight in life is in its springtime', will find them a rich source of amusement. And in the midst of all this confusion, he will find that the authors also divorce rhythm and movement from the tune by putting unaccompanied words into meter, and rob tune and rhythm of words by using stringed instruments and pipes on their own without singers. When this is done, it is extraordinarily difficult to know what the rhythm and harmony without speech are supposed to signify and what worthwhile object they imitate and represent. The conclusion is inevitable: such practices appeal to the taste of the village idiot. It is this fondness for speed and dexterity (as in reproducing the noises of wild animals) which prompts the use of pipes and lyre otherwise than as an accompaniment to dancing and singing. Using either instrument on its own is in fact sheer showmanship that has nothing to do with art. But enough of theory: what we are considering is not what sort of music our citizens over thirty and fifty should avoid, but what sort they should go in for. I think our argument so far seems to point to the conclusion that the fifty-year-olds who have the duty of singing must have enjoyed an education that reached a higher standard than the music of choruses. They must, of course, have a nice appreciation of rhythms and harmonies and be able to understand them. Otherwise how could a man assess the correctness of the tunes, and tell whether the Dorian mode was appropriate or not in a given case, or judge whether the author has set the tunes to the right rhythm or not?

Clinias:: Clearly he couldn't.

Athenian Stranger:: The belief of the general public, that they can form an adequate judgment of merit and demerit in matters of harmony and rhythm, is laughable: they have only been drilled into singing to the pipes and marching in step, and they never stop to think that they do all this without the smallest understanding of it. In fact, every tune with the right elements is correct, but if it has the wrong ones, it is faulty.

Clinias:: Inevitably.

Athenian Stranger:: What about the man who doesn't even understand what the elements are? As we said, will he ever be able to decide that any aspect of the piece is correct?

Clinias:: No, how could he?

Athenian Stranger:: So it looks as if once again we are discovering that it is virtually indispensable for these singers of ours (who are not only being encouraged to sing but compelled to do it in a willing spirit, if I may put it like that), to have been educated up to at least this point: they should each be able to follow the notes of the tunes and the basic units of rhythm, so that they may examine the harmonies and rhythms and select those that men of their age and character could appropriately sing. If that is how they sing, they will give themselves harmless pleasure, and at the same time stimulate the younger generation to adopt virtuous customs with the proper enthusiasm. Assuming the education of these singers reaches that level, they will have pursued a more advanced course of training than will be given to ordinary men, or even the authors themselves. The author is more or less obliged to have a knowledge of rhythm and harmony, but there is no necessity for him to be able to assess the third point—whether the imitation is a morally good one or not. The men we are talking about, however, must be equally competent in all three fields, so that they can isolate the primary and secondary degrees of goodness; otherwise they will never prove capable of charming the young in the direction of virtue.

Athenian Stranger:: Our argument has done its level best: we have to consider whether it has succeeded in its original intention of showing that our defense of Dionysus' chorus was justified. A gathering like that, of course, inevitably gets increasingly rowdier as the wine flows more freely. (In fact, our initial assumption in the present discussion of this business was that such a tendency is unavoidable.)

Clinias:: Yes, it is unavoidable.

Athenian Stranger:: Everyone is taken out of himself and has a splendid time; the exuberance of his conversation is matched only by his reluctance to listen to his companions, and he thinks himself entitled to run their lives as well as his own.

Clinias:: He certainly does.

Athenian Stranger:: And didn't we say that when this happens the souls of the drinkers get hot and, like iron in a fire, grow younger and softer, so that anyone who has the ability and skill to mold and educate them, finds them as easy to handle as when they were young? The man to do the molding is the same one as before—the good lawgiver. When our drinker grows cheerful and confident and unduly shameless and unwilling to speak and keep quiet, to drink and sing, at the proper times, the lawgiver's job will be to lay down drinking laws which will be able to make this fellow willing to mend his ways; and to do battle with this disgraceful over-confidence as soon as it appears, they will be able to send into the arena, with the blessing of justice, this divine and splendid fear we have called 'modesty' and 'shame'.

Clinias:: Exactly.

Athenian Stranger:: The cool-headed and sober should guard and co-operate with these laws by taking command of those who are not sober; fighting the enemy without cool-headed leaders is actually less dangerous than fighting drink without such help as this. If a man cannot show a willing spirit and obey these commanders and the officials of Dionysus (who are upwards of sixty years of age), the dishonor he incurs must equal or even exceed that incurred by the man who disobeys the officials of the god of war.

Clinias:: Precisely.

Athenian Stranger:: So, if they drank and made merry like that, the revelers who took part in the proceedings would surely benefit? They would go their way on better terms with each other than they were before, instead of loathing each other, which is what happens nowadays; and this would be because they had rules to regulate the whole of their intercourse and had followed every instruction given by the sober to the tipsy.

Clinias:: Precisely—if indeed the party were to go as you describe.

Athenian Stranger:: So let's not abuse the gift of Dionysus any longer in the old unqualified terms, saying that it is bad and does not deserve to be received into the state. One could, indeed, enlarge on its benefits even more. But in front of the general public I would be chary of mentioning the main benefit conferred by the gift, because people misconstrue and misunderstand the explanation.

Clinias:: What is the benefit?

Athenian Stranger:: There is a little-known current of story and tradition which says that Dionysus was robbed of his wits by his stepmother Hera, and that he gets his revenge by stimulating us to Bacchic frenzies and all the mad dancing that results; and this was precisely the reason why he made us a present of wine. This sort of story, however, I leave to those who see no danger in speaking of the gods in such terms. But I am quite certain of this: no animal that enjoys the use of reason in its maturity is ever born with that faculty, or at any rate with it fully developed. During the time in which it has not yet attained its characteristic level of intelligence, it is completely mad: it bawls uncontrollably, and as soon as it can get on its feet it jumps about with equal abandon. Let's think back: we said that this situation gave rise to music and gymnastics.

Clinias:: We remember, of course.

Athenian Stranger:: And also that this was the source of man's appreciation of rhythm and harmony, and Apollo and the Muses and Dionysus were the gods who co-operated to implant it in us.

Clinias:: Yes, indeed.

Athenian Stranger:: In particular, it seems that according to the common story wine was given to men as a means of taking vengeance on us—it was intended to drive us insane. But our interpretation is entirely the opposite: the gift was intended to be a medicine and to produce reverence in the soul, and health and strength in the body.

Clinias:: Yes, sir, that's a splendid recapitulation of the argument.

Athenian Stranger:: We are now half-way through our examination of singing and dancing. Shall we carry on with the other half in whatever way recommends itself, or shall we pass it over?

Clinias:: What halves do you mean? Where do you put your dividing-line?

Athenian Stranger:: We found that singing and dancing, taken together, amounted, in a sense, to education as a whole. One part of it—the vocal part—was concerned with rhythms and 'harmonies'.

Clinias:: Yes.

Athenian Stranger:: The second part concerned the movement of the body. Here too we had rhythm, a feature shared with the movement of the voice; but the body's movements were its own particular concern, just as in the other half the tune was the special job of the vocal movements.

Clinias:: True enough.

Athenian Stranger:: When the sound of the voice penetrates the soul, we took that to be an education in virtue, and we hazarded the term ‘music’ to describe it.

Clinias:: And quite rightly.

Athenian Stranger:: When the movements of the body, which we described as ‘dancing in delight’, are such as to result in a fine state of physical fitness, we ought to call the systematic training which does this ‘gymnastics’.

Clinias:: Exactly.

Athenian Stranger:: So much, then, for music, which is roughly the half of the subject of choruses that we said we had examined and finished with; so that’s that. Shall we discuss the other half? Or what method should we follow now?

Clinias:: Really, my dear fellow! You are having a conversation with Cretans and Spartans, and we have discussed music thoroughly—leaving gymnastics still to come. What sort of answer do you think you’ll get to that question, from either of us?

Athenian Stranger:: I should say that question was a pretty unambiguous answer. I take it that your question, as I said, amounts in fact to a reply, an order even, to finish off our examination of gymnastics.

Clinias:: You understand me perfectly: do just that.

Athenian Stranger:: Yes, I must. Of course, discussing a subject so familiar to you both is not very difficult. You see, you have had much more experience of this particular skill than of the other.

Clinias:: True enough.

Athenian Stranger:: Again, the origin of this form of recreation too lies in the fact that every animal has the natural habit of jumping about. The human animal, as we said, acquired a sense of rhythm, and that led to the birth of dancing. The tune suggested rhythm and awakened the memory of it, and out of the union of the two was born choral singing and dancing as a recreation.

Clinias:: Exactly.

Athenian Stranger:: We have already discussed one of these two; now we are going to set about the discussion of the other.

Clinias:: Yes, indeed.

Athenian Stranger:: However, if you are agreeable, let’s give our discussion of the use of drink its final flourish.

Clinias:: What flourish do you mean?

Athenian Stranger:: Suppose a state takes this practice we are now discussing sufficiently seriously to control it by a set of rules and use it to cultivate moderate habits; suppose it permits a similar enjoyment of other pleasures on the same principle, seeing it simply as a device for mastering them. In each and every case, our method will be the one that must be followed. But if the state treats a drink as recreation pure and simple, and anybody who wants to can go drinking and please himself when and with whom he does it, and do whatever else he likes at the same time, then my vote would be in favor of never allowing this state or individual to take wine at all. I would go further than Cretan and Spartan practice: I would support the law of the Carthaginians, which forbids anyone on military service to take a drink of wine, and makes water the only permissible beverage during the entire campaign. As for civilians, it forbids slaves, male and female, ever to touch wine; it forbids magistrates during their year of office;

steersmen and jurymen on duty are absolutely prohibited from touching it, and so too is any councilor who is going to take part in an important discussion; nobody at all is permitted to drink wine during the day, except for reasons of training or health, nor at night if they intend to procreate children (this prohibition applying to men and women alike); and one could point to a great many other situations in which any sensible person with a respect for the law would find it proper not to drink wine. This kind of approach would mean that no state would need many vines and as part of the regulations covering agriculture in general and the whole question of diet, the production of wine in particular would be restricted to the most modest quantities. With your permission, gentlemen, let’s take that as the final flourish to our discussion of wine.

Clinias:: Splendid! Permission granted.

## Book 3.

Athenian Stranger:: We can take that as settled, then. But what about political systems? How are we to suppose they first came into existence? I feel sure that the best and easiest way to see their origins is this.

Clinias:: What?

Athenian Stranger:: To use the same method that we always have to adopt when we look into a state's moral progress or decline.

Clinias:: What method have you in mind?

Athenian Stranger:: We take an indefinitely long period of time and study the changes that occur in it.

Clinias:: How do you mean?

Athenian Stranger:: Look, do you think you could ever grasp how long it is that states have existed and men have lived under some sort of political organization?

Clinias:: No, not very easily.

Athenian Stranger:: But at any rate you realize it must be an enormously long time?

Clinias:: Yes, I see that, of course.

Athenian Stranger:: So surely, during this period, thousands upon thousands of states have come into being, while at least as many, in equally vast numbers, have been destroyed? Time and again each one of them has adopted every type of political system. And sometimes small states have become bigger, and big ones have grown smaller; superior states have deteriorated and bad ones have improved.

Clinias:: Inevitably.

Athenian Stranger:: Let's try to pin down just why these changes took place, if we can; then perhaps we shall discover how the various systems took root and developed.

Clinias:: Admirable! Let's get down to it. You must do your best to explain your views, and we must try to follow you.

Athenian Stranger:: Do you think there is any truth in tradition?

Clinias:: What sort of tradition do you mean?

Athenian Stranger:: This: that the human race has been repeatedly annihilated by floods and plagues and many other causes, so that only a small fraction of it survived.

Clinias:: Yes, of course, all that sort of thing strikes everyone as entirely credible.

Athenian Stranger:: Now then, let's picture just one of this series of annihilations— I mean the effect of the flood.

Clinias:: What special point are we to notice about it?

Athenian Stranger:: That those who escaped the disaster must have been pretty nearly all hill-shepherds—a few embers of mankind preserved, I imagine, on the tops of mountains.

Clinias:: Obviously.

Athenian Stranger:: Here's a further point: such men must have been in general unskilled and unsophisticated. In particular, they must have been quite innocent of the crafty devices that city-dwellers use in the rat-race to do each other down; and all the other dirty tricks that men play against one another must have been unknown.

Clinias:: Quite likely.

Athenian Stranger:: And we can take it, can't we, that the cities that had been built on the plains and near the sea were destroyed root-and-branch?

Clinias:: Yes, we can.

Athenian Stranger:: So all their tools were destroyed, and any worthwhile discovery they had made in politics or any other field was entirely lost? You see, my friend, if their discoveries had survived throughout at the same level of development as they have attained today, it is difficult to see what room there can ever have been for any new invention.

Clinias:: The upshot of all this, I suppose, is that for millions of years these techniques remained unknown to primitive man. Then, a thousand or two thousand years ago, Daedalus and Orpheus and Palamedes made their various discoveries, Marsyas and Olympus pioneered the art of music, Amphion invented the lyre, and many other discoveries were made by other people. All this happened only yesterday or the day before, so to speak.

Athenian Stranger:: How tactful of you, Clinias, to leave out your friend, who really was born 'yesterday'!

Clinias:: I suppose you mean Epimenides?

Athenian Stranger:: Yes, that's the man. His discovery, my dear fellows, put him streets ahead of all the other inventors. Hesiod had foreshadowed it in his poetry long before, but it was Epimenides who achieved it in practice, so you Cretans claim.

Clinias:: We certainly do claim that.

Athenian Stranger:: Perhaps we can describe the state of mankind after the cataclysm like this: in spite of a vast and terrifying desolation, plenty of fertile land was available, and although animals in general had perished it happened that some cattle still survived, together with perhaps a small stock of goats. They were few enough, but sufficient to maintain the correspondingly few herdsmen of this early period.

Clinias:: Agreed.

Athenian Stranger:: But at the moment we are talking about the state, and the business of legislation and political organization. Is it conceivable that any trace at all of such things survived—even, so to speak, in the memory?

Clinias:: Of course not.

Athenian Stranger:: So out of those conditions all the features of our present-day life developed: states, political systems, technical skills, laws, rampant vice and frequent virtue.

Clinias:: What do you mean?

Athenian Stranger:: My dear sir, can we really suppose that the men of that period, who had had no experience of city life in all its splendor and squalor, ever became totally wicked or totally virtuous?

Clinias:: A good point. We see what you mean.

Athenian Stranger:: So it was only as time went on, and the numbers of the human race increased, that civilization advanced and reached its present stage of development?

Clinias:: Exactly.

Athenian Stranger:: The process was probably not sudden, but gradual, and took a considerable time.

Clinias:: Yes, that’s perfectly plausible.

Athenian Stranger:: I imagine men were all numbed with fear at the prospect of descending from the hills to the plains.

Clinias:: Naturally enough.

Athenian Stranger:: And what a pleasure it must have been to see each other, there being so few of them at that time! However, pretty well all vehicles they might have used to visit each other by land or sea had been destroyed, and the techniques used to construct them had been lost, so that I suppose they found getting together none too easy. They suffered from a scarcity of timber, because iron, copper and mineral workings in general had been overlaid with sludge and had been lost to sight, so that it was virtually impossible to refine fresh supplies of metal. Even if there was the odd tool left somewhere on the mountains, it was quickly worn down to nothing by use. Replacements could not be made until the technique of mining sprang up again among men.

Clinias:: True.

Athenian Stranger:: And how many generations later did that happen, on our calculation?

Clinias:: A good many, obviously.

Athenian Stranger:: Well then, during that period, or even longer, all techniques that depend on a supply of copper and iron and so on must have gone out of use?

Clinias:: Of course.

Athenian Stranger:: For several reasons, then, war and civil war alike came to an end.

Clinias:: How so?

Athenian Stranger:: In the first place, men's isolation prompted them to cherish and love one another. Second, their food supply was nothing they needed to quarrel about. Except perhaps for a few people in the very early stages, there was no shortage of flocks and herds, which is what men mostly lived on in that age. They always had a supply of milk and meat, and could always add to it plenty of good food to be got by hunting. They also had an abundance of clothes, bedding, houses, and equipment for cooking and other purposes. (Molding pottery and weaving, skills that have no need of iron, were a gift from God to men—his way, in fact, of supplying them with all that kind of equipment. His intention was that whenever the human race was reduced to such a desperate condition it could still take root and develop.) Because of all this, they were not intolerably poor, nor driven by poverty to quarrel with each other; but presumably they did not grow rich either, in view of the prevailing lack of gold and silver. Now the community in which neither wealth nor poverty exists will generally produce the finest characters because tendencies to violence and crime, and feelings of jealousy and envy, simply do not arise. So these men were good, partly for that very reason, partly because of what we might call their 'naïveté'. When they heard things labeled 'good' or 'bad', they were so artless as to think it a statement of the literal truth and believe it. This lack of sophistication precluded the cynicism you find today: they accepted as the truth the doctrine they heard about gods and men, and lived their lives in accordance with it. That is why they were the sort of people we have described.

Clinias:: Megillus and I, at least, agree with your account.

Athenian Stranger:: If we compare them with the era before the flood and with the modern world, we shall have to say that the many generations which lived in that way were inevitably unskilled and ignorant of techniques in general, and particularly of the military devices used on land and sea nowadays. They must also have been innocent of the techniques of warfare peculiar to city-life—generally called 'lawsuits' and 'party-strife'—in which men concoct every possible device to damage and hurt each other by word and deed. Weren't our primitive men simple and manlier and at the same time more restrained and upright in every way? We have already explained why.

Clinias:: Yes, you're quite right.

Athenian Stranger:: Let’s remind ourselves that this reconstruction, and the conclusions we shall draw from it, are supposed to make us appreciate how early man came to feel the need of laws, and who their lawgiver was.

Clinias:: Well reminded!

Athenian Stranger:: Presumably they felt no need for legislators, and in that era law was not yet a common phenomenon. Men born at that stage of the world cycle did not yet have any written records, but lived in obedience to accepted usage and ‘ancestral’ law, as we call it.

Clinias:: Quite likely.

Athenian Stranger:: But this is already a political system, of a sort.

Clinias:: What sort?

Athenian Stranger:: Autocracy—the name which everyone, I believe, uses for the political system of that age. You can still find it in many parts of the world today, both among Greeks and non-Greeks. I suppose this is what Homer is describing in his account of the household of the Cyclopes:

No laws, no councils for debate have they:

They live on the tips of lofty mountains In hollow caves; each man lays down the law To wife and children, with no regard for neighbor.

Clinias:: That poet of yours sounds as if he was a charming fellow. I have gone through other verses of his, and very polished they were too. Not that I know his work to any great extent—we Cretans don’t go in for foreign poetry very much.

Megillus:: But we at Sparta do, and we think Homer is the prince of epic poets, even though the way of life he describes is invariably Ionian rather than Spartan. In this instance he certainly seems to bear you out when he points in his stories to the wild life of the Cyclopes as an explanation of their primitive customs.

Athenian Stranger:: Yes, he does testify in my favor. So let’s take him as our evidence that political systems of this kind do sometimes develop.

Clinias:: Very well.

Athenian Stranger:: And they arise among these people who live scattered in separate households and individual families in the confusion that follows the cataclysms. In such a system the eldest member rules by virtue of having inherited power from his father or mother; the others follow his lead and make one flock like birds. The authority to which they bow is that of their patriarch: they are governed, in effect, by the most justifiable of all forms of kingship.

Clinias:: Yes, of course.

Athenian Stranger:: The next stage is when several families amalgamate and form larger communities. They turn their attention to agriculture, initially in the foot-hills, and build rings of dry stones to serve as walls to protect themselves against wild animals. The result now is a single large unit, a common homestead.

Clinias:: I suppose that’s quite probable.

Athenian Stranger:: Well then, isn’t this probable too?

Clinias:: What?

Athenian Stranger:: As these original relatively tiny communities grew bigger, each of the small constituent families lived under its own ruler—the eldest member—and followed its own particular customs which had arisen because of its isolation from the others. The various social and religious standards to which people had grown accustomed reflected the bias of their ancestors and teachers: the more restrained or adventurous the ancestor, the more restrained or adventurous would be the character of his descendants. Consequently, as I say, the members of each group entered the larger community with laws peculiar to themselves, and were ready to impress their own inclinations on their children and their children's children.

Clinias:: Naturally.

Athenian Stranger:: And of course each group inevitably approved of its own laws and looked on those of other people with rather less favor.

Clinias:: Exactly.

Athenian Stranger:: So it looks as if we have unwittingly stumbled on the origin of legislation.

Clinias:: We certainly have.

Athenian Stranger:: At any rate the next and necessary step in this amalgamation is to choose some representatives to review the rules of all the families, and to propose openly to the leaders and heads of the people—the 'kings', so to speak—the adoption of those rules that particularly recommend themselves for common use. These representatives will be known as lawgivers, and by appointing the leaders as officials they will create out of the separate autocracies a sort of aristocracy, or perhaps kingship. And while the political system passes through this transitional stage they will administer the state themselves.

Clinias:: Yes, that sort of change would certainly come about by stages.

Athenian Stranger:: So we can now go on to describe the birth of a third type of political system, one which in fact admits all systems and all their modifications and exhibits equal variety and change in the actual states as well.

Clinias:: What type is this?

Athenian Stranger:: The one which Homer too listed as the successor of the second. This is how he describes the origin of the third: ‘He founded Dardania’—I think this is how it goes—’when holy Ilium, A town upon the plain for mortal men, had not been built:

For still they lived upon the lower slopes of many-fountained Ida.’

He composed these lines, as well as those about the Cyclopes, under some sort of inspiration from God. And how true to life they are! This is because poets as a class are divinely gifted and are inspired when they sing, so that with the help of Graces and Muses they frequently hit on how things really happen.

Clinias:: They do indeed.

Athenian Stranger:: Let’s carry on with the story we are telling: it may suggest something to our purpose. I take it this is what we ought to do?

Clinias:: Of course.

Athenian Stranger:: Ilium was founded, according to us, when men had descended from the hills to a wide and beautiful plain. They built their city on a hill of moderate height near several rivers which poured down from Ida above.

Clinias:: So the story goes.

Athenian Stranger:: I suppose we may assume that this descent of theirs took place many ages after the flood?

Clinias:: Yes, naturally, many ages later.

Athenian Stranger:: I mean that apparently the disaster we’ve just described must have been forgotten to a quite remarkable degree if they founded their city on the lower reaches of several rivers flowing down from the mountains, and put their trust in hills that were none too high.

Clinias:: Yes, a clear proof that they were far removed in time from any such experience.

Athenian Stranger:: With the increase in the human population many other cities, one supposes, were already being founded.

Clinias:: Naturally.

Athenian Stranger:: These cities also mounted an expedition against Ilium, probably by sea as well, because by then all mankind had overcome its fear and had taken to ships.

Clinias:: So it seems.

Athenian Stranger:: And after a siege of about ten years the Achaeans sacked Troy.

Clinias:: Indeed they did.

Athenian Stranger:: They besieged Ilium for ten years, and during this period the domestic affairs of the individual attackers took a turn for the worse. The younger generation revolted, and the ugly and criminal reception they gave the troops when they returned to their own cities and homes led to murder, massacre and expulsion on a large scale. When the exiles came back again they adopted a new name, and were now known as Dorians instead of Achaeans, in honor of Dorieus, who had rallied them while they were in exile. A full and exhaustive account of subsequent events can be found in your traditional Spartan stories.

Megillus:: Of course.

Athenian Stranger:: When we were starting to discuss legislation, the question of the arts and drinking cropped up, and we made a digression. But now we really do have a chance to come to grips with our subject. As if God himself were guiding us, we’ve come back to the very point from which we digressed: the actual foundation of Sparta. You maintained that Sparta was established on the right lines, and you said the same of Crete, because it has laws that bear a family resemblance to Sparta’s. We have had a rather random discussion about various foundations and political systems, but we have achieved at least this much: we have watched the first, second and third type of state being founded in succession over a vast period of time, and now we discover this fourth state (or ‘nation’, if you like) whose historical foundation and development we are tracing down to its maturity today. After all this, perhaps we can get some idea of what was right and wrong in the way these foundations were established. Can we see what kind of laws are responsible for continued preservation of the features that survive and the ruin of those that collapse? What detailed alterations will produce happiness in a state? If we can understand all this, Clinias and Megillus, we shall have to discuss the whole business all over again: it will be like making a fresh start. However, we may be able to find some fault in our account so far.

Megillus:: Well, sir, if some god were to give us his word that if we do make a second attempt to look at the problem of legislation, we shall hear an account of at least the quality and length of the one we have just had, I for one would willingly extend our journey, and the present day would seem not a moment too long—though it is in fact more or less the day when the Sun-god turns past summer towards winter.

Athenian Stranger:: So it looks as if we must press on with the investigation.

Megillus:: Certainly.

Athenian Stranger:: Let’s imagine that we are living at the time when the territory of Sparta, Argos and Messene, and the districts nearby, had in effect come under the control of your ancestors, Megillus. Their next decision, or so the story goes, was to split their forces into three and establish three states—Argos, Messene and Sparta.

Megillus:: That’s quite right.

Athenian Stranger:: Temenos became king of Argos, Cresphontes of Messene, and Procles and Eurysthenes of Sparta.

Megillus:: True.

Athenian Stranger:: And all their contemporaries swore to them that they would go to their help if anybody tried to subvert their thrones.

Megillus:: Precisely.

Athenian Stranger:: Now when a monarchy is overthrown (and indeed when any other type of authority has been destroyed at any time) surely no one but the rulers themselves are to blame? That was the line we took when the subject cropped up a little time ago—or have we forgotten by now?

Megillus:: No, of course not.

Athenian Stranger:: So now we can put our thesis on a firmer footing, because it looks as if our study of history has led us to the same conclusion as before. This means we shall carry on our investigation on the basis of the actual facts rather than conjecture. The facts are, of course, as follows: each of the three royal families, and each of the three royal states they ruled, exchanged oaths in accordance with mutually binding laws which they had adopted to regulate the exercise of authority and obedience to it. The kings swore never to stiffen their rule as the nation continued down the years; the others undertook, provided the rulers kept to their side of the bargain, never themselves to overthrow the kingships nor tolerate an attempt to do so by others. The kings would help the kings and peoples if they were wronged, and the peoples would help the peoples and the kings likewise. That’s right, isn’t it?

Megillus:: Certainly.

Athenian Stranger:: Now whether it was the kings or someone else who laid down laws for this political system thus established in the three states, the crucial provision, surely, was this—

Megillus:: What?

Athenian Stranger:: Whenever a given state broke the established laws, an alliance of the other two would always be there to take the field against it.

Megillus:: Obviously.

Athenian Stranger:: Of course, most people only ask their legislators to enact the kind of laws that the population in general will accept without objection. But just imagine asking your trainer or doctor to give you pleasure when he trains or cures your body!

Megillus:: Exactly.

Athenian Stranger:: In fact, you often have to be satisfied if you can restore your body to health and vigor without undue pain.

Megillus:: True.

Athenian Stranger:: In another respect too the people of that time were particularly well placed to make legislation a painless process.

Megillus:: What respect?

Athenian Stranger:: Their legislators’ efforts to establish a certain equality of property among them were not open to one particularly damaging accusation which is frequently made in other states. Suppose a legal code is being framed and someone adopts the policy of a change in the ownership of land and a cancellation of debts, because he sees that this is the only way in which equality can be satisfactorily achieved. ‘Hands off fundamentals’ is the slogan everybody uses to attack a legislator who tries to bring in that kind of reform, and his policy of land-redistribution and remission of debts earns him only curses. It’s enough to make any man despair. So here is another tremendous advantage the Dorians enjoyed: the absence of resentment. No one could object to the way the land was parceled out, and large long-standing debts did not exist.

Megillus:: True.

Athenian Stranger:: Then why on earth, my friends, did this foundation and its legislation turn out such a dismal failure?

Megillus:: What do you mean by that? What’s your objection?

Athenian Stranger:: Three states were founded but in two of them the political system and the legal code were quickly corrupted. Only the third settlement survived—that of your state, Sparta.

Megillus:: A pretty difficult problem you’re posing!

Athenian Stranger:: Nevertheless, it demands our attention. So now let’s look into it, and while away the journey, as we said when we set out, by amusing ourselves with laws—it’s a dignified game and it suits our time of life.

Megillus:: Of course. We must do as you say.

Athenian Stranger:: No laws could form a better subject for our investigation than those by which these states have been administered. Or are there any bigger or more famous states whose foundation we might examine?

Megillus:: No, it’s not easy to think of alternatives.

Athenian Stranger:: Well then, it’s pretty obvious that they intended the arrangements they made to protect adequately not only the Peloponnese but the Greeks in general against any possible attack by non-Greeks—as for example occurred when those who then lived in the territory of Ilium trusted to the power of the Assyrian empire, which Ninos had founded, and provoked the war against Troy by their arrogance. You see, a good deal of the splendor of the Assyrian empire still remained, and the dread of its united organization was the counterpart in that age of our fear of the Great King of Persia today. The Assyrians had a tremendous grudge against the Greeks: Troy, which was part of the Assyrian empire, had been captured for a second time. To meet such dangers the Dorian army formed a single unified body, although at that period it was distributed among the three states under the command of the kings (who were brothers, being sons of Hercules). It seemed to be excellently conceived and equipped— better even than the army which sailed against Troy. For a start, people thought the sons of Hercules were, as commanders, a cut above the grandsons of Pelops; secondly, they rated the prowess of the army itself higher than that of the expedition which went to Troy. After all, they calculated, that had consisted of Achaeans, the very people the Dorians had defeated. So may we take it that this was the nature and purpose of the arrangements they made?

Megillus:: Certainly.

Athenian Stranger:: And for various reasons they probably expected these arrangements would be permanent and last a long time. They had been comrades in a great many toils and dangers in the past, and now they had been brought under the control of a single family (the kings being brothers); and they had also consulted a large number of prophets, notably Apollo's at Delphi.

Megillus:: Yes, that's probable enough, of course.

Athenian Stranger:: But apparently these large expectations evaporated pretty quickly, except, as we said a minute ago, in the case of just one small part of the alliance—your state, Sparta. And right up to the present day Sparta has never stopped fighting the other two members. But if they had done as they intended and had agreed on a common policy, their power would have been irresistible, militarily speaking.

Megillus:: It certainly would.

Athenian Stranger:: So just how did their plans misfire? This is surely a problem we ought to look into: why was such a vast and tremendous organization unlucky enough to be destroyed?

Megillus:: True: this is the right direction to look. Neglect these, and you'll never find any other laws or political systems preserving (or eliminating) such remarkable and important features.

Athenian Stranger:: What a stroke of luck! It looks as if we've somehow got on to a crucial point.

Megillus:: No doubt about it.

Athenian Stranger:: Well now, my fine fellow, what hackneyed thoughts we've been having, without realizing it! When people see some tremendous achievement, they always think to themselves, 'What terrific results it would have led to, if someone had known how to set about putting it to proper use!' Here and now, perhaps our ideas on the topic we are discussing are just as wrong and unrealistic as anybody else’s who looks at anything in that sort of way.

Megillus:: Well really, what do you mean? What are we supposed to think you’re driving at when you say that?

Athenian Stranger:: I was poking fun at no one but myself, my friend. I was thinking about the army we are discussing and it occurred to me how splendid it was and what a marvelous tool (as I said) had been put into the hands of the Greeks—if only someone had put it to the proper use at the time!

Megillus:: And you were quite right and sensible in everything you said, and we heartily agreed with you—equally rightly and sensibly.

Athenian Stranger:: Maybe so. Still, my view is that everyone who sets eyes on something big and strong and powerful immediately gets the feeling that if the owner knew how to take advantage of its size and scale he would get tremendous results and be a happy man.

Megillus:: And this again is surely right and proper. Or do you see it differently?

Athenian Stranger:: Well now, just consider what criteria a man ought to employ if he is going to be ‘right’ to give such praise in an individual case. What about the one we are discussing, for a start? Suppose those who undertook the organization of the army in that age had known their job: somehow, they would have succeeded in it—but the question is how. They ought, of course, to have consolidated their army and kept it on a permanent footing; this would have ensured them their own freedom while they ruled over anybody else they liked, and in general it would have enabled them to do whatever they or their children wanted all over the world, among Greeks and non-Greeks indifferently. This is what men would praise them for, isn’t it?

Megillus:: It is indeed.

Athenian Stranger:: Again, anyone who notices a case of great wealth or exceptional family distinction or something like that takes precisely the same line. He assumes that just because a man enjoys these advantages his every wish will be granted—or at any rate most of them, and the most important ones.

Megillus:: Quite likely.

Athenian Stranger:: Now then, this shows that there is one specific desire common to all mankind. Isn’t this the upshot of our discussion?

Megillus:: What desire?

Athenian Stranger:: That events should obey whatever orders one feels like giving—invariably, if possible, but failing that, at least where human affairs are concerned.

Megillus:: Very true.

Athenian Stranger:: So seeing that this is the constant wish of us all, right from childhood to old age, isn’t it inevitably what we are always praying for too?

Megillus:: Of course.

Athenian Stranger:: And I suppose our prayers on behalf of those whom we love will be for precisely what they themselves pray for on their own behalf?

Megillus:: Certainly.

Athenian Stranger:: A man who is a father loves the child who is his son?

Megillus:: Of course.

Athenian Stranger:: Yet there is a good deal in the son’s prayers that the father will beg the gods never to grant.

Megillus:: You mean when the son who prays is still young and irresponsible?

Athenian Stranger:: Yes, and I’m thinking too of when the father is senile or even unduly impulsive because of second childhood, and has lost all sense of what is right and proper. He gets into the same state as Theseus when he dealt with Hippolytus, who died so wretchedly, and his prayers become very vehement indeed. But if the son understands the situation, do you think he will join in his father’s prayers, given those circumstances?

Megillus:: I know what you mean. Your point, I take it, is that you should demand your own way in your prayers only if your wishes are supported by your rational judgment—and this, a rational outlook, should be the object of the prayers and efforts of us all, states and individuals alike.

Athenian Stranger:: It should indeed, and in particular—let me remind myself— it should always be the aim of a state’s legislator when he frames the provisions of his laws. And I remind you again—to recollect the beginning of our discussion—of what you two recommended: you said that the good legislator should construct his entire legal code with a view to war; for my part, I maintained that this was to order him to establish his laws with an eye on only one virtue out of the four. I said he ought to keep virtue as a whole in mind but especially and preeminently the virtue that heads the list—judgment and wisdom, and a strength of mind such that desires and appetites are kept under control. Our discussion has come full circle, and being the speaker at the moment I make the same point as before. You can treat it as a joke if you like, but if you prefer, you can take it seriously: I maintain that, if you lack wisdom, praying is a risky business, because you get the opposite of what you want. If you like to suppose that I am in earnest, do so: I’m confident that if you follow the line of argument we opened up a moment ago you’ll soon discover that the cause of the ruin of the kings and the whole enterprise was not cowardice nor a lack of military expertise in the commanders or in those whose role it was to obey them. The disaster was caused by every other sort of vice, and in particular ignorance about mankind’s most vital concerns. And if that was true then it is even more so today; and precisely the same will be true in the future. If you like, I’ll try to press on with the next stages in the argument and develop the point. As you are my friends, I’ll do my very best to make it clear.

Clinias:: To make a speech in your praise, sir, would be a tasteless thing to do. Our actions rather than our words will show our regard for you: we shall give you our closest attention. This is the best way to tell whether a gentleman approves or not.

Megillus:: Well said, Clinias. Let’s do as you say.

Clinias:: And so we shall, God willing. Now let’s have your explanation.

Athenian Stranger:: Well then, to go back on to the track of the argument, we maintain that crass ignorance destroyed that great empire, and that it has a natural tendency to produce precisely the same results today. If this is so, it means that the legislator must try to inspire states with as much good sense as possible, and eradicate folly, as far as he can.

Clinias:: Obviously.

Athenian Stranger:: So what kind of ignorance would deserve the title ‘crass’? See if you agree with my description. I suggest this kind.

Clinias:: What?

Athenian Stranger:: The kind involved when a man thinks something is fine and good, but loathes it instead of liking it, and conversely when he likes and welcomes what he believes is wicked and unjust. I maintain that this disaccord between his feelings of pleasure and pain and his rational judgment constitutes the very lowest depth of ignorance. It is also the most ‘crass’, in that it affects the most extensive element in the soul (the element that experiences pleasure and pain, which corresponds to the most extensive part of a state, the common people). So when the soul quarrels with knowledge or opinion or reason, its natural ruling principles, you have there what I call ‘folly’. This applies both to the state in which people disobey their rulers and laws, and to the individual, when the fine principles in which he really believes prove not only ineffective but actually harmful. It’s all these examples of ignorance that I should put down as the worst kind of discord in a state and individual, not the mere professional ignorance of a workman. I hope you see what I mean, gentlemen.

Clinias:: We do, my friend, and we agree with what you say.

Athenian Stranger:: So let’s adopt this as an agreed statement of policy: no citizens who suffer from this kind of ignorance should be entrusted with any degree of power. They must be reproved for their ignorance, even if their ability to reason is outstanding and they have worked hard at every nice accomplishment that makes a man quick-witted. It is those whose characters are at the other extreme who must be called ‘wise’, even if, as the saying is, ‘they cannot read, they cannot swim’; and it is these sensible people who must be given the offices of state. You see, my friends, without concord, how could you ever get even a glimmer of sound judgment? It’s out of the question.

But we should be entirely justified in styling the greatest and most splendid concord of all ‘the greatest wisdom’. Anyone who lives a rational life shares in this wisdom, but the man who lacks it will invariably turn out to be a spendthrift and no savior to the city— quite the reverse, because he suffers from this particular kind of ignorance. So as we said just now, let’s adopt this as the statement of our views.

Clinias:: Adopted it is.

Athenian Stranger:: Now, I take it that states must contain some people who govern and others who are governed?

Clinias:: Naturally.

Athenian Stranger:: Good. Well then, what titles are there to either rank? Can we count them? (I mean both in the state and in the family, in each case irrespective of size.) One claim, surely, could be made by father and mother; and in general the title of parents to exercise control over their children and descendants would be universally acknowledged, wouldn’t it?

Clinias:: Of course.

Athenian Stranger:: Close behind comes the title of those of high birth to govern those of low birth. Next in order comes our third demand: that younger people should consent to be governed by their elders.

Clinias:: Certainly.

Athenian Stranger:: The fourth is that slaves should be subject to the control of their masters.

Clinias:: No doubt about it.

Athenian Stranger:: And I suppose the fifth is that the stronger should rule and the weaker should obey.

Clinias:: A pretty compelling claim to obedience, that!

Athenian Stranger:: Yes, and one which prevails throughout the animal kingdom—by decree of nature, as Pindar of Thebes once remarked. But it looks as if the most important claim will be the sixth, that the ignorant man should follow the leadership of the wise and obey his orders. In spite of you, my clever Pindar, what I'd called the 'decree of nature' is in fact the rule of law that governs willing subjects, without being imposed by force; I'm certainly not prepared to say it's unnatural.

Clinias:: Quite right.

Athenian Stranger:: And we persuade a man to cast lots, by explaining that this, the seventh title to authority, enjoys the favor of the gods and is blessed by fortune. We tell him that the fairest arrangement is for him to exercise authority if he wins, but to be subject to it if he loses.

Clinias:: That's very true.

Athenian Stranger:: 'So you see, O legislator' (as we might jocularly address someone who sets about legislation with undue optimism), 'you see how many titles to authority there are, and how they naturally conflict with each other. Now here's a source of civil strife we've discovered for you, which you must put to rights. First, though, join us in trying to find out how the kings of Argos and Messene went astray and broke these rules, and so destroyed themselves and the power of Greece, for all its splendor at that time. Wasn't it because they didn't appreciate the truth of Hesiod's remark that the half is often greater than the whole? He thought that when it is harmful to get the whole, and the half is enough, then enough is better than a feast, and is the preferable alternative.'

Clinias:: True enough.

Athenian Stranger:: So where do we suppose this destructive process invariably starts? Among kings or people?

Clinias:: Most instances suggest that this is probably a disease of kings whose life of luxury has made them arrogant.

Athenian Stranger:: So it is clear that it was the kings of that era who were first infected by the acquisitive spirit in defiance of the law of the land. The precise point to which they had given their seal of approval by their word and oath became the ground of their disagreement, and this lack of harmony (which is, in our view, the 'crassest' stupidity, though it looks like wisdom) put the whole arrangement jarringly off key and out of tune: hence its destruction.

Clinias:: Quite likely.

Athenian Stranger:: Very well. Then what precautions ought a contemporary legislator to have taken in his code to nip this disease in the bud? God knows, the answer's not difficult nowadays, and the point is quite simple to understand—though if anyone had foreseen the problem then, assuming it was possible to do so, he'd have been wiser than we are.

Megillus:: What do you mean?

Athenian Stranger:: Hindsight, Megillus! In the perspective of today it's easy to understand what should have been done then, and once understood it's equally easy to explain.

Megillus:: You' better be even clearer than that.

Athenian Stranger:: The clearest way of putting it would be this.

Megillus:: What?

Athenian Stranger:: If you neglect the rule of proportion and fit excessively large sails to small ships, or give too much food to a small body, or too high authority to a soul that doesn’t measure up to it, the result is always disastrous. Body and soul become puffed up: disease breaks out in the one, and in the other arrogance quickly leads to injustice. Now, what are we getting at? Simply this: the mortal soul simply does not exist, my friends, which by dint of its natural qualities will ever make a success of supreme authority among men while it is still young and responsible to no one. Full of folly, the worst of diseases, it inevitably has its judgment corrupted, and incurs the enmity of its closest friends; and once that happens, its total ruin and the loss of all its power soon follow. A first-class lawgiver’s job is to have a sense of proportion and to guard against this danger. Nowadays it is a reasonable guess that this was in fact done at that time. However, it looks as if there was…

Megillus:: What?

Athenian Stranger:: …some god who was concerned on your behalf and saw what was going to happen. He took your single line of kings and split it into two, so as to restrict its powers to more reasonable proportions. After that, a man who combined human nature with some of the powers of a god observed that your leadership was still in a feverish state, so he blended the obstinacy and vigor of the Spartans with the prudent influence of age by giving the twenty-eight elders the same authority in making important decisions as the kings. Your ‘third savior’ saw that your government was still fretting and fuming with restless energy, so he put a kind of bridle on it in the shape of the power of the ephors—a power which came very close to being held by lot. This is the formula that turned your kingship into a mixture of the right elements, so that thanks to its own stability it ensured the stability of the rest of the state. If things had been left to the discretion of Temenus and Cresphontes and the legislators of that time, whoever in fact they were, not even Aristodemus' part would have survived. You see, they were tiros in legislation: otherwise it would never have occurred to them to rely on oaths to restrain the soul of a young man who had taken over power from which a tyranny could develop. But the fact is that God has demonstrated the sort of thing a position of authority ought to have been then and should be now, if it is to have any prospects of permanency. As I said before, we don't need any great wisdom to recognize all this now—after all, it's not difficult to see the point if you have a historical example to go by. But if anyone had seen all this then, and had been able to control the various offices and produce a single authority out of the three, he would have saved all the splendid projects of that age from destruction, and neither the Persians nor anyone else would ever have sent a fleet to attack Greece, contemptuously supposing that we were people who counted for very little.

Clinias:: That's true.

Athenian Stranger:: After all, Clinias, the way the Greeks repulsed them was a disgrace. In saying this, I don't mean that those who won the battles of that war by land and sea did not do so magnificently. By 'disgrace' I mean that, to start with, only one of those three states fought to defend Greece. The other two were rotten to the core. One of them even hindered Sparta's attempts to help the defense, and fought her tooth and nail, while the other, Argos (which used to be paramount when the territory was first divided up), although called upon to repel the barbarian, ignored the request and failed to contribute to the defense. A detailed history of the course of that war would have some pretty ugly charges to make against Greece: indeed, there is no reason why it should report that Greece made any defense at all. If it hadn't been for the joint determination of the Athenians and the Spartans to resist the slavery that threatened them, we should have by now virtually a complete mixture of the races—Greek with Greek, Greek with barbarian, and barbarian with Greek. We can see a parallel in the nations whom the Persians lord it over today: they have been split up and then horribly jumbled together again into the scattered communities in which they now live. Well now, Clinias and Megillus, why are we making these accusations against the so-called 'statesmen' and legislators of that day and this? Because if we find out why they went wrong we shall discover what different course of action they ought to have followed. That is what we were doing just now, when we said that legislation providing for powerful or extreme authority is a mistake. One should always remember that a state ought to be free and wise and enjoy internal harmony, and that this is what the lawgiver should concentrate on in his legislation. (It ought not to surprise us if several times before now we have decided on a number of other aims and said they were what a lawgiver should concentrate on, so that the aims proposed never seem to be the same from minute to minute. When we say that the legislator should keep self-control or good judgment or friendship in view, we must bear in mind that all these aims are the same, not different. Nor should we be disconcerted if we find a lot of other expressions of which the same is true.)

Clinias:: Yes, when we think back over the argument we'll certainly try to remember that. But you wanted to explain what the legislator ought to aim at in the matter of friendship and good judgment and liberty. So tell us now what you were going to say.

Athenian Stranger:: Listen to me then. There are two mother-constitutions, so to speak, which you could fairly say have given birth to all the others. Monarchy is the proper name for the first, and democracy for the second. The former has been taken to extreme lengths by the Persians, the latter by my country; virtually all the others, as I said, are varieties of these two. It is absolutely vital for a political system to combine them, if (and this is of course the point of our advice, when we insist that no state formed without these two elements can be constituted properly)—if it is to enjoy freedom and friendship applied with good judgment.

Clinias:: Of course.

Athenian Stranger:: One state was over-eager in embracing only the principle of monarchy, the other in embracing only the ideal of liberty; neither has achieved a balance between the two. Your Spartan and Cretan states have done better, and time was when you could say much the same of the Athenians and Persians, but things have changed since then. Let's run through the reasons for this, shall we?

Clinias:: Yes, of course—if, that is, we mean to finish what we have set out to do.

Athenian Stranger:: Then let's listen to the story. Under Cyrus, the life of the Persians was a judicious blend of liberty and subjection, and after gaining their own freedom they became the masters of a great number of other people. As rulers, they granted a degree of liberty to their subjects and put them on the same footing as themselves, with the result that soldiers felt more affection for their commanders and displayed greater zeal in the face of danger. The king felt no jealousy if any of his subjects was intelligent and had some advice to offer; on the contrary, he allowed free speech and valued those who could contribute to the formulation of policy; a sensible man could use his influence to help the common cause. Thanks to freedom, friendship, and the practice of pooling their ideas, during that period the Persians made progress all along the line.

Clinias:: It does rather look as if that was the situation in the period you describe.

Athenian Stranger:: So how are we to explain the disaster under Cambyses, and the virtually complete recovery under Darius? To help our reconstruction of events, shall we have a shot at some inspired guessing?

Clinias:: Yes, because this topic we’ve embarked on will certainly help our inquiry.

Athenian Stranger:: My guess, then, about Cyrus, is that although he was doubtless a good commander and a loyal patriot, he never considered, even superficially, the problem of correct education; and as for running a household, I'd say he never paid any attention to it at all.

Clinias:: And what interpretation are we to put on a remark like that?

Athenian Stranger:: I mean that he probably spent his entire life after infancy on campaign, and handed over his children to the women to bring up. These women reared them from their earliest years as though they were already Heaven’s special favorites and darlings, endowed with all the blessings that implies. They wouldn’t allow anyone to thwart ‘their Beatitudes’ in anything, and they forced everybody to rhapsodize about what the children said or did. You can imagine the sort of person they produced.

Clinias:: And a fine old education it must have been, to judge from your account.

Athenian Stranger:: It was a womanish education, conducted by the royal harem. The teachers of the children had recently come into considerable wealth, but they were left all on their own, without men, because the army was preoccupied by wars and constant dangers.

Clinias:: That makes sense.

Athenian Stranger:: The children's father, for his part, went on accumulating herds and flocks for their benefit—and many a herd of human beings too, quite apart from every other sort of animal; but he didn't know that his intended heirs were not being instructed in the traditional Persian discipline. This discipline (the Persians being shepherds, and sons of a stony soil) was a tough one, capable of producing hardy shepherds who could camp out and keep awake on watch and turn soldier if necessary. He just didn't notice that women and eunuchs had given his sons the education of a Mede and that it had been debased by their so-called 'blessed' status. That is why Cyrus' children turned out as children naturally do when their teachers have never corrected them. So, when they succeeded to their inheritance on the death of Cyrus, they were living in a riot of unrestrained debauchery. First, unwilling to tolerate an equal, one of them killed the other; next, he himself, driven out of his senses by liquor and lack of self-control, was deprived of his dominions by the Medes and 'the Eunuch' (as he was then called), to whom the idiot Cambyses was an object of contempt.

Clinias:: So the story goes, and it seems probable enough.

Athenian Stranger:: And it goes on, I think, to say that the empire was regained for the Persians by Darius and 'the Seven'.

Clinias:: Certainly.

Athenian Stranger:: Now let's carry on with this story of ours and see what happened. Darius was no royal prince, and his upbringing had not encouraged him to self-indulgence. When he came and seized the empire with the aid of the other six, he split it up into seven divisions, of which some faint outlines still survive today. He thought the best policy was to govern it by new laws of his own which introduced a certain degree of equality for all; and he also included in his code regulations about the tribute promised to the people by Cyrus. His generosity in money and gifts rallied all the Persians to his side, and stimulated a feeling of community and friendship among them; consequently his armies regarded him with such affection that they added to the territory Cyrus had bequeathed at least as much again. But Darius was succeeded by Xerxes, whose education had reverted to the royal pampering of old. (‘Darius’—as perhaps we'd be entitled to say to him—’you haven’t learned from Cyrus’ mistake, so you’ve brought up Xerxes in the same habits as Cyrus brought up Cambyses.’) So Xerxes, being a product of the same type of education, naturally had a career that closely reproduced the pattern of Cambyses’ misfortunes. Ever since then, hardly any king of the Persians has been genuinely ‘great’, except in style and title. I maintain that the reason for this is not just bad luck, but the shocking life that the children of dictators and fantastically rich parents almost always lead: no man, you see, however old or however young, will ever excel in virtue if he has had this sort of upbringing. We repeat that this is the point the legislator must look out for, and so must we here and now. And in all fairness, my Spartan friends, one must give your state credit for at least this much: rich man, poor man, commoner and king are held in honor to the same degree and are educated in the same way, without privilege, except as determined by the supernatural instructions you received from some god when your state was founded. A man’s exceptional wealth is no more reason for a state to confer specially exalted office on him than his ability to run, his good looks, or his physical strength, in the absence of some virtue—or even if he has some virtue, if it excludes self-control.

Megillus:: What do you mean by that, sir?

Athenian Stranger:: Courage, I take it, is one part of virtue.

Megillus:: Of course.

Athenian Stranger:: So now that you’ve heard the story, use your own judgment: would you be glad to have as a resident in your house or as a neighbor a man who in spite of considerable courage was immoderate and licentious?

Megillus:: Heaven forbid!

Athenian Stranger:: Well then, what about a skilled workman, knowledgeable in his own field, but unjust?

Megillus:: No, I'd never welcome him.

Athenian Stranger:: But surely, in the absence of self-control, justice will never spring up.

Megillus:: Of course not.

Athenian Stranger:: Nor indeed will the ‘wise’ man we put forward just now, who keeps his feelings of pleasure and pain in tune with right reason and obedient to it.

Megillus:: No, he certainly won’t.

Athenian Stranger:: Now here’s another point for us to consider, which will help us to decide whether civic distinctions are, on a given occasion, conferred correctly or incorrectly.

Megillus:: And what is that?

Athenian Stranger:: If we found self-control existing in the soul in isolation from all other virtue, should we be justified in admiring it? Or not?

Megillus:: I really couldn’t say.

Athenian Stranger:: A very proper reply. If you had opted for either alternative it would have struck an odd note, I think.

Megillus:: So my reply was all right, then.

Athenian Stranger:: Yes. But if you have something which in itself deserves to be admired or execrated, a mere additional element isn’t worth talking about: much better pass it over and say nothing.

Megillus:: Self-control is the element you mean, I suppose.

Athenian Stranger:: It is. And in general, whatever benefits us most, when this element is added, deserves the highest honor, the second most beneficial thing deserves the second highest honor, and so on: as we go down the list, everything will get in due order the honor it deserves.

Megillus:: True.

Athenian Stranger:: Well then, shan’t we insist again that the distribution of these honors is the business of the legislator?

Megillus:: Of course.

Athenian Stranger:: Would you prefer us to leave the entire distribution to his discretion and let him deal with the details of each individual case? But as we too have something of a taste for legislation, perhaps you'd like us to try our hands at a three-fold division and distinguish the most important class, then the second and the third.

Megillus:: Certainly.

Athenian Stranger:: We maintain that if a state is going to survive to enjoy all the happiness that mankind can achieve, it is vitally necessary for it to distribute honors and marks of disgrace on a proper basis. And the proper basis is to put spiritual goods at the top of the list and hold them—provided the soul exercises self-control—in the highest esteem; bodily goods and advantages should come second, and third those said to be provided by property and wealth. If a legislator or a state ever ignores these guidelines by valuing riches above all or by promoting one of the other inferior goods to a more exalted position, it will be an act of political and religious folly. Shall we take this line, or not?

Megillus:: Yes, emphatically and unambiguously.

Athenian Stranger:: It was our scrutiny of the political system of the Persians that made us go into this business at such length. Our verdict was that their corruption increased year by year; and the reason we assign for this is that they were too strict in depriving the people of liberty and too energetic in introducing authoritarian government, so that they destroyed all friendship and community of spirit in the state. And with that gone, the policy of rulers is framed not in the interests of their subjects the people, but to support their own authority: let them only think that a situation offers them the prospect of some profit, even a small one, and they wreck cities and ruin friendly nations by fire and sword; they hate, and are hated in return, with savage and pitiless loathing. When they come to need the common people to fight on their behalf, they discover the army has no loyalty, no eagerness to face danger and fight. They have millions and millions of soldiers—all useless for fighting a war, so that just as if manpower were in short supply, they have to hire it, imagining that mercenaries and foreigners will ensure their safety. Not only this, they inevitably become so stupid that they proclaim by their very actions that as compared with gold and silver everything society regards as good and valuable is in their eyes so much trash.

Megillus:: Exactly.

Athenian Stranger:: So let’s have done with the Persians. Our conclusion is that the empire is badly run at the moment because the people are kept in undue subjection and the rulers excessively authoritarian.

Megillus:: Precisely.

Athenian Stranger:: Next we come to the political system of Attica. We have to demonstrate, on the same lines as before, that complete freedom from all authority is infinitely worse than submitting to a moderate degree of control.

At the time of the Persian attack on the Greeks—on virtually everyone living in Europe, is perhaps a better way of putting it—we Athenians had a constitution, inherited from the distant past, in which a number of public offices were held on the basis of four property-classes. Lady Modesty was the mistress of our hearts, a despot who made us live in willing subjection to the laws then in force. Moreover, the enormous size of the army that was coming at us by land and sea made us desperately afraid, and served to increase our obedience to the authorities and the law. For all these reasons we displayed a tremendous spirit of co-operation. You see, about ten years before the battle of Salamis, Datis had arrived at the head of a Persian army; he had been sent by Darius against the Athenians and the Eretrians with explicit instructions to make slaves of them and bring them home, and he had been warned that failure would mean death. With his vast numbers of soldiers, Datis made short work of the Eretrians, whom he completely overpowered and captured. He then sent to Athens a bloodcurdling report that not a single Eretrian had got away—propaganda which asked us to believe that Datis’ soldiers, hand in hand in a long line, had combed over every inch of Eretria. Well, whatever the truth or otherwise of this tale, it terrified the Greeks; the Athenians were particularly scared, and they sent off envoys in all directions, but no one was prepared to help them except the Spartans—who were, however, prevented by the Messenian war, which was going on at that time, or perhaps by some other distraction (I'm not aware of any information being given on the point). However that may be, the Spartans arrived at Marathon one day too late for the battle. After this, reports of vast preparations and endless threats on the part of the king came thick and fast. The years went by, and then we were told that Darius was dead, but that his son, young and impetuous, had inherited the kingdom and was determined not to give up the invasion. The Athenians reckoned that all these preparations were directed against themselves, because of what had happened at Marathon;

and when they heard of the canal that had been dug through Athos, the bridging of the Hellespont and the huge number of Xerxes' ships, they calculated that neither land nor sea offered any prospects of safety. No one, they thought, would come to help them. They remembered the previous attack and the success of the Persians in Eretria: no one had assisted the Athenians then, no one had faced the danger by fighting at their side. On land they expected the same thing to happen this time; and as for the sea, they realized that escape by this route was out of the question, in view of the thousand or more ships coming to the attack. They could think of only one hope, and a thin, desperate hope it was; but there was simply no other. Their minds went back to the previous occasion, and they reflected how the victory they won in battle had been gained in equally desperate circumstances. Sustained by this hope, they began to recognize that no one but they themselves and their gods could provide a way out of their difficulties. All this inspired them with a spirit of solidarity. One cause was the actual fear they felt at the time, but there was another kind too, encouraged by the traditional laws of the state. I mean the ‘fear’ they had learned to experience as a result of being subject to an ancient code of laws. In the course of our earlier discussion we have called this fear ‘modesty’ often enough, and we said that people who aspire to be good must be its slave. A coward, on the other hand, is free of this particular kind of fear and never experiences it. And if ‘ordinary’ fear had not overtaken the cowards on that occasion, they would never have combined to defend themselves or protected temples, tombs, fatherland, and friends and relatives as well, in the way they did. We would all have been split up and scattered over the face of the earth.

Megillus:: Yes, sir, you are quite right, and your remarks reflect credit both on your country and yourself.

Athenian Stranger:: No doubt, Megillus; and it is only right and proper to tell you of the history of that period, seeing that you’ve been blessed with your ancestors’ character. Now then, you and Clinias, consider: have these remarks of ours any relevance at all to legislation? After all, this is the object of the exercise—I’m not going through all this simply for the story. Look: in a way, we Athenians have had the same experience as the Persians. They, of course, reduced the people to a state of complete subjection, and we encouraged the masses to the opposite extreme of unfettered liberty, but the discussion we have had serves well enough as a pointer to the next step in the argument, and shows us the method to follow.

Megillus:: Splendid! But do try to be even more explicit about what you mean.

Athenian Stranger:: Very well. When the old laws applied, my friends, the people were not in control: on the contrary, they lived in a kind of ‘voluntary slavery’ to the laws.

Megillus:: Which laws have you in mind?

Athenian Stranger:: I’m thinking primarily of the regulations about the music of that period (music being the proper place to start a description of how life became progressively freer of controls). In those days Athenian music comprised various categories and forms. One type of song consisted of prayers to the gods, which were termed ‘hymns’; and there was another quite different type, which you might well have called laments’. ‘Paeans’ made up a third category, and there was also a fourth, called a ‘dithyramb’ (whose theme was, I think, the birth of Dionysus). There existed another kind of song too, which they thought of as a separate class, and the name they gave it was this very word that is so often on our lips: ‘nomes’ (‘for the lyre’, as they always added). Once these categories and a number of others had been fixed, no one was allowed to pervert them by using one sort of tune in a composition belonging to another category. And what was the authority which had to know these standards and use its knowledge in reaching its verdicts, and crack down on the disobedient? Well, certainly no notice was taken of the catcalls and uncouth yelling of the audience, as it is nowadays, nor yet of the applause that indicates approval. People of taste and education made it a rule to listen to the performance with silent attention right through to the end; children and their attendants and the general public could always be disciplined and controlled by a stick. Such was the rigor with which the mass of the people was prepared to be controlled in the theatre, and to refrain from passing judgment by shouting. Later, as time went on, composers arose who started to set a fashion of breaking the rules and offending good taste. They did have a natural artistic talent, but they were ignorant of the correct and legitimate standards laid down by the Muse. Gripped by a frenzied and excessive lust for pleasure, they jumbled together laments and hymns, mixed paeans and dithyrambs, and even imitated pipe tunes on the lyre. The result was a total confusion of styles. Unintentionally, in their idiotic way, they misrepresented their art, claiming that in music there are no standards of right and wrong at all, but that the most 'correct' criterion is the pleasure of a man who enjoyed the performance, whether he is a good man or not. On these principles they based their compositions, and they accompanied them with propaganda to the same effect. Consequently they gave the ordinary man not only a taste for breaking the laws of music but the arrogance to set himself up as a capable judge. The audiences, once silent, began to use their tongues; they claimed to know what was good and bad in music, and instead of a 'musical meritocracy', a sort of vicious 'theatrocracy' arose. But if this democracy had been limited to gentlemen and had applied only to music, no great harm would have been done; in the event, however, music proved to be the starting point of everyone's conviction that he was an authority on everything, and of a general disregard for the law. Complete license was not far behind. The conviction that they knew made them unafraid, and assurance engendered effrontery. You see, a reckless lack of respect for one's betters is effrontery of peculiar viciousness, which springs from a freedom from inhibitions that has gone much too far.

Megillus:: You're absolutely right.

Athenian Stranger:: This freedom will then take other forms. First people grow unwilling to submit to the authorities, then they refuse to obey the admonitions of their fathers and mothers and elders. As they hurtle along towards the end of this primrose path, they try to escape the authority of the laws; and the very end of the road comes when they cease to care about oaths and promises and religion in general. They reveal, reincarnated in themselves, the character of the ancient Titans of the story, and thanks to getting into the same position as the Titans did, they live a wretched life of endless misery. Again I ask: what's the purpose of saying all this? My tongue has been galloping on and obviously I ought to curb it constantly; I must keep a bridle in my mouth and not let myself be carried away by the argument so as to 'take a toss from the hoss', as the saying is. Let me repeat the question: what's the point of this speech I've made?

Megillus:: Well asked!

Athenian Stranger:: The point is one we've made before.

Megillus:: What?

Athenian Stranger:: We said that a lawgiver should frame his code with an eye on three things: the freedom, unity and wisdom of the city for which he legislates. That's right, isn't it?

Megillus:: Certainly.

Athenian Stranger:: That was why we selected two political systems, one authoritarian in the highest degree, the other representing an extreme of liberty; and the question is now, which of these two constitutes correct government? We reviewed a moderate authoritarianism and a moderate freedom, and saw the result: tremendous progress in each case. But when either the Persians or the Athenians pushed things to extremes (of subjection in the one case and its opposite in the other), it did neither of them any good at all.

Megillus:: You're quite right.

Athenian Stranger:: We had precisely the same purpose when we looked at the settlement of the Dorian forces, Dardanus' dwellings in the foothills, the foundation by the sea, and the original survivors of the flood; earlier, we discussed music and drink from the same point of view, as well as other topics before that. The object was always to find out what would be the ideal way of administering a state, and the best principles the individual can observe in running his own life. But has it been worth our while? I wonder, Clinias and Megillus, if there's some test of this that we could set ourselves?

Clinias:: I think I can see one, sir. As luck would have it, I find that all the subjects we have discussed in our conversation are relevant to my needs here and now. How fortunate that I've fallen in with you and Megillus! I won't keep you in the dark about my position—indeed, I think that meeting you is a good omen for the future. The greater part of Crete is attempting to found a colony, and has given responsibility for the job to the Cnossians; and the state of Cnossus has delegated it to myself and nine colleagues. Our brief is to compose a legal code on the basis of such local laws as we find satisfactory, and to use foreign laws as well—the fact that they are not Cretan must not count against them, provided their quality seems superior. So what about doing me—and you—a favor? Let's take a selection of the topics we have covered and construct an imaginary community, pretending that we are its original founders. That will allow us to consider the question before us, and it may be that I'll use this framework for the future state.

Athenian Stranger:: Well, Clinias, that's certainly welcome news! You may take it that I for my part am entirely at your disposal, unless Megillus has some objection.

Clinias:: Splendid!

Megillus:: Yes, I too am at your service.

Clinias:: I’m delighted you both agree. Now then, let’s try—initially only in theory—to found our state.

## Book 4.

Athenian Stranger:: Well, now, how should we describe our future state? I don't mean just its name: I'm not asking what it's called now, nor what it ought to be called in the future. (This might well be suggested by some detail of the actual foundation or by some spot nearby: perhaps a river or spring or some local gods will give the new state their own style and title.) This is my real question: is it to be on the coast, or inland?

Clinias:: The state I was talking about a moment ago, sir, is approximately eighty stades from the sea.

Athenian Stranger:: Well, what about harbors? Are there any along the coast on that side of the state, or are they entirely absent?

Clinias:: No, sir. The state has harbors in that direction which could hardly be bettered.

Athenian Stranger:: A pity, that. What about the surrounding countryside? Does it grow everything or are there some deficiencies?

Clinias:: No, it grows practically everything.

Athenian Stranger:: Will it have some nearby state for a neighbor?

Clinias:: Absolutely none—that's just why it's being founded. Ages ago, there was a migration from the district, which has left the land deserted for goodness knows how long.

Athenian Stranger:: What about plains and mountains and forests? How is it off for each of these?

Clinias:: Very much like the rest of Crete in general.

Athenian Stranger:: Rugged rather than flat, you mean?

Clinias:: Yes, that's right.

Athenian Stranger:: Then the state will have tolerably healthy prospects of becoming virtuous. If it were going to be founded near the sea and have good harbors, and were deficient in a great number of crops instead of growing everything itself, then a very great savior indeed and lawgivers of divine stature would be needed to stop sophisticated and vicious characters developing on a grand scale: such a state would simply invite it. As it is, we can take comfort in those eighty stades. Even so, it lies nearer the sea than it should, and you say that it is rather well off for harbors, which makes matters worse; but let’s be thankful for small mercies. For a country to have the sea nearby is pleasant enough for the purpose of everyday life, but in fact it is a ‘salty-sharp and bitter neighbor’ in more senses than one. It fills the land with wholesaling and retailing, breeds shifty and deceitful habits in a man’s soul, and makes the citizens distrustful and hostile, not only among themselves, but also in their dealings with the world outside. Still, the fact that the land produces everything will be some consolation for these disadvantages, and it is obvious in any case that even if it does grow every crop, its ruggedness will stop it doing so in any quantity; if it yielded a surplus that could be exported in bulk, the state would be swamped with the gold and silver money it received in return—and this, if a state means to develop just and noble habits, is pretty nearly the worst thing that could happen to it, all things considered (as we said, if we remember, earlier in our discussion).

Clinias:: Of course we remember, and we agree that our argument then was right, and still is now.

Athenian Stranger:: The next point is this: how well is the surrounding district supplied with timber for building ships?

Clinias:: There are no firs or pines worth mentioning, and not much by way of cypress, though you'll find a small quantity of plane and Aleppo pine, which is, of course, the standard material shipwrights must have to construct the interior parts of a boat.

Athenian Stranger:: That too is a feature of the country which will do it no harm.

Clinias:: Oh?

Athenian Stranger:: It's a good thing that a state should find it difficult to lower itself to copy the wicked customs of its enemies.

Clinias:: And what on earth has been said to prompt that remark?

Athenian Stranger:: My dear sir, cast your mind back to the beginning of our discussion and watch what I'm up to. Do you remember the point we made about the laws of the Cretans having only one object, and how in particular the two of you asserted that this was warfare? I took you up on the point and argued that in so far as such institutions were established with virtue as their aim, they were to be approved; but I took strong exception to their aiming at only a part of virtue instead of the whole. Now it's your turn: keep a sharp eye on this present legislation, in case I lay down some law which is not conducive to virtue, or which fosters only a part of it. I'm going on the assumption that a law is well enacted only if it constantly aims, like an archer, at that unique target which is the only object of legislation to be invariably and uninterruptedly attended by some good result; the law must ignore everything else (wealth or anything like that), if it happens not to meet the requirements I have stipulated. This 'disgraceful copying of enemies' to which I was referring occurs when people live by the sea and are plagued by such foes as Minos, who once forced the inhabitants of Attica to pay a most onerous tribute (though of course in saying this I've no wish at all to hark back to our old grudges against you). Minos exercised tremendous power at sea, whereas the Athenians had not yet acquired the fighting ships they have today, nor was their country so rich in supplies of suitable timber that they could readily construct a strong fleet; consequently they couldn't turn themselves into sailors at a moment's notice and repel the enemy by copying the Cretan use of the sea. Even if they had been able to do that, it would have done them more good to lose seven boys over and over again rather than get into bad habits by forming themselves into a navy. They had previously been infantrymen, and infantrymen can stand their ground; but sailors have the bad habit of dashing at frequent intervals and then beating a very rapid retreat indeed back to their ships. They see nothing disgraceful at all in a craven refusal to stand their ground and die as the enemy attacks, nor in the plausible excuses they produce so readily when they drop their weapons and take to their heels—or, as they put it, 'retreat without dishonor'. This is the sort of terminology you must expect if you make your soldiers into sailors; these expressions are not 'beyond praise' (far from it): men ought never to be trained in bad habits, least of all the citizen-elite. Even from Homer, I suspect, you can see that this is bad policy. He has Odysseus pitching into Agamemnon for ordering the ships to be put to sea just when the Achaeans were being hard put to it in their fight with the Trojans. In his anger, Odysseus says to him:

> Why bid the well-benched ships be put to sea,
> When in our ears the noise of battle rings?
> Do you want the Trojans' dearest wish fulfilled,
> and utter ruin send us to the grave?
> Put the ships to sea, and watch the Achaeans
> buckle to the fight! No: they'll scuttle off

> and shrink away from battle. The advice you give
> will mean the end of us.

So Homer too realized that it is bad tactics to have triremes lined up at sea in support of infantry in the field. This is the sort of habit-training that will soon make even lions run away from deer. And that's not all. When a state which owes its power to its navy wins a victory, the bravest soldiers never get the credit for it, because the battle is won thanks to the skill of steersman, boatswain and rower and the efforts of a motley crowd of ragamuffins, which means that it is impossible to honor each individual in the way he deserves. Rob a state of its power to do that, and you condemn it to failure.

Clinias:: I suppose that's more or less inevitable. But in spite of that, sir, it was by fighting at sea at Salamis against the barbarians that the Greeks saved their country—according to us Cretans, anyway.

Athenian Stranger:: Yes, that's what most people say, Greek and non-Greek alike. Still, my friend, we—Megillus here and myself—are arguing in favor of two battles fought on land: Marathon, which first got the Greeks out of danger, and Plataea, which finally made them really safe. We maintain that these battles improved the Greeks, whereas the fighting at sea had the opposite effect. I hope this isn't too strong language to use about battles that at the time certainly helped to ensure our survival (and I'll concede you the battle at Artemisium as well as the one at Salamis). That's all very well, but when we examine the natural features of a country and its legal system, our ultimate object of scrutiny is of course the quality of its social and political arrangements. We do not hold the common view that a man's highest good is to survive and simply continue to exist. His highest good is to become as virtuous as possible and to continue to exist in that state as long as life lasts. But I think we’ve already taken this line before.

Clinias:: Of course.

Athenian Stranger:: Then we need consider only one thing: is the method we are following the same as before? Can we assume it is the best way to found a state and legislate for it?

Clinias:: Yes, it’s by far the best.

Athenian Stranger:: Now for the next point. Tell me, what people will you be settling? Will your policy be to accept all comers from the whole of Crete, on the grounds that the population in the individual cities has exceeded the number that can be supported by the land? I don’t suppose you’re taking all comers from the Greeks in general—though in fact I notice that some settlers from Argos and Aegina and other parts of Greece have come to settle in your country. But tell me what you intend on this occasion: where do you think your citizen body will come from this time?

Clinias:: They will probably come from all over Crete; as for the other Greeks, I imagine settlers from the Peloponnese will be particularly welcome. You are quite right in what you said just now, that there are some here from Argos: they include the Gortynians, the most distinguished of the local people, who hail from the well-known Gortyn in the Peloponnese.

Athenian Stranger:: So it won’t be all that easy for the Cretan states to found their colony. The emigrants, you see, haven’t the unity of a swarm of bees: they are not a single people from a single territory settling down to form a colony with mutual goodwill between themselves and those they have left behind. Such migrations occur because of the pressures of land-shortage or some similar misfortune:

sometimes a given section of the community may be obliged to go off and settle elsewhere because it is harassed by civil war, and on one occasion a whole state took to its heels after being overcome by an attack it could not resist. In all these cases to found a state and give it laws is, in some ways, comparatively easy, but in others it's rather difficult. When a single people speaks the same language and observes the same laws you get a certain feeling of community, because everyone shares the same religious rites and so forth; but they certainly won't find it easy to accept laws or political systems that differ from their own. Sometimes, when it's bad laws that have stimulated the revolt, and the rebels try in their new home to keep to the same familiar habits that ruined them before, their reluctance to toe the line presents the founder and lawgiver with a difficult problem. On the other hand, a miscellaneous combination of all kinds of different people will perhaps be more ready to submit to a new code of laws—but to get them to 'pull and puff as one' (as they say of a team of horses) is very difficult and takes a long time. There's no escaping it: founding a state and legislating for it is a superb test that separates the men from the boys.

Clinias:: I dare say; but what do you mean? Please be a little clearer.

Athenian Stranger:: My dear fellow, now that I'm going back to considering legislators again, I think I'm actually going to insult them: but no matter, so long as the point is relevant. Anyway, why should I have qualms about it? It seems true of pretty nearly all human affairs.

Clinias:: What are you getting at?

Athenian Stranger:: I was going to say that no man ever legislates at all. Accidents and calamities occur in a thousand different ways, and it is they that are the universal legislators of the world. If it isn’t pressures of war that overturn a constitution and rewrite the laws, it’s the distress of grinding poverty; and disease too forces us to make a great many innovations, when plagues beset us for years on end and bad weather is frequent and prolonged. Realizing all these possibilities, you may jump to conclusions and say what I said just now, that no mortal ever passes any law at all, and that human affairs are almost entirely at the mercy of chance. Now of course this same view could equally plausibly be taken of the profession of the steersman or doctor or general—but at the same time there’s another point that could be made about all these examples, and with no less justification.

Clinias:: What?

Athenian Stranger:: That the all-controlling agent in human affairs is God, assisted by the secondary influences of ‘chance’ and ‘opportunity’. A less uncompromising way of putting it is to acknowledge that there must be a third factor, namely ‘skill’, to back up the other two. For instance, in a storm the steersman may or may not use his skill to seize any favorable opportunity that may offer. I'd say it would help a great deal if he did, wouldn’t you?

Clinias:: Yes.

Athenian Stranger:: So the same will apply in the other cases too, and legislation in particular must be allowed to play the same role. If a state is to live in happiness, certain local conditions must be present, and when all these coincide, what the community needs to find is a legislator who understands the right way to go about things.

Clinias:: Very true.

Athenian Stranger:: So a professional man in each of the fields we’ve enumerated could hardly go wrong if he prayed for conditions in which the workings of chance needed only to be supplemented by his own skill.

Clinias:: Certainly.

Athenian Stranger:: And all the other people we've instanced would of course be able to tell you what conditions they were praying for, if you asked them.

Clinias:: Of course.

Athenian Stranger:: And I fancy a legislator would do just the same.

Clinias:: I agree.

Athenian Stranger:: 'Well now, legislator,' let's say to him, 'tell us your requirements. What conditions in the state we are going to give you will enable you to run it properly on your own from now on?' What's the right answer to a question like that? (We're giving the legislator's answer for him, I take it.)

Clinias:: Yes.

Athenian Stranger:: Then this is what he'll say: 'Give me a state under the absolute control of a dictator, and let the dictator be young, with a good memory, quick to learn, courageous, and with a character of natural elevation. And if his other abilities are going to be any use, his dictatorial soul should also possess that quality which was earlier agreed to be an essential adjunct to all the parts of virtue.'

Clinias:: I think the 'essential adjunct' our companion means, Megillus, is self-control. Right?

Athenian Stranger:: Yes, Clinias—but the everyday kind, not the kind we speak of in a heightened sense, when we compel self-control to be good judgment as well. I mean the spontaneous instinct that flowers earlier in life in children and animals and in some cases succeeds in imposing a certain restraint in the search for pleasure, but fails in others. We said that if this quality existed in isolation from the many other merits we are discussing, it was not worth consideration. You see my point, I take it.

Clinias:: Of course.

Athenian Stranger:: This is the innate quality our dictator must have, in addition to the others, if the state is going to get, as quickly and efficiently as possible, a political system that will enable it to live a life of supreme happiness. You see, there is no quicker or better method of establishing a political system than this one, nor could there ever be.

Clinias:: Well sir, how can a man convince himself that he is talking sense in maintaining all this? What arguments are there for it?

Athenian Stranger:: It’s easy enough, surely, to see that the very facts of the case make the doctrine true.

Clinias:: What do you mean? If we were to get a dictator, you say, who is young, restrained, quick to learn, with a retentive memory, courageous and elevated—

Athenian Stranger:: —and don’t forget to add ‘lucky’ too, in this one point: he should be the contemporary of a distinguished lawgiver, and be fortunate enough to come into contact with him. If that condition is fulfilled, God will have done nearly all that he usually does when he wants to treat a state with particular favor. The next best thing would be a pair of such dictators; the third best would be several of them. The difficulties are in direct proportion to the numbers.

Clinias:: It looks as if your position is this: the best state will be the product of a dictatorship, thanks to the efforts of a first-rate legislator and a well-behaved dictator, and this will be the quickest and easiest way to bring about the transformation. The second best will be to start with an oligarchy—is that your point, or what?—and the third to start with a democracy.

Athenian Stranger:: Certainly not. The ideal starting point is dictatorship, the next best is constitutional kingship, and the third is some sort of democracy. Oligarchy comes fourth, because it has the largest number of powerful people, so that it admits the growth of a new order only with difficulty. And we maintain, of course, that such a growth takes place when circumstances throw up a genuine lawgiver who comes to share a degree of power with the most influential persons in the state. Where the most influential element is both extremely powerful and numerically as small as it could be, as in a dictatorship, you usually get a rapid and trouble-free transition.

Clinias:: How? We don’t understand.

Athenian Stranger:: We’ve made the point more than once, I think. Perhaps you two have not so much as seen a state under the control of a dictator.

Clinias:: No, and I don’t particularly want to, either.

Athenian Stranger:: Still, suppose you did: you'd notice something we remarked on just now.

Clinias:: What’s that?

Athenian Stranger:: That when a dictator wants to change the morals of a state, he doesn’t need to exert himself very much or spend a lot of time on the job. He simply has to be the first to set out on the road along which he wishes to urge the citizens—whether to the practice of virtue or vice— and give them a complete moral blueprint by setting his own personal example; he must praise and commend some courses of action and censure others, and in every field of conduct he must see that anyone who disobeys is disgraced.

Clinias:: And why should we expect the citizens to obey, with such alacrity, a man who combines persuasion with compulsion like that?

Athenian Stranger:: My friends, there's no quicker or easier way for a state to change its laws than to follow the leadership of those in positions of power; there is no other way now, nor will there be in the future, and we shouldn't let anyone persuade us to the contrary. Actually, you see, it's not simply this that is impossible or difficult to achieve. What is difficult, and a very rare occurrence in the history of the world, is something else; but when it does occur, the state concerned reaps the benefit on a grand scale—indeed, there's no blessing that will pass it by.

Clinias:: What occurrence do you mean?

Athenian Stranger:: A situation in which an inspired passion for the paths of restraint and justice guides those who wield great power. The passion may seize a single supreme ruler, or perhaps men who owe their power to exceptional wealth or high birth; or you may get a reincarnation of Nestor, who, superior as he was to all mankind for the vigor of his speech, is said to have put them in the shade even more by his qualities of restraint. In Trojan times, they say, such a paragon did exist, but he is certainly unheard of today. Still, granted someone like that did in fact exist in the past or is going to in the future, or is alive among us now, blessed is the life of this man of moderation, and blessed they who listen to the words that fall from his lips. And whatever the form of government, the same doctrine holds true: where supreme power in a man joins hands with wise judgment and self-restraint, there you have the birth of the best political system, with laws to match; you'll never achieve it otherwise. So much for my somewhat oracular fiction! Let's take it as established that though in one sense it is difficult for a state to acquire a good set of laws, in another sense nothing could be quicker or easier—granted, of course, the conditions I’ve laid down.

Clinias:: How so?

Athenian Stranger:: What about pretending the fiction is true of your state, Clinias, and having a shot at making up its laws? Like children, we old men love a bit of make-believe.

Clinias:: Yes, what are we waiting for? Let’s get down to it.

Athenian Stranger:: Let us therefore summon God to attend the foundation of the state. May he hear our prayers, and having heard, come graciously and benevolently to help us settle our state and its laws.

Clinias:: May he come indeed.

Athenian Stranger:: Well now, what political system do we intend to impose on the state?

Clinias:: Please be a little more explicit about what you really mean by that question. Do you mean we have to choose between a democracy, an oligarchy, and an aristocracy? Presumably you’re hardly contemplating a dictatorship—or so we'd think, at any rate.

Athenian Stranger:: Well then, which of you would be prepared to answer first and tell us which of these terms fits the political system of your homeland?

Megillus:: Isn’t it right and proper for me to answer first, as the elder?

Clinias:: Perhaps so.

Megillus:: Very well. When I consider the political system in force at Sparta, sir, I find it impossible to give you a straight answer: I just can’t say what one ought to call it. You see, it really does look to me like a dictatorship (it has the ephors, a remarkably dictatorial institution), yet on occasions I think it gets very close to being run democratically. But then again, it would be plain silly to deny that it is an aristocracy; and there is also a kingship (held for life), which both we and the rest of the world speak of as the oldest kingship of all. So when I'm asked all of a sudden like this, the fact is, as I said, that I can't distinguish exactly which of these political systems it belongs to.

Clinias:: I'm sure I'm in the same predicament as you, Megillus. I find it acutely difficult to say for sure that the constitution we have in Cnossus comes into any of these categories.

Athenian Stranger:: And the reason, gentlemen, is this: you really do operate constitutions worthy of the name. The ones we called constitutions just now are not really that at all: they are just a number of ways of running a state, all of which involve some citizens living in subjection to others like slaves, and the state is named after the ruling class in each case. But if that's the sort of principle on which your new state is to be named, it should be called after the god who really does rule over men who are rational enough to let him.

Clinias:: What god is that?

Athenian Stranger:: Well, perhaps we ought to make use of this fiction a little more, if we are going to clear up the question at issue satisfactorily.

Clinias:: Yes, that will be the right procedure.

Athenian Stranger:: It certainly will. Well now, countless ages before the formation of the states we described earlier, they say there existed, in the age of Cronus, a form of government and administration which was a great success, and which served as a blueprint for the best run of our present-day states.

Clinias:: Then I think we simply must hear about it.

Athenian Stranger:: Yes, I agree. That’s just why I introduced it into the discussion.

Clinias:: You were quite right to do so, and seeing how relevant it is, you’ll be entirely justified in giving a systematic account of what happened.

Athenian Stranger:: I must try to meet your wishes. The traditional account that has come down to us tells of the wonderfully happy life people lived then, and how they were provided with everything in abundance and without any effort on their part. The reason is alleged to be this: Cronus was of course aware that human nature, as we’ve explained, is never able to take complete control of all human affairs without being filled with arrogance and injustice. Bearing this in mind, he appointed kings and rulers for our states; they were not men, but beings of a superior and more divine order— spirits. We act on the same principle nowadays in dealing with our flocks of sheep and herds of other domesticated animals: we don’t put cattle in charge of cattle or goats in charge of goats, but control them ourselves, because we are a superior species. So Cronus too, who was well-disposed to man, did the same: he placed us in the care of the spirits, a superior order of beings, who were to look after our interests—an easy enough task for them, and a tremendous boon to us, because the result of their attentions was peace, respect for others, good laws, justice in full measure, and a state of happiness and harmony among the races of the world. The story has a moral for us even today, and there is a lot of truth in it: where the ruler of a state is not a god but a mortal, people have no respite from toil and misfortune. The lesson is that we should make every effort to imitate the life men are said to have led under Cronus; we should run our public and our private life, our homes and our cities, in obedience to what little spark of immortality lies in us, and dignify these edicts of reason with the name of ‘law’. But take an individual man, or an oligarchy, or even a democracy, that lusts in its heart for pleasure and demands to have its fill of everything it wants—the perpetually unsatisfied victim of an evil greed that attacks it like the plague—well, as we said just now, if a power like that controls a state or an individual and rides roughshod over the laws, it’s impossible to escape disaster. This is the doctrine we have to examine, Clinias, and see whether we are prepared to go along with it— or what?

Clinias:: Of course we must go along with it.

Athenian Stranger:: You realize that some people maintain that there are as many different kinds of laws as there are of political systems? (And of course we’ve just run through the many types of political systems there are popularly supposed to be.) Don’t think the question at issue is a triviality: it’s supremely important, because in effect we’ve got back to arguing about the criteria of justice and injustice. These people take the line that legislation should be directed not to waging war or attaining complete virtue, but to safeguarding the interests of the established political system, whatever that is, so that it is never overthrown and remains permanently in force.

They say that the definition of justice that measures up to the facts is best formulated like this.

Clinias:: How?

Athenian Stranger:: It runs: ‘Whatever serves the interest of the stronger’.

Clinias:: Be a little more explicit, will you?

Athenian Stranger:: The point is this: according to them, the element in control at any given moment lays down the law of the land. Right?

Clinias:: True enough.

Athenian Stranger:: ‘So do you imagine,’ they say, ‘that when a democracy has won its way to power, or some other constitution has been established (such as dictatorship), it will ever pass any laws, unless under pressure, except those designed to further its own interests and ensure that it remains permanently in power? That’ll be its main preoccupation, won’t it?’

Clinias:: Naturally.

Athenian Stranger:: So the author of these rules will call them ‘just’ and claim that anyone who breaks them is acting ‘unjustly’, and punish him?

Clinias:: Quite likely.

Athenian Stranger:: So this is why such rules will always add up to ‘justice’.

Clinias:: Certainly, on the present argument.

Athenian Stranger:: We are, you see, dealing with one of those ‘claims to authority’.

Clinias:: What claims?

Athenian Stranger:: The ones we examined before, when we asked who should rule whom. It seemed that parents should rule children, the elder the younger, and the noble those of low birth; and there was a large number of other titles to authority, if you remember, some of which conflicted with others. The claim we’re talking about now was certainly one of these: we said, I think, that Pindar turned it into a law of nature—which meant that he ‘justified the use of force extreme’, to quote his actual words.

Clinias:: Yes, those are the points that were made.

Athenian Stranger:: Now look: to which side in the dispute should we entrust our state? In some cities, you see, this is the sort of thing that has happened thousands of times.

Clinias:: What?

Athenian Stranger:: When offices are filled competitively, the winners take over the affairs of state so completely that they totally deny the losers and the losers' descendants any share of power. Each side passes its time in a narrow scrutiny of the other, apprehensive lest someone with memories of past injustices should gain some office and lead a revolution. Of course, our position is that this kind of arrangement is very far from being a genuine political system; we maintain that laws which are not established for the good of the whole state are bogus laws, and when they favor particular sections of the community, their authors are not citizens but party-men; and people who say those laws have a claim to be obeyed are wasting their breath. We've said all this because in your new state we aren't going to appoint a man to office because of his wealth or some other claim like that, say strength or stature or birth. We insist that the highest office in the service of the gods must be allocated to the man who is best at obeying the established laws and wins that sort of victory in the state; the man who wins the second prize must be given second rank in that service, and so on, the remaining posts being allocated in order on the same system. Such people are usually referred to as 'rulers', and if I have called them 'servants of the laws' it's not because I want to mint a new expression but because I believe that the success or failure of a state hinges on this point more than on anything else. Where the law is subject to some other authority and has none of its own, the collapse of the state, in my view, is not far off; but if law is the master of the government and the government is its slave, then the situation is full of promise and men enjoy all the blessings that the gods shower on a state. That's the way I see it.

Clinias:: By heaven, sir, you're quite right. You've the sharp eye of an old man for these things.

Athenian Stranger:: Yes, when we're young, we're all pretty blind to them; old age is the best time to see them clearly.

Clinias:: Very true.

Athenian Stranger:: Well, what now? I suppose we should assume our colonists have arrived and are standing before us. So we shall have to finish off the topic by addressing them.

Clinias:: Of course.

Athenian Stranger:: Now then, our address should go like this: 'Men, according to the ancient story, there is a god who holds in his hands the beginning and end and middle of all things, and straight he marches in the cycle of nature. Justice, who takes vengeance on those who abandon the divine law, never leaves his side. The man who means to live in happiness latches on to her and follows her with meekness and humility. But he who bursts with pride, elated by wealth or honors or by physical beauty when young and foolish, whose soul is afire with the arrogant belief that so far from needing someone to control and lead him, he can play the leader to others—there's a man whom God has deserted. And in his desolation he collects others like himself, and in his soaring frenzy he causes universal chaos. Many people think he cuts a fine figure, but before very long he pays to Justice no trifling penalty and brings himself, his home and state to rack and ruin. Thus it is ordained. What action, then, should a sensible man take, and what should his outlook be? What must he avoid doing or thinking?'

Clinias:: This much is obvious: every man must resolve to belong to those who follow in the company of God.

Athenian Stranger:: 'So what conduct recommends itself to God and reflects his wishes? There is only one sort, epitomized in the old saying "like approves of like" (excess apart, which is both its own enemy and that of due proportion). In our view it is God who is preeminently the "measure of all things," much more so than any "man," as they say. So if you want to recommend yourself to someone of this character, you must do your level best to make your own character reflect his, and on this principle the moderate man is God's friend, being like him, whereas the immoderate and unjust man is not like him and is his enemy; and the same reasoning applies to the other vices too.

'Let's be clear that the consequence of all this is the following doctrine (which is, I think, of all doctrines the finest and truest): If a good man sacrifices to the gods and keeps them constant company in his prayers and offerings and every kind of worship he can give them, this will be the best and noblest policy he can follow; it is the conduct that fits his character as nothing else can, and it is his most effective way of achieving a happy life. But if the wicked man does it, the results are bound to be just the opposite. Whereas the good man's soul is clean, the wicked man's soul is polluted, and it is never right for a good man or for God to receive gifts from unclean hands—which means that even if impious people do lavish a lot of attention on the gods, they are wasting their time, whereas the trouble taken by the pious is very much in season. So this is the target at which we should aim—but what "missiles" are we to use to hit it, and what "bow" is best carried to shoot them? Can we name these "weapons"? The first weapon in our armory will be to honor the gods of the underworld next after those of Olympus, the patron-gods of the state; the former should be allotted such secondary honors as the Even and the Left, while the latter should receive superior and contrasting honors like the Odd. That's the best way a man can hit his target, piety. After these gods, a sensible man will worship the spirits, and after them the heroes. Next in priority will be rites celebrated according to law at private shrines dedicated to ancestral gods. Last come honors paid to living parents. It is meet and right that a debtor should discharge his first and greatest obligation and pay the debt which comes before all others; he must consider that all he has and holds belongs to those who bore and bred him, and he is meant to use it in their service to the limit of his powers. He must serve them first with his property, then with hand and brain, and so give to the old people what they desperately need in view of their age: repayment of all that anxious care and attention they lavished on him, the longstanding "loan" they made him as a child. Throughout his life the son must be very careful to watch his tongue in addressing his parents, because there is a very heavy penalty for careless and ill-considered language; Retribution, messenger of Justice, is the appointed overseer of these things. If his parents get angry, he must submit to them, and whether they satisfy their anger in speech or in action, he must forgive them; after all, he must reflect, it's natural enough for a father to get very angry if he thinks he's being harmed by his own son. When the parents die, the most modest burial will be best, and the ceremonies should not be more elaborate than custom demands nor inferior to those with which his forefathers laid their own parents to rest. Year by year he should honor the departed by similar acts of devotion; he will honor them best by never failing to provide a perpetual memorial to them, spending on the dead a proper proportion of the money he happens to have available. If we do that, and live in accordance with these rules, each of us will get the reward we deserve from the gods and such beings as are superior to ourselves, and live in a spirit of cheerful confidence for most of the years of our life.’

The laws themselves will explain the duties we owe to children, relatives, friends and fellow citizens, as well as the service heaven demands we render to foreigners; they will tell us the way we have to behave in the company of each of these categories of people, if we want to lead a full and varied life without breaking the law. The laws’ method will be partly persuasion and partly (when they have to deal with characters that defy persuasion) compulsion and chastisement; and with the good wishes of the gods they will make our state happy and prosperous. There are a number of other topics which a legislator who thinks as I do simply must mention, but they are not easily expressed in the form of a law. So he should, I think, put up to himself and those for whom he is going to legislate an example of the way to deal with the remaining subjects, and when he has explained them all as well as he can, he should set about laying down his actual code of laws. So what’s the particular form in which such topics are expressed? It’s none too easy to confine one’s exposition of them to a single example, but let’s see if we can crystallize our ideas by looking at the matter rather like this.

Clinias:: Tell us what you have in mind.

Athenian Stranger:: I should like the citizens to be supremely easy to persuade along the paths of virtue; and clearly this is the effect the legislator will try to achieve throughout his legislation.

Clinias:: Of course.

Athenian Stranger:: It occurs to me that the sort of approach I've just explained, provided it is not made to totally uncouth souls, will help to make people more amenable and better disposed to listen to what the lawgiver recommends. So even if the address has no great effect but only makes his listener a trifle easier to handle, and so that much easier to teach, the legislator should be well pleased. People who are anxious to attain moral excellence with all possible speed are pretty thin on the ground and it isn't easy to find them: most only go to prove the wisdom of Hesiod's remark that the road to vice is smooth and can be traveled without sweating, because it is very short; but 'as the price of virtue', he says;

> The gods have imposed the sweat of our brows,
> And long and steep is the ascent that you have to make
> And rough, at first; but when you get to the top,
> Then the rugged road is easy to endure)

Clinias:: It sounds as if he hit off the situation very well.

Athenian Stranger:: He certainly did. But after this discussion I'm left with certain impressions which I want to put forward for your consideration.

Clinias:: Do so, then.

Athenian Stranger:: Let's have a word with the legislator and address him like this: 'Tell us, legislator, if you were to discover what we ought to do and say, surely you'd tell us?'

Clinias:: Of course.

Athenian Stranger:: 'Now didn't we hear you saying a few minutes ago that a legislator ought not to allow the poets to compose whatever happened to take their fancy? You see, they' never know when they were saying something in opposition to the law and harming the state.'

Clinias:: You're quite right.

Athenian Stranger:: Well, then, if we took the poets’ side and addressed the legislator, would this be a reasonable line to take?

Clinias:: What?

Athenian Stranger:: This: ‘There is an old proverb, legislator, which we poets never tire of telling and which all laymen confirm, to the effect that when a poet takes his seat on the tripod of the Muse, he cannot control his thoughts. He’s like a fountain where the water is allowed to gush forth unchecked. His art is the art of representation, and when he represents men with contrasting characters he is often obliged to contradict himself, and he doesn’t know which of the opposing speeches contains the truth. But for the legislator, this is impossible: he must not let his law say two different things on the same subject; his rule has to be “one topic, one doctrine.” For example, consider what you said just now. A funeral can be extravagant, inadequate or modest, and your choice falls on one of these three—the moderate—which you recommend with unqualified praise. But if I were composing a poem about a woman of great wealth and how she gave instructions for her own funeral, I should recommend the elaborate burial; a poor and frugal character, on the other hand, would be in favor of the cheap funeral, while the moderate man of moderate means would recommend accordingly. But you ought not to use the term “moderate” in the way you did just now: you must say what “moderate” means and how big or small it may be. If you don’t, you must realize that a remark such as you made still has some way to go before it can be a law.’

Clinias:: That’s quite right.

Athenian Stranger:: So should the legislator whom we appoint skip any such announcement at the beginning of his laws? Is he to say without ceremony what one should and should not do, and simply threaten the penalty for disobedience before passing on to the next law, without adding to his statutes a single word of encouragement or persuasion? It's just the same with doctors, you know, when we're ill: one follows one method of treatment, one another. Let's recall the two methods, so that we can make the same request of the legislator that a child might make of its doctor, to treat him as gently as possible. You want an example? Well, we usually speak, I think, of doctors and doctors' assistants, but of course we call the latter 'doctors' too.

Clinias:: Certainly.

Athenian Stranger:: And these 'doctors' (who may be free men or slaves) pick up the skill empirically, by watching and obeying their masters; they've no systematic knowledge such as the free doctors have learned for themselves and pass on to their pupils. You' agree in putting 'doctors' into these two categories?

Clinias:: Of course.

Athenian Stranger:: Now here's another thing you notice. A state's invalids include not only free men but slaves too, who are almost always treated by other slaves who either rush about on flying visits or wait to be consulted in their surgeries. This kind of doctor never gives any account of the particular illness of the individual slave, or is prepared to listen to one; he simply prescribes what he thinks best in the light of experience, as if he had precise knowledge, and with the self-confidence of a dictator. Then he dashes off on his way to the next slave-patient, and so takes off his master's shoulders some of the work of attending the sick. The visits of the free doctor, by contrast, are mostly concerned with treating the illnesses of free men; his method is to construct an empirical case-history by consulting the invalid and his friends; in this way he himself learns something from the sick and at the same time he gives the individual patient all the instruction he can. He gives no prescription until he has somehow gained the invalid’s consent; then, coaxing him into continued cooperation, he tries to complete his restoration to health. Which of the two methods do you think makes a doctor a better healer, or a trainer more efficient? Should they use the double method to achieve a single effect, or should the method too be single—the less satisfactory approach that makes the invalid more recalcitrant?

Clinias:: The double, sir, is much better, I think.

Athenian Stranger:: Would you like us to see how this double method and the single work out when applied to legislation?

Clinias:: Yes, I'd like that very much.

Athenian Stranger:: Well then, in heaven’s name, what will be the first law our legislator will establish? Surely the first subject he will turn to in his regulations will be the very first step that leads to the birth of children in the state.

Clinias:: Of course.

Athenian Stranger:: And this first step is, in all states, the union of two people in the partnership of marriage?

Clinias:: Naturally.

Athenian Stranger:: So the correct policy for every state will probably be to pass marriage laws first.

Clinias:: No doubt about it.

Athenian Stranger:: Now then, to start with, let’s have the simple form. It might run more or less like this:

A man must marry between the ages of thirty and thirty-five.

If he does not, he must be punished by fines and disgrace—and the fines and disgrace will then be specified. So much for the simple version of the marriage law; this will be the double version:

A man must marry between the ages of thirty and thirty-five, reflecting that there is a sense in which nature has not only somehow endowed the human race with a degree of immortality, but also planted in us all a longing to achieve it, which we express in every way we can. One expression of that longing is the desire for fame and the wish not to lie nameless in the grave. Thus mankind is by nature a companion of eternity, and is linked to it, and will be linked to it, forever. Mankind is immortal because it always leaves later generations behind to preserve its unity and identity for all time: it gets its share of immortality by means of procreation. It is never a holy thing voluntarily to deny oneself this prize, and he who neglects to take a wife and have children does precisely that. So if a man obeys the law he will be allowed to go his way without penalty, but if a man disobeys, and reaches the age of thirty-five without having married, he must pay a yearly fine (of a sum to be specified; that ought to stop him thinking that life as a bachelor is all cakes and ale), and be deprived too of all the honors which the younger people in the state pay to their elders on the appropriate occasions.

When one has heard this law and compared it with the other, one can judge whether in general laws should run to at least twice the length by combining persuasion and threats, or restrict themselves to threats alone and be of ‘single’ length only.

Megillus:: The Spartan instinct, sir, is always to prefer brevity. But if I were asked to sit in judgment on these statutes and say which of the two I'd like to see committed to writing in the state, I'd choose the longer one, and my choice would be precisely the same for every law drafted in the alternative versions of which you’ve given us specimens. Still, I suppose Clinias here too must approve this present legislation, seeing that it’s his state that is contemplating the adoption of laws modeled on it.

Clinias:: You’ve put it all very well, Megillus.

Athenian Stranger:: However, it would be pretty fatuous to spend our time talking about the length or brevity of the text: it’s high quality that we should value, I think, not extreme brevity or length. One of the kinds of laws we mentioned just now is twice as valuable for practical purposes as the other, but that’s not all: as we said a little while ago, the two types of doctors were an extremely apt parallel: A relevant point here is that no legislator ever seems to have noticed that in spite of its being open to them to use two methods in their legislation, compulsion and persuasion (subject to the limitations imposed by the uneducated masses), in fact they use only one. They never mix in persuasion with force when they brew their laws, but administer compulsion neat. As for myself, my dear sirs, I can see a third condition that should be observed in legislation—not that it ever is.

Clinias:: What condition do you mean?

Athenian Stranger:: Providentially enough, the point is brought out by the very conversation we’ve had today. Since we began to discuss legislation dawn has become noon and we’ve reached this splendid resting-place; we’ve talked about nothing but laws—and yet I suspect it was only a moment ago that we really got round to framing any, and that everything we’ve said up till now has been simply legislative preamble. Now why have I pointed this out? I want to make the point that the spoken word, and in general all compositions that involve using the voice, employ ‘preludes’ (a sort of limbering up, so to speak), and that these introductions are artistically designed to aid the coming performance. For instance, the ‘nomes’ of songs to the harp, and all other kinds of musical composition, are preceded by preludes of fantastic elaboration. But in the case of the real ‘nomes’, the kind we call ‘administrative’, nobody has ever so much as breathed the word ‘prelude’ or composed one and given it to the world; the assumption has been that such a thing would be repugnant to nature. But in my opinion the discussion we’ve had indicates that it is perfectly natural; and this means that the laws which seemed ‘double’ when I described them a moment ago are not really ‘double’ in the straightforward sense the term suggests: it’s just that they have two elements, ‘law’ and ‘preface to law’. The ‘dictatorial prescription’, which we compared to the prescriptions of the ‘slavish’ doctors, is the law pure and simple; and the part that comes before it, although in point of fact ‘persuasive’ (as Megillus put it), nevertheless has a function, analogous to that of a preamble in a speech. It seems obvious to me that the reason why the legislator gave that entire persuasive address was to make the person to whom he promulgated his law accept his orders—the law—in a more co-operative frame of mind and with a correspondingly greater readiness to learn. That’s why, as I see it, this element ought properly to be termed not the ‘text’ of the law, but the ‘preamble’. So after all that, what’s the next point I'd like made? It’s this: the legislator must see that both the permanent body of laws and the individual sub-divisions are always supplied with preambles. The gain will be just as great as it was in the case of the two specimens we gave just now.

Clinias:: As far as I’m concerned, I'd certainly instruct our lawgiver, master of his art though he is, to legislate in no way but that.

Athenian Stranger:: Yes, Clinias, I think you’re right to agree that all laws have their preambles and that the first task must be to preface the text of each part of the legal code with the appropriate introduction, because the announcement it introduces is important, and it matters a great deal whether it is clearly remembered or not. However, we should be wrong to demand that both ‘major’ laws and minor rules should invariably be headed by a preface. Not every song and speech, after all, needs this treatment. (They all have introductions in the nature of the case, but it’s not always appropriate to use them.) Still, the decision in all these cases must be left to the discretion of the orator or singer or legislator.

Clinias:: I think all this is very true. But let’s not waste any more time delaying, sir. Let’s get back to our theme and make a fresh start, if you are agreeable, on the subject you dealt with before, when you were not professing to compose in preamble form; let’s go over the topic again (‘second time lucky’, as they say in games), on the understanding that we are not talking at random, as we did just now, but composing a preface; and we should begin by agreeing that this is what we are doing. We’ve heard enough said just now about the worship of the gods and the services to be rendered to our ancestors; let’s try to deal with the subsequent topics until you think the entire preface has been adequately put together. Then you will go on to work through the actual laws.

Athenian Stranger:: So our feeling at the moment is that we have already produced an adequate preface about the gods and the powers below them, and about parents living and dead. Your instructions now, I think, are that I should, as it were, take the covers off the remainder of the preface.

Clinias:: Certainly.

Athenian Stranger:: Well now, the next thing is this: how far should a man concentrate or relax the efforts he devotes to looking after his soul, his body, and his property? This is a suitable topic, and it will be to the mutual advantage of both speaker and listeners to ponder it and so perfect their education as far as they can. So beyond a shadow of a doubt here's the next subject for explanation and the next topic to listen to.

Clinias:: You're quite right.

## Book 5.

Athenian Stranger:: Everyone who was listening to the address just now about the gods and our dearly beloved ancestors, should now pay attention.

Of all the things a man can call his own, the holiest (though the gods are holier still) is his soul, his most intimate possession. There are two elements that make up the whole of every man. One is stronger and superior, and acts as master; the other, which is weaker and inferior, is a slave; and so a man must always respect the master in him in preference to the slave. Thus when I say that next after the gods—our masters—and their attendant spirits, a man must honor his soul, my recommendation is correct. But hardly a man among us honors it in the right way: he only thinks he does. You see, nothing that is evil can confer honor, because to honor something is to confer marvelous benefits upon it; and anyone who reckons he is magnifying his soul by flattery or gifts or indulgence, so that he fails to make it better than it was before, may think he is honoring it, but in fact that is not what he is doing at all. For instance, a person has only to reach adolescence to imagine he is capable of deciding everything; he thinks he is honoring his soul if he praises it, and he is only too keen to tell it to do what it likes. But our present doctrine is that in doing this he is not honoring but harming it; whereas we are arguing that he should honor it next after the gods. Similarly when a man thinks that the responsibility for his every fault lies not in himself but in others, whom he blames for his most frequent and serious misfortunes, while exonerating himself, he doubtless supposes he is honoring his soul. But far from doing that, he is injuring it. Again, when he indulges his pleasures and disobeys the recommendations and advice of the legislator, he is not honoring his soul at all, but dishonoring it, by filling it with misery and repentance. Or, to take the opposite case, he may not brace himself to endure the recommended toils and fears and troubles and pains, and simply give up; but his surrender confers no honor on his soul, because all such conduct brings disgrace upon it. Nor does he do it any honor if he thinks that life is a good thing no matter what the cost. This too dishonors his soul, because he surrenders to its fancy that everything in the next world is an evil, whereas he should resist the thought and enlighten his soul by demonstrating that he does not really know whether our encounter with the gods in the next world may not be in fact the best thing that ever happens to us. And when a man values beauty above virtue, the disrespect he shows his soul is total and fundamental, because he would argue that the body is more to be honored than the soul—falsely, because nothing born on earth is to be honored more than what comes from heaven; and anyone who holds a different view of the soul does not realize how wonderful is this possession which he scorns. Again, a man who is seized by lust to obtain money by improper means and feels no disgust in the acquisition, will find that in the event he does his soul no honor by such gifts—far from it: he sells all that gives the soul its beauty and value for a few paltry pieces of gold; but all the gold upon the earth and all the gold beneath it does not compensate for lack of virtue.

To sum up, the legislator will list and classify certain things as disgraceful and wicked, and others as fine and good; everyone who is not prepared to make all efforts to refrain from the one kind of action and practice the other to the limits of his power must be unaware that in all such conduct he is treating his soul, the most holy possession he has, in the most disrespectful and abominable manner.

You see, practically no one takes into account the greatest ‘judgment’, as it is called, on wrongdoing. This is to grow to resemble men who are evil, and as the resemblance increases to shun good men and their wholesome conversation and to cut oneself off from them, while seeking to attach oneself to the other kind and keep their company. The inevitable result of consorting with such people is that what you do and have done to you is exactly what they naturally do and say to each other. Consequently, this condition is not really a ‘judgment’ at all, because justice and judgment are fine things: it is mere punishment, suffering that follows a wrongdoing. Now whether a man is made to suffer or not, he is equally wretched. In the former case he is not cured, in the latter he will ultimately be killed to ensure the safety of many others.

To put it in a nutshell, ‘honor’ is to cleave to what is superior, and, where practicable, to make as perfect as possible what is deficient. Nothing that nature gives a man is better adapted than his soul to enable him to avoid evil, keep on the track of the highest good, and when he has captured his quarry to live in intimacy with it for the rest of his life.

For those reasons the soul has been allotted the second rank of honor; third—as everyone will realize—comes the honor naturally due to the body. Here again it is necessary to examine the various reasons for honoring it, and see which are genuine and which are false; this is the job of a legislator, and I imagine he will list them as follows. The body that deserves to be honored is not the handsome one or the strong or the swift—nor yet the healthy (though a good many people would think it was); and it is certainly not the one with the opposite qualities to all these. He will say that the body which achieves a mean between all these extreme conditions is by far the soundest and best-balanced, because the one extreme makes the soul bold and boastful, while the other makes it abject and groveling.

The same is true of the possession of money and goods: its value is measured by the same yardstick. Both, in excess, produce enmity and feuds in private and public life, while a deficiency almost invariably leads to slavery.

No one should be keen on making money for the sake of leaving his children as rich as possible, because it will not do them any good, or the state either. A child's fortune will be most in harmony with his circumstances, and superior to all other fortunes, if it is modest enough not to attract flatterers, but sufficient to supply all his needs; to our ears such a fortune strikes exactly the right note, and it frees our life from anxiety. Extreme modesty, not gold, is the legacy we should leave our children. We imagine that the way to bequeath them modesty is to rebuke them when they are immodest, but that is not the result produced in the young when people admonish them nowadays and tell them that youth must show respect to everyone. The sensible legislator will prefer to instruct the older men to show respect to their juniors, and to take especial care not to let any young man see or hear them doing or saying anything disgraceful: where the old are shameless the young too will inevitably be disrespectful to a degree. The best way to educate the younger generation (as well as yourself) is not to rebuke them but patently to practice all your life what you preach to others.

If a man honors and respects his relatives, who all share the worship of the family gods and have the same blood in their veins, he can reasonably expect to have the gods of birth look with benevolence on the procreation of his own children. And as for friends and companions, you will find them easier to get on with in day-to-day contact if you make more of their services to you and esteem them more highly than they do, and put a smaller value on your own good turns to your friends and companions than they do themselves. In dealings with the state and one's fellow citizens, the best man by far is the one who, rather than win a prize at Olympia or in any of the other contests in war and peace, would prefer to beat everyone by his reputation for serving the laws of his country—a reputation for having devoted a lifetime of service to them with more distinction than anyone else.

As to foreigners, one should regard agreements made with them as particularly sacrosanct. Practically all offenses committed as between or against foreigners are quicker to attract the vengeance of God than offenses as between fellow citizens. The foreigner is not surrounded by friends and companions, and stirs the compassion of gods and men that much more, so that anyone who has the power to avenge him comes to his aid more readily; and that power is possessed preeminently by the guardian spirit or god, companion of Zeus the God of Strangers, who is concerned in each case. Anyone who takes the smallest thought for the future will therefore take great care to reach the end of his days without having committed during his life any crime involving foreigners. The most serious of offenses against foreigners or natives is always that affecting suppliants; the god the victim supplicated and invoked when he won his promise becomes a devoted protector of his suppliant, who can consequently rely on the promise he received never to suffer without vengeance being taken for the wrongs done to him.

We've now dealt fairly thoroughly with a man's treatment of his parents, himself and his own possessions, and his contacts with the state, his friends, his relatives, foreigners and countrymen. The next question for consideration is the sort of person he must be himself, if he is to acquit himself with distinction in his journey through life; it’s not the influence of law that we’re concerned with now, but the educational effect of praise and blame, which makes the individual easier to handle and better disposed towards the laws that are to be established.

Truth heads the list of all things good, for gods and men alike. Let anyone who intends to be happy and blessed be its partner from the start, so that he may live as much of his life as possible a man of truth. You can trust a man like that, but not the man who is fond of telling deliberate lies (and anyone who is happy to go on producing falsehoods in ignorance of the truth is an idiot). Neither state is anything to envy: no one has any friends if he is a fool or cannot be trusted. As the years go by he is recognized for what he is, and in the difficulties of old age as life draws to its close he isolates himself completely; he has just about as much contact with his surviving friends and children as with those who are already dead.

A man who commits no crime is to be honored; yet the man who will not even allow the wicked to do wrong deserves more than twice as much respect. The former has the value of a single individual, but the latter, who reveals the wickedness of another to the authorities, is worth a legion. Anyone who makes every effort to assist the authorities in checking crime should be declared to be the great and perfect citizen of his state, winner of the prize for virtue.

The same praise should also be given to self-control and good judgment, and to all the other virtues which the possessor can communicate to others as well as displaying in his own person. If a man does so communicate them, he should be honored as in the top rank; if he is prepared to communicate them but lacks the ability, he must be left in second place; but if he is a jealous fellow and churlishly wants to monopolize his virtues, then we should certainly censure him, but without holding the virtue itself in less esteem because of its possessor—on the contrary, we should do our best to acquire it. We want everyone to compete in the struggle for virtue in a generous spirit, because this is the way a man will be a credit to his state—by competing on his own account but refraining from fouling the chances of others by slander. The jealous man, who thinks he has to get the better of others by being rude about them, makes less effort himself to attain true virtue and discourages his competitors by unfair criticism. In this way he hinders the whole state's struggle to achieve virtue and diminishes its reputation, in so far as it depends on him.

Every man should combine in his character high spirit with the utmost gentleness, because there is only one way to get out of the reach of crimes committed by other people and which are dangerous or even impossible to cure: you have to overcome them by fighting in self-defense and rigidly punishing them, and no soul can do this without righteous indignation. On the other hand there are some criminals whose crimes are curable, and the first thing to realize here is that every unjust man is unjust against his will. No man on earth would ever deliberately embrace any of the supreme evils, least of all in the most precious parts of himself—and as we said, the truth is that the most precious part of every man is his soul. So no one will ever voluntarily accept the supreme evil into the most valuable part of himself and live with it throughout his life. No: in general, the unjust man deserves just as much pity as any other sufferer. And you may pity the criminal whose disease is curable, and restrain and abate your anger, instead of persisting in it with the spitefulness of a shrew;

but when you have to deal with complete and unmanageably vicious corruption, you must let your anger off its leash. That is why we say that it must be the good man's duty to be high-spirited or gentle as circumstances require.

The most serious vice innate in most men's souls is one for which everybody forgives himself and so never tries to find a way of escaping. You can get some idea of this vice from the saying that a man is in the nature of the case 'his own best friend', and that it is perfectly proper for him to have to play this role. It is truer to say that the cause of each and every crime we commit is precisely this excessive love of ourselves, a love which blinds us to the faults of the beloved and makes us bad judges of goodness and beauty and justice, because we believe we should honor our own ego rather than the truth. Anyone with aspirations to greatness must admire not himself and his own possessions, but acts of justice, not only when they are his own, but especially when they happen to be done by someone else. It's because of this same vice of selfishness that stupid people are always convinced of their own shrewdness, which is why we think we know everything when we are almost totally ignorant, so that thanks to not leaving to others what we don't know how to handle, we inevitably come to grief when we try to tackle it ourselves. For these reasons, then, every man must steer clear of extreme love of himself, and be loyal to his superior instead; and he mustn't be put off by shame at the thought of abandoning that 'best friend'.

There is a certain amount of more detailed but no less useful advice which one hears often enough, and one should go through it to oneself by way of reminder. (Where waters ebb, there is always a corresponding flow, and the act of remembering is the ‘flow’ of thought that has drained away.)

So then: excessive laughter and tears must be avoided, and this is the advice every man must give to every other; one should try to behave decently by suppressing all extremes of joy and grief, both when one’s guardian angel brings continued prosperity and when in times of trouble our guardians face difficulties as insurmountable as a high, sheer cliff. We should always have the hope that the blessings God sends will decrease the troubles that assail us, change our present circumstances for the better, and make us lucky enough to see our good fortune always increase. These are the hopes that every man should live by; he must remember all this advice and never spare any effort to recall it vividly to his own mind and that of others, at work and in leisure time alike.

Now then, from the point of view of religion, we’ve expounded pretty thoroughly what sort of activities we should pursue and what sort of person the individual ought to be; but we have not yet come down to the purely secular level. But we must, because we are addressing men, not gods.

Human nature involves, above all, pleasures, pains, and desires, and no mortal animal can help being hung up dangling in the air (so to speak) in total dependence on these powerful influences. That is why we should praise the noblest life—not only because it enjoys a fine and glorious reputation, but because (provided one is prepared to try it out instead of recoiling from it as a youth) it excels in providing what we all seek: a predominance of pleasure over pain throughout our lives. That this result is guaranteed, if it is tried out in the correct manner, will be perfectly obvious in an instant. But what is ‘correctness’ here? One should consider this point in the light of the following thesis. We have to ask if one condition suits our nature while another does not, and weigh the pleasant life against the painful with that question in mind. We want to have pleasure; we neither choose nor want pain; we prefer the neutral state if we are thereby relieved of pain, but not if it involves the loss of pleasure. We want less pain and more pleasure, we do not want less pleasure and more pain; but we should be hard put to it to be clear about our wishes when faced with a choice of two situations bringing pleasure and pain in the same proportions. These considerations of number or size or intensity or equality (or their opposites) which determine our wishes all influence or fail to influence us whenever we make a choice. This being inevitably the way of things, we want a life in which pleasures and pains come frequently and with great intensity, but with pleasure predominating; if pains predominate, we reject that life. Similarly when pleasures and pains are few and small and feeble: if pain outweighs pleasure, we do not want that life, but we do when pleasure outweighs pain. As for the ‘average’ life, which experiences only moderate pleasures or pains, we should observe the same point as before: we desire it when it offers us a preponderance of pleasure (which we enjoy), but not when it offers us a preponderance of pain (which we abhor). In that sense, then, we should think of all human lives as bound up in these two feelings, and we must think to what kind of life our natural wishes incline. But if we assert that we want anything outside this range, we are talking out of ignorance and inexperience of life as it is really lived.

So when a man has considered his likes and dislikes, what he would willingly do and what not, and adopted that as a working rule to guide him in choosing what he finds congenial and pleasant and supremely excellent, he will select a life that will enable him to live as happily as a man can. So what are these lives, and how many are there, from which he must make this choice? Let us list them: there is the life of self-control for one, the life of wisdom for another, and the life of courage too; and let us treat the healthy life as another. As opposed to these, we have another four lives—the licentious, the foolish, the cowardly and the diseased. Now anyone who knows what the life of self-control is like will describe it as gentle in all respects, with mild pleasures and pains, light appetites, and desires without frenzy; the licentious life he will say is violent through and through, involving extreme pleasures and pains, intense and raging appetites and desires of extreme fury. He will say that in the life of self-control the pleasures outweigh the pains, and in the licentious life the pains exceed the pleasures, in point of size, number and frequency. That is why we inevitably and naturally find the former life more pleasant, the latter more painful, and anyone who means to live a pleasant life no longer has the option of living licentiously. On the contrary, it is already clear (if our present position is correct) that if a man is licentious it must be without intending to be. It is either because of ignorance or lack of self-control, or both, that the world at large lives immoderately. The healthy and unhealthy life should be regarded in the same way: they both offer pleasures and pains, but the pleasures outweigh the pains in the healthy life, vice versa in the unhealthy. But what we want when we choose between lives is not a predominance of pain: we have chosen as the pleasanter life the one where pain is the weaker element. And so we can say that the self-controlled, the wise and the courageous, experience pleasure and pain with less intensity and on a smaller and more restricted scale than the profligate, the fool and the coward. The first category beats the second on the score of pleasure, while the second beats the other when it comes to pain. The courageous man does better than the coward, the wise man than the fool; so that, life for life, the former kind—the restrained, the courageous, the wise and the healthy—is pleasanter than the cowardly, the foolish, the licentious and the unhealthy.

To sum up, the life of physical fitness, and spiritual virtue too, is not only pleasanter than the life of depravity but superior in other ways as well: it makes for beauty, an upright posture, efficiency and a good reputation, so that if a man lives a life like that it will make his whole existence infinitely happier than his opposite number's.

At this point we may stop expounding the preface to the laws, it being now complete. After the 'prelude' should come the 'tune', or (more accurately) a sketch of a legal and political framework. Now it is impossible, when dealing with a web or any piece of weaving, to construct the warp and the woof from the same stuff: the warp must be of a superior type of material (strong and firm in character, while the woof is softer and suitably workable). In a rather similar way it will be reasonable to distinguish between the authorities who are going to rule in a city and the citizens whose education has been slighter and less testing. You may assume, you see, that there are two elements in a political system: the installation of individuals in office, and equipping those officials with a code of laws.

But before all that, here are some further points to notice. Anyone who takes charge of a herd of animals—a shepherd or cattle-man or breeder of horses or what have you—will never get down to looking after them without first performing the purge appropriate to his particular animal-community: that is, he will weed out the unhealthy and inferior stock and send it off to other herds, and keep only the thoroughbreds and the healthy animals to look after.

He knows that otherwise he would have to waste endless effort on sickly and refractory beasts, degenerate by nature and ruined by incompetent breeding, and that unless he purges the existing stock these faults will spread in any herd to the animals that are still physically and temperamentally healthy and unspoilt. This is not too serious in the case of the lower animals, and we need mention it only by way of illustration, but with human beings it is vitally important for the legislator to ascertain and explain the appropriate measures in each case, not only as regards a purge, but in general. To purge a whole state, for instance, several methods may be employed, some mild, some drastic; and if a legislator were a dictator too he'd be able to purge the state drastically, which is the best way. But if he has to establish a new society and new laws without dictatorial powers, and succeeds in administering no more than the mildest purge, he'll be well content even with this limited achievement. Like drastic medicines, the best purge is a painful business: it involves chastisement by a combination of 'judgment' and 'punishment', and takes the latter, ultimately, to the point of death or exile. That usually gets rid of the major criminals who are incurable and do the state enormous harm. The milder purge we could adopt is this. When there is a shortage of food, and the underprivileged show themselves ready to follow their leaders in an attack on the property of the privileged, they are to be regarded as a disease that has developed in the body politic, and in the friendliest possible way they should be (as it will tactfully be put) 'transferred to a colony'. Somehow or other everyone who legislates must do this in good time; but our position at the moment is even more unusual. There's no need for us here and now to have resort to a colony or arrange to make a selection of people by a purge. No: it's as though we have a number of streams from several sources, some from springs, some from mountain torrents, all flowing down to unite in one lake. We have to apply ourselves to seeing that the water, as it mingles, is as pure as possible, partly by draining some of it off, partly by diverting it into different channels. Even so, however you organize a society, it looks as if there will always be trouble and risk. True enough: but seeing that we are operating at the moment on a theoretical rather than a practical level, let's suppose we've recruited our citizens and their purity meets with our approval. After all, when we have screened the bad candidates over a suitable period and given them every chance to be converted, we can refuse their application to enter and become citizens of the state; but we should greet the good ones with all possible courtesy and kindness.

We should not forget that we are in the same fortunate position as the Heraclids when they founded their colony: we noticed how they avoided vicious and dangerous disputes about land and cancellations of debts and distribution of property. When an old-established state is forced to resort to legislation to deal with these problems, it finds that both leaving things as they are and reforming them are somehow equally impossible. The only policy left them is to mouth pious hopes and make a little cautious progress over a long period by advancing a step at a time. (This is the way it can be done. From time to time some of the reformers should be themselves great land-owners and have a large number of debtors; and they should be prepared, in a philanthropic spirit, to share their prosperity with those debtors who are in distress, partly by remitting debts and partly by making land available for distribution. Their policy will be a policy of moderation, dictated by the conviction that poverty is a matter of increased greed rather than diminished wealth. This belief is fundamental to the success of a state, and is the firm base on which you can later build whatever political structure is appropriate to such conditions as we have described. But when these first steps towards reform falter, subsequent constitutional action in any state will be hard going.) Now as we say, such difficulties do not affect us. Nevertheless, it's better to have explained how we could have escaped them if they had. Let's take it, then, that the explanation has been given: the way to escape those difficulties is through a sense of justice combined with an indifference to wealth; there is no other route, broad or narrow, by which we can avoid them. So let's adopt this principle as a prop for our state. Somehow or other we must ensure that the citizens' property does not lead to disputes among them—otherwise, if people have longstanding complaints against each other, anyone with any sense at all will not go any further with organizing them, if he can help it. But when, as with us now, God has given a group of people a new state to found, in which so far there is no mutual malice—well, to stir up ill-will towards each other because of the way they distribute the land and houses would be so criminally stupid that no man could bring himself to do it.

So what's the correct method of distribution? First, one has to determine what the total number of people ought to be, then agree on the question of the distribution of the citizens and decide the number and size of the subsections into which they ought to be divided; and the land and houses must be divided equally (so far as possible) among these subsections. A suitable total for the number of citizens cannot be fixed without considering the land and the neighboring states. The land must be extensive enough to support a given number of people in modest comfort, and not a foot more is needed. The inhabitants should be numerous enough to be able to defend themselves when the adjacent peoples attack them, and contribute at any rate some assistance to neighboring societies when they are wronged. When we have inspected the land and its neighbors, we'll determine these points and give reasons for the action we take; but for the moment let's just give an outline sketch and get on with finishing our legislation.

Let's assume we have the convenient number of five thousand and forty farmers and protectors of their holdings, and let the land with its houses be divided up into the same number of parts, so that a man and his holding always go together. Divide the total first by two, then by three: you'll see it can be divided by four and five and every number right up to ten. Everyone who legislates should have sufficient appreciation of arithmetic to know what number will be most use in every state, and why. So let's fix on the one which has the largest number of consecutive divisors. Of course, an infinite series of numbers would admit all possible divisions for all possible uses, but our 5040 admits no more than 59 (including 1 to without a break), which will have to suffice for purposes of war and every peacetime activity, all contracts and dealings, and for taxes and grants.

Anyone who is legally obliged to understand these mathematical facts should try to deepen his understanding of them even in his spare time. They really are just as I say, and the founder of a state needs to be told of them, for the following reasons. It doesn't matter whether he's founding a new state from scratch or reconstructing an old one that has gone to ruin: in either case, if he has any sense, he will never dream of altering whatever instructions may have been received from Delphi or Dodona or Ammon about the gods and temples that ought to be founded by the various groups in the state, and the gods or spirits after whom the temples should be named. (Alternatively, such details may have been suggested by stories told long ago of visions or divine inspiration, which somehow moved people to institute sacrifices with their rituals—either native or taken from Etruria or Cyprus or some other country—so that on the strength of these reports they consecrated statues, altars, temples and sites of oracles, providing each with its own sacred plot of land.) The legislator must not tamper with any of this in the slightest detail. He must allocate to each division of citizens a god or spirit or perhaps a hero, and when he divides up the territory he must give these priority by setting aside plots of land for them, endowed with all the appropriate resources. Thus when the different divisions gather together at fixed times they will have an opportunity of satisfying their various needs, and the citizens will recognize and greet each other at the sacrifices in mutual friendship—and there can be no greater benefit for a state than that the citizens should be well-known one to another. Where they have no insight into each other's characters and are kept in the dark about them, no one will ever enjoy the respect he merits or fill the office he deserves or obtain the legal verdict to which he is entitled. So every citizen of every state should make a particular effort to show that he is straightforward and genuine, not shifty, and try to avoid being hoodwinked by anyone who is.

The next move in this game of legislation is as unusual as going 'across the line' in checkers, and may well cause surprise at first hearing. But reflection and experience will soon show that the organization of a state is almost bound to fall short of the ideal. You may, perhaps—if you don't know what it means to be a legislator without dictatorial powers—refuse to countenance such a state; nevertheless the right procedure is to describe not only the ideal society but the second and third best too, and then leave it to anyone in charge of founding a community to make a choice between them. So let's follow this procedure now: let's describe the absolutely ideal society, then the second-best, then the third. On this occasion we ought to leave the choice to Clinias, but we should not forget anyone else who may at some time be faced with such a choice and wish to adopt for his own purposes customs of his native country which he finds valuable.

You'll find the ideal society and state, and the best code of laws, where the old saying 'friends' property is genuinely shared' is put into practice as widely as possible throughout the entire state. Now I don't know whether in fact this situation—a community of wives, children and all property—exists anywhere today, or will ever exist, but at any rate in such a state the notion of 'private property' will have been by hook or by crook completely eliminated from life. Everything possible will have been done to throw into a sort of common pool even what is by nature 'my own', like eyes and ears and hands, in the sense that to judge by appearances they all see and hear and act in concert. Everybody feels pleasure and pain at the same things, so that they all praise and blame with complete unanimity. To sum up, the laws in force impose the greatest possible unity on the state—and you'll never produce a better or truer criterion of an absolutely perfect law than that. It may be that gods or a number of the children of gods inhabit this kind of state: if so, the life they live there, observing these rules, is a happy one indeed. And so men need look no further for their ideal: they should keep this state in view and try to find the one that most nearly resembles it. This is what we've put our hand to, and if in some way it could be realized, it would come very near immortality and be second only to the ideal. Later, God willing, we'll describe a third best. But for the moment, what description should we give of this second-best state? What's the method by which a state like this is produced?

First of all, the citizens must make a distribution of land and houses; they must not farm in common, which is a practice too demanding for those born and bred and educated as ours are. But the distribution should be made with some such intention as this: each man who receives a portion of land should regard it as the common possession of the entire state. The land is his ancestral home and he must cherish it even more than children cherish their mother; furthermore, Earth is a goddess, and mistress of mortal men. (And the gods and spirits already established in the locality must be treated with the same respect.)

Additional measures must be taken to make sure that these arrangements are permanent: the number of hearths established by the initial distribution must always remain the same; it must neither increase nor decrease. The best way for every state to ensure this will be as follows: the recipient of a holding should always leave from among his children only one heir to inherit his establishment. This will be his favorite son, who will succeed him and give due worship to the ancestors (who rank as gods) of the family and state; these must be taken to include not only those who have already passed on, but also those who are still alive. As for the other children, in cases where there are more than one, the head of the family should marry off the females in accordance with the law we shall establish later; the males he must present for adoption to those citizens who have no children of their own—priority to be given to personal preferences as far as possible. But some people may have no preferences, or other families too may have surplus offspring, male or female; or, to take the opposite problem, they may have too few, because of the onset of sterility. All these cases will be investigated by the highest and most distinguished official we shall appoint. He will decide what is to be done with the surpluses or deficiencies, and will do his best to discover a device to keep the number of households down to 5040. There are many devices available: if too many children are being born, there are measures to check propagation; on the other hand, a high birthrate can be encouraged and stimulated by conferring marks of distinction or disgrace, and the young can be admonished by words of warning from their elders. This approach should do the trick, and if in the last resort we are in complete despair about variations from our number of 5040 households, and the mutual love of wives and husbands produces an excessive flow of citizens that drives us to distraction, we have that old expedient at hand, which we have often mentioned before. We can send out colonies of people that seem suitable, with mutual goodwill between the emigrants and their mother-city. By contrast, we may be flooded with a wave of diseases or by the ravages of wars, so that bereavements depress the citizens far below the appointed number. In this event we ought not to import citizens who have been brought up by a bastard education, if we can help it; but not even God, they say, can grapple with necessity.

So let’s pretend our thesis can talk and gives us this advice: ‘My dear sirs, don’t ignore the facts and be careless enough to undervalue the concepts of likeness, equality, identity and agreement, either in mathematics or in any other useful and productive science. In particular, your first task now is to keep to the said number as long as you live; you must respect the upper limits of the total property which you originally distributed as being reasonable, and not buy and sell your holdings among yourselves. The lot by which they were distributed is a god, so there will be no support for you there, or from the legislator either. And there are two warnings the law has for the disobedient: You may choose or decline to take part in the distribution, but if you do take part you must observe the following conditions: you must acknowledge that the land is sacred to all the gods; after priests and priestesses have offered prayers for that intention at the first, second and third sacrifices;

1. Anyone buying or selling his allotted land or house must suffer the penalty appropriate to the crime.

You are to inscribe the details on pieces of cypress wood and put these written records on permanent deposit in the temples. You must appoint the official who seems to have the sharpest eyes to superintend the observance of the rule, so that the various contraventions may be brought to your notice and the disobedient punished by the law and the god alike. What a boon this rule is to all the states that observe it, given the appropriate arrangements, no wicked men—as the saying goes—will ever understand; such knowledge is the fruit of experience and virtuous habits. Such arrangements, you see, involve very little by way of profit-making, and there is no need or opportunity for anyone to engage in any of the vulgar branches of commerce (you know how a gentleman's character is coarsened by manual labor, which is generally admitted to be degrading), and no one will presume to rake in money from occupations such as that.'

All these considerations suggest a further law that runs like this: no private person shall be allowed to possess any gold or silver, but only coinage for day-to-day dealings which one can hardly avoid having with workmen and all other indispensable people of that kind (we have to pay wages to slaves and foreigners who work for money). For these purposes, we agree, they must possess coinage, legal tender among themselves, but valueless to the rest of mankind. The common Greek coinage is to be used for expeditions and visits to the outside world, such as when a man has to be sent abroad as an ambassador or to convey some official message; to meet these occasions the state must always have a supply of Greek coinage. If a private individual should ever need to go abroad, he should first obtain leave of the authorities, and if he returns home with some surplus foreign money in his pocket he must deposit it with the state and take local money to the same value in exchange.

If he is found keeping it for himself, it must be confiscated by the state.

If anyone who knows of its concealment fails to report it, he must be liable to a curse and a reproach (and so must the importer), and in addition be fined in a sum not less than that of the foreign currency brought in.

When a man marries or gives in marriage, no dowry whatsoever must be given or received. Money must not be deposited with anybody whom one does not trust. There must be no lending at interest, because it will be quite in order for the borrower to refuse absolutely to return both interest and principal.

The best way to appreciate that these are the best policies for a state to follow is to examine them in the light of the fundamental aim. Now we maintain that the aim of a statesman who knows what he's about is not in fact the one which most people say the good legislator should have. They' say that if he knows what he's doing his laws should make the state as huge and as rich as possible; he should give the citizens gold mines and silver mines, and enable them to control as many people as possible by land and sea. And they' add, too, that to be a satisfactory legislator he must want to see the state as good and as happy as possible. But some of these demands are practical politics, and some are not, and the legislator will confine himself to what can be done, without bothering his head with wishful thinking about impossibilities. I mean, it's pretty well inevitable that happiness and virtue should come hand in hand (and this is the situation the legislator will want to see), but virtue and great wealth are quite incompatible, at any rate great wealth as generally understood (most people would think of the extreme case of a millionaire, who will of course be a rogue into the bargain). In view of all this, I'll never concede to them that the rich man can become really happy without being virtuous as well: to be extremely virtuous and exceptionally rich at the same time is absolutely out of the question. 'Why?' it may be asked. 'Because,' we shall reply, 'the profit from using just and unjust methods is more than twice as much as that from just methods alone, and a man who refuses to spend his money either worthily or shamefully spends only half the sum laid out by worthwhile people who are prepared to spend on worthy purposes too. So anyone who follows the opposite policy will never become richer than the man who gets twice as much profit and makes half the expenditures. The former is a good man; the latter is not actually a rogue so long as he uses his money sparingly, but on some occasions he is an absolute villain; thus, as we have said, he is never good. Ill-gotten and well-gotten gains plus expenditure that is neither just nor unjust, when a man is also sparing with his money, add up to wealth; the absolute rogue, who is generally a spendthrift, is quite impoverished. The man who spends his money for honest ends and uses only just methods to come by it, will not easily become particularly rich or particularly poor. Our thesis is therefore correct: the very rich are not good; and if they are not good, they are not happy either.'

The whole point of our legislation was to allow the citizens to live supremely happy lives in the greatest possible mutual friendship. However, they will never be friends if injuries and lawsuits arise among them on a grand scale, but only if they are trivial and rare. That is why we maintain that neither gold nor silver should exist in the state, and there should not be much money made out of menial trades and charging interest, nor from prostitutes; the citizens' wealth should be limited to the products of farming, and even here a man should not be able to make so much that he can't help forgetting the real reason why money was invented (I mean for the care of the soul and body, which without physical and cultural education respectively will never develop into anything worth mentioning). That's what has made us say more than once that the pursuit of money should come last in the scale of value. Every man directs his efforts to three things in all, and if his efforts are directed with a correct sense of priorities he will give money the third and lowest place, and his soul the highest, with his body coming somewhere between the two. In particular, if this scale of values prevails in the society we're now describing, then it has been equipped with a good code of laws. But if any of the laws subsequently passed is found giving pride of place to health in the state rather than the virtue of self-control, or to wealth rather than health and habits of restraint, then quite obviously its priorities will be wrong. So the legislator must repeatedly try to get this sort of thing straight in his own mind by asking 'What do I want to achieve?' and 'Am I achieving it, or am I off target?' If he does that, perhaps he'll complete his legislation by his own efforts and leave nothing to be done by others. There’s no other way he could possibly succeed.

So when a man has drawn his lot, he must take over his holding on the terms stated. It would have been an advantage if no one entering the colony had had any more property than anyone else; but that’s out of the question, and some people will arrive with relatively large fortunes, others with relatively little. So for a number of reasons, and especially because the state offers equality of opportunity, there must be graded property-classes, to ensure that offices and taxes and grants may be arranged on the basis of what a man is worth. It’s not only his personal virtues or his ancestors’ that should be considered, or his physical strength or good looks: what he’s made of his wealth or poverty should also be taken into account. In short, the citizens must be esteemed and given office, so far as possible, on exactly equal terms of ‘proportional inequality’, so as to avoid ill-feeling. For these reasons four permanent property-classes must be established, graded according to wealth: the ‘first’, ‘second’, ‘third’, and ‘fourth’ classes, or whatever other names are employed. A man will either keep his original classification, or, when he has grown richer or poorer than he was before, transfer to the appropriate class.

In view of all this, the next law I'd pass would be along the following lines. (We maintain that if a state is to avoid the greatest plague of all— I mean civil war, though civil disintegration would be a better term— extreme poverty and wealth must not be allowed to arise in any section of the citizen-body, because both lead to both these disasters. That is why the legislator must now announce the acceptable limits of wealth and poverty.) The lower limit of poverty must be the value of the holding (which is to be permanent: no official nor anyone else who has ambitions to be thought virtuous will ever overlook the diminution of any man's holding). The legislator will use the holding as his unit of measure and allow a man to possess twice, thrice, and up to four times its value. If anyone acquires more than this, by finding treasure-trove or by gift or by a good stroke of business or some other similar lucky chance which presents him with more than he's allowed, he should hand over the surplus to the state and its patron deities, thereby escaping punishment and getting a good name for himself.

If a man breaks this law, anyone who wishes may lay information and be rewarded with half the amount involved, the other half being given to the gods; and besides this the guilty person must pay a fine equivalent to the surplus out of his own pocket.

The total property of each citizen over and above his holding of land should be recorded in a public register kept in the custody of officials legally appointed for that duty, so that lawsuits on all subjects—in so far as they affect property—may go smoothly because the facts are clear.

After this, the legislator's first job is to locate the city as precisely as possible in the center of the country, provided that the site he chooses is a convenient one for a city in all other respects too (these are details which can be understood and specified easily enough). Next he must divide the country into twelve sections. But first he ought to reserve a sacred area for Hestia, Zeus and Athena (calling it the 'acropolis'), and enclose its boundaries; he will then divide the city itself and the whole country into twelve sections by lines radiating from this central point. The twelve sections should be made equal in the sense that a section should be smaller if the soil is good, bigger if it is poor. The legislator must then mark out five thousand and forty holdings, and further divide each into two parts; he should then make an individual holding consist of two such parts coupled so that each has a partner near the center or the boundary of the state as the case may be. (A part near the city and a part next to the boundary should form one holding, the second nearest the city with the second from the boundary should form another, and so on.) He must apply to the two parts the rule I've just mentioned about the relative quality of the soil, making them equal by varying their size. He should also divide the population into twelve sections, and arrange to distribute among them as equally as possible all wealth over and above the actual holdings (a comprehensive list will be compiled). Finally, they must allocate the sections as twelve 'holdings' for the twelve gods, consecrate each section to the particular god which it has drawn by lot, name it after him, and call it a 'tribe'. Again, they must divide the city into twelve sections in the same way as they divided the rest of the country; and each man should be allotted two houses, one near the center of the state, one near the boundary. That will finish off the job of getting the state founded.

But there's a lesson here that we must take to heart. This blueprint as a whole is never likely to find such favorable circumstances that every single detail will turn out precisely according to plan. It presupposes men who won't turn up their noses at living in such a community, and who will tolerate a moderate and fixed level of wealth throughout their lives, and the supervision of the size of each individual's family as we've suggested. Will people really put up with being deprived of gold and other things which, for reasons we went into just now, the legislator is obviously going to add to his list of forbidden articles? What about this description of a city and countryside with houses at the center and in all directions round about? He might have been relating a dream, or modeling a state and its citizens out of wax. The ideal impresses well enough, but the legislator must reconsider it as follows (this being, then, a reprise of his address to us). ‘My friends, in these talks we’re having, don’t think it has escaped me either that the point of view you are urging has some truth in it. But I believe that in every project for future action, when you are displaying the ideal plan that ought to be put into effect, the most satisfactory procedure is to spare no detail of absolute truth and beauty. But if you find that one of these details is impossible in practice, you ought to put it on one side and not attempt it: you should see which of the remaining alternatives comes closest to it and is most nearly akin to your policy, and arrange to have that done instead. But you must let the legislator finish describing what he really wants to do, and only then join him in considering which of his proposals for legislation are feasible, and which are too difficult. You see, even the maker of the most trivial object must make it internally consistent if he is going to get any sort of reputation.’

Now that we’ve decided to divide the citizens into twelve sections, we should try to realize (after all, it’s clear enough) the enormous number of divisors the subdivisions of each section have, and reflect how these in turn can be further subdivided and subdivided again until you get to 5040. This is the mathematical framework which will yield you your brotherhoods, local administrative units, villages, your military companies and marching-columns, as well as units of coinage, liquid and dry measures, and weights. The law must regulate all these details so that the proper proportions and correspondences are observed. And not only that: the legislator should not be afraid of appearing to give undue attention to detail. He must be bold enough to give instructions that the citizens are not to be allowed to possess any equipment that is not of standard size. He'll assume it's a general rule that numerical division in all its variety can be usefully applied to every field of conduct. It may be limited to the complexities of arithmetic itself, or extended to the subtleties of plane and solid geometry; it's also relevant to sound, and to motion (straight up or down or revolution in a circle). The legislator should take all this into account and instruct all his citizens to do their best never to operate outside that framework. For domestic and public purposes, and all professional skills, no single branch of a child's education has such an enormous range of applications as mathematics; but its greatest advantage is that it wakes up the sleepy ignoramus and makes him quick to understand, retentive and sharp witted; and thanks to this miraculous science he does better than his natural abilities would have allowed. These subjects will form a splendidly appropriate curriculum, if by further laws and customs you can expel the spirit of pettiness and greed from the souls of those who are to master them and profit from them. But if you fail, you'll find that without noticing it you've produced a 'twister' instead of a man of learning—just what can be seen to have happened in the case of the Egyptians and Phoenicians, and many other races whose approach to wealth and life in general shows a narrow-minded outlook. (It may have been an incompetent legislator who was to blame for this state of affairs, or some stroke of bad luck, or even some natural influences that had the same effect.)

And that's another point about the choice of sites, Clinias and Megillus, that we mustn't forget. Some localities are more likely than others to produce comparatively good (or bad) characters, and we must take care to lay down laws that do not fly in the face of such influences. Some sites are suitable or unsuitable because of varying winds or periods of heat, others because of the quality of the water; in some cases the very food grown in the soil can nourish or poison not only the body but the soul as well. But best of all will be the places where the breeze of heaven blows, where spirits hold possession of the land and greet with favor (or disfavor) the various people who come and settle there. The sensible legislator will ponder these influences as carefully as a man can, and then try to lay down laws that will take account of them. This is what you must do too, Clinias. You're going to settle a territory, so here's the first thing you have to attend to.

Clinias:: Well said, sir. I must follow your advice.

## Book 6.

Athenian Stranger:: Well then, now that I've got all that off my chest, your next job will be to appoint officials for the state.

Clinias:: It certainly will.

Athenian Stranger:: There are two stages involved in organizing a society. First you establish official positions and appoint people to hold them: you decide how many posts there should be and how they ought to be filled. Then each office has to be given its particular laws: you have to decide which laws will be appropriate in each case, and the number and type required. But before we make our choice, let's pause a moment and explain a point that will affect it.

Clinias:: And what's that?

Athenian Stranger:: This. It's obvious to anyone that legislation is a tremendous task, and that when you have a well constructed state with a well-framed legal code, to put incompetent officials in charge of administering the code is a waste of good laws, and the whole business degenerates into farce. And not only that: the state will find that its laws are doing it damage and injury on a gigantic scale.

Clinias:: Naturally.

Athenian Stranger:: Now let's notice the relevance of this to your present society and state. You appreciate that if your candidates are to deserve promotion to positions of power, their characters and family background must have been adequately tested, right from their childhood until the moment of their election. Furthermore, the intending electors ought to have been well brought up in law-abiding habits, so as to be able to approve or disapprove of the candidates for the right reasons and elect or reject them according to their deserts. But in the present case we are dealing with people who have only just come together and don't know each other—and they're uneducated too. So how could they ever elect their officials without going wrong?

Clinias:: It's pretty well impossible.

Athenian Stranger:: But look here, 'once in the race, you've no excuses', as the saying is. That's just our predicament now: you and your nine colleagues, you tell us, have given an undertaking to the people of Crete to turn your energies to founding this state; I, for my part, have promised to join in with this piece of fiction I'm now relating. Seeing that I've got on to telling a story, I'd be most reluctant to leave it without a head: it would look a grim sight wandering about like that!

Clinias:: And a fine story it's been, sir.

Athenian Stranger:: Surely, but I also intend to give you actual help along those lines, so far as I can.

Clinias:: Then let's carry out our program, certainly.

Athenian Stranger:: Yes, we shall, God willing, if we can keep old age at bay for long enough.

Clinias:: 'God willing' can probably be taken for granted.

Athenian Stranger:: Of course. So let's be guided by him and notice something else.

Clinias:: What?

Athenian Stranger:: That we'll find we've been pretty bold and foolhardy in launching this state of ours.

Clinias:: What's made you say that? What have you in mind?

Athenian Stranger:: I'm thinking of the cheerful way we're legislating for people who'll be new to the laws we've passed, without bothering how they'll ever be brought to accept them. It's obvious to us all, Clinias, even if we're not very clever, that at the start they won’t readily accept any at all. Ideally, we'd remain on the spot long enough to see people getting a taste of the laws while they’re still children; then when they’ve grown up and have become thoroughly accustomed to them, they can take part in the elections to all the offices of the state. If we can manage that (assuming acceptable ways and means are available), then I reckon that the state would have a firm guarantee of survival when its ‘schooldays’ are over.

Clinias:: That’s reasonable enough.

Athenian Stranger:: So let’s see if we can find ways and means. Will this do? I maintain, Clinias, that of all the Cretans, the citizens of Cnossus have a special duty. They must not be content with simply doing all that religion demands for the mere soil of your settlement: they must also take scrupulous care to see that the first officials are appointed by the best and safest methods. And it’s absolutely vital to give your best attention to choosing, first of all, Guardians of the Laws. (Less trouble need be taken over the other officials.)

Clinias:: So can we find a reasonable way of going about it?

Athenian Stranger:: Yes. ‘Sons of Crete’ (I say), ‘as the Cnossians take precedence over your many cities, they should collaborate with the newly arrived settlers in choosing a total of thirty-seven men from the two sides, nineteen from the settlers, the rest from Cnossus itself’—the gift of the Cnossians to this state of yours, Clinias. They should include you in the eighteen, and make you yourself a citizen of the colony, with your consent (failing which, you’ll be gently compelled).

Clinias:: But why on earth, sir, haven’t you, and Megillus too, enrolled as joint administrators?

Athenian Stranger:: Ah, Clinias, Athens is a high and mighty state, and so is Sparta; besides, they're both a long way off. But it's just the right thing for you and the other founders, and what I said a moment ago of you applies equally to them. So let's take it we've explained how to deal with the present situation. But as time goes on and the constitution has become established, the election of these officials should be held more or less as follows. Everyone who serves in the cavalry or infantry, and has fought in the field while young and strong enough to do so, should participate.

They must proceed to election in the temple which the state considers to be the most venerable; each elector should place on the altar of the god a small tablet on which he has written the name of the person he wishes to vote for, adding the candidate's father, tribe, and deme; and he should append his own name with the same details. For at least thirty days anyone who wishes should be allowed to remove any tablet bearing a name he finds objectionable and put it on display in the market-place. Then the officials must exhibit to the state at large the three hundred tablets that head the list; on the basis of this list the voters must then again record their nominations, and the hundred names that lead this second time must be publicly displayed as before. On the third occasion anyone who wishes should walk between the victims of a sacrifice and record which of these three hundred he chooses. The thirty-seven who receive most votes must then submit to scrutiny and be declared elected.

Well then, Clinias and Megillus, who will make all these arrangements about these officials in our state, and their scrutiny? We can surely appreciate that as the state apparatus is as yet only rudimentary such people have to be on hand; but they could hardly be available before any officials at all have been appointed. Even so, we must have them, and these two hundred persons mustn't be feeble specimens, either, but men of the highest caliber. As the proverb says, 'getting started is half the battle', and a good beginning we all applaud. But in my view a good start is more than 'half', and no one has yet given it the praise it deserves.

Clinias:: That's quite true.

Athenian Stranger:: So as we acknowledge the value of a good beginning, let's not skip discussion of it in this case. Let's get it quite clear in our own minds how we can tackle it. I've no particular points to make, except one, which is vitally relevant to the situation.

Clinias:: And what's that?

Athenian Stranger:: Apart from the city which is founding it, this state we are about to settle has, so to speak, no father or mother. I'm quite aware, of course, that many a foundation has quarreled repeatedly with its founder-state, and will again, but in the present circumstances we have, as it were, the merest infant on our hands. I mean, any child is going to fall out with his parents sooner or later, but while he's young and can't help himself, he loves them and they love him; he's forever scampering back to his family and finding his only allies are his relatives. That's exactly the way I maintain our young state regards the citizens of Cnossus and how they regard it, in virtue of their role as its guardians. I therefore repeat what I said just now—there's no harm in saying a good thing twice—that the citizen of Cnossus should choose colleagues from among the newly arrived colonists and take charge of all these arrangements; they should choose at least a hundred of them, the oldest and most virtuous they can find; and they themselves should contribute another hundred. They should enter the new state and collaborate in seeing that the officials are designated according to law, and after designation, scrutinized. When they've done all that, the citizens of Cnossus should resume living in Cnossus and leave the infant state to work out its own salvation and flourish unaided.

The duties for which the members of the body of thirty-seven should be appointed are as follows (not only here and now, but permanently): first, they are to act as Guardians of the Laws; second, they are to take charge of the documents in which each person has made his return to the officials of his total property. (A man may leave four hundred drachmas undeclared if he belongs to the highest property-class, three hundred if to the second, two hundred if to the third, and one hundred if he belongs to the fourth.)

If anyone is found to possess anything in addition to the registered sum, the entire surplus should be confiscated by the state, and on top of that anyone who wants to should bring a charge against him—and an ugly, discreditable and disgraceful charge it will be, if the man is convicted of being enticed by the prospect of gain to hold the laws in contempt. The accuser, who may be anyone, should accordingly enter a charge of 'money-grubbing' against him, and prosecute in the court of the Law-Guardians themselves.

If the defendant is found guilty, he must be excluded from the common resources of the state, and when a grant of some kind is made, he must go without and be limited to his holding; and for as long as he lives his conviction should be recorded for public inspection by all and sundry.

A Law-Guardian must not hold office for longer than twenty years; he should be not less than fifty years old on appointment, and if he is appointed at sixty, his maximum tenure must be ten years, and so on. And if a man survives beyond seventy, he should no longer expect to hold such an important post as membership of this board.

That gives us three duties to assign to the Guardians of the Laws. As the legal code is extended, every new law will give this body of men additional duties to perform, over and above the ones we've mentioned. Now for the election of the other officials, one by one.

Next, then, we have to elect Generals and their aides-de-camp, so to speak: Cavalry-Commanders, Tribe-Leaders, and controllers of the tribal companies of infantry ('Company-Commanders' will be a good name for these officers, which is in fact what most people do call them).

Generals. The Guardians of the Laws must compile a preliminary list of candidates, restricted to citizens, and the Generals should then be elected from this list by all those who have served in the armed forces at the proper age, or are serving at the time. If anybody thinks that someone not on the preliminary list is better qualified than someone who is, he must name his proposed substitute, and say whom he should replace; then, having sworn his oath, he must propose the alternative candidate.

Whichever of the two the voting favors should be a candidate in the election. The three candidates who receive most votes should become Generals and take over the organization of military affairs, after being scrutinized in the same way as the Guardians of the Laws.

Company-Commanders. The elected Generals should make their own preliminary list of twelve Company-Commanders, one for each tribe; the counter-nominations, the election and the scrutiny must be conducted as they were for the Generals themselves.

The Elections. For the moment, before a council and executive committees have been chosen, your assembly must be convened by the Guardians of the Laws in the holiest and most capacious place they can find; and they must seat the heavy-armed soldiers, the cavalry, and finally all other ranks, in separate blocks. The Generals and Cavalry-Commanders should be elected by the whole assembly, the Company-Commanders by the shield-bearers, and their Tribe-Leaders by the entire cavalry; as for light-armed troops, archers, or whatever other ranks there may be, the appointment of their leaders should be left to the Generals' discretion.

Cavalry-Commanders. That will leave us with the appointment of the Cavalry-Commanders. The preliminary list must be drawn up by the same persons as drew up the list of Generals, and the election and counterproposals should be conducted in the same way; the cavalry must hold the election watched by the infantry, and the two candidates with the most votes must become leaders of the entire mounted force.

Disputed Votes. Votes may be disputed no more than twice. If anyone contests the vote on the third occasion, the tellers must decide the issue by voting among themselves.

The council should have thirty dozen members, as three hundred sixty will be a convenient number for subdivision. The total will be divided into four sections of ninety, this being the number of members to be elected from each property-class. The first step in the election is to be compulsory for all: everyone must take part in the nomination of members of the highest class, and anybody who neglects his duty must pay the approved fine. When the nominations are completed, the names must be noted down.

On the next day, using the same procedure as before, they will nominate members of the second class.

On the third day, nominating for Councilors from the third class will be optional, except for voters of the first three classes: voters of the fourth and lowest class will be exempted from the fine if they do not care to make a nomination.

The fourth day will see the nomination for representatives of the fourth and lowest class; everyone must take part, but voters of the third and fourth class who do not wish to nominate should not be fined—unlike voters of the second and first classes, who must be fined treble and quadruple the standard fine respectively if they do not make a nomination.

On the fifth day the officials must display to the entire citizen body the names duly noted down, and on the basis of these lists every man must cast his vote or pay the standard fine. One hundred eighty must be selected from each property-class, and half of them finally chosen by lot. These, after scrutiny, are to be Councilors for the year.

A system of selection like that will effect a compromise between a monarchical and a democratic constitution, which is precisely the sort of compromise a constitution should always be. You see, even if you proclaim that a master and his slave shall have equal status, friendship between them is inherently impossible. The same applies to the relations between an honest man and a scoundrel. Indiscriminate equality for all amounts to inequality, and both fill a state with quarrels between its citizens. How correct the old saying is, that ‘equality leads to friendship’! It’s right enough and it rings true, but what kind of equality has this potential is a problem which produces ripe confusion. This is because we use the same term for two concepts of ‘equality’, which in most respects are virtual opposites. The first sort of equality (of measures, weights and numbers) is within the competence of any state and any legislator: that is, one can simply distribute equal awards by lot. But the most genuine equality, and the best, is not so obvious. It needs the wisdom and judgment of Zeus, and only in a limited number of ways does it help the human race; but when states or even individuals do find it profitable, they find it very profitable indeed. The general method I mean is to grant much to the great and less to the less great, adjusting what you give to take account of the real nature of each—specifically, to confer high recognition on great virtue, but when you come to the poorly educated in this respect, to treat them as they deserve. We maintain, in fact, that statesmanship consists of essentially this—strict justice. This is what we should be aiming at now, Clinias: this is the kind of ‘equality’ we should concentrate on as we bring our state into the world. The founder of any other state should also concentrate on this same goal when he frames his laws, and take no notice of a bunch of dictators, or a single one, or even the power of the people. He must always make justice his aim, and this is precisely as we’ve described it: it consists of granting the ‘equality’ that unequals deserve to get. Yet on occasion a state as a whole (unless it is prepared to put up with a degree of friction in one part or another) will be obliged to apply these concepts in a rather rough and ready way, because complaisance and toleration, which always wreck complete precision, are the enemies of strict justice. You can now see why it was necessary to avoid the anger of the man in the street by giving him an equal chance in the lot (though even then we prayed to the gods of good luck to make the lot give the right decisions). So though force of circumstances compels us to employ both sorts of equality, we should employ the second, which demands good luck to prove successful, as little as possible.

So much, my friends, for the justification of our policy, which is the policy a state must follow if it means to survive. The state is just like a ship at sea, which always needs someone to keep watch night and day: as it is steered through the waves of international affairs, it lives in constant peril of being captured by all sorts of conspiracies. Hence the need of an unbroken chain of authority right through the day and into the night and then on into the next day, guard relieving guard in endless succession. But a large body will never be able to act quickly enough, and most of the time we have to leave the majority of council members free to live their private lives and administer their own establishments. We must therefore divide the members of the council into twelve groups, one for each month, and have them go on guard by turns. They must be available promptly, whenever anyone from abroad or from within the state itself approaches them wishing to give information or inquire about those topics on which a state must arrange to answer the questions of other states and receive replies to its own. They must be particularly concerned with the constant revolutions of all kinds that are apt to occur in a state; if possible, they must prevent them, but failing that they must see that the state gets to know as soon as possible, so that the outbreak can be cured. That is why this executive committee has to be in charge of convening and dissolving not only statutory meetings but also those held in some national emergency. The authority that should see to all this—a twelfth of the council— will of course be off duty for eleven-twelfths of the year: it’s the section of the council on duty that must co-operate with other officials and keep a watchful eye on the state.

That will be a reasonable arrangement for the city, but what about the rest of the country? How should it be superintended and organized? Well now, the entire city and the entire country have been divided into twelve sections; there are the roads of the central city; there are houses, public buildings, harbors, the market, and fountains; there are, above all, sacred enclosures and similar places. Shouldn’t all these things have officials appointed to look after them?

Clinias:: Naturally.

Athenian Stranger:: We can say, then, that the temples should have Attendants and Priests and Priestesses. Next, there are the duties of looking after streets and public buildings, ensuring that they reach the proper standards, stopping men and animals doing them damage, and seeing that conditions both in the suburbs and the city itself are in keeping with a civilized life. All these duties require three types of officials to be chosen: the ‘City-Wardens’ (as they will be called) will be responsible for the points we’ve just mentioned, and the ‘Market-Wardens’ for the correct conduct of the market.

Priests or Priestesses of temples who have hereditary priesthoods should not be turned out of office. But if (as is quite likely in a new foundation) few or no temples are thus provided for, the deficiencies must be made good by appointing Priests and Priestesses to be Attendants in the temples of the gods. In all these cases the appointments should be made partly by election and partly by lot, so that a mixture of democratic and non-democratic methods in every rural and urban division may lead to the greatest possible feeling of solidarity. In electing Priests, one should leave it to the god himself to express his wishes, and allow him to guide the luck of the draw. But the man whom the lot favors must be screened to see that he is healthy and legitimate, reared in a family whose moral standards could hardly be higher, and that he himself and his father and mother have lived unpolluted by homicide and all such offenses against heaven.

They must get laws on all religious matters from Delphi, and appoint Expounders of them; that will provide them with a code to be obeyed. Each priesthood must be held for a year and no longer, and anyone who intends to celebrate our rites in due conformity with religious law should not be less than sixty years old. The same rules should apply to Priestesses too.

There should be three Expounders. The tribes will be arranged in three sets of four, and every man should nominate four persons, each from the same set as himself; the three candidates who receive most votes should be scrutinized, and nine names should then be sent to Delphi for the oracle to select one from each group of three. Their scrutiny, and the requirement as to age, should be the same as in the case of the Priests; these three must hold office for life, and when one dies the group of four tribes in which the vacancy occurs should make nominations for a replacement.

The highest property-class must elect Treasurers to control the sacred funds of each temple, and to look after the temple-enclosures and their produce and revenues; three should be chosen to take charge of the largest temples, two for the less large, and one for the very small. The election and scrutiny of these officials should be conducted as it was for the Generals.

So much by way of provision for the holy places.

As far as practicable, nothing should be left unguarded. The protection of the city is to be the business of the Generals, Company-Commanders, Cavalry-Commanders, Tribe-Leaders and members of the Executive—and the City-Wardens and Market-Wardens too, once we have them elected and satisfactorily installed in office. The whole of the rest of the country should be protected as follows. Our entire territory has been divided as exactly as possible into twelve equal sections, and every year one tribe must be allocated by lot to each of them. Every tribe must provide five 'Country-Wardens' or 'Guards-in-Chief', each of whom will be allowed to choose from his own tribe twelve young men who must be not younger than twenty-five nor older than thirty. The effect of the lot will be that each group will take a different section every month, so that they all get experience and knowledge of the entire country. The guards and their officers in charge are to hold their respective commissions for two years. Starting from the original sections (i.e., districts of the country) assigned by lot, the Guards-in-Chief are to take their groups round in a circle, transferring them each month to the next district on the right ('on the right' should be understood to mean 'to the East'). But it's not enough that as many of the guards as possible should get experience of the country at only one season of the year: we want them to add to their knowledge of the actual territory by discovering what goes on in every district at every season. So their leaders for the time being should follow up the first year by spending a second leading them back through the various districts, moving this time to the left. For the third year, a tribe must choose other Country-Wardens, and five new Guards-in-Chief, each in charge of twelve assistants.

While stationed in the various districts, their duties should be as follows. To start with, they must see that the territory is protected against enemies as thoroughly as possible. They must dig ditches wherever necessary, and excavate trenches and erect fortifications to check any attempt to harm the land and the livestock. They will requisition the beasts of burden and slaves of the local residents for these purposes, and employ them at their discretion, picking as far as possible times when they are not required for their normal duties. The wardens must arrange that the enemy would be impeded at every turn, whereas movement by our own side (by men or beasts of burden or cattle) would be facilitated; and they must see that every road is as easy for the traveler as can be managed.

The rain God sends must do the countryside good, not harm, so the wardens must see that the water flowing off the high ground down into any sufficiently deep ravines between the hills is collected by dikes and ditches, so that the ravines can retain and absorb it, and supply streams and springs for all the districts in the countryside below, and give even the driest of spots a copious supply of pure water. As for water that springs from the ground, the wardens must beautify the fountains and rivers that form by adorning them with trees and buildings; they must use drains to tap the individual streams and collect an abundant supply, and any grove or sacred enclosure which has been dedicated nearby must be embellished by having a perennial flow of water directed by irrigation into the very temples of the gods. The young men should erect in every quarter gymnasia for themselves and senior citizens, construct warm baths for the old folk, and lay up a large stock of thoroughly dry wood. All this will help to relieve invalids, and farmers wearied by the labor of the fields—and it will be a much kinder treatment than the tender mercies of some fool of a doctor.

All these and similar projects will beautify and improve a district, and permit some welcome recreation into the bargain. The Wardens' really serious duties should be as follows. Each squad of sixty must protect its own district not only from enemies, but from those who profess to be friends. If a slave or a free man injures a neighbor or any other citizen, the Wardens must try the case brought by the plaintiff. The five leaders should deal with the trivial cases on their own authority, but in the more important cases (when one man sues another for any sum up to three minas) they should sit in judgment with one group of twelve assistants as a bench of seventeen. Apart from the officials whose decisions (like those of kings) are final, no judge shall hold court, and no official shall fill his position, without being liable to be called to account for his actions. The Country-Wardens are to be no exception, if they treat the people in their care at all high-handedly by giving them unfair orders or by trying to grab and remove any agricultural equipment without permission, or allow their palms to be greased, or go so far as to deliver unjust verdicts. For giving way to boot-lickers they must be publicly disgraced. When the actual injury they have done to an inhabitant of their district does not exceed one mina in value, they should voluntarily submit to a trial before the villagers and neighbors. Whenever larger sums are involved (or even smaller sums, if the accused is not prepared to submit to trial because he's confident that by moving to a fresh district every month he will get away and 'get off' too), the injured party should file suit against him in the common courts.

If the plaintiff wins the day, then this elusive fellow who was not prepared to pay a penalty with a good grace must pay him double the amount at issue.

The way of life of the Country-Wardens and their officers during their two years on duty will be something like this. First, in every district of the country there should be communal restaurants, at which everyone will have to eat together.

If a Warden fails to turn up at these meals even for one day, or sleeps away from his quarters at night, except on the express orders of his superiors or because of some unavoidable necessity, the five leaders may post his name in the market-place as a deserter from his post; if they do, he will have to bear the disgrace of having turned traitor to the state, and everyone who happens to meet him will be entitled to give him a beating if he wants to, without being punished for it.

If one of the actual officers goes so far as to commit this sort of offense, all his fifty-nine colleagues must look into the business.

If one of them notices (or is told) what is going on and fails to bring a case, the same laws should be invoked against him, and he must be punished with greater severity than his juniors: that is, he is to be stripped of his right to exercise any authority over the young.

The Guardians of the Laws should keep a sharp eye on these offenses and try to stop them being committed at all; failing that, they must see that the proper penalties are inflicted.

No one will ever make a commendable master without having been a servant first; one should be proud not so much of ruling well but of serving well—and serving the laws above all (because this is the way we serve the gods), and secondly, if we are young, those who are full of years and honor. It is vital that everyone should be convinced that this rule applies to us all. The next point, then, is that when someone who has joined the Country-Wardens gets to the end of his two years, he ought to be no stranger to a meager daily ration of uncooked food. In fact, after being selected, the groups of twelve assistant Wardens must assemble with the five officers and resolve that, being servants, they will not possess other servants and slaves for themselves, nor employ the attendants of other people (the farmers and villagers) for their own private needs, but only for public tasks. With that exception, they must expect to double as their own servants and fend for themselves; and on top of all that they must reckon to investigate the entire country, summer and winter, in arms, to protect and get to know every district in succession. Everyone should be closely familiar with his own country: probably no study is more valuable. This is the real reason why the youths must go in for hunting with dogs, and other types of chase—quite apart from the pleasure and profit that everyone gets out of such activities.

So much for these ‘secret-service men’ or ‘Country-Wardens’ (call them what you will), and their regimen—a regimen into which everyone who means to play his part in keeping his country safe must throw himself heart and soul.

The next election on our list was that of the Market-Wardens and City-Wardens. There are to be three of the latter, who will divide the twelve sections of the city into three groups, and like their counterparts (the Country-Wardens), will look after the roads, both the streets within the city boundaries and the various routes that extend into the capital from the country; and they must also supervise the buildings, to see that they are constructed to the statutory standards. In particular, they must ensure that the water which the Guards-in-Chief have transmitted and sent on to them in good condition reaches the fountains pure and in sufficient quantities, so that it enhances the beauty and amenities of the city. So these officials too must be men of some caliber, with time to go in for public affairs, which means that every citizen nominating City-Wardens must confine his choice to members of the highest property-class. When they have held the election and produced a short list of six candidates with the most votes, the officials responsible are to select three of them by lot; and these, after scrutiny, should hold office in accordance with the laws provided for them.

Next, five Market-Wardens must be elected from the first and second property-classes. In general, their election should be conducted as for the City-Wardens: ten should be selected from the list of candidates by voting, and then five selected by lot, who after due scrutiny should be appointed to office. (Voting is compulsory for all in every election, and everyone who fails in his duty and is denounced to the authorities should be fined fifty drachmas and get the reputation of being a scoundrel. Attendance at the assembly (the general meeting of the state) is to be optional, except for members of the first and second property-classes, who will be fined ten drachmas if their absence from such a meeting is proved. But the third and fourth classes will not be forced to attend and should not be subject to any penalty unless the authorities, for some pressing reason, instruct everyone to come.) To get back to the Market-Wardens: they are to maintain due order in the market, and look after the temples and fountains, to see that no one damages them. They must punish anyone who commits an offense, a slave or foreigner by whipping him and putting him in chains; but if a native citizen misbehaves himself in this way, the Market-Wardens should be authorized to decide the case on their own and fine the culprit up to a hundred drachmas, the limit being increased to two hundred if they sit in association with the City-Wardens. In their own sphere, the City-Wardens too should have the same power of fining and punishing, and inflict fines up to one mina on their own, and up to two minas in association with the Market-Wardens.

The right thing to do next will be to appoint officials in charge of culture and physical training—two categories of them in each case, one to handle the educational side and the other to organize competitions. By ‘education officials’ the law means superintendents of gymnasia and schools, who see that they are decently run, supervise the curriculum and organize such related matters as the attendance and accommodation of the boys and girls. ‘Officials in charge of competitions’ means judges of competitors in athletics and contests of the arts (there being here again two categories (AB) of officials, one for the arts, one for athletics). Men and horses in athletic contests can have the same judges, but in the arts, choruses should properly have (Aa) one set of judges, while solo dramatic performances (given by reciters of poetry, lyre-players, pipe-players and such people) ought to have another (Ab). So I suppose a good start will be to select (Aa) the authority to supervise children, men and girls as they enjoy themselves in choruses by dancing and every other type of cultural activity. One official, who is to be not less than forty years old, will suffice, and one of not less than thirty (Ab) will also be enough to present the solo performances and give an adequate decision between the contestants. The Chief Organizer of the Choruses (Aa) must be chosen in some such way as this. All those who are keen on such things should attend the election meeting and be liable to a fine if they don’t (this is a point for the Guardians of the Laws to decide), whereas others who do not wish to attend should not be compelled. In proposing their choice the electors should confine themselves to the experts, and in the scrutiny there must be only one reason for accepting or rejecting the candidate the lot has favored: that he is experienced or inexperienced as the case may be. One of the ten nominees with the most votes must be selected by lot, scrutinized, and be in charge of the choruses for the year according to law. Similarly with the year's entrants for solo performances and combined pieces on the pipes: only after the application of the same criterion should the candidate (Ab) favored by the lot take charge of them and decide between them, having referred the decision in his own case to his judges. Next, Umpires for athletic contests and exercises of horses and men must be chosen from the second and also the third property-class; it will be compulsory for members of the first three classes to take part in the election, but the lowest class may be let off without a fine. The Umpires should number three, chosen by lot from the twenty candidates who head the poll, and duly sanctioned by the scrutineers.

If anyone is judged and found wanting in the scrutiny after being drawn by lot for any office, another person must be chosen in his place by the same methods, and his scrutiny conducted in the same way.

The remaining official in this field is the director of the entire education of the boys and girls. Here too there should be one official in charge under the law. He must be not younger than fifty years old, and the father of legitimate children—preferably both sons and daughters, though either alone will do. The chosen candidate himself and those who choose him should appreciate that this is by far the most important of all the supreme offices in the state. Any living creature that flourishes in its first stages of growth gets a tremendous impetus towards its natural perfection and the final development appropriate to it, and this is true of both plants and animals (tame and wild), and men too. Man is a 'tame' animal, as we put it, and of course if he enjoys a good education and happens to have the right natural disposition, he's apt to be a most heavenly and gentle creature; but his upbringing has only to be inadequate or misguided and he'll become the wildest animal on the face of the earth. That's why the legislator should not treat the education of children cursorily or as a secondary matter; he should regard the right choice of the man who is going to be in charge of the children as something of crucial importance, and appoint as their Minister the best all-round citizen in the state. So all the officials except the council and members of the Executive should meet at the temple of Apollo and hold a secret ballot, each man voting for whichever Guardian of the Laws he thinks would make the best Minister of Education. The one who attracts the largest number of votes should be scrutinized by the officials who have elected him, the Guardians of the Laws standing aside. The Minister should hold office for five years, and in the sixth he should be replaced by his successor after an election held under the same rules.

If any public official dies in office and there are more than thirty days of his tenure left to run, the officials concerned must follow the same procedure as before and appoint a replacement. If a guardian of orphans dies, the relatives on both the mother's and the father's side (as far as the children of first cousins), provided they are living in the state, should appoint a successor within ten days, or be fined a drachma for every day they let pass without appointing the children's new guardian.

Of course, any state without duly established courts simply ceases to be a state. If a judge is silent, and (as in arbitration) has no more to say than the litigants in a preliminary hearing he’ll never be able to come to a satisfactory decision on the cases before him. That’s why a large bench finds it difficult to return good verdicts—and so does a small one, if its members are of poor caliber. The point in dispute between the parties must always be made crystal clear, and leisurely and repeated interrogation over a period of time helps a lot to clarify the issues. That is the justification for making litigants bring their charges initially before a court of neighbors, who will be their friends and understand best the actions which provoke the dispute. If a litigant is dissatisfied with the judgment of this court, he may apply to a second, but if the first two courts are both unable to settle the argument, the verdict of the third must close the case.

In a sense, to establish a court is to elect officials. Every official, you see, sometimes has to set up as a judge as well; and a judge, although strictly he has no official position, becomes in a way an official of considerable importance during the day on which he sits in judgment and gives his verdict. So on the assumption that judges too are officials, let’s specify what judges will be appropriate, the disputes they will decide, and how many should sit on each case. The court appointed by the common choice of the litigants themselves for their own private cases should have absolute authority. Cases may be brought before the other courts for two reasons: one private person may charge another with having done him wrong, and bring him to court so that the issue can be decided; or someone may believe that one of the citizens is acting against the public interests and wish to come to the community’s assistance. Now we must specify the character and identity of the judges.

First, let's set up a common court for all private persons who are contesting an issue with each other for the third time. It is to be formed in some such way as this. All officials whose tenure lasts for a year or longer should assemble in a single temple on the day just before the new year opens in the month after the summer solstice; then, after swearing to the god, they must offer him their choicest fruit, so to speak: each board of officials should contribute one judge, the man who appears to be the outstanding member of his board and seems likely to judge the cases of his fellow citizens during the coming year in the best and most god-fearing manner. When the judges have been chosen, their scrutiny should be conducted before their very electors, and if any one of them is rejected, a replacement should be chosen under the same rules. Those who pass the scrutiny are to sit in judgment on the cases of the litigants who refuse to accept the decision of the other courts. They are to vote openly, and it will be compulsory for the Councilors and the other officials who elected the judges to watch and listen to the trials; others may attend if they wish.

If anyone accuses a man of having knowingly returned a false verdict, he must go to the Guardians of the Laws to prefer the charge.

If the accused is found guilty as charged, he will have to pay to the injured party half the damages awarded; if he is thought to deserve a stiffer punishment, his judges must calculate the additional penalty he should suffer or additional fine he ought to pay to the state and his prosecutor.

As for charges of crimes against the state, the first need is to let the man in the street play his part in judging them. A wrong done to the state is a wrong done to all its citizens, who would be justifiably annoyed if they were excluded from deciding such cases. But although we should allow the opening and closing stages of this kind of trial to be in the hands of the people, the detailed examination should be conducted by three of the highest officials, chosen by agreement between prosecutor and defendant. If they are unable to reach agreement themselves, the council should decide between their respective choices.

Everyone should have a part to play in private suits too, because anyone excluded from the right to participate in trying cases feels he has no stake in the community whatever. Hence we must also have courts organized on a tribal basis, where the judges, being chosen by lot as occasion arises, will give their verdicts uncorrupted by external pressures. But the final decision in all these cases is to be given by that other court which deals with litigants who cannot settle their case either before their neighbors or in the tribal courts, and which for their benefit has been made (we claim) as incorruptible a court as can be assembled by human power.

So much for our courts (and we admit that to call their members either 'officials' or 'non-officials' without qualification raises difficulties of terminology). We've given a sort of superficial sketch, which in spite of including a number of details, nevertheless omitted a good many, because a better place for presenting an exact legal procedure and classification of suits will be towards the end of our legislation. So this theme may be dismissed till we are finishing off. We have already explained most of the rules for establishing official posts, but we still can't get a completely clear and exact picture of every individual detail of the entire constitutional organization of the state: for that, we need to take every single topic in proper sequence and go through the whole subject from beginning to end. So far, then, we've described the election of officials, and that brings us to the end of our introduction. Now to start the actual legislation: there's no need to postpone or delay it any longer.

Clinias:: I very much approve of your introduction, sir, and I'm even more impressed by the way you've rounded it off so that it leads into the opening of the next theme.

Athenian Stranger:: So far, then, these ideas we old men have been tossing about have given us splendid sport.

Clinias:: Splendid indeed, but I fancy you really meant they were 'a splendid challenge for men in their prime of life'.

Athenian Stranger:: I dare say. But here's another point. I wonder if you agree with me?

Clinias:: What about? What point?

Athenian Stranger:: You know how painting a picture of anything seems to be a never-ending business. It always looks as if the process of touching up by adding color or relief (or whatever it's called in the trade) will never finally get to the point where the clarity and beauty of the picture are beyond improvement.

Clinias:: Yes, I too get much the same sort of impression, though only from hearsay—I've never gone in for that sort of skill.

Athenian Stranger:: Well, you haven't missed anything. But we can still use this passing mention of it to illustrate the next point. Suppose that one day somebody were to take it into his head to paint the most beautiful picture in the world, which would never deteriorate but always improve at his hands as the years went by. You realize that as the painter is not immortal, he won't achieve anything very permanent by lavishing such care and attention on his picture unless he leaves some successor to repair the ravages of time? Won't his successor also have to be able to supplement deficiencies in his master’s skill and improve the picture by touching it up?

Clinias:: True.

Athenian Stranger:: Well then, don’t you think the legislator will want to do something similar? First of all he’ll want to write his laws and make them as accurate as he can; then as time goes on and he tries to put his pet theories into practice—well, do you think there’s any legislator so stupid as not to realize that his code has many inevitable deficiencies which must be put right by a successor, if the state he’s founded is to enjoy a continuous improvement in its administrative arrangements, rather than suffer a decline?

Clinias:: Yes, I think—indeed I’m sure—that this is the sort of thing any legislator will want to do.

Athenian Stranger:: So if a legislator were able to discover a way of doing this— that is, if by instruction or pointing to concrete examples he could make someone else understand (perfectly or imperfectly) how to keep laws in good repair by amending them—I suppose he'd never give up explaining his method until he'd got it across?

Clinias:: Of course.

Athenian Stranger:: So isn’t this what you two and I ought to be doing now?

Clinias:: What do you mean?

Athenian Stranger:: Now that we (in the evening of life) are on the point of framing laws, for which we have guardians already chosen (our juniors), oughtn’t we to combine our law-giving with an attempt to turn them into law-’givers’ as well as law-’guardians’, as far as we can?

Clinias:: Of course we ought, assuming we’re up to it.

Athenian Stranger:: Anyhow, we ought to try, and do our level best.

Clinias:: Certainly.

Athenian Stranger:: Let's address them as follows: 'Colleagues and protectors of our laws, we shall—inevitably—leave a great many gaps in every section of our code. However, we shall certainly take care to outline a sort of sketch of the complete system with its main points, and it will be your job to take this sketch and fill in the details. You ought to hear what your aims should be when you do this. Megillus and Clinias and I have mentioned it to each other more than once, and we are agreed that our formula is a good one. We want you to be sympathetic to our way of thinking and become our pupils, keeping in view this aim which the three of us are unanimous a giver and guardian of laws should have. The central point on which we agree amounted to this. "Our aim in life should be goodness and the spiritual virtue appropriate to mankind. There are various things that can assist us: it may be some pursuit we follow, a particular habit, or something we possess; we may get help from some desire we have or some opinion we hold or some course of study; and all this is true of both male and female members of the community, young or old. Whatever the means, it's this aim we've described that we must all strain every muscle to achieve throughout our lives. No man, whoever he is, should ever be found valuing anything else, if it impedes his progress— not even, in the last resort, the state. Rather than have the state tolerate the yoke of slavery and be ruled by unworthy hands, it may be absolutely necessary to allow it to be destroyed, or abandon it by going into exile. All that sort of hardship we simply have to endure rather than permit a change to the sort of political system which will make men worse." This, then, is the agreed statement; now it's up to you to consider this double aim of ours and censure the laws that can do nothing to help us; but you must commend and welcome the effective ones with enthusiasm, and cheerfully live as they dictate. You must have no truck with other pursuits which aim at different "goods" (as people call them).'

The best way to start the next section of our code will be to deal with matters of religion. First, we should go back to the figure of 5040 and reflect again how many convenient divisors we found both in this total and its subdivision the tribe (which is one-twelfth of the total, as we specified, i.e., exactly the product of twenty-one multiplied by twenty). Our grand total is divisible by twelve, and so is the number of persons in a tribe and in each case this subdivision must be regarded as holy, a gift of God, corresponding to the months of the year and the revolution of the universe. This is exactly why every state is guided by innate intuition to give these fractions the sanction of religion, though in some cases the divisions have been made more correctly than in others and the religious backing has proved more successful. So for our part we claim that we had every justification for preferring 5040, which can be divided by every number from one to twelve, except eleven (a drawback that's very easily cured: one way to remedy it is simply to omit two hearths). The truth of this could be demonstrated very briefly in any idle moment. So let's trust to the rule we've just explained, and divide our number along those lines. We must allocate a god, or child of a god, to each division and subdivision of the state and provide altars and the associated equipment; we must establish two meetings per month for the purposes of sacrifice, one in each of the twelve tribes into which the state is divided, and another in each of the twelve local communities that form the divisions of each tribe. This arrangement is intended to ensure, first, that we enjoy the favor of the gods and heaven in general, and secondly (as we'd be inclined to stress) that we should grow familiar and intimate with each other in every kind of social contact.

You see, when people are going to live together as partners in marriage, it is vital that the fullest possible information should be available about the bride and her background and the family she'll marry into. One should regard the prevention of mistakes here as a matter of supreme importance—so important and serious, in fact, that even the young people's recreation must be arranged with this in mind. Boys and girls must dance together at an age when plausible occasions can be found for their doing so, in order that they may have a reasonable look at each other; and they should dance naked, provided sufficient modesty and restraint are displayed by all concerned.

The controllers and organizers of the choruses should be in charge of all these arrangements and maintain due order; and in conjunction with the Guardians of the Laws they will settle anything we leave out. As we said, it's inevitable that a legislator will omit the numerous details of such a topic; those who administer his laws from year to year will have to learn from experience and settle the details by annual refinements and amendments, until they think they've made the rules and procedures sufficiently precise. In the case of sacrifices and dances, a reasonable and adequate period to allow for experiment, in general and in detail, will be ten years. So long as the original legislator is alive, the various officials should bring him into the consultations, but when he is dead they must use their own initiative in putting up to the Guardians of the Laws proposals for remedying the deficiencies in their respective spheres. This process should continue until every detail is thought to have received its final polish. After that, they must assume that the rules are immutable, and observe them along with the rest of the code which the legislator laid down and imposed on them originally. Not a single detail should be altered, if they can help it; but if they ever believe that the force of circumstances has become irresistible, they must consult all the officials, the entire citizen body and all the oracles of the gods. If the verdict is unanimously in favor, then they may amend, but never in any other conditions whatever; the law will be that the opposition must always win the day.

To resume, then: when a man of twenty-five has observed others and been observed by them and is confident that he has found a family offering someone to his taste who would make a suitable partner for the procreation of children, he should get married, and in any case before he reaches thirty. First, however, he ought to hear the correct method of trying to find a suitable and congenial partner. As Clinias says, the appropriate preface should stand at the head of every law.

Clinias:: Well reminded, sir—and at just the right moment in our conversation, I fancy.

Athenian Stranger:: Quite so. ‘My boy,’ let’s say to this son of a good family, ‘you must make a marriage that will be approved by sensible folk. They will advise you not to be over keen to avoid marrying into a poor family or to seek to marry into a rich one; other things being equal, you should always prefer to marry somewhat beneath you. That will be best both for the state and the union of your two hearths and homes, because it is infinitely better for the virtue of a man and wife if they balance and complement each other than if they are both at the same extreme. If a man knows he’s rather headstrong and apt to be too quick off the mark in everything he does, he ought to be anxious to ally himself to a family of quiet habits, and if he has the opposite kind of temperament he should marry into the opposite kind of family. One general rule should apply to marriage: we should seek to contract the alliance that will benefit the state, not the one that we personally find most alluring. Everyone is naturally drawn to the person most like himself, and that puts the whole state off balance, because of discrepancies in wealth and character, and these in turn generally lead, in most states, to results we certainly don't want to see in ours.'

If we give explicit instructions in the form of a law—'no rich man to marry into a rich family, no powerful person to marry into a powerful house, the headstrong must be forced to join in marriage with the phlegmatic and the phlegmatic with the headstrong'—well, it's ludicrous, of course, but it will also annoy a great many people who find it hard to understand why the state should be like the mixture in a mixing-bowl. When you pour in the wine it seethes furiously, but once dilute it with the god of the teetotalers, and you have a splendid combination which will make you a good and reasonable drink. Very few people have it in them to see that the same principle applies to the alliance that produces children. For these reasons we are forced to omit such topics from our actual laws. However, we must resort to our 'charms' and try to persuade everybody to think it more important to produce well-balanced children than to marry his equal and never stop lusting for wealth. Anyone who is set on enriching himself by his marriage should be headed off by reproaches rather than compelled by a written law.

So much for marriage: these exhortations should be added to our previous account of how we should become partners in eternity by leaving a line of descendants to serve God forever in our stead. A correctly composed preface would have all that and more to say about the obligation to marry.

If anyone disobeys (except involuntarily), and unsociably keeps himself to himself so that he is still unmarried at the age of thirty-five, he must pay an annual fine: one hundred drachmas if he belongs to the highest property-class, seventy if to the second, sixty if to the third, and thirty if to the fourth; the sum to be consecrated to Hera.

If he refuses to pay his annual fine, his debt must be increased ten times.

(The fine is to be collected by the treasurer of the goddess.

If he fails to collect it, he will have to owe the sum himself.

Every treasurer must give an account of himself in this respect at the scrutiny.) So much for the financial penalty to be paid by anyone refusing to marry, but he should also be barred from receiving the respect due to him from his juniors, none of whom should ever readily take the slightest notice of him. If the bachelor tries to chastise a man, everyone should take the victim's side and protect him.

If a bystander fails to give the victim help, the law should see that he gets the reputation of being a rotten, lily-livered citizen.

We've already discussed dowries, but we ought to repeat that even if the poor do have to marry and give in marriage on limited resources, it will not affect their prospects of a long life one way or the other, because in this state no one will go without the necessities of life. Nor will wives be so inclined to give themselves airs, and their husbands will be less humiliated by kowtowing to them for financial reasons. If a man obeys this law, so much to his credit.

If he does not, and gives or receives more than fifty drachmas for the trousseau in the case of the lowest property-class (or more than a hundred or a hundred and fifty or two hundred according to class), he must owe as much again to the treasury, and the amount given or received must be dedicated to Hera and Zeus.

The treasurers of these gods are to exact these sums in the same way as we said the treasurers of Hera had to collect the fines in every case of refusal to marry, or pay out of their own pockets.

The right to make a valid betrothal should rest initially with the bride's father, secondly with her grandfather, thirdly with her brothers by the same father. If none of these is available, the right should belong to the relatives on the mother's side in the same order. If any exceptional misfortune occurs, the nearest relatives shall be authorized to act in conjunction with the girl's guardians.

That leaves us with the pre-marriage sacrifices and any other relevant rites that should be performed before, during or after the wedding. A citizen should ask the Expounders about these matters, and be confident that if he does as they tell him, everything will be in order.

As for the wedding-feast, neither family should invite more than five friends of both sexes, and the number of relatives and kinsmen from either side should be limited similarly. No one should incur expense beyond his means: that is, no more than a mina in the case of the wealthiest class, half a mina for the next and so on down the scale according to class. Everyone should commend the man who obeys the regulation, but. The Guardians of the Laws must chastise the disobedient as a philistine who has never been trained to appreciate the melodies of the Muses of marriage.

To drink to the point of inebriation is improper whatever the place (except at the feasts of the god who made us the gift of wine), and it’s dangerous too, especially if you want to make your marriage a success. On the day of their wedding particularly, when they are at a turning-point in their lives, bride and groom ought to show restraint, so as to make as sure as they can (it being practically impossible to tell the day or night in which by the favor of God conception will take place) that any child they may have should have parents who were sober when they conceived him. Apart from that, children should not be conceived when the parents’ bodies are in a state of drunken relaxation; the fetus should be compactly formed and firmly planted, and its growth should be orderly and undisturbed. But when he’s drunk a man reels about all over the place and bumps into things, and a raging passion invades his body and soul; this means that as a sower of his seed a drunkard will be clumsy and inefficient, and he’ll produce unbalanced children who are not to be trusted, with devious characters, and in all probability with misshapen bodies too. That’s why all the year round, throughout his life (but particularly during the age of procreation), a man must take great care to do nothing to injure his health, if he can help it, and nothing with any hint of insolence or injustice, which will inevitably rub off on to the souls and bodies of his children, and produce absolutely degenerate creatures who have been stamped with the likeness of their father. At the very least, he must shun such vices on the day of his wedding and the following night, because if a human institution gets off to a good and careful start, there is a sort of divine guarantee that it will prosper.

The bridegroom must regard one of the two homes included in the lot as the nest in which he will bring up his brood of young; here he must be married, after leaving his father and mother, and here he must make his home and become the breadwinner for himself and his children. You see, when people feel the need of absent friends, the ties that bind them are strengthened, but when they overdo it and are too much together so that they're not apart long enough to miss each other, they drift apart. That's why the newly-weds must leave their father and mother and the wife's relatives in the old home and live somewhere else, rather as if they had gone off to a colony; and each side should visit, and be visited by, the other. The young couple should produce children and bring them up, handing on the torch of life from generation to generation, and always worshipping the gods in the manner prescribed by law.

Now for the question of property: what will it be reasonable for a man to possess? Mostly, it's not difficult to see what it would be, and acquire it; but slaves offer difficulties at every turn. The reason is this. The terms we employ are partly correct and partly not, in that the actual language we use about slaves is partly a reflection and partly a contradiction of our practical experience of them.

Megillus:: Oh? What do you mean? We don't yet see your point, sir.

Athenian Stranger:: No wonder, Megillus. The Spartan helot-system is probably just about the most difficult and contentious institution in the entire Greek world; some people think it's a good idea, others are against it (though less feeling is aroused by the slavery to which the Mariandynians have been reduced at Heraclea, and by the race of serfs to be found in Thessaly). Faced with these and similar cases, what should our policy be on the ownership of slaves? The point I happened to bring up in my discussion of the subject, and which naturally made you ask what I meant, was this: we know we'd all agree that a man should own the best and most docile slaves he can get—after all, many a paragon of a slave has done much more for a man than his own brother or son, and they have often been the salvation of their masters' persons and property and entire homes. We know quite well, don't we, that some people do tell such stories about slaves?

Megillus:: Certainly.

Athenian Stranger:: And don't others take the opposite line, and say that a slave's soul is rotten through and through, and that if we have any sense we won't trust such a pack at all? The most profound of our poets actually says (speaking of Zeus) that

> If you make a man a slave, that very day
> Far-sounding Zeus takes half his wits away.

Everyone sees the problem differently, and takes one side or the other. Some people don't trust slaves as a class in anything: they treat them like animals, and whip and goad them so that they make the souls of their slaves three times—no, a thousand times—more slavish than they were. Others follow precisely the opposite policy.

Megillus:: True.

Clinias:: Well then, sir, in view of this conflict of opinion, what should we do about our own country? What's our line on the possession of slaves, and the way to punish them?

Athenian Stranger:: Look here, Clinias: the animal 'man' quite obviously has a touchy temper, and it looks as if it won't be easy, now or in the future, to persuade him to fall neatly into the two categories (slave and freeman master) which are necessary for practical purposes. Your slave, therefore, will be a difficult beast to handle. The frequent and repeated revolts in Messenia, and in the states where people possess a lot of slaves who all speak the same language, have shown the evils of the system often enough;

and we can also point to the various crimes and adventures of the robbers who plague Italy, the ‘Rangers’, as they’re called. In view of all this you may well be puzzled to know what your general policy ought to be. In fact, there are just two ways of dealing with the problem open to us: first, if the slaves are to submit to the condition without giving trouble, they should not all come from the same country or speak the same tongue, as far as it can be arranged; secondly, we ought to train them properly, not only for their sakes but above all for our own. The best way to train slaves is to refrain from arrogantly ill-treating them, and to harm them even less (assuming that’s possible) than you would your equals. You see, when a man can hurt someone as often as he likes, he’ll soon show whether or not his respect for justice is natural and unfeigned and springs from a genuine hatred of injustice. If his attitude to his slaves and his conduct towards them are free of any taint of impiety and injustice, he’ll be splendidly effective at sowing the seeds of virtue. Just the same can be said of the way in which any master or dictator or person in any position of authority deals with someone weaker than himself. Even so, we should certainly punish slaves if they deserve it, and not spoil them by simply giving them a warning, as we would free men. Virtually everything you say to a slave should be an order, and you should never become at all familiar with them—neither the women nor the men. (Though this is how a lot of silly folk do treat their slaves, and usually only succeed in spoiling them and in making life more difficult—more difficult, I mean, for the slaves to take orders and for themselves to maintain their authority.)

Clinias:: You’re quite right.

Athenian Stranger:: So now that the citizen has been supplied with a sufficient number of suitable slaves to help him in his various tasks, the next thing will be to outline a housing-plan, won’t it?

Clinias:: Certainly.

Athenian Stranger:: Our state is new, and has no buildings already existing, so it rather looks as if it will have to work out the details of its entire architectural scheme for itself, particularly those of the temples and city walls. Ideally, Clinias, this subject would have been dealt with before we discussed marriage, but as the whole picture is theoretical anyway, it’s perfectly possible to turn to it now, as we are doing. Still, when we put the scheme into practice, we’ll see to the buildings, God willing, before we regulate marriage, and marriage will then crown our labors in this field. But here and now, let’s just give a swift sketch of the building program.

Clinias:: By all means.

Athenian Stranger:: Temples should be built all round the marketplace and on high ground round the perimeter of the city, for purposes of protection and sanitation. Next to them should be administrative offices and courts of law. This is holy ground, and here—partly because the legal cases involve solemn religious issues, partly because of the august divinities whose temples are nearby—judgment will be given and sentence received. Among these buildings will be the courts in which cases of murder, and all other crimes which deserve the death penalty, may properly be heard.

As for city walls, Megillus, I'd agree with the Spartan view that they should be left lying asleep and undisturbed in the ground. My reasons? As the poet neatly puts it, in those words so often cited, ‘a city’s walls should be made of bronze and iron, not stone’. Besides, what fools people would take us for, and rightly, if we sent our young men out into the countryside every year to excavate trenches and ditches and various structures to ward off the enemy and stop them coming over the boundaries at all—and then were to build a wall round the city! A wall never contributes anything to a town's health, and in any case is apt to encourage a certain softness in the souls of the inhabitants. It invites them to take refuge behind it instead of tackling the enemy and ensuring their own safety by mounting guard night and day; it tempts them to suppose that a foolproof way of protecting themselves is to barricade themselves in behind their walls and gates, and then drop off to sleep, as if they were brought into this world for a life of luxury. It never occurs to them that comfort is really to be won by the sweat of the brow, whereas the only result of such disgusting luxury and idleness is a fresh round of troubles, in my view. However, if men are to have a city wall at all, the private houses should be constructed right from the foundations so that the whole city forms in effect a single wall: that is, all the houses should be easy to defend because they present to the street a regular and unbroken front. A whole city looking like a single house will be quite a pretty sight, and being easy to guard it will be superior to any other for safety. The job of seeing that the buildings always keep to the original scheme should properly belong to their occupants, but the City-Wardens should keep an eye on them and even impose fines to force any negligent person to do his duty. They should also supervise all the sanitary arrangements of the town and stop any private person encroaching on public land by buildings or excavations. The same officials must take particular care to see that rainwater flows away properly, and in general they must make all the appropriate arrangements inside and outside the city. To deal with all these points, and to supplement any other deficiency in the law (which cannot be exhaustive), the Guardians of the Laws are to make additional rules in the light of experience.

So much for these buildings, together with those round the marketplace, and gymnasia and all the schools: they are now ready and waiting to be entered, and the theaters are prepared for the arrival of their audiences. Now let's pass on to the next item in our legislation, the time after the wedding.

Clinias:: By all means.

Athenian Stranger:: Let's suppose the ceremony is over, Clinias; between then and the birth of a child there may well be a complete year. Now, in a state which sets its sights higher than others, how this year is to be spent by a bride and groom (you remember we broke off when we got to this point) is not the easiest thing in the world to specify. We've had knotty problems like this before, but the common man will find our policy this time more difficult to swallow than ever. However, we should never shrink from speaking the truth as we see it, Clinias.

Clinias:: Of course.

Athenian Stranger:: Take someone who proposes to promulgate laws to a state about the correct conduct of the public life of the community. What if he reckons that in principle one ought not to use compulsion—even in so far as one can use it in private affairs? Suppose he thinks that a man ought to be allowed to do what he likes with the day, instead of being regulated at every turn. Well, if he excludes private life from his legislation, and expects that the citizens will be prepared to be law-abiding in their public life as a community, he's making a big mistake. Now, what's made me say this? It's because we are going to assert that our newly-marrieds ought to attend communal meals no more and no less than they did before their wedding. I know that this custom of eating together caused eyebrows to be raised when it was introduced in your parts of the world, but I suppose it was dictated by war or some other equally serious emergency that pressed hard on a small people in a critical situation. But once you had had this enforced experience of communal meals, you realized just how much the custom contributed to your security. It must have been in some such way that the practice of communal feeding established itself among you.

Clinias:: That sounds plausible enough.

Athenian Stranger:: As I was saying, it was once an astonishing custom and some people were apprehensive about imposing it. But if a legislator wanted to impose it today, he wouldn't have half so much trouble. But the custom points to another measure, which would probably prove equally successful, if tried. Today, it's absolutely unheard-of, and that's what makes the legislator 'card his wool into the fire', as the saying is, and make so many efforts fruitlessly. This measure is neither easy to describe nor simple in execution.

Clinias:: Well then, sir, what's the point you're trying to make? You seem to be awfully reluctant to tell us.

Athenian Stranger:: Listen to me, then: let's not waste time lingering over this business. The blessings that a state enjoys are in direct proportion to the degree of law and order to be found in it, and the effects of good regulations in some fields are usually vitiated to the extent that things are controlled either incompetently or not at all in others. The point is relevant to the subject in hand. Thanks to some providential necessity, Clinias and Megillus, you have a splendid and—as I was saying—astonishing institution: communal meals for men. But it is entirely wrong of you to have omitted from your legal code any provision for your women, so that the practice of communal meals for them has never got under way. On the contrary, half the human race—the female sex, the half which in any case is inclined to be secretive and crafty, because of its weakness—has been left to its own devices because of the misguided indulgence of the legislator. Because you neglected this sex, you gradually lost control of a great many things which would be in a far better state today if they had been regulated by law. You see, leaving women to do what they like is not just to lose half the battle (as it may seem): a woman's natural potential for virtue is inferior to a man's, so she's proportionately a greater danger, perhaps even twice as great. So the happiness of the state will be better served if we reconsider the point and put things right, by providing that all our arrangements apply to men and women alike. But at present, unhappily, the human race has not progressed as far as that, and if you're wise you won't breathe a word about such a practice in other parts of the world where states do not recognize communal meals as a public institution at all. So when it comes to the point, how on earth are you going to avoid being laughed to scorn when you try to force women to take their food and drink in public? There's nothing the sex is likely to put up with more reluctantly: women have got used to a life of obscurity and retirement, and any attempt to force them into the open will provoke tremendous resistance from them, and they'll be more than a match for the legislator. Elsewhere, as I said, the very mention of the correct policy will be met with howls of protest. But perhaps this state will be different. So if you want our discussion about political systems to be as complete as theory can ever be, I'd like to explain the merits and advantages of this institution—that is, if you are equally keen to listen to me. If not, then let's skip it.

Clinias:: No, no, sir: we're very anxious to hear the explanation.

Athenian Stranger:: Let's listen, then. But don't be disconcerted if I appear to be starting a long way back. We've time to spare, and there's no compelling reason why we shouldn't look into the business of legislation from all possible angles.

Clinias:: You're quite right.

Athenian Stranger:: Let's go back to what we said at the beginning. Here's something that everyone must be perfectly clear about: either mankind had absolutely no beginning in time and will have no end, but always existed and always will, or it has existed for an incalculably long time from its origin.

Clinias:: Naturally.

Athenian Stranger:: Well, now we may surely assume that in every part of the world cities have been formed and destroyed, and all sorts of customs have been adopted, some orderly, some not, along with the growth of every sort of taste in food, solid and liquid. And the various changes in the seasons have developed, which have probably stimulated a vast number of natural changes in living beings.

Clinias:: Of course.

Athenian Stranger:: Well, we believe, don't we, that at a certain point virtues made their appearance, not having existed before, and olives likewise, and the gifts of Demeter and Kore, which Triptolemus, or whoever it was, handed on to us? So long as these things did not exist, we can take it that animals resorted to feeding on each other, as they do now?

Clinias:: Certainly.

Athenian Stranger:: We observe, of course, the survival of human sacrifice among many people today. Elsewhere, we gather, the opposite practice prevailed, and there was a time when we didn't even dare to eat beef, and the sacrifices offered to the gods were not animals, but cakes and meal soaked in honey and other 'pure' offerings like that. People kept off meat on the grounds that it was an act of impiety to eat it, or to pollute the altars of the gods with blood. So at that time men lived a sort of 'Orphic' life, keeping exclusively to inanimate food and entirely abstaining from eating the flesh of animals.

Clinias:: So it's commonly said, and it's easy enough to believe.

Athenian Stranger:: Then the question naturally arises, why have I related all this to you now?

Clinias:: A perfectly correct assumption, sir.

Athenian Stranger:: Now then, Clinias, I'll try to explain the next point, if I can.

Clinias:: Carry on, then.

Athenian Stranger:: Observation tells me that all human actions are motivated by a set of three needs and desires. Give a man a correct education, and these instincts will lead him to virtue, but educate him badly and he'll end up at the other extreme. From the moment of their birth men have a desire for food and drink. Every living creature has an instinctive love of satisfying this desire whenever it occurs, and the craving to do so can fill a man's whole being, so that he remains quite unmoved by the plea that he should do anything except satisfy his lust for the pleasures of the body, so as to make himself immune to all discomfort. Our third and greatest need, the longing we feel most keenly, is the last to come upon us: it is the flame of the imperious lust to procreate, which kindles the fires of passion in mankind. These three unhealthy instincts must be canalized away from what men call supreme pleasure, and towards the supreme good. We must try to keep them in check by the three powerful influences of fear, law, and correct argument; but in addition, we should invoke the help of the Muses and the gods who preside over competitions, to smother their growth and dam their tide.

The topic which should come after marriage, and before training and education, is the birth of children. Perhaps, as we take these topics in order, we shall be able to complete each individual law as we did before, when we approached the question of communal meals—I mean that when we've become intimate with our citizens, perhaps we shall be able to see more clearly whether such gatherings should consist of men only or whether, after all, they should include women. Similarly, when we've won control of certain institutions that have never yet been controlled by law, we'll use them as 'cover', just as other people do, with the result I indicated just now: thanks to a more detailed inspection of these institutions, we may be able to lay down laws that take account of them better.

Clinias:: Quite right.

Athenian Stranger:: So let's bear in mind the points we've just made, in case we find we need to refer to them later on.

Clinias:: What points in particular are you telling us to remember?

Athenian Stranger:: The three impulses we distinguished by our three terms: the desire for 'food' (I think we said) and 'drink', and thirdly 'sexual stimulation'.

Clinias:: Yes, sir, we'll certainly remember, just as you tell us.

Athenian Stranger:: Splendid. Let's turn our attention to the bridal pair, and instruct them in the manner and method by which they should produce children. (And if we fail to persuade them, we'll threaten them with a law or two.)

Clinias:: How do you mean?

Athenian Stranger:: The bride and groom should resolve to present the state with the best and finest children they can produce. Now, when human beings co-operate in any project, and give due attention to its planning and execution, the results they achieve are always of the best and finest quality; but if they act carelessly, or are incapable of intelligent action in the first place, the results are deplorable. So the bridegroom had better deal with his wife and approach the task of begetting children with a sense of responsibility, and the bride should do the same, especially during the period when no children have yet been born to them. They should be supervised by women whom we have chosen (several or only a few—the officials should appoint the number they think right, at times within their discretion). These women must assemble daily at the temple of Eileithuia for not more than a third of the day, and when they have convened each must report to her colleagues any wife or husband of childbearing age she has seen who is concerned with anything but the duties imposed on him or her at the time of the sacrifices and rites of their marriage. If children come in suitable numbers, the period of supervised procreation should be ten years and no longer. But if a couple remain childless throughout this period, they should part, and call in their relatives and the female officials to help them decide terms of divorce that will safeguard the interests of them both. If some dispute arises about the duties and interests of the parties, they must choose ten of the Guardians of the Laws as arbitrators, and abide by their decisions on the points referred to them. The female officials must enter the homes of the young people and by a combination of admonition and threats try to make them give up their ignorant and sinful ways. If this has no effect, they must go and report the case to the Guardians of the Laws, who must resort to sterner methods. If even the Guardians prove ineffective, they should make the case public and post up the relevant name, swearing on their oath that they are unable to reform so-and-so.

Unless the person whose name is posted up succeeds in convicting in court those who published the notice, he must be deprived of the privilege of attending weddings and parties celebrating the birth of children.

If he persists in attending, anyone who wishes should chastise him by beating him, and not be punished for it.

If a woman misbehaves and her name is posted up, and she fails to win the day in court, the same regulations are to apply to her too: she must be excluded from female processions and distinctions, and be forbidden to attend weddings and parties celebrating the birth of children.

When children have been produced as demanded by law, if a man has intercourse with another woman, or a woman with another man, and the other party is still procreating, they must suffer the same penalty as was specified for those who are still having children.

After the period of child-bearing, the chaste man or woman should be highly respected; the promiscuous should be held in the opposite kind of ‘repute’ (though disrepute would be a better word).

When the majority of people conduct themselves with moderation in sexual matters, no such regulations should be mentioned or enacted; but if there is misbehavior, regulations should be made and enforced after the pattern of the laws we've just laid down.

Our first year is the beginning of our whole life, and every boy's and girl's year of birth should be recorded in their family shrines under the heading 'born'. Alongside, on a whitened wall, should be written up in every brotherhood the sequence-numbers of the officials who facilitate the numbering of the years. The names of the living members of the brotherhood should be inscribed nearby, and those of the deceased expunged.

The age limits for marriage shall be: for a girl, from sixteen to twenty (these will be the extreme limits specified), and for a man, from thirty to thirty-five. A woman may hold office from the age of forty, a man from thirty. Service in the armed forces shall be required of a man from twenty to sixty. As for women, whatever military service it may be thought necessary to impose (after they have finished bearing children) should be performed up to the age of fifty; practicable and appropriate duties should be specified for each individual.

## Book 7.

Athenian Stranger:: Now that the boys and girls have been born, I suppose their education and training will be the most suitable topic to deal with next. This is not something we can leave on one side: that would be out of the question. However, we shall clearly do better to confine our remarks to advice and instruction, and not venture on precise regulations. In the privacy of family life, you see, a great many trivial activities never get publicity, and under the stimulus of feelings of pleasure or pain or desire they can all too easily fly in the face of the lawgiver's recommendations and produce citizens whose characters are varied and conflicting, which is a social evil. Now although these activities are so trivial and so common that one cannot decently arrange to punish them by law, they do tend to undermine the written statutes, because men get into the habit of repeatedly breaking rules in small matters. That's why in spite of all the difficulties of legislating on such points, we can't simply say nothing about them. But I must try to clarify my point by showing you some samples, as it were. At the moment, I expect it looks as if I'm rather concealing my meaning.

Clinias:: You're quite right, it does.

Athenian Stranger:: I take it we were justified in asserting that if an education is to qualify as 'correct', it simply must show that it is capable of making our souls and bodies as fine and as handsome as they can be?

Clinias:: Of course.

Athenian Stranger:: And I suppose (to take the most elementary requirement), that if a person is going to be supremely good-looking, his posture must be as erect as possible, right from his earliest years?

Clinias:: Certainly.

Athenian Stranger:: Well now, we observe, don’t we, that the earliest stages of growth of every animal are by far the most vigorous and rapid? That’s why a lot of people actually maintain that in the case of man, the first five years of life see more growth than the next twenty.

Clinias:: That’s true.

Athenian Stranger:: But we’re aware that rapid growth without frequent and appropriately graded exercises leads to a lot of trouble for the body?

Clinias:: Yes, indeed.

Athenian Stranger:: And isn’t it precisely when a body is getting most nourishment that it needs most exercise?

Clinias:: Good Heavens, sir, are we going to demand such a thing of new-born babies and little children?

Athenian Stranger:: No—I mean even earlier, when they’re getting nourishment in their mother’s body.

Clinias:: What’s that you say? My dear sir! Do you really mean in the womb?

Athenian Stranger:: Yes, I do. But it’s hardly surprising you haven’t heard of these athletics of the embryo. It’s a curious subject, but I'd like to tell you about it.

Clinias:: Do so, of course.

Athenian Stranger:: It’s something it would be easier to understand in Athens, where some people go in for sport more than they should. Not only boys, but some elderly men as well, rear young birds and set them to fight one another. But they certainly don’t think just pitting them one against another will give such creatures adequate exercise. To supplement this, each man keeps birds somewhere about his person—a small one in the cup of his hand, a larger one under his arm—and covers countless stades in walking about, not for the sake of his own health, but to keep these animals in good shape. To the intelligent person, the lesson is obvious: all bodies find it helpful and invigorating to be shaken by movements and joltings of all kinds, whether the motion is due to their own efforts or they are carried on a vehicle or boat or horse or any other mode of conveyance. All this enables the body to assimilate its solid and liquid food, so that we grow healthy and handsome and strong into the bargain. In view of all this, can we say what our future policy should be? If you like, we could lay down precise rules (and how people would laugh at us!): A pregnant woman should go for walks, and when her child is born she should mold it like wax while it is still supple, and keep it well wrapped up for the first two years of its life. The nurses must be compelled under legal penalty to contrive that the children are always being carried to the country or temples or relatives, until they are sturdy enough to stand on their own feet. Even then, the nurses should persist in carrying the child around until it’s three, to keep it from distorting its young limbs by subjecting them to too much pressure. The nurses should be as strong as possible, and there must be plenty of them—and we could provide written penalties for each infringement of the rules. But no! That would lead to far too much of what I mentioned just now.

Clinias:: You mean …

Athenian Stranger:: … the tremendous ridicule we'd provoke. And the nurses (women and slaves, with characters to match) would refuse to obey us anyway.

Clinias:: Then why did we insist that the rules should be specified?

Athenian Stranger:: For this reason. A state’s free men and masters have quite different characters to the nurses’, and there’s a chance that if they hear these regulations they may be led to the correct conclusion: the state’s general code of laws will never rest on a firm foundation as long as private life is badly regulated, and it’s silly to expect otherwise. Realizing the truth of this, they may themselves spontaneously adopt our recent suggestions as rules, and thereby achieve the happiness that results from running their households and their state on proper lines.

Clinias:: Yes, that’s all very reasonable.

Athenian Stranger:: Still, let’s not abandon this style of legislation yet. We started to talk about young children’s bodies: let’s use the same sort of approach to explain how to shape their personalities.

Clinias:: Good idea.

Athenian Stranger:: So let’s take this as our basic principle in both cases: all young children, and especially very tiny infants, benefit both physically and mentally from being nursed and kept in motion, as far as practicable, throughout the day and night; indeed, if only it could be managed, they ought to live as though they were permanently on board ship. But as that’s impossible, we must aim to provide our new-born infants with the closest possible approximation to this ideal.

Here’s some further evidence, from which the same conclusions should be drawn: the fact that young children’s nurses, and the women who cure Corybantic conditions, have learned this treatment from experience and have come to recognize its value. And I suppose you know what a mother does when she wants to get a wakeful child to sleep. Far from keeping him still, she takes care to move him about, rocking him constantly in her arms, not silently, but humming a kind of tune. The cure consists of movement, to the rhythms of dance and song; the mother makes her child ‘pipe down’ just as surely as the music of the pipes bewitches the frenzied Bacchic reveler.

Clinias:: Well then, sir, have we any particular explanation for all this?

Athenian Stranger:: The reason’s not very hard to find.

Clinias:: What is it?

Athenian Stranger:: Both these conditions are a species of fear, and fear is the result of some inadequacy in the personality. When one treats such conditions by vigorous movement, this external motion, by canceling out the internal agitation that gives rise to the fear and frenzy, induces a feeling of calm and peace in the soul, in spite of the painful thumping of the heart experienced by each patient. The result is very gratifying. Whereas the wakeful children are sent to sleep, the revelers (far from asleep!), by being set to dance to the music of the pipes, are restored to mental health after their derangement, with the assistance of the gods to whom they sacrifice so propitiously. This explanation, brief as it is, is convincing enough.

Clinias:: Yes, indeed.

Athenian Stranger:: Well then, seeing how effective these measures are, here’s another point to notice about the patient. Any man who has experienced terrors from his earliest years will be that much more likely to grow up timid. But no one will deny that this is to train him to be a coward, not a hero.

Clinias:: Of course.

Athenian Stranger:: Contrariwise, we'd agree that a training in courage right from infancy demands that we overcome the terrors and fears that assail us?

Clinias:: Exactly.

Athenian Stranger:: So we can say that exercising very young children by keeping them in motion contributes a great deal towards the perfection of one aspect of the soul's virtue.

Clinias:: Certainly.

Athenian Stranger:: Further, good humor and bad humor will be a conspicuous element in a good or bad moral character respectively.

Clinias:: Of course.

Athenian Stranger:: So how can we instill into the new-born child, right from the start, whichever of these two characteristics we want? We must try to indicate how far they are within our control, and the methods we have to use.

Clinias:: Quite so.

Athenian Stranger:: I belong to the school of thought which maintains that luxury makes a child bad-tempered, irritable, and apt to react violently to trivial things. At the other extreme, unduly savage repression turns children into cringing slaves and puts them so much at odds with the world that they become unfit to be members of a community.

Clinias:: So how should the state as a whole set about bringing up children who are as yet unable to understand what is said to them or respond to any attempt to educate them?

Athenian Stranger:: More or less like this. Every new-born animal is apt to give a sort of loud yell—especially the human child, who in addition to yelling is also exceptionally prone to tears.

Clinias:: He certainly is.

Athenian Stranger:: So if a nurse is trying to discover what a child wants, she judges from these reactions to what it is offered. Silence, she thinks, means she is giving it the right thing, whereas crying and bawling indicate the wrong one. Clearly these tears and yells are the child's way of signaling his likes and dislikes—and ominous signs they are, too, because this stage lasts at least three years, and that's quite a large part of one's life to spend badly (or well).

Clinias:: You're right.

Athenian Stranger:: Now don't you two think that a morose and ungenial fellow will on the whole be a more of a moaner and a grumbler than a good man has any right to be?

Clinias:: Yes, I think so, at any rate.

Athenian Stranger:: Well then, suppose you do your level best during these years to shelter him from distress and fright and any kind of pain at all. Shouldn't we expect that child to be educated into a more cheerful and genial disposition?

Clinias:: Certainly, and especially, sir, if one surrounded him with lots of pleasures.

Athenian Stranger:: Now here, my dear sir, is just where Clinias no longer carries me with him. That's the best way to ruin a child, because the corruption invariably sets in at the very earliest stages of his education. But perhaps I'm wrong about this: let's see.

Clinias:: Tell us what you mean.

Athenian Stranger:: I mean that we're now discussing a topic of great importance. So you too, Megillus, see what your views are, and help us to make up our minds. My position is this: the right way of life is neither a single-minded pursuit of pleasure nor an absolute avoidance of pain, but a genial (the word I used just now) contentment with the state between those extremes—precisely the state, in fact, which we always say is that of God himself (a conjecture that's reasonable enough, supported as it is by the statements of the oracles). Similarly if one of us aspires to live like a god, this is the state he must try to attain. He must refuse to go looking for pleasure on his own account, aware that this is not a way of avoiding pain; nor must he allow anyone else to behave like that, young or old, male or female—least of all newly-born children, if he can help it, because that's the age when habits, the seeds of the entire character, are most effectively implanted. I'd even say, at the risk of appearing flippant, that all expectant mothers, during the year of their pregnancy, should be supervised more closely than other women, to ensure that they don't experience frequent and excessive pleasures, or pains either. An expectant mother should think it important to keep calm and cheerful and sweet-tempered throughout her pregnancy.

Clinias:: There's no need to ask Megillus which of us two has made the better case, sir. I agree with you that everyone should avoid a life of extreme pleasure and pain, and always take the middle course between them. Your point has been well and truly put, and you've heard it well and truly endorsed.

Athenian Stranger:: Admirable, Clinias! Well then, here's a related point that the three of us should consider.

Clinias:: What's that?

Athenian Stranger:: That all the rules we are now working through are what people generally call 'unwritten customs', and all this sort of thing is precisely what they mean when they speak of 'ancestral law'. Not only that, but the conclusion to which we were driven a moment ago was the right one: that although 'laws' is the wrong term for these things, we can’t afford to say nothing about them, because they are the bonds of the entire social framework, linking all written and established laws with those yet to be passed. They act in the same way as ancestral customs dating from time immemorial, which by virtue of being soundly established and instinctively observed, shield and protect existing written law. But if they go wrong and get ‘out of true’—well, you know what happens when carpenters’ props buckle in a house: they bring the whole building crashing down, one thing on top of another, stays and superstructure (however well built) alike—all because the original timberwork has given way. So you see, Clinias, this is what we have to bear in mind in thoroughly binding your state together while it is still a new foundation; we must do our best not to omit anything, great or small, whether ‘laws’, ‘habits’ or ‘institutions’, because they are all needed to bind a state together, and the permanence of the one kind of norm depends on that of the other. So we ought not to be surprised to see a flood of apparently unimportant customs or usages making our legal code a bit on the long side.

Clinias:: You’re quite right, and we’ll keep the point in mind.

Athenian Stranger:: Up to the age of three the early training of a boy or girl will be helped enormously by this regimen, provided it is observed punctiliously and systematically. In the fourth, fifth, sixth and even seventh year of life, a child’s character will need to be formed while he plays; we should now stop spoiling him, and resort to discipline, but not such as to humiliate him. We said, in the case of slaves, that discipline should not be enforced so high-handedly that they become resentful, though on the other hand we mustn’t spoil them by letting them go uncorrected; the same rule should apply to free persons too. When children are brought together, they discover more or less spontaneously the games which come naturally to them at that age. As soon as they are three, and until they reach the age of six, all children must congregate at the village temples—the children of each village to assemble at the same place. They should be kept in order and restrained from bad behavior by their nurses, who should themselves be supervised, along with their groups as a whole, by the twelve women elected for the purpose, one to be in charge of one group for a year at a time, the allocations to be made by the Guardians of the Law. The twelve must be elected by the women in charge of supervising marriage, one must be chosen from each tribe, and they must be of the same age as their electors. The woman allotted to a given tribe will discharge her duties by visiting the temple daily and punishing any cases of wrongdoing. She may use a number of state slaves to deal with male and female slaves and aliens on her own authority; however, if a citizen disputes his punishment, she must take the case to the City-Wardens, but if he does not dispute it, she may punish him too on her own authority. When the boys and girls have reached the age of six, the sexes should be separated; boys should spend their days with boys, and girls with girls. Each should attend lessons. The males should go to teachers of riding, archery, javelin-throwing and slinging—and the females too, if they are agreeable, may attend at any rate the lessons, especially those in the use of weapons. In this business, you see, pretty nearly everyone misunderstands the current practice.

Clinias:: How so?

Athenian Stranger:: People think that where the hands are concerned right and left are by nature suited for different specialized tasks—whereas of course in the case of the feet and the lower limbs there is obviously no difference in efficiency at all. Thanks to the silly ideas of nurses and mothers we've all been made lame-handed, so to speak. The natural potential of each arm is just about the same, and the difference between them is our own fault, because we've habitually misused them. Of course, in activities of no consequence—using the left hand for the lyre and the right for the plectrum and so on—it doesn't matter in the slightest. But to take these examples as a model for other activities too, when there's no need, is pretty stupid. The Scythian practice is an illustration of this: a Scythian doesn't use his left hand exclusively to draw his bow and his right hand exclusively to fit in the arrow, but uses both hands for both jobs indifferently. There are a lot of other similar examples to be found—in driving chariots, for instance, and other activities—from which we can see that when people train the left hand to be weaker than the right they are going against nature. As we said, that doesn't matter when it's a case of plectra of horn and similar instruments. But it matters enormously when one has to use iron weapons of war (javelins, arrows or whatever), and it matters most of all when you have to use your weapons in fighting hand to hand. And what a difference there is between a man who has learned this lesson and one who has not, between the trained and the untrained fighter! You know how a trained pancratiast or boxer or wrestler can fight on his left, so that when his opponent makes him change over and fight on that side, he doesn't stagger round as though he were lame, but keeps his poise. And I reckon we have to suppose that precisely the same rule applies to the use of weapons and to all other activities: when a man has two sets of limbs for attack and defense, he ought to leave neither of them idle and untrained if he can help it. In fact, if you were born with the body of a

Geryon or a Briareus, you ought to be able to throw a hundred shafts with your hundred hands. All these points should come under the supervision of the male and female officials, the latter keeping an eye on the training the children get at play, the former superintending their lessons. They must see that every boy and girl grows up versatile in the use of both hands and both feet, so that they don't ruin their natural abilities by their acquired habits, so far as they can be prevented.

In practice, formal lessons will fall into two categories, physical training for the body, and cultural education to perfect the personality. Physical training can be further subdivided into two branches: dancing and wrestling. Now when people dance, they are either acting the words of the composer, and a dignified and civilized style is their prime concern, or they are aiming at physical fitness, agility and beauty. In this case they are preoccupied with bending and stretching in the approved fashion, so that each limb and other part of the body can move with its own peculiar grace—a grace which is then carried over and infused into dancing in general. As for wrestling, the kind of trick introduced as part of their technique by Antaeus and Cercyon because of their wretched obsession with winning, and the boxing devices invented by Epeius and Amycus, are absolutely useless in a military encounter and don't merit the honor of being described. But if the legitimate maneuvers of regular wrestling— extricating the neck and hands and sides from entanglement—are practiced for the sake of strength and health with a vigorous desire to win and without resort to undignified postures, then they are extremely useful, and we mustn't neglect them. So when we reach the proper place in our legal code we must tell the future teachers to present all this kind of instruction in an attractive way, and the pupils to receive it with gratitude.

Nor should we omit to mention the chorus-performances that may appropriately be imitated: for instance, here in Crete the ‘games in armor’ of the Curetes, and those of the Dioscuri in Sparta. And at Athens our Virgin Lady, I believe, charmed by the pleasure of performing in a chorus, and disapproving of empty hands in recreation, thought she should perform the dance only when arrayed in full armor. Our boys and girls should imitate her example wholeheartedly, and prize the gift which the goddess has made them, because it increases their fighting skill and embellishes their festivals. Young boys, right from the early stages up to the age of military service, should be equipped with weapons and horses whenever they parade and process in honor of any god; and when they supplicate the gods and sons of gods they must dance and march in step, sometimes briskly, sometimes slowly. Even contests and preliminary heats, if they are to prove their worth in war and peace to the state and private households, must be conducted with these purposes in view and no other. Other kinds of physical exercise, Megillus and Clinias, whether serious or by way of recreation, are beneath the dignity of a gentleman.

I’ve now pretty well described the sort of physical education which needed to be described, as I said early on. So there it is, in all its detail. If you know of a better system than that, let’s have it.

Clinias:: No sir, if we cry off these ideas of yours a better program of competitions and physical training won’t be easy to find.

Athenian Stranger:: The next subject is the gifts of Apollo and the Muses. When we discussed this before, we thought we'd exhausted the topic, and that physical training alone remained for discussion. But it’s clear now that a number of points were omitted—points which everyone ought in fact to hear first. So let's go through them in order.

Clinias:: Yes, they should certainly be mentioned.

Athenian Stranger:: Listen to me then. You've done that before, of course, but such a curious eccentricity calls for extreme caution in the speaker and his audience. You see, I'm going to spin a line that almost makes me afraid to open my mouth; still, I'll pluck up my courage and go ahead.

Clinias:: What is this thesis of yours, sir?

Athenian Stranger:: I maintain that no one in any state has really grasped that children's games affect legislation so crucially as to determine whether the laws that are passed will survive or not. If you control the way children play, and the same children always play the same games under the same rules and in the same conditions, and get pleasure from the same toys, you'll find that the conventions of adult life too are left in peace without alteration. But in fact games are always being changed and constantly modified and new ones invented, and the younger generation never enthuses over the same thing for two days running. They have no permanent agreed standard of what is becoming or unbecoming either in deportment or their possessions in general; they worship anyone who is always introducing some novelty or doing something unconventional to shapes and colors and all that sort of thing. In fact, it's no exaggeration to say that this fellow is the biggest menace that can ever afflict a state, because he quietly changes the character of the young by making them despise old things and value novelty. That kind of language and that kind of outlook is—again I say it—the biggest disaster any state can suffer. Listen: I'll tell you just how big an evil I maintain it is.

Clinias:: You mean the way the public grumbles at old-fashioned ways of doing things?

Athenian Stranger:: Exactly.

Clinias:: Well, you won’t find us shutting our ears to that kind of argument—you couldn’t have a more sympathetic audience.

Athenian Stranger:: So I should imagine.

Clinias:: Go on then.

Athenian Stranger:: Well now, let’s listen to the argument with even greater attention than usual, and expound it to each other with equal care. Change, we shall find, except in something evil, is extremely dangerous. This is true of seasons and winds, the regimen of the body and the character of the soul—in short, of everything without exception (unless, as I said just now, the change affects something evil). Take as an example the way the body gets used to all sorts of food and drink and exercise. At first they upset it, but then in the course of time it’s this very regimen that is responsible for its putting on flesh. Then the regimen and the flesh form a kind of partnership, so that the body grows used to this congenial and familiar system, and lives a life of perfect happiness and health. But imagine someone forced to change again to one of the other recommended systems: initially, he’s troubled by illnesses, and only slowly, by getting used to his new way of life, does he get back to normal. Well, we must suppose that precisely the same thing happens to a man’s outlook and personality. When the laws under which people are brought up have by some heaven sent good fortune remained unchanged over a very long period, so that no one remembers or has heard of things ever being any different, the soul is filled with such respect for tradition that it shrinks from meddling with it in any way. Somehow or other the legislator must find a method of bringing about this situation in the state. Now here’s my own solution of the problem. All legislators suppose that an alteration to children’s games really is just a ‘game’, as I said before, which leads to no serious or genuine damage. Consequently, so far from preventing change, they feebly give it their blessing. They don’t appreciate that if children introduce novelties into their games, they’ll inevitably turn out to be quite different people from the previous generation; being different, they’ll demand a different kind of life, and that will then make them want new institutions and laws. The next stage is what we described just now as the biggest evil that can affect a state—but not a single legislator takes fright at the prospect. Other changes, that affect only deportment, will do less harm, but it is a very serious matter indeed to keep changing the criteria for praising or censuring a man’s moral character, and we must take great care to avoid doing so.

Clinias:: Of course.

Athenian Stranger:: Well then, are we still happy about the line we took earlier, when we said that rhythms and music in general were means of representing the characters of good men and bad? Or what?

Clinias:: Yes, our view remains exactly the same.

Athenian Stranger:: So our position is this: we must do everything we possibly can to distract the younger generation from wanting to try their hand at presenting new subjects, either in dance or song; and we must also stop pleasure-mongers seducing them into the attempt.

Clinias:: You’re absolutely right.

Athenian Stranger:: Now, does any of us know of a better method of achieving such an object than that of the Egyptians?

Clinias:: What method is that?

Athenian Stranger:: To sanctify all our dances and music. The first job will be to settle the festivals by drawing up the year's program, which should show the dates of the various holidays and the individual gods, children of gods, or spirits in whose honor they should be taken. Second, it has to be decided what hymn should be sung at the various sacrifices to the gods and the type of dancing that should dignify the ritual in question. These decisions should be taken by some authority or other, and then the whole body of the citizens together should ratify them by sacrificing to the Fates and all the other gods, and by pouring a libation to consecrate the various songs to their respective divinities and other powers.

If anybody disobeys and introduces any different hymns or dances in honor of any god, the priests and priestesses, in association with the Guardians of the Laws, will have the backing of sacred and secular law in expelling him.

If he resists expulsion, he must be liable to a charge of impiety for the rest of his life at the hands of anyone who wishes to bring it.

Clinias:: And serve him right.

Athenian Stranger:: Now seeing that we've got on to this topic, we must watch our step and behave ourselves.

Clinias:: How do you mean?

Athenian Stranger:: No young man, much less an old one, on seeing or hearing anything paradoxical or unfamiliar, is ever going to brush aside his doubts all in a hurry and reach a snap decision about it. More probably, like a traveler who has come to a crossroads, alone or with others, and is rather uncertain about the right road, he'll pause, and put the problem to himself or his companions; and he won't continue his journey until he's pretty sure of his direction and bearings. That’s precisely what we must do now. Our discussion has led us to a legal paradox, and naturally we must go into it in details and not—at our age—rashly claim to pontificate in such an important field off the cuff.

Clinias:: You’re absolutely right.

Athenian Stranger:: So we won’t hurry over the problem, and only when we’ve looked into it properly shall we draw any firm conclusions. Still, there’s no point in being deterred from completing the formal presentation of these ‘laws’ we’re dealing with now, so let’s press on till we get to the end of them. God willing, the completion of the whole exposition may perhaps point to an adequate solution of our present problem.

Clinias:: You’ve put it very well, sir; let’s do as you say.

Athenian Stranger:: So let’s assume we’ve agreed on the paradox: our songs have turned into ‘nomes’ (apparently the ancients gave some such name to tunes on the lyre—perhaps they had some inkling of what we’re saying, thanks to the intuition of someone who saw a vision either in his sleep or while awake). However that may be, let’s adopt this as our agreed policy: no one shall sing a note, or perform any dance-movement, other than those in the canon of public songs, sacred music, and the general body of chorus performances of the young—any more than he would violate any other ‘nome’ or law. If a man obeys, he shall go unmolested by the law; but if he disobeys, the Guardians of the Laws and the priests and priestesses must punish him, as we said just now. Can we accept this as a statement of policy?

Clinias:: We can.

Athenian Stranger:: Then how could one put these rules in proper legal form, without being laughed to scorn? Well now, there’s a new point we ought to notice: in this business, the safest method is to sketch a few model rules. Here’s one for you: imagine a sacrifice has been performed and the offerings burnt as demanded by law and someone standing in a private capacity near the altar and offerings—a son or brother, say—breaks out into the most extreme blasphemy: wouldn’t his words fill his father and his other relations with alarm and despondency and forebodings of despair? Isn’t that what we'd expect?

Clinias:: Of course.

Athenian Stranger:: But it is hardly an exaggeration to say that in our corner of the world this is exactly what happens in pretty nearly every state. When an official has performed a public sacrifice, a chorus—or rather a mob of choruses—arrives and takes up position not far from the altar and sometimes right next to it. Then they swamp the holy offerings with a flood of absolute blasphemy. With words and rhythms and music of the most morbid kind they work up the emotions of their audience to a tremendous pitch, and the prize is awarded to the chorus which succeeds best in making the community burst into tears—the very community which has just offered sacrifice. Well, that’s certainly a ‘nome’ on which we must pass an unfavorable verdict, isn’t it? If there is ever any real need for the public to listen to such lugubrious noises, on days that are unclean and unlucky, it will be much better, and entirely appropriate, to hire some foreign choruses to sing such songs (just as one hires mourners to accompany funerals with Carian dirges). In particular, the costume appropriate for such funeral dirges will not be garlands or trappings of gilt, but—to polish off the topic as quickly as possible—quite the opposite kind of thing. I merely repeat the question we’re always asking ourselves: are we happy to adopt this, for a start, as one of our model rules of singing?

Clinias:: What?

Athenian Stranger:: The rule of auspicious language. This is the characteristic that is absolutely vital for our kind of song. Or shall I simply lay down the rule without repeating the question?

Clinias:: Lay it down by all means: your law's been approved without a single vote against it.

Athenian Stranger:: After auspicious language, then, what will be the second law of music? Surely this: that the gods to whom we sacrifice should always be offered our prayers.

Clinias:: Of course.

Athenian Stranger:: And the third law, I suppose, will be this: poets should appreciate that prayers are requests for something from the gods, so they must take great care that they never inadvertently request an evil under the impression that it is a benefit. What a ludicrous calamity it would be to offer that kind of prayer!

Clinias:: It certainly would.

Athenian Stranger:: Now didn't our remarks a short time ago persuade us that 'Gold and Silver, the gods of Wealth, ought to have neither temple nor home in our state'?

Clinias:: Absolutely.

Athenian Stranger:: So what lesson can we say this doctrine holds for us? Surely this: that authors in general are quite unable to tell good from bad. We conclude that a composer who embodies this error in his words or even in his music, and who produces mistaken prayers, will make our citizens pray improperly when it comes to matters of importance—and, as we were saying, we shan't find many more glaring mistakes than that. So can we establish this as one of our model laws of music?

Clinias:: What?

Athenian Stranger:: That a poet should compose nothing that conflicts with society’s conventional notions of justice, goodness and beauty. No one should be allowed to show his work to any private person without first submitting it to the appointed assessors and to the Guardians of the Laws, and getting their approval. (In effect, we’ve got our assessors already appointed—I mean the legislators we chose to regulate the arts, and the person we elected as Minister of Education.) Well then, here’s the same question yet again: are we satisfied to adopt this as our third principle and our third model law? Or what do you think?

Clinias:: Of course we’ll adopt it.

Athenian Stranger:: The next point is that it will be proper to sing hymns and panegyrics, combined with prayers, in honor of the gods. After the gods, we may similarly give the spirits and heroes their meed of praise, and pray to each of them as appropriate.

Clinias:: Certainly.

Athenian Stranger:: And the next law, which should be adopted quite ungrudgingly, will run as follows: deceased citizens who by their physical efforts or force of personality have conspicuous and strenuous achievements to their credit, and who have lived a life of obedience to the laws, should be regarded as proper subjects for our panegyrics.

Clinias:: Of course.

Athenian Stranger:: But to honor a man with hymns and panegyrics during his lifetime is to invite trouble: we must wait until he has come to the end of the course after running the race of life successfully. (Men and women who have shown conspicuous merit should qualify for all these honors without distinction of sex.)

The following arrangements should be made with regard to singing and dancing. Among the works we've inherited from the past there are a great many grand old pieces of music—dances too, for occasions when we want to exercise our bodies—from which we should not hesitate to choose those suitable and appropriate for the society we are organizing. Censors of at least fifty years of age should be appointed to make the selection, and any ancient composition that seems to come up to standard should be approved; absolutely unsuitable material must be totally rejected, and substandard pieces revised and re-arranged, on the advice of poets and musicians. (Although we shall exploit the creative talents of these people, we shan't—with rare exceptions—put our trust in their tastes and inclinations. Instead, we shall interpret the wishes of the lawgiver and arrange to his liking our dancing and singing and chorus performances in general.) Music composed in an undisciplined style is always infinitely improved by the imposition of form, even if that makes it less immediately attractive. But music doesn't have to be disciplined to be pleasant. Take someone who has right from childhood till the age of maturity and discretion grown familiar with a controlled and restrained style of music. Play him some of the other sort, and how he'll loathe it! 'What vulgar stuff!' he'll say.

Yet, if he's been brought up to enjoy the strong appeal of popular music, it's the disciplined kind he'll call frigid and repellent. So as I said just now, on the score of pleasure or the lack of it, neither type is superior nor inferior to the other. The difference is simply this: the one musical environment is invariably a good influence, the other a bad.

Clinias:: Well said!

Athenian Stranger:: In addition, we shall have to distinguish, in a rough and ready way, the songs suitable for men and those suitable for women, and give each its proper mode and rhythm. It would be terrible if the words failed to fit the mode, or if their meter were at odds with the beat of the music, which is what will happen if we don't match properly the songs to each of the other elements in the performance—elements which must therefore be dealt with, at any rate in outline, in our legal code. One possibility is simply to ensure that the songs men and women sing are accompanied by the rhythms and modes imposed by the words in either case; but our regulations about female performances must be more precise than this and be based on the natural difference between the sexes. So an elevated manner and courageous instincts must be regarded as characteristic of the male, while a tendency to modesty and restraint must be presented—in theory and law alike—as a peculiarly feminine trait.

Now to deal with how this doctrine should be taught and handed on. What method of instruction should we use? Who should be taught, and when should the lessons take place? Well, you know that when a shipwright is starting to build a boat, the first thing he does is to lay down the keel as a foundation and as a general indication of the shape. I have a feeling my own procedure now is exactly analogous. I'm trying to distinguish for you the various ways in which our character shapes the kind of life we live; I really am trying to 'lay down the keel', because I'm giving proper consideration to the way we should try to live—to the 'character-keel' we need to lay if we are going to sail through this voyage of life successfully. Not that human affairs are worth taking very seriously—but take them seriously is just what we are forced to do, alas. Still, perhaps it will be realistic to recognize the position we're in and direct our serious efforts to some suitable purpose. My meaning?—yes, you'd certainly be right to take me up on that.

Clinias:: Exactly.

Athenian Stranger:: I maintain that serious matters deserve our serious attention, but trivialities do not; that all men of good will should put God at the center of their thoughts; that man, as we said before, has been created as a toy for God; and that this is the great point in his favor. So every man and every woman should play this part and order their whole life accordingly, engaging in the best possible pastimes—in a quite different frame of mind to their present one.

Clinias:: How do you mean?

Athenian Stranger:: The usual view nowadays, I fancy, is that the purpose of serious activity is leisure—that war, for instance, is an important business, and needs to be waged efficiently for the sake of peace. But in cold fact neither the immediate result nor the eventual consequences of warfare ever turn out to be real leisure or an education that really deserves the name—and education is in our view just about the most important activity of all. So each of us should spend the greater part of his life at peace, and that will be the best use of this time. What, then, will be the right way to live? A man should spend his whole life at ‘play’—sacrificing, singing, dancing—so that he can win the favor of the gods and protect himself from his enemies and conquer them in battle. He’ll achieve both these aims if he sings and dances in the way we’ve outlined; his path, so to speak, has been marked out for him and he must go on his way confident that the poet’s words are true;

> Some things, Telemachus, your native wit will tell you,
> And Heaven will prompt the rest. The very gods, I’m sure,

Have smiled upon your birth and helped to bring you up.

And those we bring up, too, must proceed in the same spirit. They must expect that although our advice is sound as far as it goes, their guardian deity will make them further suggestions about sacrifices and dancing— telling them the various divinities in whose honor they should hold their various games, and on what occasions, so as to win the gods' good will and live the life that their own nature demands, puppets that they are, mostly, and hardly real at all.

Megillus:: That, sir, is to give the human race a very low rating indeed.

Athenian Stranger:: Don't be taken aback, Megillus. You must make allowances for me. I said that with my thoughts on God, and was quite carried away. So, if you like, let's take it that our species is not worthless, but something rather important.

To resume, then. So far, we have provided for the public gymnasia and the state schools to be housed in three groups of buildings at the center of the city; similarly, on three sites in the suburbs, there should be training grounds for horses, and open spaces adapted for archery and the discharge of other long-range missiles, where the young may practice and learn these skills. Anyway, if we haven't explained all this adequately before, let's do so now, and put our requirements into legal form.

Foreign teachers should be hired to live in these establishments and provide the pupils with complete courses of instruction in both military and cultural subjects. Children must not be allowed to attend or not attend school at the whim of their father; as far as possible, education must be compulsory for 'every man and boy' (as the saying is), because they belong to the state first and their parents second.

Let me stress that this law of mine will apply just as much to girls as to boys. The girls must be trained in precisely the same way, and I'd like to make this proposal without any reservations whatever about horse-riding or athletics being suitable activities for males but not for females. You see, although I was already convinced by some ancient stories I have heard, I now know for sure that there are pretty well countless numbers of women, generally called Sarmatians, round the Black Sea, who not only ride horses but use the bow and other weapons. There, men and women have an equal duty to cultivate these skills, so cultivate them equally they do. And while we’re on the subject, here’s another thought for you. I maintain that if these results can be achieved, the state of affairs in our corner of Greece, where men and women do not have a common purpose and do not throw all their energies into the same activities, is absolutely stupid. Almost every state, under present conditions, is only half a state, and develops only half its potentialities, whereas with the same cost and effort, it could double its achievement. Yet what a staggering blunder for a legislator to make!

Clinias:: I dare say. But a lot of these proposals, sir, are incompatible with the average state’s social structure. However, you were quite right when you said we should give the argument its head, and only make up our minds when it had run its course. You’ve made me reproach myself for having spoken. So carry on, and say what you like.

Athenian Stranger:: The point I'd like to make, Clinias, is the same one as I made a moment ago, that there might have been something to be said against our proposal, if it had not been proved by the facts to be workable. But as things are, an opponent of this law must try other tactics. We are not going to withdraw our recommendation that so far as possible, in education and everything else, the female sex should be on the same footing as the male. Consequently, we should approach the problem rather like this. Look: if women are not to follow absolutely the same way of life as men, then surely we shall have to work out some other program for them?

Clinias:: Inevitably.

Athenian Stranger:: Well then, if we deny women this partnership we're now prescribing for them, which of the systems actually in force today shall we adopt instead? What about the practice of the Thracians and many other peoples, who make their women work on the land and mind sheep and cattle, so that they turn into skivvies indistinguishable from slaves? Or what about the Athenians and all the other states in that part of the world? Well, here's how we Athenians deal with the problem: we 'concentrate our resources', as the expression is, under one roof, and let our women take charge of our stores and the spinning and wool-working in general. Or we could adopt the Spartan system, Megillus, which is a compromise. You make your girls take part in athletics and you give them a compulsory education in the arts; when they grow up, though dispensed from working wool, they have to 'weave' themselves a pretty hard-working sort of life which is by no means despicable or useless: they have to be tolerably efficient at running the home and managing the house and bringing up children—but they don't undertake military service. This means that even if some extreme emergency ever led to a battle for their state and the lives of their children, they wouldn't have the expertise to use bows and arrows, like so many Amazons, nor could they join the men in deploying any other missile. They wouldn't be able to take up shield and spear and copy Athena, so as to terrify the enemy (if nothing more) by being seen in some kind of battle-array gallantly resisting the destruction threatening their native land. Living as they do, they' never be anything like tough enough to imitate the Sarmatian women, who by comparison with such femininity would look like men. Anyone who wants to commend your Spartan legislators for this state of affairs, had better get on with it: I'm not going to change my mind. A legislator should go the whole way and not stick at half-measures; he mustn't just regulate the men and allow the women to live as they like and wallow in expensive luxury. That would be to give the state only half the loaf of prosperity instead of the whole of it.

Megillus:: What on earth are we to do, Clinias? Are we going to let our visitor run down Sparta for us like this?

Clinias:: Yes, we are. We told him he could be frank, and we must give him his head until we've properly worked through every section of our legal code.

Megillus:: Very well.

Athenian Stranger:: So I suppose I should try to press straight on with the next topic?

Clinias:: Naturally.

Athenian Stranger:: Now that our citizens are assured of a moderate supply of necessities, and other people have taken over the skilled work, what will be their way of life? Suppose that their farms have been entrusted to slaves, who provide them with sufficient produce of the land to keep them in modest comfort; suppose they take their meals in separate messes, one for themselves, another nearby for their families, including their daughters and their daughters' mothers; assume the messes, are presided over by officials, male and female as the case may be, who have the duty of dismissing their respective assemblies after the day’s review and scrutiny of the diners’ habits; and that when the official and his company have poured libations to whatever gods that day and night happen to be dedicated, they all duly go home. Now, do such leisured circumstances leave them no pressing work to do, no genuinely appropriate occupation? Must each of them get plumper and plumper every day of his life, like a fatted beast? No: we maintain that’s not the right and proper thing to do. A man who lives like that won’t be able to escape the fate he deserves; and the fate of an idle fattened beast that takes life easy is usually to be torn to pieces by some other animal—one of the skinny kind, who’ve been emaciated by a life of daring and endurance. (Our ideal, of course, is unlikely to be realized fully so long as we persist in our policy of allowing individuals to have their own private establishments, consisting of house, wife, children and so on. But if we could ever put into practice the second-best scheme we’re now describing, we'd have every reason to be satisfied.) So we must insist that there is something left to do in a life of leisure, and it’s only fair that the task imposed, far from being a light or trivial one, should be the most demanding of all. As it is, to dedicate your life to winning a victory at Delphi or Olympia keeps you far too busy to attend to other tasks; but a life devoted to the cultivation of every physical perfection and every moral virtue (the only life worth the name) will keep you at least twice as busy. Inessential business must never stop you taking proper food and exercise, or hinder your mental and moral training. To follow this regimen and to get the maximum benefit from it, the whole day and the whole night is scarcely time enough.

In view of this, every gentleman must have a timetable prescribing what he is to do every minute of his life, which he should follow at all times from the dawn of one day until the sun comes up at the dawn of the next. However, a lawgiver would lack dignity if he produced a mass of details about running a house, especially when he came to the regulations for curtailing sleep at night, which will be necessary if the citizens are going to protect the entire state systematically and uninterruptedly. Everyone should think it a disgrace and unworthy of a gentleman, if any citizen devotes the whole of any night to sleep; no, he should always be the first to wake and get up, and let himself be seen by all the servants. (It doesn't matter what we ought to call this kind of thing—either 'law' or 'custom' will do.) In particular, the mistress of the house should be the first to wake up the other women; if she herself is woken by some of the maids, then all the slaves—men, women and children—should say 'How shocking!' to one another, and so too, supposing they could, should the very walls of the house. While awake at night, all citizens should transact a good proportion of their political and domestic business, the officials up and down the town, masters and mistresses in their private households. By nature, prolonged sleep does not suit either body or soul, nor does it help us to be active in all this kind of work. Asleep, a man is useless; he may as well be dead. But a man who is particularly keen to be physically active and mentally alert stays awake as long as possible, and sets aside for sleep only as much time as is necessary for his health—and that is only a little, once that little has become a regular habit. Officials who are wide awake at night in cities inspire fear in the wicked, whether citizens or enemies, but by the just and the virtuous they are honored and admired; they benefit themselves and are a blessing to the entire state. And an additional advantage of spending the night in this way will be the courage thus inspired in individual members of the state.

When dawn comes up and brings another day, the children must be sent off to their teachers. Children must not be left without teachers, nor slaves without masters, any more than flocks and herds must be allowed to live without attendants. Of all wild things, the child is the most unmanageable: an unusually powerful spring of reason, whose waters are not yet canalized in the right direction, makes him sharp and sly, the most unruly animal there is. That’s why he has to be curbed by a great many ‘bridles’, so to speak. Initially, when he leaves the side of his nurse and mother, and is still young and immature, this will be his tutor’s duty, but later on it will devolve on his instructors in the various subjects—subjects which will be an extra discipline in themselves. So far, he will be treated as a young gentleman deserves. However, both the boy and his tutor or teacher must be punished by any passing gentleman who finds either of them misbehaving, and here the child must be treated as though he were a slave.

Any passer-by who fails to inflict due punishment, must for a start be held in the deepest disgrace, and the Guardian of the Laws who has been put in charge of the young must keep under observation this fellow who has come across miscreants of the kind we mentioned and has either failed to inflict the necessary punishment, or not inflicted it in the approved fashion.

Our sharp-eyed and efficient supervisor of the education of the young must redirect their natural development along the right lines, by always setting them on the paths of goodness as embodied in the legal code.

But how will the law itself adequately convey its teaching to this Guardian? So far, the instruction he has had from the law has been cursory and obscure, because only a selection of topics has been covered. But nothing, as far as possible, should be omitted; the Guardian should have every point explained to him so that he in turn may enlighten and educate others. Now, the business of choruses has already been dealt with: we've seen what types of song and dance should be selected or revised, and then consecrated. But what type of prose works should be put in front of your pupils? How should they be presented? Now here, my dear Director of Youth, is something we've not explained. Of course, we've told you what military skills they must practice and learn, but what about literature, playing the lyre, arithmetic? We stipulated that they must each understand enough of these subjects to fight a war and run a house and administer a state; for the same reasons they must acquire such knowledge about the heavenly bodies in their courses—sun, moon and stars—as will help them with the arrangements that every state is forced to make in this respect. You ask what arrangements we are referring to? We mean that the days must be grouped into months, and the months into years, in such a way that the seasons, along with their various sacrifices and festivals, may each receive proper recognition by being duly observed in their natural sequence. The result will be to keep the state active and alert, to render the gods due honor, and to make men better informed on these matters. All this, my friend, has not yet been adequately explained to you by the legislator. So pay attention to the points which are going to be made next.

We said that you have insufficient information about literature, for a start. Now, what's our complaint against the instructions you were given? It's simply that you've not yet been told whether a complete mastery of the subject is necessary before one can become a decent citizen or whether one shouldn't attempt it at all; and similarly in the case of the lyre. Well, we maintain that these subjects do have to be tackled. About three years will be a reasonable time for a child of ten to spend on literature, and a further three years, beginning at the age of thirteen, should be spent on learning the lyre. These times must be neither shortened nor lengthened: neither the child nor its father must be allowed to extend or curtail these periods of study out of enthusiasm for, or distaste of, the curriculum; that will be against the law.

Cases of disobedience must be punished by disqualification from the school prizes we shall have to describe a little later.

First, though, you yourself must grasp just what must be taught by the teachers and learned by the pupils in those periods of time. Well, the children must work at their letters until they are able to read and write, but any whose natural abilities have not developed sufficiently by the end of the prescribed time to make them into quick or polished performers should not be pressed.

The question now arises of the study of written works which the authors have not set to music. Although some of these works are in meter, others lack any rhythmical pattern at all—they are writings that simply reproduce ordinary speech, unadorned by rhythm and music. Some of the many authors of such works have left us writings that constitute a danger. Now, my splendid Guardians of the Laws, how are you going to deal with these works? What will be the right instructions for the lawgiver to give you about coping with them? I reckon he's going to be very much at a loss.

Clinias:: What is the difficulty you're talking about, sir? It looks as if you're faced by a genuine personal problem.

Athenian Stranger:: Your assumption is quite right, Clinias. But the two of you are my partners in legislation, and I'm obliged to tell you when I think I anticipate a difficulty and when I do not.

Clinias:: Oh? What makes you bring up that aspect of the business at this point? What's the matter?

Athenian Stranger:: I'll tell you: the idea of contradicting many thousands of voices. That's always difficult.

Clinias:: Well, bless my soul! Do you really imagine that your existing legislative proposals flout popular prejudices in just a few tiny details?

Athenian Stranger:: Yes, that's fair comment. The point you're making, I take it, is that although a lot of people set their face against the path we are following in our discussion, just as many are enthusiastic about it (or even if they are fewer in number, they're not inferior in quality)—and you're telling me to rely on the support of the latter and proceed with boldness and resolution along the legislative path opened up for us by our present discussion, and not to hang back.

Clinias:: Naturally.

Athenian Stranger:: Best foot forward, then. Now, what I say is this. We have a great many poets who compose in hexameters and trimeters and all the standard meters; some of these authors try to be serious, while others aim at a comic effect. Over and over again it's claimed that in order to educate young people properly we have to cram their heads full of this stuff; we have to organize recitations of it so that they never stop listening to it and acquire a vast repertoire, getting whole poets off by heart. Another school of thought excerpts the outstanding work of all the poets and compiles a treasury of complete passages, claiming that if the wide knowledge of a fully informed person is to produce a sound and sensible citizen, these extracts must be committed to memory and learned by rote. I suppose you're now pressing me to be quite frank and show these people where they are right and where they've gone wrong?

Clinias:: Of course.

Athenian Stranger:: Well then, in a nutshell, what sort of estimate will do them all justice? I imagine everybody would agree if I put it rather like this. Each of these authors has produced a lot of fine work, and a lot of rubbish too—but if that's so, I maintain that learning so much of it puts the young at risk.

Clinias:: So what recommendation would you give the Guardian of the Laws?

Athenian Stranger:: What about?

Clinias:: The model work that will enable him to decide what material all the children may learn, and what not. Tell us, without any hesitation.

Athenian Stranger:: My dear Clinias, I suspect I've had a bit of luck.

Clinias:: How's that?

Athenian Stranger:: Because I haven't got far to look for a model. You see, when I look back now over this discussion of ours, which has lasted from dawn up till this very moment—a discussion in which I think I sense the inspiration of heaven—well, it's come to look, to my eyes, just like a literary composition. Perhaps not surprisingly, I was overcome by a feeling of immense satisfaction at the sight of my 'collected works', so to speak, because, of all the addresses I have ever learned or listened to, whether in verse or in this kind of free prose style I've been using, it's these that have impressed me as being the most eminently acceptable and the most entirely appropriate for the ears of the younger generation. So I could hardly commend a better model than this to the Guardian of the Laws in charge of education. Here's what he must tell the teachers to teach the children, and if he comes across similar and related material while working through prose writings, or the verse of poets, or when listening to unwritten compositions in simple prose that show a family resemblance to our discussion today, he must on no account let them slip through his fingers, but have them committed to writing. His first job will be to compel the teachers to learn this material and speak well of it, and he must not employ as his assistants any teachers who disapprove of it; he should employ only those who endorse his own high opinion, and entrust them with the teaching and education of the children. That, then, is my doctrine on literature and its teachers, so let me finish there.

Clinias:: Well, sir, as far as I can judge from our original program, we've not strayed off the subjects we set out to discuss. But is our general policy the right one, or not? I suspect it would be difficult to say for sure.

Athenian Stranger:: That, Clinias, as we have often remarked, is something which will probably become clearer of its own accord when we've completely finished expounding our laws.

Clinias:: True enough.

Athenian Stranger:: After the teacher of literature, surely, we have to address the lyre-master?

Clinias:: Of course.

Athenian Stranger:: Now when we allocate these masters the duties of teaching this instrument and giving instruction in the subject in general, I think we ought to remember the line we took earlier.

Clinias:: What line do you mean?

Athenian Stranger:: We said think, that the sixty-year-old singers of Dionysus should be persons who are particularly sensitive to rhythm and the way in which ‘harmonies’ are constructed, so that when faced with good or vicious musical representations, and the emotions aroused by them, they may be able to select the works based on good representation and reject those based on bad. The former they should present and sing to the community at large, so as to charm the souls of the young people, encouraging each and every one of them to let these representations guide them along the path that leads to virtue.

Clinias:: You’re absolutely right.

Athenian Stranger:: With this object in view, here’s how the lyre-master and his pupil must employ the notes of their instruments. By exploiting the fact that each string makes a distinct sound, they must produce notes that are identical in pitch to the words being sung. The lyre should not be used to play an elaborate independent melody: that is, its strings must produce no notes except those of the composer of the melody being played; small intervals should not be combined with large, nor quick tempo with slow, nor low notes with high. Similarly, the rhythms of the music of the lyre must not be tricked out with all sorts of frills and adornments. All this sort of thing must be kept from students who are going to acquire a working knowledge of music in three years, without wasting time. Such conflict and confusion makes learning difficult, whereas the young people should above all be swift learners, because they have a great many important compulsory subjects laid down for them as it is—and in due time, as our discussion progresses, we shall see what these subjects are. But all these musical matters should be controlled, according to his brief, by our official in charge of education. As regards the actual singing, and the words, we have explained earlier what tunes and style of language the chorus-masters must teach: we said—remember?—that these things should be consecrated and each allocated to a suitable festival, so as to benefit society by the welcome pleasure they give.

Clinias:: Here again you've spoken the truth —

Athenian Stranger:: — the whole truth and nothing but the truth! So these are the regulations the person appointed as our Director of Music must adopt and enforce: let's wish him the best of luck in his task.

We, however, must supplement our previous regulations about dancing and the training of the body in general. We've filled in the gaps in our tuition in the case of music, so now let's deal with physical training in the same way. Both boys and girls, of course, must learn to dance and perform physical exercises?

Clinias:: Yes.

Athenian Stranger:: So it won't come amiss if we provide dancing masters for the boys and dancing mistresses for the girls, so as to facilitate practice.

Clinias:: Agreed.

Athenian Stranger:: So now let's summon once again the official that has the hardest job of all—the Director of Children. He'll be in charge both of music and of physical training, so he won't get much time off.

Clinias:: How then will a man of his advancing years be able to supervise so much?

Athenian Stranger:: There is no problem here, my friend. The law has already given him permission, which it will not withdraw, to recruit as assistant supervisors any citizens he may wish, of either sex. He will know whom to choose, and a sober respect for his office and a realization of its importance will make him anxious not to choose wrongly, because he'll be well aware that only if the younger generation has received and goes on receiving a correct education shall we find everything is ‘plain sailing’, whereas if not—well, it would be inappropriate to describe the consequences, and as the state is young we shall refrain from doing so, out of respect for the feelings of the excessively superstitious.

Well then, on these topics too—I mean dances and the entire range of movements involved in physical training—we have already said a great deal. We are establishing gymnasia for all physical exercises of a military kind—archery and deployment of missiles in general, skirmishing, heavy-armed fighting of every variety, tactical maneuvers, marches of every sort, pitching camp, and also the various disciplines of the cavalryman. In all these subjects there must be public instructors paid out of public funds; their lessons must be attended by the boys and men of the state, and the girls and women as well, because they too have to master all these techniques. While still girls, they must practice every kind of dancing and fighting in armor; when grown women, they must play their part in maneuvering, getting into battle formation and taking off and putting on weapons, if only to ensure that if it ever proves necessary for the whole army to leave the state and take the field abroad, so that the children and the rest of the population are left unprotected, the women will at least be able to defend them. On the other hand—and this is one of those things we can’t swear is impossible—suppose a large and powerful army, whether Greek or not, were to force a way into the country and make them fight a desperate battle for the very existence of the state. It would be a disaster for their society if its women proved to have been so shockingly ill-educated that they couldn’t even rival female birds, who are prepared to run every risk and die for their chicks fighting against the most powerful of wild animals. What if, instead of that, the women promptly made off to temples and thronged every altar and sanctuary, and covered the human race with the disgrace of being by nature the most lily-livered creatures under the sun?

Clinias:: By heaven, sir, no state in which that happened could avoid disgrace—quite apart from the damage that would be caused.

Athenian Stranger:: So let's lay down a law to the effect that women must not neglect to cultivate the techniques of fighting, at any rate to the extent indicated. These are skills which all citizens, male and female, must take care to acquire.

Clinias:: That gets my vote, at least.

Athenian Stranger:: Now for wrestling. We've partly dealt with this already, but we haven't described what in my eyes is its most important feature. But it's not easy to find words to explain it unless at the same time someone gives an actual demonstration with his body. So we'll postpone a decision on this point till we can support our statements with concrete examples and prove, among other points we've mentioned, that of all physical movements, those involved in our kind of wrestling are the most closely related to those demanded in warfare, and in particular that we should practice wrestling for the sake of military efficiency, rather than cultivate the latter in order to be better wrestlers.

Clinias:: You're right in that, at least.

Athenian Stranger:: So let's accept what we've said so far as an adequate statement of what wrestling can do for a man. The proper term for most of the other movements that can be executed by the body as a whole is 'dancing'. Two varieties, the decent and the disreputable, have to be distinguished. The first is a representation of the movements of graceful people, and the aim is to create an effect of grandeur; the second imitates the movements of unsightly people and tries to present them in an unattractive light. Both have two subdivisions. The first subdivision of the decent kind represents handsome, courageous soldiers locked in the violent struggles of war; the second portrays a man of temperate character enjoying moderate pleasures in a state of prosperity, and the natural name for this is 'dance of peace'. The dance of war differs fundamentally from the dance of peace, and the correct name for it will be the 'Pyrrhic'. It depicts the motions executed to avoid blows and shots of all kinds (dodging, retreating, jumping into the air, crouching); and it also tries to represent the opposite kind of motion, the more aggressive postures adopted for shooting and discharging javelins and delivering various kinds of blows. In these dances, which portray fine physiques and noble characters, the correct posture is maintained if the body is kept erect in a state of vigorous tension, with the limbs extended nearly straight. A posture with the opposite characteristics we reject as not correct. As for the dance of peace, the point we have to watch in every chorus-performer is this: how successfully—or how disastrously—does he keep up the fine style of dancing to be expected from men who've been brought up under good laws? This means we'd better distinguish the dubious style of dancing from the style we may accept without question. So can we define the two? Where should the line be drawn between them? 'Bacchic' dances and the like, which (the dancers allege) are a 'representation' of drunken persons they call Nymphs and Pans and Sileni and Satyrs, and which are performed during 'purifications' and 'initiations', are something of a problem: taken as a group, they cannot be termed either 'dances of peace' or 'dances of war', and indeed they resist all attempts to label them. The best procedure, I think, is to treat them as separate from ‘war-dances’ and ‘dances of peace’, and put them in a category of their own which a statesman may ignore as outside his province. That will entitle us to leave them on one side and get back to dances of peace and war, both of which undeniably deserve our attention.

Now, what about the non-combatant Muse? The dances she leads in honor of the gods and children of gods will comprise one broad category of dances performed with a sense of well-being. This is how we shall distinguish between the two forms this feeling may take: the particularly keen pleasure felt by people who have emerged from trouble and danger to a state of happiness; the quieter pleasures of those whose past good fortune has not only continued but increased. Now, take a man in either of these situations. The greater his pleasure the brisker his body’s movements; more modest pleasures make his actions correspondingly less brisk. Again, the more composed the man’s temperament, and the tougher he has been trained to be, the more deliberate are his movements; on the other hand, if he’s a coward and has not been trained to show restraint, his actions are wilder and his postures change more violently. And in general, when a man uses his voice to talk or sing, he finds it very difficult to keep his body still. This is the origin of the whole art of dancing: the gestures that express what one is saying. Some of us make gestures that are invariably in harmony with our words, but some of us fail. In fact, one has only to reflect on many other ancient terms that have come down to us, to see that they should be commended for their aptness and accuracy. One such term describes the dances performed by those who enjoy prosperity and seek only moderate pleasures: it’s just the right word, and whoever coined it must have been a real musician. He very sensibly gave all such dances the name ‘emmeleiai,’ and established two categories of approved dancing, the ‘war-dance’ (which he called ‘Pyrrhic’) and ‘dance of peace’ (‘emmeleiai,’) thus giving each its apt and appropriate title. The lawgiver should give an outline of them, and the Guardian of the Laws should see where they are to be found; then, after hunting them out, he must combine the dance-sequences with the other musical elements, and allocate each sacrifice and feast in the calendar the style of dance that is appropriate. After thus consecrating the whole list of dances, he must henceforth refrain from altering any feature either of the dancing or the singing: the same state and the same citizens (who should all be the same sort of people, as far as possible), should enjoy the same pleasures in the same fashion: that is the secret of a happy and a blessed life.

So much for the way men of superior physique and noble character should perform in choruses of the kind we’ve prescribed. We are now obliged to examine and pronounce on the misshapen bodies and degraded outlook of those performers who have turned to producing ludicrous and comic effects by exploiting the opportunities for humorous mimicry offered by dialogue, song and dance. Now anyone who means to acquire a discerning judgment will find it impossible to understand the serious side of things in isolation from their ridiculous aspect, or indeed appreciate anything at all except in the light of its opposite. But if we intend to acquire virtue, even on a small scale, we can’t be serious and comic too, and this is precisely why we must learn to recognize buffoonery, to avoid being trapped by our ignorance of it into doing or saying anything ridiculous when there’s no call for it. Such mimicry must be left to slaves and hired aliens, and no one must ever take it at all seriously. No citizen or citizeness must be found learning it, and the performances must always contain some new twist. With that law, and that explanation of it, humorous amusements—usually known as ‘comedy’—may be dismissed.

But what about our ‘serious’ poets, as they’re called, the tragedians? Suppose some of them were to come forward and ask us some such question as this: ‘Gentlemen, may we enter your state and country, or not? And may we bring our work with us? Or what’s your policy on this point?’ What would be the right reply for us to make to these inspired geniuses?

This, I think: ‘Most honored guests, we’re tragedians ourselves, and our tragedy is the finest and best we can create. At any rate, our entire state has been constructed so as to be a “representation” of the finest and noblest life—the very thing we maintain is most genuinely a tragedy. So we are poets like yourselves, composing in the same genre, and your competitors as artists and actors in the finest drama, which true law alone has the natural powers to “produce” to perfection (of that we’re quite confident). So don’t run away with the idea that we shall ever blithely allow you to set up stage in the market-place and bring on your actors whose fine voices will carry further than ours. Don’t think we’ll let you declaim to women and children and the general public, and talk about the same practices as we do but treat them differently—indeed, more often than not, so as virtually to contradict us. We should be absolutely daft, and so would any state as a whole, to let you go ahead as we’ve described before the authorities had decided whether your work was fit to be recited and suitable for public performance or not. So, you sons of the charming Muses, first of all show your songs to the authorities for comparison with ours, and if your doctrines seem the same as or better than our own, we'll let you produce your plays; but if not, friends, that we can never do.'

So as regards chorus performances in general and the question of learning a part in them, custom will march hand in hand with law—dealing with slaves and their masters separately, if you are agreeable.

Clinias:: How could we fail to agree, at any rate for the moment?

Athenian Stranger:: For gentlemen three related disciplines still remain: computation and the study of numbers; measurements of lines, surfaces and solids; the mutual relationship of the heavenly bodies as they revolve in their courses. None of these subjects must be studied in minute detail by the general public, but only by a chosen few (and who they are, we shall say when the time comes, when our discussion is drawing to a close). But what about the man in the street? It would certainly be a disgrace for him to be ignorant of what people very rightly call the 'indispensable rudiments'; but it will be difficult—impossible, even—for him to make a minute study of the entire subject. However, we can't dispense with the basic necessities, which was probably the point in the mind of the coiner of that saying about God, to the effect that 'not even God will be found at odds with necessity'—presumably divine necessities, because if you interpret the remark as referring to necessities in the mortal realm, as do most people who quote such things, it's by far the most naive remark that could be made.

Clinias:: Well, then, sir, what necessities, divine rather than the other sort, are relevant to these studies?

Athenian Stranger:: These, I think: the necessities of which at least some practical and theoretical knowledge will always be essential for every god, spirit or hero who means to take charge of human beings in a responsible fashion. A man, at any rate, will fall a long way short of such godlike standards if he can’t recognize one, two and three, or odd and even numbers in general, or hasn’t the faintest notion how to count, or can’t reckon up the days and nights, and is ignorant of the revolutions of the sun and moon and the other heavenly bodies. It’s downright stupid to expect that anyone who wants to make the slightest progress in the highest branches of knowledge can afford to ignore any of these subjects. But what parts of them should be studied, and how intensively, and when? Which topics should be combined, and which kept separate? How will they be synthesized? These are the first questions we have to answer, and then with these preliminary lessons to guide us we may advance to the remaining studies. This is the natural procedure enforced by the necessity with which we maintain no god contends now, or ever will.

Clinias:: Yes, sir, those proposals of yours, put like that, seem natural and correct.

Athenian Stranger:: They certainly are, Clinias, but such a preliminary statement of them is difficult to put into legal form. If you like, we’ll postpone more precise legislation till later.

Clinias:: It looks to us, sir, as if you’re deterred by the way our countrymen commonly neglect this sort of subject. But your fears are quite groundless, so try to tell us what you think, without keeping anything back on that account.

Athenian Stranger:: I am indeed deterred, for the reasons you mention, but I am even more appalled at those who have actually undertaken those studies, but in the wrong manner. Total ignorance over an entire field is never dangerous or disastrous; much more damage is done when a subject is known intimately and in detail, but has been improperly taught.

Clinias:: You're right.

Athenian Stranger:: So we should insist that gentlemen should study each of these subjects to at least the same level as very many children in Egypt, who acquire such knowledge at the same time as they learn to read and write. First, lessons in calculation have been devised for tiny tots to learn while they are enjoying themselves at play: they divide up a given number of garlands or apples among larger or smaller groups, and arrange boxers or wrestlers in an alternation of 'byes' and 'pairs', or in a sequence of either, and in the various further ways in which 'byes' and 'pairs' naturally succeed each other. Another game the teachers play with them is to jumble up bowls of gold and bronze and silver and so on, or distribute whole sets of one material. In this way, as I indicated, they make the uses of elementary arithmetic an integral part of their pupils' play, so that they get a useful introduction to the art of marshaling, leading and deploying an army, or running a household; and in general they make them more alert and resourceful persons. Next, the teacher puts the children on to measuring lengths, surfaces and solids—a study which rescues them from the deep-rooted ignorance, at once comic and shocking, that all men display in this field.

Clinias:: What sort of ignorance do you mean, in particular?

Athenian Stranger:: My dear Clinias, even I took a very long time to discover mankind's plight in this business; but when I did, I was amazed, and could scarcely believe that human beings could suffer from such swinish stupidity. I blushed not only for myself, but for Greeks in general.

Clinias:: Why so? Go on, sir, tell us what you're getting at.

Athenian Stranger:: I'll explain—or rather, I'll make my point by asking you a few questions. Here's a simple one: you know what's meant by a 'line', I suppose?

Clinias:: Of course.

Athenian Stranger:: Very well. What about 'surface'?

Clinias:: Surely.

Athenian Stranger:: You appreciate that these are two distinct things, and that 'volume' is a third?

Clinias:: Naturally.

Athenian Stranger:: And you regard all these as commensurable?

Clinias:: Yes.

Athenian Stranger:: And one length, I suppose, is essentially expressible in terms of another length, one surface in terms of another surface, and one volume in terms of another volume?

Clinias:: Exactly.

Athenian Stranger:: Well, what if some of these can't be thus expressed, either 'exactly' or approximately. What if some can, and some cannot, in spite of your thinking they all can? What do you think of your ideas on the subject now?

Clinias:: They're worthless, obviously.

Athenian Stranger:: What about the relationship of line and surface to volume, or surface and line to each other? Don't all we Greeks regard them as in some sense commensurable?

Clinias:: We certainly do.

Athenian Stranger:: But if, as I put it, ‘all we Greeks’ believe them to be commensurable when fundamentally they are incommensurable, one had better address these people as follows (blushing the while on their behalf): ‘Now then, most esteemed among the Greeks, isn’t this one of those subjects we said it was disgraceful not to understand—not that a knowledge of the basic essentials was much to be proud of?’

Clinias:: Of course.

Athenian Stranger:: Now there are a number of additional and related topics which are a fertile breeding-ground for mistakes similar to those we’ve mentioned.

Clinias:: What sort of topics?

Athenian Stranger:: The real relationship between commensurables and in-commensurables. We must be very poor specimens if on inspection we can’t tell them apart. These are the problems we ought to keep on putting up to each other, in a competitive spirit, when we’ve sufficient time to do them justice; and it’s a much more civilized pastime for old men than checkers.

Clinias:: Perhaps so. Come to think of it, checkers is not radically different from such studies.

Athenian Stranger:: Well, Clinias, I maintain that these subjects are what the younger generation should go in for. They do no harm, and are not very difficult: they can be learned in play, and so far from harming the state, they’ll do it some good. But if anyone disagrees, we must listen to his case.

Clinias:: Of course.

Athenian Stranger:: However, although obviously we shall sanction them if that proves to be their effect, we shall reject them if they seem to disappoint our expectations.

Clinias:: Obviously indeed. No doubt about it.

Athenian Stranger:: Well then, sir, so that our legal code shall have no gaps, let's regard these studies as an established but independent part of the desired curriculum—independent, that is, of the rest of the framework of the state, so that they can be 'redeemed' like 'pledges', in case the arrangements fail to work out to the satisfaction of us the depositors or you the pledgees.

Clinias:: Yes, that's a fair way to present them.

Athenian Stranger:: Next, consider astronomy. Would a proposal to teach it to the young meet with your approval, or not?

Clinias:: Just tell us what you think.

Athenian Stranger:: Now here's a very odd thing, that really is quite intolerable.

Clinias:: What?

Athenian Stranger:: We generally say that so far as the supreme deity and the universe are concerned, we ought not to bother our heads hunting up explanations, because that is an act of impiety. In fact, precisely the opposite seems to be true.

Clinias:: What's your point?

Athenian Stranger:: My words will surprise you, and you may well think them out of place on the lips of an old man. But it's quite impossible to keep quiet about a study, if one believes it is noble and true, a blessing to society and pleasing in the sight of God.

Clinias:: That's reasonable enough, but what astronomy are we going to find of which we can say all that?

Athenian Stranger:: My dear fellows, at the present day nearly all we Greeks do the great gods—Sun and Moon—an injustice.

Clinias:: How so?

Athenian Stranger:: We say that they, and certain other heavenly bodies with them, never follow the same path. Hence our name for them: ‘planets.’

Clinias:: Good heavens, sir, that’s absolutely right. In the course of my life I’ve often seen with my own eyes how the Morning and the Evening Star, and a number of others, never describe the same course, but vary from one to another; and we all know that the sun and moon always move like that.

Athenian Stranger:: Megillus and Clinias, this is precisely the sort of point about the gods of the heavens that I am insisting our citizens and young men must study, so as to learn enough about them all to avoid blasphemy, and to use reverent language whenever they sacrifice and offer up their pious prayers.

Clinias:: Right enough—if it’s possible, in the first place, to acquire the knowledge you mention. On the assumption that investigation will enable us to correct any errors in our present statements, I too agree that this subject must be studied, in view of its grandeur and importance. So do your level best to convince us of the case you’re making, and we’ll try to follow you and take in what you say.

Athenian Stranger:: My point is not an easy one to appreciate, but it’s not unduly difficult either, and won’t take up a lot of time, as I’ll prove to you by my ability to keep my explanation brief—even though it wasn’t so very long ago, when I was no youngster, that I heard of these things. If the subject were difficult, I'd never be able to explain it to you, old men that we all are.

Clinias:: You’re right. But what is this subject you say is so wonderful, so suitable for young men to learn, yet unknown to us? Try to tell us that much about it, at any rate, as clearly as you can.

Athenian Stranger:: Yes, try I must. This belief, my dear fellows, that the moon and sun and other heavenly bodies do in fact ‘wander’, is incorrect: precisely the opposite is true. Actually, each of them perpetually describes just one fixed orbit, although it is true that to all appearances its path is always changing. Further, the quickest body is wrongly supposed to be the slowest, and vice versa. So if the facts are as stated, and we are in error, we’re no better than spectators at Olympia would be, if they said that the fastest horse in the race or the fastest long-distance runner was the slowest, and the slowest the fastest, and composed panegyrics and songs extolling the loser as the winner. I don’t suppose the praises showered on the runners would be at all apt or welcome to them—they’re only men, after all! At Olympia, such a mistake would be merely ludicrous. But what are we to think of the analogous theological errors we’re committing nowadays? In this field such mistakes are not funny at all; and it certainly gives the gods no pleasure to have us spread false rumors about them.

Clinias:: Very true—if you’re right about the facts.

Athenian Stranger:: So if we can prove I am right, all such topics as these must be studied to the level indicated, but in the absence of proof they must be left alone. May we adopt this as agreed policy?

Clinias:: Certainly.

Athenian Stranger:: So it’s high time to call a halt to our regulations about the subjects to be studied in the educational curriculum, and turn our attention to hunting and all that sort of thing. Here too we must adopt the same procedure as before, because the legislator’s job is not done if he simply lays down laws and gets quit of the business. In addition to his legislation, he must provide something else, which occupies a sort of no-man's land between admonition and law. This is a point, of course, that we've come across often enough as we talked of this and that, as for instance when we dealt with the training of very young children. We hold that although education at that level is certainly the sort of topic on which suggestions are needed, it would be plain silly to think of these suggestions as formal laws. Even when the actual laws and the complete constitution have been thus formally committed to writing, you don't exhaust the praises of a supremely virtuous citizen by saying 'Here's a good man for you, a devoted and utterly obedient servant of the laws'. Your praise will be more comprehensive if you can say, 'He's a good man because he has given a lifetime of unswerving obedience to the written words of the legislator, whether they took the form of a law, or simply expressed approval or disapproval'. There is no truer praise of a citizen than that. The real job of the legislator is not only to write his laws, but to blend into them an explanation of what he regards as respectable and what he does not, and the perfect citizen must be bound by these standards no less than by those backed by legal sanctions.

We can cite our present subject as a kind of witness to demonstrate the point more clearly. You know how 'hunting' takes a great many forms, almost all of which are nowadays covered by this one term. There is a variety of ways of hunting water animals, and the same goes for the birds of the air, and the animals that live on land too—and not only the wild ones, either: we also have to take into account the hunting of men, not merely by their enemies in war (such as the raids carried out by robbers and the pursuit of army by army), but by their lovers, who 'pursue' their quarry for many different reasons, some admirable, some execrable. When the legislator comes to lay down his laws about hunting he cannot leave all this unexplained, but neither can he produce a set of menacing regulations by imposing rules and punishments for all cases. So how are we going to tackle this kind of thing? He—the legislator—having asked himself ‘Are these suitable exercises and activities for the young, or not?’, must then approve or condemn the various forms of hunting. The young men, for their part, must listen to the lawgiver and obey him, without being seduced by the prospect of pleasure or deterred by vigorous effort; and they should pay much more attention to carrying out warm recommendations than to the detailed threats and punishment of the formal law.

With those preliminaries, we may now put in due form our approval or disapproval of the various forms of hunting, commending the kind that is a good influence on the younger generation and censuring the other sort. So let’s now follow up with a talk to the young people, and address them in this idealistic vein:

Friends, we hope you’ll never be seized by a desire or passion to fish in the sea or to angle or indeed to hunt water animals at all; and don’t resort to creels, which a lazybones will leave to catch his prey whether he’s asleep or awake. We hope you never feel any temptation to capture men on the high seas and take to piracy, which will make you into brutal hunters and outlaws; and we hope it never so much as occurs to you to turn thief in town or country. Nor should any young man ever be seduced by a fancy to trap birds—away with such an uncivilized desire! That leaves only land animals for the athletes of our state to hunt and capture. Now sometimes this is done by what is called “night-hunting,” when the participants, sluggards that they are, take it in turn to sleep. This sort of hunting is not to be recommended, nor is the sort that offers periods of rest from exertion, where the savage strength of the animals is subdued by nets and traps, rather than because a hunter who relishes the fight has got the better of them. All men who wish to cultivate the “divine” courage have only one type of hunting left, which is the best: the capture of four-footed animals with the help of dogs and horses and by your own exertions, when you hunt in person and subdue all your prey by chasing and striking them and hurling weapons at them.’

This address may be taken as an explanation of what we approve and condemn in this entire business. Here’s the actual law:

No one should restrain these genuinely ‘holy’ hunters from taking their hounds where they like and as they like; but the night-trapper, who relies on nets and snares, must not be allowed by anyone, at any time or place, to hunt his prey.

The fowler is not to be restrained on fallow-land or on the mountain side, but any passer-by should chase him off cultivated or holy ground.

The fisherman is to be allowed to fish anywhere except in harbors and sacred rivers, ponds and lakes, provided only that he does not make the water turbid by using noxious juices.

So here’s where we have to say that our regulations about education are finally complete.

Clinias:: That’s good news!

## Book 8.

Athenian Stranger:: Now then, the next job is to enlist the aid of the oracles reported from Delphi to draw up a program of festivals to be established by law, and discover what sacrifices the state will find it ‘meet and right’ to offer and which gods should receive them. It will probably be within our own discretion to decide the number and the occasions.

Clinias:: Yes, I dare say the number will be up to us.

Athenian Stranger:: So let’s deal with that first. There are to be no less than three hundred and sixty-five of them, so as to ensure that there is always at least one official sacrificing to some god or spirit on behalf of the state, its citizens and their property. The Expounders, Priests, Priestesses and Prophets are to hold a meeting with the Guardians of the Laws and fill in the details the legislator has inevitably omitted (in fact, this same combined board will also have to spot where such deficiencies exist in the first place). The law will provide for twelve festivals in honor of the twelve gods who give their names to the individual tribes. Every month the citizens should sacrifice to each of these gods and arrange chorus performances and cultural and gymnastic contests, varied according to the deity concerned and appropriate to the changing seasons of the year; and they must divide festivals for women into those that must be celebrated in the absence of men, and those that need not be. Further, they must not confuse the cult of the gods of the underworld with that of the ‘heavenly’ gods (as we must style them) and their retinue. They are to keep the two kinds of celebration separate, and put the former by law in the twelfth month, which is sacred to Pluto. Men of battle should feel no horror for such a god as this—on the contrary, they should honor him as a great friend of the human race. The union of body and soul, you see, can never be superior to their separation (and I mean that quite seriously).

There's a further point they will have to appreciate if they are going to allocate these events satisfactorily. Although on the score of leisure-time and abundance of all necessities our state has no rivals at the present day, it still has to live the good life, just like the individual person; and the first requirement for a happy life is to do yourself no injury nor allow any to be done to you by others. Of course, the first half of the requirement presents no great problem; the difficulty lies in becoming strong enough to be immune to injury—and the one and only thing that brings such immunity is complete virtue. The same applies to a state: if it adopts the ways of virtue, it can live in peace; but if it is wicked, war and civil war will plague it. That's the situation in a nutshell, and it means that each and every citizen must undertake military training in peace-time, and not leave it till war breaks out. So a state that knows its business should reserve at least one day per month (and more than one, if the authorities think fit) for military maneuvers, to be held without regard for the weather, come rain come shine. Men, women and children should participate, and the authorities will decide from time to time whether to take them out on maneuvers en masse or in sections. They must never fail to mount a program of wholesome recreation, accompanied by sacrifices; and the program ought to include 'war-games' which should simulate the conditions of actual fighting as realistically as possible. On each field-day they should distribute prizes and awards of merit, and compose speeches in commendation or reproof of each other according to the conduct of individuals not only in the contests but in daily life too: those who are deemed to have acquitted themselves particularly well should be honored, while the failures should be censured. But not everyone should produce such compositions. For a start, a composer must be at least fifty years old, and he must not be one of those people who for all their poetical and musical competence have not a single noble or outstanding achievement to their credit. The compositions that ought to be sung (even if in terms of art they leave something to be desired) are those of citizens who have achieved a high standard of conduct and whose personal merits have brought them distinction in the state. The official in charge of education, together with the other Guardians of the Laws, are to select them and grant them alone the privilege of giving their Muses free rein; other people are to be entirely forbidden. No one should dare to sing any unauthorized song, not even if it is sweeter than the hymns of Orpheus or of Thamyras. Our citizens must confine themselves to such pieces as have been given the stamp of approval and consecrated to the gods, and to compositions which on the strength of their authors' reputation are judged to be suitable vehicles for commendation or censure. (I intend the same regulations to apply to men and women alike, both as regards military excursions and freedom to compose unsupervised.)

The legislator should think things over and employ this sort of analogy: 'Let's see, now, once I've organized the state as a whole, what sort of citizen do I want to produce? Athletes are what I want—competitors against a million rivals in the most vital struggles of all. Right?' 'Very much so', one would reply, correctly. Well then, if we were training boxers or pancratiasts or competitors in some other similar contest should we go straight into the ring unprepared by a daily work-out against an opponent? If we were boxers, surely we'd have spent days on end before the contest in strenuous practice, learning how to fight, and trying out all those maneuvers we intended to use when the time came to fight to win? We'd come as close as we could to the real conditions of the contest by putting on practice-gloves instead of thongs, so as to get as much practice as possible in delivering and dodging punches. And if we ran particularly short of sparring partners then we'd go to the trouble of hanging up a lifeless dummy to practice against; and we certainly wouldn't be put off by the idiots who might laugh at us. Come to that, if one day we ran out of sparring partners completely, living or otherwise, and had no one to practice with at all, we'd go so far as to box against our own shadows—shadow-boxing with a vengeance! After all, how else can you describe a practice-session in which you just throw punches at the air?

Clinias:: No, sir, there's no other term for it than the one you've just used.

Athenian Stranger:: Very well. So when the fighting force of our state comes to brace itself to face the most important contest of all—to fight for life and children and property and the entire state—is it really to be after less intensive training than combatants such as these have enjoyed? Is our citizens' legislator going to be so scared that their practice against each other may look silly to some people that he will neglect his duty? I mean his duty of instructing that maneuvers on a small scale, without arms, should be held every day, if possible (and for this purpose he should arrange teams to compete in every kind of gymnastic exercise), whereas the 'major' exercises, in which arms are carried, should be held not less than once per month. The citizens will compete with each other throughout the entire country, to see who is best at occupying positions and laying ambushes, and they must reproduce the conditions of every kind of battle (that will give them real practice, because they will be aiming at the closest possible approximation to the real targets). And they should use missiles that are moderately dangerous: we don’t want the competitions they hold against each other to be entirely unalarming, but to inspire them with fear and do something to reveal the brave man and the coward; and the legislator should confer honors or inflict disgrace as appropriate, so as to prepare the whole state to be an efficient fighter in the real struggle that lasts a lifetime. In fact, if anyone is killed in such circumstances, the homicide should be regarded as involuntary, and the legislator should decree that the killer’s hands are clean when once he has been purified according to law. After all, the lawgiver will reflect, even if a few people do die, others who are just as good will be produced to replace them, whereas if fear dies (so to speak), he’ll not be able to find in all these activities a yardstick to separate the good performers from the bad—and that would be a bigger disaster for the state than the other.

Clinias:: Yes, sir, we'd agree that this is the sort of law that every state should pass and observe.

Athenian Stranger:: Now we all know, don’t we, the reason why this kind of teamwork and competition is not to be found in any state at the present time, except on a very modest scale indeed? I suppose we'd say it was because the masses and their legislators suffer from ignorance?

Clinias:: Maybe so.

Athenian Stranger:: Not a bit of it, my dear Clinias! We ought to say there are two causes, and pretty powerful ones at that.

Clinias:: What are they?

Athenian Stranger:: The first is a passion for wealth which makes men unwilling to devote a minute of their time to anything except their own personal property. This is what every single citizen concentrates on with all his heart and soul; his ruling passion is his daily profit and he's quite incapable of worrying about anything else. Everyone is out for himself, and is very quick off the mark indeed to learn any skill and apply himself to any technique that fills his pocket; anything that doesn't do that he treats with complete derision. So we can treat this as one reason why states are not prepared to undertake this or any other praiseworthy activity in a serious spirit, whereas their insatiable desire for gold and silver makes them perfectly willing to slave away at any ways and means, fair or foul, that promise to make them rich. It doesn't matter whether something is sanctioned by heaven, or forbidden and absolutely disgusting—it's all the same to them, and causes not the slightest scruple, provided it enables them to make beasts of themselves by wallowing in all kinds of food and drink and indulging every kind of sexual pleasure.

Clinias:: You're quite right.

Athenian Stranger:: So I've described one cause: let's treat this obsession as the first obstacle that prevents states from following an adequate course of training, either for military or for any other purposes: naturally decent folk are turned into traders or merchant-venturers or just plain servants, and bold fellows are made into robbers and burglars, and become bellicose and overbearing. Quite often, though, they are not naturally corrupt: they're simply unlucky.

Clinias:: How do you mean?

Athenian Stranger:: Well, if you have to live out your life with a continual hunger in your soul, aren't you 'unlucky' to a degree? What other term could I use?

Clinias:: Very well, that's one reason. What's your second, sir?

Athenian Stranger:: Ah, yes, thank you for jogging my memory.

Clinias:: According to you, one cause is the insatiable and lifelong acquisitive urge which obsesses us all and stops us undertaking military training in the proper way. All right—now tell us the second.

Athenian Stranger:: I dare say it looks as if I'm putting off getting round to it because I don't know what to say?

Clinias:: No, but you do seem to be such a 'good hater' of this sort of character that you're berating it more than the subject in hand requires.

Athenian Stranger:: That's a very proper rebuke, gentlemen. So you're all ready for the next point, it seems.

Clinias:: Just tell us, that's all!

Athenian Stranger:: The cause I want to put forward are those 'non-constitutions' that I've often mentioned earlier in our conversation—democracy, oligarchy and tyranny. None of these is a genuine political system: the best name for them all would be 'party rule', because under none of them do willing rulers govern willing subjects: that is, the rulers are always willing enough, but they never hold power with the consent of the governed. They hold it by constant resort to a degree of force, and they are never prepared to allow any of their subjects to cultivate virtue or acquire wealth or strength or courage—and least of all will they tolerate a man who can fight. So much for the two main roots of pretty nearly all evil, and certainly the main roots of the evils we're discussing. However, the political system which we are now establishing by law has avoided both of them. Our state enjoys unparalleled leisure, the citizens live free of interference from each other, and I reckon these laws of ours are quite unlikely to turn them into money-grubbers. So it's a reasonable and natural supposition that a political system organized along these lines will be unique among contemporary constitutions in finding room for the military training-cum-sport that we've just described—and described in the detail it deserves, too.

Clinias:: Splendid.

Athenian Stranger:: The next thing we have to bear in mind about any athletic contest is this: if it helps us to train for war we must go in for it and put up prizes for the winners, but leave it strictly alone if it does not. Isn't that right? It will be better to stipulate from the start the contests we want, and provide for them by law. First, I take it we should arrange races, and contests of speed in general?

Clinias:: Yes, we should.

Athenian Stranger:: At any rate, what makes a man a fine soldier more than anything else is general agility, a ready use of his hands as well as his feet. If he's a good runner, he can make a capture or show a clean pair of heels, and versatile hands will stand him in good stead in tangling with the enemy in close combat, where strength and force are essential.

Clinias:: Certainly.

Athenian Stranger:: But if he hasn't any weapons, neither ability will help him as much as it might.

Clinias:: Of course not.

Athenian Stranger:: So in our contests the first competitor our herald will summon will be (as now) the single-length runner, and he will come forward armed; we shan't put up any prizes for competitors who are unarmed. So, as I say, the competitor who intends to run one length will come on first, carrying his arms; second will come the runner over two lengths, and third the middle-distance runner; the long-distance man will come on fourth. The fifth competitor we shall call the 'heavy-armed' runner, from his heavier equipment. We shall start by sending him in full armor over a distance of sixty lengths to some temple of Ares and back. His course will be over comparatively level ground, whereas the other runner, an archer in full archer rig, will run a course of  lengths over hills and constantly changing terrain to a temple of Apollo and Artemis. While we're waiting for these runners to return, we'll hold the other contests and finally award the prizes to the winners of each event.

Clinias:: Fine.

Athenian Stranger:: Let's arrange these contests in three groups, one for boys, one for youths, and one for men. When youths and boys compete as archers and heavy-armed runners, we shall make the course for youths two-thirds of the full distance and for the boys one-half. As for females, girls below the age of puberty must enter (naked) for the single-length, double-length, middle and long-distance races, their competition being confined to the stadium. Girls from thirteen till the marriage-age must enter till they are at least eighteen, but not beyond the age of twenty. (They, however, must put on some suitable clothing before presenting themselves as competitors in these races.)

So much for men's and women's races; now to deal with trials of strength. Instead of wrestling and other he-man contests that are the fashion nowadays, we'll have our citizens fight each other armed—man to man, two a side, and any number per team up to ten. We ought to take our cue from the authorities in charge of wrestling, who have established criteria which will tell you whether a wrestler’s performance is good or bad. We must call in the leading exponents of armed combat and ask them to assist us in framing rules about the blows one needs to avoid or inflict to win in this sort of contest, and similarly the points we need to look for to decide the loser. The same set of rules should also apply to the female competitors (who must be below the age of marriage). To replace the pancration we shall establish a general contest of light-infantry; the weapons of the competitors are to be bows, light shields, javelins, and stones cast by hand and sling. Here too we’ll lay down rules, and give the honor of victory to the competitor who reaches the highest standard as defined by the regulations.

The next thing for which we must provide rules is horse-racing. In Crete, of course, horses are of rather limited use and you don’t find very many of them, so that the comparatively low level of interest in rearing and racing them is inevitable. No one in this country keeps a team of horses for a chariot, nor is ever likely to covet such a thing, so that if we established contests in something so foreign to the local customs, we'd be taken for idiots (and rightly). The way to modify this sport for the local Cretan terrain is to put up prizes for skill in riding the animals—as foals, when half-grown, and when fully grown. So our law should provide for contests in which jockeys can compete with each other in these categories; Tribe-Leaders and Cavalry-Commanders should be entrusted with the job of deciding the actual courses and deciding which competitor has won (in full armor, of course: just as in the athletic events, if we established contests for unarmed competitors we'd be failing in our duty as legislators). And since your Cretan is no fool at archery and javelin-throwing in the saddle, people should amuse themselves by competing in this sort of contest too. As for women, there’s no point in making it legally compulsory for them to join in all this, but if their previous training has got them into the habit, and girls and young women are in good enough shape to take part without hardship, then they should be permitted to do so and not discouraged.

That brings us to the end of our discussion of competitions and the teaching of physical training, and we’ve seen what strenuous efforts are involved in the contests and the daily sessions with instructors. In fact, we’ve also dealt pretty thoroughly with the role of the arts, although arrangements about reciters of poetry and similar performers, and the chorus-competitions obligatory at festivals, can wait till the gods and the minor deities have had their days and months and years allocated to them; then we can decide whether festivals should be held at two-year or four-year intervals, or whether the gods suggest some other pattern. On these occasions we must also expect the various categories of competitions in the arts to be held. This is the province of the stewards of the games, the Minister of Education and the Guardians of the Laws, who should all meet as an ad hoc committee and produce their own regulations about the date of each chorus-competition and dance, and specify who should compete and who may watch. The original legislator has often enough explained the sort of thing each of these performances should be, and has dealt with the songs, the spoken addresses and the musical styles that accompany the rhythmical movements of the dancers. His successors must emulate his example in their own legislation and match the right contests with the right sacrifices at the right times, and so provide festivals at which the state may make merry.

Athenian Stranger:: It’s not difficult to see how to cast these and similar matters in the form of a law, and making this or that alteration won’t help or harm the state very much. But now for something which is not a triviality at all. It’s a point on which it is difficult to convince people, and God himself is really the only person to do it—supposing, that is, we could in fact somehow get explicit instructions from him. Since that’s impossible, it looks as if we need some intrepid mortal, who values frankness above all, to specify the policy he believes best for the state and its citizens, give a firm ‘no’ to our most compelling passions, and order his audience of corrupted souls to observe standards of conduct in keeping with, and implied by, the whole organization of the state. There will be no one to back him up. He’ll walk alone, with reason alone to guide him.

Clinias:: What new topic is this, sir? We don’t see what you’re getting at.

Athenian Stranger:: That’s not surprising. Well, I’ll try to put the point more explicitly. When I came to discuss education, I envisaged young men and women associating with each other on friendly terms. Naturally enough, I began to feel some disquiet. I wondered how one would handle a state like this, with everyone engaged on a life-long round of sacrifices and festivals and chorus-performances, and the young men and women well-nourished and free of those demanding and degrading jobs that damp down lust so effectively. Reason, which is embodied in law as far as it can be, tells us to avoid indulging the passions that have ruined so many people. So how will the members of our state avoid them? (Actually, most desires may well be kept in check by the regulations we have already framed. If so, we needn’t be surprised. After all, the law against excessive wealth will do a great deal to encourage self-control, and the educational curriculum is full of sound rules designed for the same purpose. The officials too, who have been rigorously trained to watch this point closely, and to keep the young people themselves under constant surveillance, will do something to restrain ordinary passions, as far as any man can.) But there are sexual urges too—of boys and girls and heterosexual love among adults. What precautions should one take against passions which have had a such a powerful effect on public and private life? What's the remedy that will save us from the dangers of sex in each? It's a great problem, Clinias. We're faced with the fact that though in several other respects Crete in general and Sparta give us pretty solid help when we frame laws that flout common custom, in affairs of the heart (there's no one listening, so let's be frank) they are totally opposed to us. Suppose you follow nature's rule and establish the law that was in force before the time of Laius. You' argue that one may have sexual intercourse with a woman but not with men or boys. As evidence for your view, you'd point to the animal world, where (you'd argue) the males do not have sexual relations with each other, because such a thing is unnatural. But in Crete and Sparta your argument would not go down at all well, and you'd probably persuade nobody. However, another argument is that such practices are incompatible with what in our view should be the constant aim of the legislator—that is, we're always asking 'which of our regulations encourages virtue, and which does not?' Now then, suppose in the present case we agreed to pass a law that such practices are desirable, or not at all undesirable—what contribution would they make to virtue? Will the spirit of courage spring to life in the soul of the seduced person? Will the soul of the seducer learn habits of self-control? No one is going to be led astray by that sort of argument—quite the contrary. Everyone will censure the weakling who yields to temptation, and condemn his all-too-effeminate partner who plays the role of the woman. So who on earth will pass a law like that? Hardly anyone, at any rate if he knows what a genuine law really is. Well, how do we show the truth of this? If you want to get these things straight, you have to analyze the nature of friendship and desire and 'love', as people call it. There are two separate categories, plus a third which is a combination of both. But one term covers all three, and that causes no end of muddle and confusion.

Clinias:: How's that?

Athenian Stranger:: When two people are virtuous and alike, or when they are equals, we say that one is a 'friend' of the other; but we also speak of the poor man's 'friendship' for the man who has grown rich, even though they are poles apart. In either case, when the friendship is particularly ardent, we call it 'love'.

Clinias:: Yes, we do.

Athenian Stranger:: And a violent and stormy friendship it is, when a man is attracted to someone widely different to himself, and only seldom do we see it reciprocated. When men are alike, however, they show a calm and mutual affection that lasts a lifetime. But there is a third category, compounded of the other two. The first problem here is to discover what this third kind of lover is really after. There is the further difficulty that he himself is confused and torn between two opposing instincts: one tells him to enjoy his beloved, the other forbids him. The lover of the body, hungry for his partner who is ripe to be enjoyed, like a luscious fruit, tells himself to have his fill, without showing any consideration for his beloved's character and disposition. But in another case physical desire will count for very little and the lover will be content to gaze upon his beloved without lusting for him—a mature and genuine desire of soul for soul. That body should sate itself with body he'll think outrageous; his reverence and respect for self-control, courage, high principles and good judgment will make him want to live a life of purity, chaste lover with chaste beloved. This combination of the first two is the 'third' love we enumerated a moment ago.

So there's your list of the various forms love can take: should the law forbid them all, and keep them out of our community? Or isn't it obvious that in our state we'd want to see the virtuous kind spring up—the love that aims to make a young man perfect? It's the other two we'll forbid, if we can. Or what is our policy, Megillus, my friend?

Megillus:: Indeed, sir, I heartily endorse what you've said on the subject.

Athenian Stranger:: So it looks as if I've won you over, my dear fellow, as I guessed I would, and there's no call for me to inquire what line the law of Sparta takes on this topic: it is enough to note your assent to my argument. Later on I'll come back to the subject and try to charm Clinias also into agreeing with me. Let's assume you've both conceded my point, and press on with our laws without delay.

Megillus:: Fair enough.

Athenian Stranger:: I want to put the law on this subject on a firm footing, and at the moment I'm thinking of a method which is, in a sense, simplicity itself. But from another point of view, nothing could be harder.

Megillus:: What are you getting at?

Athenian Stranger:: We're aware, of course, that even nowadays most men, in spite of their general disregard for the law, are very effectively prevented from having relations with people they find attractive. And they don’t refrain reluctantly, either—they’re more than happy to.

Megillus:: What circumstances have you in mind?

Athenian Stranger:: When it’s one’s brother or sister whom one finds attractive. And the same law, unwritten though it is, is extremely effective in stopping a man sleeping—secretly or otherwise—with his son or daughter, or making any kind of amorous approach to them. Most people feel not the faintest desire for such intercourse.

Megillus:: That’s perfectly true.

Athenian Stranger:: So the desire for this sort of pleasure is stifled by a few words?

Megillus:: What words do you mean?

Athenian Stranger:: The doctrine that ‘these acts are absolutely unholy, an abomination in the sight of the gods, and that nothing is more revolting’. We refrain from them because we never hear them spoken of in any other way. From the day of our birth each of us encounters a complete unanimity of opinion wherever we go; we find it not only in comedies but often in the high seriousness of tragedy too, when we see a Thyestes on the stage, or an Oedipus or a Macareus, the clandestine lover of his sister. We watch these characters dying promptly by their own hand as a penalty for their crimes.

Megillus:: You’re right in this, anyway, that when no one ventures to challenge the law, public opinion works wonders.

Athenian Stranger:: So we were justified in what we said just now. When the legislator wants to tame one of the desires that dominate mankind so cruelly, it’s easy for him to see his method of attack. He must try to make everyone—slave and free, women and children, and the entire state without any exception—believe that this common opinion has the backing of religion. He couldn’t put his law on a securer foundation than that.

Megillus:: Very true. But how on earth it will ever be possible to produce such spontaneous unanimity—

Athenian Stranger:: I’m glad you’ve taken me up on the point. This is just what I was getting at when I said I knew of a way to put into effect this law of ours which permits the sexual act only for its natural purpose, procreation, and forbids not only homosexual relations, in which the human race is deliberately murdered, but also the sowing of seeds on rocks and stone, where it will never take root and mature into a new individual; and we should also have to keep away from any female ‘soil’ in which we'd be sorry to have the seed develop. At present, however, the law is effective only against intercourse between parent and child, but if it can be put on a permanent footing and made to apply effectively, as it deserves to, in other cases as well, it’ll do a power of good. The first point in its favor is that it is a natural law. But it also tends to check the raging fury of the sexual instinct that so often leads to adultery; it discourages excesses in food and drink, and inspires men with affection for their own wives. And there are a great many other advantages to be gained, if only one could get this law established.

But suppose some impatient young man were standing here, bursting with seed, and heard us passing this law. He'd probably raise the echoes with his bellows of abuse, and say our rules were stupid and unrealistic. Now this is just the sort of protest I had in mind when I remarked that I knew of a very simple—and yet very difficult—way of putting this law into effect permanently. It’s easy to see that it can be done, and easy to see how: if the rule is given sufficient religious backing, it will get a grip on every soul and intimidate it into obeying the established laws. But in fact we’ve reached a point where people still think we'd fail, even granted those conditions. It’s just the same with the supposed impossibility of the common meals: people see no prospect of a whole state keeping up the practice permanently. The proven facts of the case in your countries do nothing to convince your compatriots that it would be natural to apply the practice to women. It was this flat disbelief that made me remark on the difficulty of turning either proposal into an established law.

Megillus:: You’re absolutely right.

Athenian Stranger:: Even so, I could put up quite a convincing case for supposing that the difficulties are not beyond human powers, and can be overcome. Do you want me to try to explain?

Clinias:: Of course.

Athenian Stranger:: When will a man find it easier to keep off sex, and do as he’s told in a decent and willing spirit? When he’s not neglected his training and is in the pink of condition, or when he’s in poor shape?

Clinias:: He’ll find it a great deal easier if he’s in training.

Athenian Stranger:: Now of course we’ve all heard the story of how Iccus of Tarentum set about winning contests at Olympia and elsewhere. He was so ambitious to win, they say, and his expertise was strengthened by a character of such determination and self-discipline, that he never had a woman or even a boy during the whole time he was under intensive training. In fact, we are told very much the same about Crison, Astylus, Diopompus, and a great many others. And yet, Clinias, their characters were far less well educated than the citizens you and I have to deal with, and physically they were much lustier.

Clinias:: Yes, you’re right—our ancient sources are quite definite that these athletes did in fact do as you say.

Athenian Stranger:: Well then, they steeled themselves to keep off what most people regard as sheer bliss, simply in order to win wrestling matches and races and so forth. But there's a much nobler contest to be won than that, and I hope the young people of our state aren't going to lack the stamina for it. After all, right from their earliest years we're going to tell them stories and talk to them and sing them songs, so as to charm them, we trust, into believing that this victory is the noblest of all.

Clinias:: What victory?

Athenian Stranger:: The conquest of pleasure. If they win this battle, they'll have a happy life—but so much the worse for them if they lose. That apart, the fear that the act is a ghastly sin will, in the end, enable them to tame the passions that their inferiors have tamed before them.

Clinias:: Quite likely.

Athenian Stranger:: So thanks to the general corruption, that's the predicament we've got into at this point in our consideration of the law about sex. My position, therefore, is that the law must go ahead and insist that our citizens' standards should not be lower than those of birds and many other wild animals which are born into large communities and live chaste and unmarried, without intercourse, until the time comes for them to breed. At the appropriate age they pair off; the male picks a wife, and female chooses a husband, and forever afterwards they live in a pious and law-abiding way, firmly faithful to the promises they made when they first fell in love. Clearly our citizens ought to reach standards higher than the animals'. But if they are corrupted by seeing and hearing how most other Greeks and non-Greeks go in for 'free' love on a grand scale, they may prove unable to keep themselves in check.

In that case, the law-guardians must turn themselves into law-makers and frame a second law for people to observe.

Clinias:: So if they find it impossible to enforce the ideal law now proposed, what other law do you advise them to pass?

Athenian Stranger:: The second best, Clinias, obviously.

Clinias:: Namely?

Athenian Stranger:: My point is that the appetite for pleasures, which is very strong and grows by being fed, can be starved (you remember) if the body is given plenty of hard work to distract it. We'd get much the same result if we were incapable of having sexual intercourse without feeling ashamed; our shame would lead to infrequent indulgence, and infrequent indulgence would make the desire less compulsive. So in sexual matters our citizens ought to regard privacy—though not complete abstinence—as a decency demanded by usage and unwritten custom, and lack of privacy as disgusting. That will establish a second legal standard of decency and indecency—not the ideal standard, but the next to it. People whose characters have been corrupted (they form a single group we call the 'self-inferior') will be made prisoners of three influences that will compel them not to break the law.

Clinias:: What influences do you mean?

Athenian Stranger:: Respect for religion, the ambition to be honored, and a mature passion for spiritual rather than physical beauty. 'Pious wishes!' you'll say; 'what romance!' Perhaps so. But if such wishes were to come true, the world would benefit enormously.

However, God willing, perhaps we'll succeed in imposing one or other of two standards of sexual conduct. Ideally, no one will dare to have relations with any respectable citizen woman except his own wedded wife, or sow illegitimate and bastard seed in courtesans, or sterile seed in males in defiance of nature. Alternatively, while suppressing sodomy entirely, we might insist that if a man does have intercourse with any woman (hired or procured in some other way) except the wife he wed in holy marriage with the blessing of the gods, he must do so without any other man or woman getting to know about it. If he fails to keep the affair secret, I think we'd be right to exclude him by law from the award of state honors, on the grounds that he’s no better than an alien. This law, or ‘pair’ of laws, as perhaps we should say, should govern our conduct whenever the sexual urge and the passion of love impel us, wisely or unwisely, to have intercourse.

Megillus:: Speaking for myself, sir, I'd be very glad to adopt this law of yours. Clinias must tell us his view on the subject himself.

Clinias:: I’ll do that later, Megillus, when I think a suitable moment has arrived. For the nonce, let’s not stop our friend from going on to the next stage of his legislation.

Megillus:: Fair enough.

Athenian Stranger:: Well then, this is the stage we’ve reached now. We can assume that communal meals have been established (a thing that would be a problem in other countries, we notice, but not in Crete, where no one would think of doing anything else). But how should they be organized? On the Cretan model, or the Spartan? Or is there some third type that would suit us better than either? I don’t think this is a difficulty, and there’s not much to be gained from settling the point. The arrangements we have made are quite satisfactory as they are.

The next question is the organization of a food-supply in keeping with our communal meals. In other states the sources of supply are many and varied—in fact, at least twice as many as in ours, because most Greeks draw on both the land and the sea for their food, whereas our citizens will use the land alone. For the legislator, this makes things simpler. It's not just that half the number of laws or even substantially fewer will do, but they'll be more suitable laws for gentlemen to observe. Our state's legislator, you see, need not bother his head very much about the merchant-shipping business, trading, retailing, inn-keeping, customs duties, mining, money-lending and compound interest. Waving aside most of these and a thousand other such details, he'll legislate for farmers, shepherds, beekeepers, for the protectors of their stock and the supervisors of their equipment. His laws already cover such major topics as marriage and the birth and rearing of children, as well as their education and the appointment of the state's officials, so the next topic to which he must turn in his legislation is their food, and the workers who co-operate in the constant effort to produce it.

Let's first specify the 'agricultural' laws, as they're called. The first law— sanctioned by Zeus the Protector of Boundaries—shall run as follows:

No man shall disturb the boundary stones of his neighbor, whether fellow citizen or foreigner (that is, when a proprietor's land is on the boundary of the state), in the conviction that this would be 'moving the immovable' in the crudest sense. Far better that a man should want to try to move the biggest stone that does not mark a boundary, than a small one separating friend's land from foe's, and established by an oath sworn to the gods. Zeus the God of Kin is witness in the one case, Zeus the Protector of Foreigners in the other. Rouse him in either capacity, and the most terrible wars break out. If a man obeys the law he will escape its penalties, but if he holds it in contempt he is to be liable to two punishments, the first at the hands of the gods, the second under the law. No man, if he can help it, must move the boundary stones of his neighbor's land, but if anyone does move them, any man who wishes should report him to the farmers, who should take him to court.

If anyone is found guilty of such a charge, he must be regarded as a man who has tried to reallocate land, whether clandestinely or by force; and the court must bear that in mind when assessing what penalty he should suffer or what fine he should pay.

Next we come to those numerous petty injuries done by neighbor to neighbor. The frequent repetition of such injuries makes feelings run high, so that relations between neighbors become intolerably embittered. That's why everyone should do everything he can to avoid offending his neighbor; above all, he must always go out of his way to avoid all acts of encroachment. Hurting a man is all too easy, and we all get the chance to do that; but it's not everyone who is in a position to do a good turn.

If a man oversteps his boundaries and encroaches on his neighbor's land, he should pay for the damage, and also, by way of cure for such uncivilized and inconsiderate behavior, give the injured party a further sum of twice that amount.

In all these and similar cases the Country-Wardens should act as inspectors, judges and assessors (the entire divisional company in the graver cases, as indicated earlier, and the Guards-in-Chief in the more trivial).

If a man lets his cattle graze on someone else's land, these officials must inspect the damage, reach a decision, and assess the penalty.

If anyone takes over another man's bees, by making rattling noises to please and attract them, so that he gets them for himself, he must pay for the injury he has done.

If anyone burns his own wood without taking sufficient precautions to protect his neighbor’s, he must be fined a sum decided by the officials.

If when planting trees a man fails to leave a suitable gap between them and his neighbor’s land, the same regulation is to apply.

These are points that many legislators have dealt with perfectly adequately, and we should make use of their work rather than demand that the grand architect of our state should legislate on a mass of trivial details that can be handled by any run-of-the-mill lawgiver. For instance, the water supply for farmers is the subject of some splendid old-established laws—but there’s no call to let them overflow into our discussion! It is fundamental that anyone who wants to conduct a supply of water to his own land may do so, provided his source is the public reservoirs and he does not intercept the surface springs of any private person. He may conduct the water by any route he likes, except through houses, temples and tombs, and he must do no damage beyond the actual construction of the conduit. But in some naturally dry districts the soil may fail to retain the moisture when it rains, so that drinking water is in short supply. In that case the owner must dig down to the clay, and if he fails to strike water at that depth he should take from his neighbors sufficient drinking water for each member of his household. If the neighbors too are short of water, he should share the available supply with them and fetch his ration daily, the amount to be fixed by the Country-Wardens. A man may injure the farmer or householder next door on higher ground by blocking the flow of rainwater; on the other hand he may discharge it so carelessly as to damage the man below. If the parties are not prepared to co-operate in this matter, anyone who wishes should report the matter to an official— a City-

Warden in the city, and a Country-Warden in the country—and obtain a ruling as to what each side should do. Anyone refusing to abide by the ruling must take the consequences of being a grudging and ill-tempered fellow:

If found guilty, he should pay twice the value of the damage to the injured party as a penalty for disobeying the officials.

Everyone should take his share of the fruit harvest on roughly the following principles. The goddess of the harvest has graciously bestowed two gifts upon us, the fruit which pleases Dionysus so much, but which won't keep, and the produce which nature has made fit to store. So our law about the harvest should run as follows.

Anyone who consumes any part of the coarse crop of grapes or figs, whether on his own land or another's, before the rising of Arcturus ushers in the vintage, must owe fifty drachmas, to be presented to Dionysus, if he takes the fruit from his own trees, one hundred if from his neighbor's, and sixty-six and two-thirds drachmas if from anyone else's trees.

If a man wants to gather in the 'dessert' grapes or figs (as they are called nowadays), he may do so whenever and however he likes, provided they come from his own trees; but if he takes them from anyone else's trees, without permission, he must be punished in accordance with the provisions of the law which forbids the removal of any object except by the depositor.

If a slave fails to get the landowner's permission before touching any of this kind of fruit, he must be whipped, the number of lashes to be the same as the number of grapes in the bunch or figs picked off the fig tree.

A resident alien may buy dessert fruit and gather it in as he wishes. If a foreigner on a visit from abroad feels inclined to eat some fruit as he travels along the road, he may, if he wishes, take some of the dessert crop gratis, for himself and one attendant, as part of our hospitality. But foreigners must be prevented by law from sharing with us the ‘coarse’ and similar fruits.

If a foreigner, master or slave, touches such fruit in ignorance of the law, the slave is to be punished with a whipping; the free man is to be dismissed with a warning and told to stick to the crop that is unsuitable to be kept in store in the form of raisins, wine, or dried figs.

There should be nothing to be ashamed of in helping oneself inconspicuously to apples and pears and pomegranates and so on, but, if a man under thirty is caught at it, he should be cuffed and driven off, provided he suffers no actual injury.

A citizen should have no legal redress for such an assault on his person. (A foreigner is to be entitled to a share of these fruits too, on the same terms as he may take some of the dessert grapes and figs.) If a man above thirty years of age touches some fruits, consuming them on the spot and taking none away with him, he shall share them all on the same terms as the foreigner, but if he disobeys the law, he should be liable to be disqualified from competing for awards of merit, if anyone draws the attention of the assessors to the facts when the awards are being decided.

Water is the most nourishing food a garden can have, but it’s easily fouled, whereas the soil, the sun and the winds, which co-operate with the water in fostering the growth of the plants that spring up out of the ground, are not readily interfered with by being doctored or channeled off or stolen. But in the nature of the case, water is exposed to all these hazards. That is why it needs the protection of a law, which should run as follows.

If anyone deliberately spoils someone else’s water supply, whether spring or reservoir, by poisons or excavations or theft, the injured party should take his case to the City-Wardens and submit his estimate of the damage in writing.

Anyone convicted of fouling water by magic poisons should, in addition to his fine, purify the spring or reservoir, using whatever method of purification the regulations of the Expounders prescribe as appropriate to the circumstances and the individuals involved.

A man may bring home any crop of his own by any route he pleases, provided he does no one any damage, or, failing that, benefits to at least three times the value of the damage he does his neighbor. The authorities must act as inspectors in this business, as well as in all other cases when someone uses his own property deliberately to inflict violent or surreptitious damage on another man or some piece of his property without his permission. When the damage does not exceed three minas, the injured party must report it to the magistrates and obtain redress; but if he has a larger claim to bring against someone, he must get his redress from the culprit by taking the case to the public courts.

If one of the officials is judged to have settled the penalties in a biased fashion, he must be liable to the injured person for double the damages.

Offenses committed by the authorities in handling any claim should be taken to the public courts by anyone who may wish to do so. (There are thousands of procedural details like this that must be observed before a penalty can be imposed: the complaint has to be lodged, the summonses issued and served in the presence of two witnesses, or whatever the proper number is. All this sort of detail must not be left to look after itself, but it is not important enough for a legislator who is getting on in years. Our younger colleagues must settle these points, using the broad principles laid down by their predecessors as a guide for their own detailed regulations, which they must apply as need arises. They must thus proceed by trial and error until they think they have got a satisfactory set of formalities, and once the process of modification is over, they should finalize their rules of procedure and render them lifelong obedience.)

As for craftsmen in general, our policy should be this. First, no citizen of our land nor any of his servants should enter the ranks of the workers whose vocation lies in the arts and crafts. A citizen's vocation, which demands a great deal of practice and study, is to establish and maintain good order in the community, and this is not a job for part-timers. Following two trades or two callings efficiently—or even following one and supervising a worker in another—is almost always too difficult for human nature. So in our state this must be a cardinal rule: no metal worker must turn to carpentry and no carpenter must supervise workers in metal instead of practicing his own craft. We may, of course, be met with the excuse that supervising large numbers of employees is more sensible—because more profitable—than just following one's own trade. But no! In our state each individual must have one occupation only, and that's how he must earn his bread. The City-Wardens must have the job of enforcing this rule.

If a citizen born and bred turns his attention to some craft instead of to the cultivation of virtue, the City-Wardens must punish him with marks of disgrace and dishonor until they've got him back on the right lines.

If a foreigner follows two trades, the Wardens must punish him by prison or fines or expulsion from the state, and so force him to play one role, not many.

As for craftsmen's pay, and cases of refusal to take delivery of their work, or any other wrong done to them by other parties or by them to others, the City-Wardens must adjudicate if the sum at issue does not exceed fifty drachmas; if more, the public courts must decide the dispute as the law directs.

In our state no duties will have to be paid by anyone on either imports or exports. No one must import frankincense and similar foreign fragrant stuff used in religious ritual, or purple and similar dyes not native to the country, or materials for any other process which only needs imports from abroad for inessential purposes; nor, on the other hand, is anyone to export anything that it is essential to keep in the state. The twelve Guardians of the Laws next in order of seniority after the five eldest must act as inspectors and supervisors in this entire field. But what about arms and other military equipment? Well, if we ever need, for military purposes, some technique, vegetable product, mineral, binding material or animal that has to be obtained from abroad, the state will receive the goods and pay for them, and the Cavalry-Commanders and the Generals are to be in charge of importing them and exporting other goods in exchange. The Guardians of the Laws will lay down suitable and adequate regulations on the subject. Nowhere in the whole country and whole state are these—or any other— goods to be retailed for profit.

It looks as if the right way to organize the food supply and distribute agricultural produce will be to adopt something like the regulations in force in Crete. Every citizen must divide each crop into twelve parts corresponding to the twelve periods in which it is consumed. Take wheat or barley, for instance (though the same procedure must be followed for all the other crops too, as well as for any livestock there may be for sale in each district): each twelfth part should be split proportionately into three shares, one for the citizens, one for their slaves, and the third for workmen and foreigners in general (i.e., communities of resident aliens in need of the necessities of life, and occasional visitors on some public or private business). It should be necessary to sell only this third share of all the necessities of life; there should be no necessity to sell any part of the other two. So what will be the right way to arrange the division? It's obvious, for a start, that the shares we allocate will in one sense be equal, but in another sense unequal.

Clinias:: What do you mean?

Athenian Stranger:: Well, the land will grow a good crop of one thing and a bad crop of another. That's inevitable, I take it.

Clinias:: Of course.

Athenian Stranger:: None of the three shares—for masters, slaves and foreigners— must be better than the others: when the distribution is made, each group should be treated on an equal footing and get the same share. Each citizen must take his two shares and distribute them at his discretion to the slaves and free persons in his charge (quality and quantity being up to him). The surplus should be distributed by being divided up according to the number of animals that have to be supported by the produce of the soil, and rationed out accordingly.

Next, the population should have houses grouped in separate localities. This entails the following arrangements. There should be twelve villages, one in the middle of each of the twelve divisions of the state; in each village the settlers should first select a site for a market-place with its temples for gods and their retinue of spirits. (Local Magnesian gods, and sanctuaries of other ancient deities who are still remembered, must be honored as they were in earlier generations.) In each division they must establish shrines of Hestia, Zeus, Athena, and the patron deity of the district; after this their first job must be to build houses on the highest ground in a circle round these temples, so as to provide the garrison with the strongest possible position for defense.

Thirteen groups of craftsmen must be formed to provide for all the rest of the territory. One should be settled in the central city and the others distributed all round it on the outskirts in twelve further sub-groups corresponding to the twelve urban districts; and the categories of craftsmen useful to farmers must be established in each village. They must all be under the supervision of the chief Country-Wardens, who must decide the number and type required in each district and say where they should settle in order to prove their full worth to the farmers and cause them as little trouble as possible. Similarly the board of City-Wardens must assume permanent responsibility for the craftsmen in the city.

The detailed supervision of the market must naturally be in the hands of the Market-Wardens. Their first job is to ensure that no one does any damage to the temples round the marketplace; secondly, to see whether people are conducting their business in an orderly or disorderly fashion, and inflict punishment on anyone who needs it. They must ensure that every commodity the citizens are required to sell to the aliens is sold in the manner prescribed by law. The law will be simply this. On the first day of the month the agents (the foreigners or slaves who act for the citizens) must produce the share that has to be sold to the aliens, beginning with the twelfth part of corn. At this first market an alien must buy corn and related commodities to last him the whole month. On the tenth day the respective parties must buy and sell a whole month’s supply of liquids. The third market should be on the twentieth, when they should hold a sale of the livestock that individuals find they need to buy or sell, and also of all the equipment or goods sold by the farmers, and which aliens cannot get except by purchase—skins, for example, and all clothing, woven material, felt, and all that sort of thing. But these goods (and barley and wheat ground into flour and every other kind of food) should never be bought by, or sold to, a citizen or his slave through retail channels. The proper place for ‘retail’ trading (as it’s generally called) in corn and wine is the foreigners’ market, where foreigners are to sell these goods to craftsmen and their slaves; and when the butchers have cut up the animals, it is to foreigners that they must dispose of the meat. Any foreigner who wishes may buy any kind of firewood wholesale any day from the district agents and sell it to other foreigners whenever he likes and in whatever quantity he pleases.

All other goods and equipment needed by various people should be brought to the general market and put up for sale in the place allotted them. (The Guardians of the Laws and the Market-Wardens, in conjunction with the City-Wardens, will have marked out suitable spaces and decided where each article is to be sold.) Here they must exchange money for goods and goods for money, and never hand over anything without getting something in return; anyone who doesn’t bother about this and trusts the other party must grin and bear it whether or not he gets what he’s owed, because for such transactions there will be no legal remedy. If the amount or value of the object bought or sold is greater than is allowed by the law which forbids increase or diminution of a man’s property above or below a given limit, the excess must immediately be registered with the Guardians of the Laws; but if there is a deficiency, it must be cancelled. The same rules are to apply to the registration of the property of resident aliens.

Anyone who wishes may come to live in the state on specified conditions. There will be a community of foreigners open to anyone willing and able to join it. The alien must have a skill and not stay longer than twenty years from the date of registration, He need pay no alien-tax, even a small one (apart from behaving himself), nor any tax on any purchase or sale, (e) When his time has expired, he is to collect his possessions and depart, (f) If during this period he has distinguished himself for some notable service to the state, and is confident he can persuade the council and the assembly to grant his request for an official extension of his stay, either temporarily or for life, he should present himself and make out his case; and he must be allowed to enjoy to the full whatever concessions the state grants him. (g) Children of resident aliens must be craftsmen, and (h) their period of residence must be deemed to have started when they reach the age of fifteen. On these conditions they may stay for twenty years, after which they must depart to whatever destination they like. If they wish to stay longer, they may do so provided they obtain permission as already specified, Before a departing alien leaves he must cancel the entries that he originally made in the records kept in the custody of the officials.

## Book 9.

Athenian Stranger:: Next, in accordance with the natural arrangement of our legal code, will come the legal proceedings that arise out of all the occupations we have mentioned up till now. To some extent, so far as agricultural affairs and related topics are concerned, we have already listed the acts that should be prosecuted, but the most serious have yet to be specified. Our next task is to enumerate these one by one, mentioning what penalty each should attract and to which court it should be assigned.

Clinias:: That's right.

Athenian Stranger:: The very composition of all these laws we are on the point of framing is, in a way, a disgrace: after all, we're assuming we have a state which will be run along excellent lines and achieve every condition favorable to the practice of virtue. The mere idea that a state of this kind could give birth to a man affected by the worst forms of wickedness found in other countries, so that the legislator has to anticipate his appearance by threats—this, as I said, is in a way a disgrace. It means we have to lay down laws against these people, to deter them and punish them when they appear, on the assumption that they will certainly do so. However, unlike the ancient legislators, we are not framing laws for heroes and sons of gods. The lawgivers of that age, according to the story told nowadays, were descended from gods and legislated for men of similar stock. But we are human beings, legislating in the world today for the children of humankind, and we shall give no offense by our fear that one of our citizens will turn out to be, so to speak, a 'tough egg', whose character will be so 'hard-boiled' as to resist softening; powerful as our laws are, they may not be able to tame such people, just as heat has no effect on tough beans. For their dismal sake, the first law I shall produce will deal with robbery from temples, in case anyone dares to commit this crime. Now in view of the correct education our citizens will have received, we should hardly want any of them to catch this disease, nor is there much reason to expect that they will. Their slaves, however, as well as foreigners and the slaves of foreigners, may well make frequent attempts at such crimes. For their sake principally—but still with an eye on the general weakness of human nature—I'll spell out the law about robbery from temples, and about all the other similar crimes which are difficult or even impossible to cure.

Following the practice we agreed earlier, we must first compose preambles, in the briefest possible terms, to stand at the head of all these laws. Take a man who is incited by day and kept awake at night by an evil impulse which drives him to steal some holy object. You might talk to him and exhort him as follows:

'My dear fellow, this evil impulse that at present drives you to go robbing temples comes from a source that is neither human nor divine. It is a sort of frenzied goad, innate in mankind as a result of crimes of long ago that remained unexpiated; it travels around working doom and destruction, and you should make every effort to take precautions against it. Now, take note what these precautions are. When any of these thoughts enters your head, seek the rites that free a man from guilt; seek the shrines of the gods who avert evil, and supplicate them; seek the company of men who have a reputation in your community for being virtuous. Listen to them as they say that every man should honor what is fine and just—try to bring yourself to say it too. But run away from the company of the wicked, with never a backward glance. If by doing this you find that your disease abates somewhat, well and good; if not, then you should look upon death as the preferable alternative, and rid yourself of life.'

These are the overtures we make to those who think of committing all these impious deeds that bring about the ruin of the state. When a man obeys us, we should silently omit the actual law; but in cases of disobedience, we must change our tune after the overture and sing this resounding strain:

If a man is caught thieving from a temple and is a foreigner or slave, a brand of his misfortune shall be made on his face and hands, and he shall be whipped, the number of lashes to be decided by his judges. Then he shall be thrown out beyond the boundaries of the land, naked.

(Perhaps paying this penalty will teach him restraint and make him a better man: after all, no penalty imposed by law has an evil purpose, but generally achieves one of two effects: it makes the person who pays the penalty either more virtuous or less wicked.)

If a citizen is ever shown to be responsible for such a crime—to have perpetrated, that is, some great and unspeakable offense against the gods or his parents or the state, the penalty is death.

The judge should consider him as already beyond cure; he should bear in mind the kind of education and upbringing the man has enjoyed from his earliest years, and how after all this he has still not abstained from acts of the greatest evil. But the very tiniest of evils will be what the offender suffers, indeed, he will be of service to others, by being a lesson to them when he is ignominiously banished from sight beyond the borders of the state. And if the children and family escape taking on the character of the father, they should be held in honor and win golden opinions for the spirit and persistence with which they have shunned evil and embraced the good.

In a state where the size and number of the farms are to be kept permanently unaltered, it would not be appropriate for the state to confiscate the property of any of these criminals. But if a man commits a crime and is thought to deserve a penalty in money, then provided he possesses a surplus over and above the basic equipment of his farm, he must pay his fine. The Guardians of the Laws must scrutinize the registers and discover the precise facts in these cases, and make an exact report to the court on each occasion, so as to prevent any farm becoming unworked because of a shortage of money. If a man appears to deserve a stiffer fine, and if some of his friends are not prepared to bail him out by contributing the money to set him free, his punishment should take the form of a prolonged period of imprisonment (which should be open to public view), and various humiliations. But no one, no matter what his offense, is ever to be deprived of his citizen rights completely, not even if he has gone into exile beyond our frontiers for it. The penalties we impose will be death, imprisonment, whipping, or various degrading postures (either standing or sitting), or being rusticated and made to stand before temples on the boundaries of the state; and payments of money may be made in certain cases which we have just mentioned, where such a punishment is appropriate. In cases involving the death penalty the judges are to be the Guardians of the Laws, sitting in conjunction with the court whose members are selected by merit from the officials of the previous year. The method of bringing these cases to court, the serving of the summonses and similar procedural details must be the concern of the legislators who succeed us; what we have to do is legislate about the voting. The vote should be taken openly, but before this our judges should have ranged themselves according to seniority and sat down close together facing the prosecutor and defendant; all citizens who have some spare time should attend and listen carefully to such trials. First, the prosecutor should deliver a single speech, then the defendant; the most senior judge should follow these addresses by cross-questioning, and continue until he has gone into the arguments in sufficient detail. One by one, the other judges should follow the most senior and work through any points on which either litigant has left him dissatisfied by some kind of error or omission. A judge who feels no such dissatisfaction should hand on the interrogation to his colleague. All the judges should endorse those arguments that appear pertinent by appending their signatures and then depositing the documents on the altar of Hestia. The next day they must reconvene in the same place, and after similar interrogation and examination again append their signatures to the depositions. Having followed this procedure three times, after giving due consideration to the evidence and witnesses, each judge should cast a sacred vote, swearing in the name of Hestia to give, as far as lies in him, a judgment just and true. In this way they should conclude this category of trial.

We come next, after these matters of religion, to cases of political subversion. We should treat as the biggest enemy of the entire state the man who makes the laws into slaves, and the state into the servant of a particular interest, by subjecting them to the diktat of mere men. This transgressor of the law uses violence in all that he does and stirs up sedition. Second in the scale of wickedness, in our estimation, should come the holder of some high state office, who while not an accessory to any such crimes, nevertheless fails to detect them and exact the vengeance of his fatherland (or, if he does detect them, holds back through cowardice). Every man who is any good at all must denounce the plotter to the authorities and take him to court on a charge of violently and illicitly overthrowing the constitution. The court should consist of the same judges as for robbers from temples, and the procedure of the entire trial should be the same as it was for them, a majority vote being sufficient for the death penalty.

As a rule, penalties and disgrace incurred by a father should not be passed on to any of his children, except where a man's father, grandfather and great-grandfather have all in turn been sentenced to death. The state should deport such cases to the state and city from which their family originally came; and they should take their property with them, apart from all the basic equipment of their farm. Next, sons of citizens who have more than one son over ten years of age should be nominated by their father or grandfather on either the mother's or the father's side. Ten of them should be chosen by lot, and the names of those whom the lot selects should be reported to Delphi. The god's choice should then be installed as heir to the abandoned property—and he, we hope, will have better luck.

Clinias:: Splendid.

Athenian Stranger:: The same regulations about the judges that should try the case, and the procedure to be followed at the trial, will apply in yet a third instance, when a man is brought to court on a charge of treason. In the same way, a single law should apply to all three cases and decide whether the children of these criminals (traitor, temple-robber, and the violent wrecker of the laws of the state) should remain in their fatherland or leave it.

Again, a single law and legal penalty should apply to every thief, no matter whether his theft is great or small: if he has not, he must be kept in prison until he pays up or persuades the man who has had him convicted to let him off.

If a man is convicted of stealing from public sources, he shall be freed from prison when he has either persuaded the state to let him off or paid back twice the amount involved.

Clinias:: How on earth can we be serious, sir, in saying that it makes no odds whether his theft is large or small, or whether it comes from sacred or secular sources? And what about all the other different circumstances of a theft? Shouldn’t a legislator vary the penalties he inflicts, so that he can cope with the various categories of theft?

Athenian Stranger:: That’s a good question, Clinias: I have been walking in my sleep, and you have bumped into me and woken me up. You have reminded me of something that has occurred to me before, that the business of establishing a code of law has never been properly thought out—as we can see from the example that has just cropped up. Now, what am I getting at? It wasn’t a bad parallel we made, you know, when we compared all those for whom legislation is produced today to slaves under treatment from slave doctors. Make no mistake about what would happen, if one of those doctors who are innocent of theory and practice medicine by rule of thumb were ever to come across a gentleman doctor conversing with a gentleman patient. This doctor would be acting almost like a philosopher, engaging in a discussion that ranged over the source of the disease and pushed the inquiry back into the whole nature of the body. But our other doctor would immediately give a tremendous shout of laughter, and his observations would be precisely those that most ‘doctors’ are always so ready to trot out. 'You ass,' he would say, 'you are not treating the patient, but tutoring him. Anybody would think he wanted to become a doctor rather than get well again.'

Clinias:: And wouldn't he be right to say that?

Athenian Stranger:: Perhaps he would—if he were to bear in mind this further point, that anyone who handles law in the way we are now, is tutoring the citizens, not imposing laws on them. Wouldn't it be equally right to say that?

Clinias:: Perhaps so.

Athenian Stranger:: However, at the moment, we are in a fortunate position.

Clinias:: How do you mean?

Athenian Stranger:: I mean the lack of any necessity to legislate. We are simply carrying out our own review of every kind of political system and trying to see how we could put into effect the absolutely ideal kind, as well as the least good sort that would still be acceptable. This is particularly true of our legislation, where it looks as if we have a choice: either we can examine ideal laws, if we want to, or again, if we feel like it, we can look at the minimum standard we are prepared to put up with. So we must choose which course we want to take.

Clinias:: This is a ridiculous choice to give ourselves, my friend: it's not as if we were legislators forced by some irresistible necessity to legislate at a minute's notice, without being allowed to put the business off till tomorrow. We, God willing, can do as bricklayers do, or workmen starting some other kind of erecting. We can gather our materials in no particular order and then select—and select at leisure—the items which are appropriate for the forthcoming construction. Our assumption should be, therefore, that we are constructing something, but not under any constraint; we work at our convenience and spend part of the time preparing our material, part of the time fitting it together. So it would be quite fair to describe our penal code as already partially laid down, while other material for it lies ready to hand.

Athenian Stranger:: At any rate, Clinias, this will be the more realistic way to conduct our review of legislation. Well then, may we please notice this point that concerns legislators?

Clinias:: What point?

Athenian Stranger:: I suppose literary compositions and written speeches by many other authors are current in our cities, besides those of the legislator?

Clinias:: Of course they are.

Athenian Stranger:: To whose writings ought we to apply ourselves? Are we to read the poets and others who have recorded in prose or verse compositions their advice about how one should live one's life, to the neglect of the compositions of the legislators? Or isn't it precisely the latter that deserve our closest attention?

Clinias:: Yes, it certainly is.

Athenian Stranger:: And I suppose the legislator, alone among writers, is to be denied permission to give advice about virtue and goodness and justice? Is he alone to be prevented from explaining their nature and how they should be reflected in our conduct, if we aim to be happy?

Clinias:: No, of course not.

Athenian Stranger:: Then is it really more scandalous in the case of Homer and Tyrtaeus and the other poets to have composed in writing bad rules for the conduct of life, but less so for Lycurgus and Solon, and all others who have turned legislator and committed their recommendations to writing? The proper view, surely, is this: a city's writings on legal topics should turn out, on being opened, to be the finest and best of all those it has in circulation; the writings of other men should either sound in harmony with them, or provoke ridicule by being out of tune. So what is the style in which a state's laws ought to be written, in our opinion? Should the regulations appear in the light of a loving and prudent father and mother? Or should they act the tyrant and the despot, posting their orders and threats on walls and leaving it at that? Clearly, then, at this stage, we must decide whether we are going to try to talk about laws in the right spirit. Succeed or no, we shall at any rate show our good intentions. If we take this course and have to face some difficulties en route, then let's face them. Good luck to us, and God willing, we shall succeed.

Clinias:: You've put it splendidly. Let's do as you suggest.

Athenian Stranger:: In the first place, we must continue the attempt we've just made: we must scrutinize our law about robbers of temples, theft in general, and every variety of crime. We should not let it daunt us if in the full spate of our legislation we find that although we have settled some matters, our inquiry into others has still to be completed. We are still aiming at the status of legislators, but we haven't achieved it yet; perhaps eventually we may succeed. So now let's look at these topics I've mentioned—if, that is, you are prepared to look at them in the way I have explained.

Clinias:: Certainly we are prepared.

Athenian Stranger:: Now, on the whole subject of goodness and justice, we ought to try to see quite clearly just where we agree, and where there are differences of opinion between us. Again, how far do ordinary men agree? What differences are there between them? (Naturally, we should claim that we wanted there to be at least a small ‘difference between’ us and ordinary men!)

Clinias:: What sort of ‘differences between us’ have you in mind when you say that?

Athenian Stranger:: I’ll try to explain. When we talk about justice in general— just men, just actions, just arrangements, we are, after a fashion, unanimous that all these things are ‘good’. One might insist that even if just men happen to be shocking in their physical appearance, they are still preeminently ‘good’ because of their supremely just character. No one would think a man was talking nonsense in saying that.

Clinias:: Wouldn’t that be right?

Athenian Stranger:: Perhaps. But if everything that has the quality of justice is ‘good’, we ought to note that we include in that ‘everything’ even the things done to us, which are about as frequent, roughly speaking, as the things we do to others.

Clinias:: What now, then?

Athenian Stranger:: Any just action we do has the quality of being ‘good’ roughly in proportion to the degree to which it has the quality of justice.

Clinias:: Indeed.

Athenian Stranger:: So surely, anything done to us, which has the quality of justice, is to that extent agreed to be ‘good’? This wouldn’t involve our argument in any contradiction.

Clinias:: True.

Athenian Stranger:: If we agree that something done to us is just, but at the same time shocking, the terms ‘just’ and ‘good’ will be in conflict with each other—the reason being that we have termed ‘just’ actions ‘most shameful’.

Clinias:: What are you getting at?

Athenian Stranger:: It’s not difficult to understand. The injunctions of the laws we laid down a little while ago would seem to be in flat contradiction to what we are saying now.

Clinias:: How so?

Athenian Stranger:: Our ruling was, I think, that the temple-robber and the enemy of properly established laws would suffer a ‘just’ death. But then, on the brink of establishing a great many such rules, we held back. We saw ourselves becoming involved with penal suffering of infinite variety and on a grand scale. Of all sufferings, these were particularly just; but they were also the particularly shocking ones. Thus, surely, one minute we shall find ‘just’ and ‘good’ invariably turning out to be the same, and the next moment discover they are opposites.

Clinias:: Likely enough.

Athenian Stranger:: This is the source of the inconsistency in the language of the ordinary man: he destroys the unity of the terms ‘good’ and ‘just’.

Clinias:: That is indeed how it looks, sir.

Athenian Stranger:: Now, Clinias, we ought to examine our own position again. How far is it consistent in this business?

Clinias:: Consistent? What consistency do you mean?

Athenian Stranger:: Earlier in our discussion I think I have said quite categorically—or if I haven’t before, assume I’m saying it now—that…

Clinias:: What?

Athenian Stranger:: …all wicked men are, in all respects, unwillingly wicked. This being so, my next argument necessarily follows.

Clinias:: What argument?

Athenian Stranger:: That the unjust man is doubtless wicked; but that the wicked man is in that state only against his will. However, to suppose that a voluntary act is performed involuntarily makes no sense. Therefore, in the eyes of someone who holds the view that injustice is involuntary, a man who acts unjustly would seem to be doing so against his will. Here and now, that is the position I have to accept: I allow that no one acts unjustly except against his will. (If anyone with a disputatious disposition or a desire to attract favorable notice says that although there are those who are unjust against their will, even so many men do commit unjust acts voluntarily, I would reject his argument and stick to what I said.) Well then, how am I to make my own arguments consistent? Suppose the two of you, Clinias and Megillus, were to ask me, ‘If that’s so, sir, what advice have you for us about laying down laws for the city of the Magnesians? Do we legislate, or don’t we?’ ‘Of course we legislate’, I'd say, and you'd ask: ‘Are you going to make a distinction for the Magnesians between voluntary and involuntary acts of injustice? Shall we impose stiffer penalties on voluntary wrongdoing and acts of injustice, and smaller penalties on the involuntary? Or shall we treat them all on an equal footing, on the grounds that there simply is no such thing as an act of voluntary injustice?’

Clinias:: You are perfectly right, sir. So what use shall we make of this position we have just taken up?

Athenian Stranger:: That’s a good question. First of all, we shall make this use of it—

Clinias:: What?

Athenian Stranger:: Let’s cast our minds back. A few minutes ago we were quite right to say that in the matter of justice we were in a state of great muddle and inconsistency. With that in mind, we may go back to asking questions of ourselves. ‘We have not yet found a way out of our confusion in these things. We have not defined the difference between these two categories of wrongs, voluntary and involuntary. In all states, every lawgiver who has ever appeared treats them as distinct, and the distinction is reflected in his laws. Now, is the position we took up a moment ago to overrule all dissent, like a decision handed down from God? Shall we make just this one assertion and dismiss the topic, without adducing any reasons to show that our position is correct?’ Impossible. What we must do, before we legislate, is somehow make clear that there are two categories, but that the distinction between them is a different one. Then, when one imposes the penalty on either, everybody will be able to appreciate the arguments for it, and make some kind of judgment whether it is the appropriate penalty to have imposed or not.

Clinias:: We think you state the position fairly, sir. We must do one of two things, either stop insisting that unjust acts are always involuntary, or, before going any further, demonstrate its validity by means of a preliminary distinction.

Athenian Stranger:: The first of the two alternatives, denying the proposition when I believe it to represent the truth, is absolutely unacceptable to me. I should be breaking the laws of both God and man. But if the two things do not differ by virtue of being ‘voluntary’ and ‘involuntary’, how do they differ? What other factor is involved? That is what we have to try, somehow or other, to show.

Clinias:: It is surely impossible, sir, to approach the problem in any way.

Athenian Stranger:: So this is what we shall try to do. Look: when citizens come together and associate with each other, they obviously inflict many injuries; and to these the terms ‘voluntary’ and ‘involuntary’ can be freely applied.

Clinias:: Of course.

Athenian Stranger:: But no one should describe all these injuries as acts of injustice, and conclude that therefore the unjust acts committed in these cases of injury fall into two categories, involuntary (because if we add them all up, you see, the involuntary injuries are no less numerous and no less great than the voluntary ones), and voluntary as well Rather than do that, consider the next step I am going to take in my argument: am I on to something or just driveling? My position, Clinias and Megillus, is not that, if someone hurts someone else involuntarily and without intending it, he is acting unjustly but involuntarily. I will not legislate so as to make this an involuntary act of injustice. Ignoring its relative seriousness or triviality, I shall refuse to put down such an injury under the heading of ‘injustice’ at all. Indeed, if my view is sustained, we shall often say of a benefactor that ‘he is committing the injustice of conferring a benefit’—an improper benefit. You see, my friends, in effect we should not simply call it ‘just’ when one man bestows some object on another, nor simply ‘unjust’ when correspondingly he takes it from him. The description ‘just’ is applicable only to the benefit conferred or injury inflicted by someone with a just character and outlook. This is the point the lawgiver has to watch; he must keep his eyes on these two things, injustice and injury. He must use the law to exact damages for damage done, as far as he can; he must restore losses, and if anyone has knocked something down, put it back upright again; in place of anything killed or wounded, he must substitute something in a sound condition. And when atonement has been made by compensation, he must try by his laws to make the criminal and the victim, in each separate case of injury, friends instead of enemies.

Clinias:: So far, so good.

Athenian Stranger:: Now to deal with unjust injuries (and gains too, as when one man's unjust act results in a gain for someone else). The cases that are curable we must cure, on the assumption that the soul has been infected by disease. We must, however, state what general policy we pursue in our cure for injustice.

Clinias:: What is this policy?

Athenian Stranger:: This: when anyone commits an act of injustice, serious or trivial, the law will combine instruction and constraint, so that in the future either the criminal will never again dare to commit such a crime voluntarily, or he will do it a very great deal less often; and in addition, he will pay compensation for the damage he has done. This is something we can achieve only by laws of the highest quality. We may take action, or simply talk to the criminal; we may grant him pleasures, or make him suffer; we may honor him, we may disgrace him; we can fine him, or give him gifts. We may use absolutely any means to make him hate injustice and embrace true justice—or at any rate not hate it. But suppose the lawgiver finds a man who's beyond cure—what legal penalty will he provide for this case? He will recognize that the best thing for all such people is to cease to live—best even for themselves. By passing on they will help others, too: first, they will constitute a warning against injustice, and secondly they will leave the state free of scoundrels. That is why the lawgiver should prescribe the death penalty in such cases, by way of punishment for their crimes—but in no other case whatever.

Clinias:: In one way, what you have said seems eminently reasonable. However, we should be glad to hear a clearer explanation of two points: first, the difference between injustice and injury, and secondly the various senses of ‘voluntary’ and ‘involuntary’ that you distinguished so elaborately in the course of your argument.

Athenian Stranger:: I must try to meet your request and explain these points. Doubtless in the course of conversation you make at least this point to each other about the soul: one of the constituent elements (whether ‘part’ or ‘state’ is not important) to be found in it is ‘anger’, and this innate impulse, unruly and difficult to fight as it is, causes a good deal of havoc by its irrational force.

Clinias:: Yes, indeed.

Athenian Stranger:: The next point is the distinction we make between ‘pleasure’ and ‘anger’. We say Pleasure wields her power on the basis of an opposite kind of force; she achieves whatever her will desires by persuasive deceit that is irresistibly compelling.

Clinias:: Quite right.

Athenian Stranger:: Thirdly, we would be saying nothing but the truth if we named ignorance as a cause of wrongdoing. The lawgiver would, in fact, do a better job if he divided ignorance into two: ‘simple’ ignorance, which he would treat as the cause of trivial faults, ‘double’ ignorance, which is the error of a man who is not only in the grip of ignorance but on top of that is convinced of his own wisdom, believing that he has a thorough knowledge of matters of which, in fact, his ignorance is total. When such ignorance is backed up by strength and power, the lawgiver will treat it as the source of serious and barbarous wrongdoing; but when it lacks power, he will treat the resultant faults as the peccadilloes of children and old men. He will of course regard these deeds as offenses, and will legislate against these people as offenders, but the laws will be of the most gentle character, full of understanding.

Clinias:: Your proposals are perfectly reasonable.

Athenian Stranger:: Most of us agree that some people are ‘conquerors of’ their desire for pleasure and feelings of anger, while others are ‘conquered’ by them. And that is in fact the situation.

Clinias:: It certainly is.

Athenian Stranger:: But we have never heard anyone say that some people are ‘conquerors of’ their ignorance, while others are ‘conquered by’ it.

Clinias:: Very true.

Athenian Stranger:: But we do say that each of these influences often prompts every man to take the opposite course to the one which attracts him and which he really wishes to take.

Clinias:: Yes, times without number.

Athenian Stranger:: May I now clearly distinguish for you, without elaboration, what in my view the terms ‘just’ and ‘unjust’ mean. My general description of injustice is this: the mastery of the soul by anger, fear, pleasure, pain, envy and desires, whether they lead to any actual damage or not. But no matter how states or individuals think they can achieve the good, it is a conception of what the good is that should govern every man and hold sway in his soul, even if he is a little mistaken. If it does, every action done in accordance with it, and any part of a man’s nature that becomes subject to such control, we have to call ‘just’, and best for the entire life of mankind—and this in spite of the popular belief that damage done in such circumstances is an ‘involuntary’ injustice. However, we are not engaging now in a captious dispute about terminology. But since it has become clear that there are three kinds of basic faults, we ought first to impress these upon our memory even more firmly. Our first kind is a painful one, and we call it anger and fear.

Clinias:: Yes.

Athenian Stranger:: The second kind consists of pleasures and desires. The third, which is a distinct category, consists of hopes and opinion—a mere shot at the truth about the supreme good. If we divide this last category twice, we get three types; and that makes, according to our present argument, a total of five in all. We must enact different laws for the five kinds, and we must have two main categories.

Clinias:: And what are these?

Athenian Stranger:: The first category covers every occasion when crimes are committed openly with violence; secondly, we have crimes that take place under cover of darkness, involving secrecy and fraud. Sometimes we find a combination of both methods, in which case our laws will have to be very harsh indeed, if they are going to do their job.

Clinias:: Of course.

Athenian Stranger:: Now let’s go back to the point where we started to digress, and carry on with our enactment of the legal code. Our regulations about those who pillage from the gods, and about traitors, had, I think, already been made; we had also dealt with those who do violence to the laws in order to subvert the existing constitution. A man who commits one of these crimes might be suffering from insanity, or be as good as insane either because of disease, or the effects of advanced senility, or because he is still in the years of childhood.

If clear proof of any of these states is ever shown to the judges selected in each case, on the submission of either the criminal or his counsel, and in the opinion of the court the man was in that condition when he committed his crime, he must pay, without fail, simple recompense for any damage he may have inflicted on anyone, but the other details of the penalty should be waived, if he has killed someone and his hands are polluted by murder, he must depart to a place in another country and live there in exile for a year.

If he comes back before the legally appointed time, or even puts a foot into any part of his native country, he must be imprisoned in the public jail by the Guardians of the Laws for two years, after which he shall be released.

The start we have made points the way forward: we need not scruple to lay down a comprehensive set of laws that will cover every category of murder. First we should deal with those committed with the use of force, but unintentionally:

If anyone has unintentionally killed a man who is not an enemy in a contest or public games—whether death occurs immediately, or later as a result of the wounds, in war similarly, in military training, whether in javelin-exercises without the protection of armor, or when some weapons are being carried in imitation of wartime usage, the offender shall be free of pollution when he has been purified in accordance with the relevant law from Delphi.

All doctors, if their patient dies as an unintended result of their treatment, are to be free of pollution according to law.

If one man kills another by his own act, but unintentionally, by his own hand, without weapons, or by tool, weapon, administration of food or drink, application of fire or cold, or deprivation of air, whether (he does the deed himself, or through the agency of others, in all cases it must be reckoned his own act and he must pay penalties as under:

If he kills a slave, he must indemnify the dead man's master against the damage, reflecting what the loss would be if his own slave had been killed.

If he fails to indemnify the master, he must pay a penalty of twice the value of the dead man, the judges making an estimate of it, and he must resort to greater and more numerous purifications than those who have killed in contests; and such expounders as are chosen by the oracle are to be in charge of these purifications.

If he kills a slave of his own, let him purify himself, and be quit of the murder according to law.

If he kills a free man, inadvertently, he must undergo the same purifications as the killer of a slave.

He should not take lightly an old story that comes from our collection of ancient tales. It runs as follows: Having lived in the full proud spirit of freedom, the man murdered by violence, freshly dead, turns his fury on the person responsible. The dead man is full of fear and loathing at his own violent sufferings; he abominates the sight of his own murderer going about localities once familiar to himself; to the full limit of his powers he visits his own anguish on the perpetrator of the crime, the man and his deeds; and his allies are the memories that haunt the murderer.

Therefore, A killer must keep clear of his victim for all the seasons of an entire year, by staying away from the dead man's usual haunts and the whole of his native country.

If the deceased is a foreigner, the killer should keep clear of the foreigner's homeland as well for an identical period.

If a man obeys this law without demur, the deceased's next of kin, who will take note of his compliance with these requirements, will grant him pardon and will be entirely correct to live on peaceable terms with him.

If the killer disobeys, by daring to enter temples and perform sacrifices, polluted as he is, and then by refusing to complete the above-mentioned period abroad, the deceased's next of kin must prosecute the killer on a charge of murder. In case of conviction, all penalties are to be doubled.

If the next of kin does not prosecute the crime, the pollution must be deemed to have arrived at his own door, owing to the murdered man's supplications for atonement. Anyone who wishes may bring a charge against the next of kin and force him to keep away from his native country for five years, according to law.

If a foreigner kills a foreigner who is living in the state, anyone who wishes should prosecute under the same laws.

If the killer is a resident alien, he must go abroad for a year; a non-resident alien, he must keep away, for the whole of his life, from the country that lays down these laws, in addition to performing the purifications; this is to apply whether he kills a non-resident alien, a resident alien, or a citizen.

If he returns illegally, the Guardians of the Laws must punish him by death, and if he has any property, they must present it to his victim's nearest relative; unintentionally, being shipwrecked on the coast, he must camp out where the sea washes by his feet and await an opportunity to sail away; being forcibly brought in overland by someone, the first official of the state that comes across him must set him free and dispatch him unharmed beyond the border.

If someone kills a free man by his own hand, but the deed is done in anger, we must first make an internal distinction within this type of crime. Anger is common to those who kill a man by blows or similar means, owing to a sudden impulse: here the action is immediate, there is no previous intention to kill, and regret for the deed follows at once; those who have been stung by insults or opprobrious actions and who pursue their vengeance until, some time later, they kill somebody: they intend to kill, and the deed causes no repentance. So it looks as if we have to establish two categories of murder; broadly speaking, both are done in anger, but a proper description would be 'falling somewhere midway between "voluntary" and "involuntary" '; however, each type comes closer to one or other of these extremes. The man who nurses his anger and takes his vengeance later—not suddenly, on the spur of the moment, but with premeditation—approximates to the voluntary murderer. The man whose anger bursts forth uncontrollably, whose action is instant, immediate, and without premeditation, resembles the involuntary killer. Yet even so, he is not an entirely involuntary killer: he only resembles one. It is therefore sometimes difficult to categorize murders done under the influence of anger, and to know whether to treat them in law as voluntary or involuntary. The best course, which corresponds most closely to reality, is to classify them both under what they most resemble, and to distinguish them by the presence or absence of premeditation. We should lay down comparatively severe penalties for those who have killed in anger and with premeditation, and lighter ones for those who have killed on the spur of the moment without previous intent. Something which resembles a greater evil should attract a greater punishment, whereas a lesser penalty should be visited on that which resembles a lesser evil. This, then, is the course our laws should take.

Clinias:: Indeed it is.

Athenian Stranger:: Then let's go back to our subject and carry on as follows:

If someone kills a free man with his own hand, and the deed is done in a fit of anger, without previous intent, his penalty should in general be that appropriate to a man who has killed without anger; but in addition he should be obliged to go into exile for two years, by way of a curb for his anger.

If a man kills in anger, but with premeditation, his penalty should in general be that inflicted in the previous instance; but his exile should be for three years as against the other's two, the period of punishment being longer because of the greater violence of his passion.

In such cases, regulations for the return from exile should run as follows. (It is not easy to make hard and fast rules: sometimes the fiercer criminal as defined by the law may turn out easier to manage, whereas the man who is supposedly more manageable may turn out to be a more difficult case, having committed a murder with some savagery; the other, conversely, may have dispatched his victim without brutality. However, my account does describe the cases you'll find are typical.)

The Guardians of the Laws should act as assessors of all these points, and when the period of exile prescribed for either category has come to an end, they should send twelve of their number, as judges, to the borders of the country. During the time that has elapsed these twelve should have made a still more exact investigation into what the exiles did, so as to decide whether to grant pardon and permission to return; and the exiles are bound to acquiesce in the judgment of these authorities.

If a returned exile of either category is ever again overcome by anger and commits the same offense, he must go into exile and never come back.

If he does come back, his penalty will be the same as that imposed on the foreigner who returns.

If a man kills his own slave, he must purify himself.

If he kills another's slave, in anger, he must pay double damages to the owner.

If a killer in any category flouts the law and in his unpurified state pollutes the market-place, the sports stadium, and other holy places, anyone who wishes should prosecute both the killer and the relative of the dead man who allows the killer to do this, and compel the relative to exact payment of twice the fine and the other expenses; and the prosecutor shall be legally entitled to take for himself the money so paid.

If a slave kills his own master, in anger, the relatives of the deceased shall treat the killer in whatever way they like (except that under no circumstances whatever may they let him go on living), and be free of pollution.

If a slave murders a free man who is not his master, in anger, his master shall deliver him up to the relatives of the deceased, who will be obliged to kill him, the manner of the execution being within their discretion.

(This is a rare occurrence, but not unknown.)

If a father or mother kills a son or daughter in anger by beating them or by using some other form of violence, the murderers must undergo the same purifications as apply in the other cases, and go into exile for three years.

When they come back, the female killer must be separated from her husband and the male from his wife, and they must have no more children; and they must never again share hearth and home with those whom they have robbed of a son or brother, or join in religious ceremonies with them.

If someone is impious enough to disobey these regulations, he shall be liable to a charge of impiety at the hands of anyone who wishes.

If a man kills his wedded wife in a fit of anger, or a wife her husband, they must undergo the same purifications and spend three years in exile, On his return, a person who has done such a deed must never join his children in religious ceremonies nor eat at the same table with them.

If the parent or the child disobeys, he shall equally be liable to a charge of impiety at the hands of anyone who wishes.

If in anger a brother kills a brother or a sister, or a sister kills a brother or a sister, the same purifications and periods of exile as applied to parents and children should be specified as applying in these cases too. (That is, they should never share hearth and home with the brothers whom they have deprived of their fellow brothers nor with parents whom they have deprived of children, nor join in religious ceremonies with them.)

If anyone disobeys this law, he will be subject to the relevant law of impiety already laid down, as is only right and proper.

If anyone gets into such an ungovernable temper with his parents and begetters that in his insane fury he dares to kill one of them, and is let off responsibility for murder by a voluntary statement of the deceased before death, he must perform the same purifications as those who commit involuntary murder; and when he has followed the rest of the procedure prescribed for those cases, he may be considered purified.

If he is not let off, the perpetrator of such a crime will be indictable under many laws. He will be subject to the most huge penalties for assault, and likewise for impiety for temple-robbery—he has plundered the shrine that is his parent’s body, and deprived it of life. Consequently if one man could die many times, the murderer of his father or mother who has acted in anger would deserve to die the death over and over again. To this one killer no law will allow the plea of self-defense; no law will permit him to kill his father or mother, who brought him into the world. The law will instruct him to put up with all manner of suffering before he does such a thing. But what other penalty than death could the law appropriately lay down for this criminal? The law, then, should run: the penalty for the murderer of a father or mother is to be death.

If a brother kills his own brother in a political brawl or some similar circumstances, in self-defense when his victim had struck first, he should be regarded as free of pollution (as though he had killed an enemy).

The same applies if a citizen kills a citizen, or a foreigner kills a foreigner.

If in self-defense a citizen kills a foreigner, or a foreigner kills a citizen, the culprit should be in the same position with regard to the freedom from pollution, and likewise if a slave kills a slave.

If however a slave, in self-defense, kills a free man, he should be subject to the same laws as the parricide.

The regulations stated about the acquittal from responsibility for murder granted by a father are to apply to every acquittal in such cases (when, that is, one man voluntarily absolves another of responsibility, on the grounds that the murder has been committed involuntarily): the criminal must undergo the purifications and spend one year away from the country according to law.

Let this more or less suffice as a description of involuntary murders, which involve violence and anger. Our next task is to speak of voluntary murders, which are premeditated and spring from sheer injustice—the lack of control over the desire for pleasure and over one's lusts and jealous feelings. Clinias: True.

Athenian Stranger:: First of all, we ought again to make as complete a list as possible of these sources of crime.

The chief cause is lust, which tyrannizes a soul that has gone wild with desire. This lust is most usually for money, the object of most men's strongest and most frequent longing. Because of the innate depravity of men and their misdirected education, money has the power to produce in them a million cravings that are impossible to satisfy—all centering on the endless acquisition of wealth. The cause of this incorrect education is the pernicious praise given to wealth by the public opinion of Greeks and non-Greeks alike. In fact, wealth takes only third place in the scale of goodness; but they make it preeminent, to the ruination of posterity and themselves. The best and the noblest policy for all cities to follow is to tell the truth about wealth, namely that it exists to serve the body, just as the body should be the servant of the soul. Although the ends which wealth naturally serves are indeed 'good', wealth itself will take third place, coming after the perfection of the soul and the body. Taking, therefore, this argument as our guide, we shall find that the man who means to be happy should not seek simply to be wealthy, but to be wealthy in a way consistent with justice and self-control. Murders needing still more murders in expiation would not occur in cities that had taken this lesson to heart. But as things are, as we said when we embarked on this topic, we have here one cause, and an extremely prominent cause at that, of the most serious charges of deliberate murder.

Second, an ambitious cast of mind: this breeds feelings of jealousy, which are dangerous companions to live with, particularly for the person who actually feels jealous, but potentially harmful to the leading citizens of the state as well.

In the third place, many a murder has been prompted by the cowardly fears of a guilty man. When a man is committing some crime, or has already committed it, he wants no one to know about it, and if he cannot eliminate a possible informer in any other way, he murders him.

These remarks should constitute the preface applying to all these crimes. In addition, we must tell the story which is so strongly believed by so many people when they hear it from those who have made a serious study of such matters in their mystic ceremonies. It is this:

Vengeance is exacted for these crimes in the after-life, and when a man returns to this world again he is ineluctably obliged to pay the penalty prescribed by the law of nature—to undergo the same treatment as he himself meted out to his victim, and to conclude his earthly existence by encountering a similar fate at the hands of someone else.

If a man obeys and heartily dreads such a penalty after merely hearing the overture, there is no need to play over the relevant law. But in case of disobedience the following law should be stated in writing:

If a man by his own hand viciously kills a fellow citizen, with premeditation, he must be excluded from the places where people usually gather, and not pollute temples or market or harbors or any other common place of assembly, whether or not someone makes a proclamation against the culprit in these terms. (The reason is that the law itself makes the proclamation. It makes a permanent and public proclamation on behalf of the whole state, and always will.)

If a man fails in his duty to prosecute the culprit or bar him by proclamation, and is a relative (no more distant than a cousin) of the deceased on either the father's side or the mother's, the pollution, together with the enmity of the gods, should arrive at his own door. (The curse imposed by the law turns the edict of heaven against him.) He must be subject to prosecution at the hands of any man who wishes to take vengeance for the deceased, and the man who thus wishes to take vengeance must scrupulously perform all the appropriate ablutions and all the other ritual details the god prescribes for such cases; and when he has published the proclamation, he must go and make the criminal submit to the imposition of the penalty, under the law.

It is easy for a legislator to demonstrate that all this should be accompanied by a number of prayers and sacrifices to those gods who make it their business to prevent murders occurring in society. The Guardians of the Laws, in association with expounders, soothsayers, and the god, should rule who these gods are to be, and specify the procedure for bringing such cases that would be most in harmony with the requirements of religion; they should then follow it themselves in bringing these cases to court, which should be the same as the one given final authority over temple-robbers.

If a man is found guilty, he must be punished by death and be deprived of burial in the country of his victim. (In this way we can show he has not been forgiven, and avoid impiety.)

If the defendant makes off and refuses to submit to trial, he must remain in exile permanently.

If such a person sets foot within the country of the murdered man, the first of the relatives of the deceased who comes across him, or indeed any citizen, should either kill him with impunity, or tie him up, and hand him over to the judges who tried the case for them to carry out the execution.

When a man undertakes a prosecution, he should immediately demand sureties from the accused. The latter must duly provide his sureties, who must be deemed, in the eyes of the judges who constitute the court in these cases, to be credit-worthy; and these three credit-worthy sureties must pledge themselves to produce the accused at his trial. If a man refuses, or is unable, to produce sureties, the authorities must arrest him and keep him bound and under guard, so that they can produce him at the hearing of the case.

If a man does not actually kill with his own hands, but simply plans the murder, and although responsible for it by virtue of plotting arrangements, continues to live in the state with his soul polluted by homicide, his trial for this crime should proceed along the same lines as before, except as regards the bail. If he is convicted, he may be granted burial in his native land, but the other details of the punishment should conform with the regulations previously laid down for this category.

These same regulations about the actual commission and mere plotting of a murder should apply when foreigners prosecute foreigners, citizens prosecute foreigners and foreigners citizens, and slaves prosecute slaves.

But an exception should be made in the business of the surety. Just as it was said that actual murderers should provide sureties, the person who proclaims the ban arising from the murder should simultaneously demand sureties in these cases too.

If a slave intentionally kills a free man, whether he did the deed himself or planned it, and is convicted, the public executioner should haul him off in the direction of the deceased's grave to a point from which the culprit can see the tomb. He should then scourge him, giving as many strokes as the successful prosecutor instructs. If the homicide survives the scourging, he is to be executed.

H. If a man kills an innocent slave, fearing that he will inform against his own shocking and disgraceful conduct, or prompted by some similar motive, he should submit to trial, when a slave has died in these circumstances, precisely as he would have submitted to trial for murder if he had killed a citizen.

Certain crimes, which may occur, make the mere composition of laws for them an unpleasant and distasteful business, but it is impossible to omit them from our code. I mean deliberate and wholly wicked murders of relatives, whether the murderer commits the crime in person or merely plots it. Generally speaking, these killings occur in states that are badly administered or have a defective system of education, but occasionally one of them might crop up even in a country where one would hardly look for it. What we have to do is to repeat our explanation of a moment ago, hoping that anyone who hears it will be more willing and able to avoid committing murders that are absolutely the most detestable in the sight of Heaven. The ‘myth’, or ‘explanation’, or whatever the right word is, has come down to us in unambiguous terms from the lips of priests of long ago.

Justice stands on guard to exact vengeance for the spilling of the blood of relatives; she operates through the law we have just mentioned, and her decree is that a man who has done something of this kind is obliged to suffer precisely what he has inflicted. If ever a man has murdered his father, in the course of time he must suffer the same fate from violent treatment at the hands of his children. A matricide, before being reborn, must adopt the female sex, and after being born a woman and bearing children, be dispatched subsequently by them. No other purification is available when common blood has been polluted; the pollution resists cleansing until, murder for murder, the guilty soul has paid the penalty and by this appeasement has soothed the anger of the deceased’s entire line.

Thus the fear of such vengeance, exacted by the gods, should hold a man in check. But this is the law the human legislator will lay down in case some people should be overwhelmed by the terrible misfortune of committing such a crime:

If they should dare to tear the soul from the body of their father, mother, brothers or children, deliberately and with premeditation, the proclamations of banishment from places of public resort, and the sureties, should be identical to those detailed in previous cases.

If a man is convicted of such a murder, having killed one of the aforementioned persons, the court-assistants and the officials shall execute him, and throw him out, naked, at a specified place where three roads meet outside the city. All the officials, on behalf of the entire state, must take a stone and throw it at the head of the corpse, and thus purify the entire state. After this, they must carry the corpse to the borders of the land and eject it, giving it no burial, as the law instructs.

But what about the killer of the person who is, above all, his ‘nearest and dearest’, as the expression is? What penalty ought he to undergo? I am talking about the man who kills himself who uses violence to take his fate out of the hands of destiny, is not acting in obedience to any legal decision of his state, whose hand is not forced by the pressure of some excruciating and unavoidable misfortune, has not fallen into some irremediable disgrace that he cannot live with, and imposes this unjust judgment on himself in a spirit of slothful and abject cowardice. In general, what ritual observances should take place with regard to purification and interment in this case, are matters known to God; the relatives must seek guidance from expounders and the relevant laws, and act in these instances according to their instructions. But, people who perish in this way must be buried individually, with no one to share their grave.

They must be buried in disgrace on the boundaries of the twelve territorial divisions, in deserted places that have no name.

The graves must not be identifiable, either by headstone or title.

If a beast of burden or any other animal kills anyone (except when the incident occurs while they are competing in one of the public contests), the relatives must prosecute the killer for murder; the next of kin must appoint some Country-Wardens (whichever ones he pleases, and as many as he likes), and they must try the case: if the animal is found guilty, they must kill it and throw it out beyond the frontiers of the country.

If some inanimate object causes loss of human life (but not if it is a stroke of lightning or some similar weapon wielded by God—it must be one of the other things that kill a man by falling on him, or because he falls on it), the next of kin must appoint the nearest neighbor to sit in judgment on the object, and thus effect the purification of himself and the deceased's entire line; the condemned object must be thrown over the frontiers, in the way specified in the case of animals.

If someone is found dead, and the killer is not known and cannot be discovered by diligent efforts to trace him, the proclamations should be the same as laid down in former cases, being made, however, against 'the murderer': when the prosecutor has established his case, he must give notice in the market-place to the killer and convicted murderer of so-and-so, that he must not enter holy places nor any part of the country of the deceased; he must threaten that if he does turn up and is recognized, he will be executed, denied burial, and his body ejected from the country of his victim.

So much, then, for the law on that sort of murder. In the following conditions, however, it will be right to regard the killer as innocent:

If he catches a thief entering his home at night to steal his goods, and kills him, he shall be innocent.

If he kills a footpad in self-defense, he shall be innocent.

If anyone sexually violates a free woman or boy, he may be killed with impunity by the victim of the violence, or by the victim's father or brothers or sons.

If a husband discovers his wedded wife being raped and kills the attacker, the law will regard him as innocent.

If a man kills someone while saving the life of his father (provided the latter is not committing a crime), or while rescuing his mother or children or brothers, or the mother of his children, he shall be completely innocent.

Athenian Stranger:: Let us assume we have completed our legislation concerning the training and education that the soul needs during a man’s life (a life that is worth the living if these needs are met, but not if they are not), and the penalties that should apply in cases of death by violence. We have discussed, too, the training and education of the body, and the related topic in this case is the violent treatment, voluntary or involuntary, of one man by another. So far as we can, we must distinguish the various categories, see how many there are, and say what penalties will be appropriate for each. It looks as if this could properly form the next subject of our legislation.

Even the biggest bungler you could find among would-be legislators will put cases of wounding and mutilation immediately after cases of murder. Woundings ought to be distinguished as murders were: some are inflicted involuntarily, some in anger, some through fear, while others are committed voluntarily and with premeditation. A preliminary address must be given about all these categories as follows:

It is vital that men should lay down laws for themselves and live in obedience to them; otherwise they will be indistinguishable from wild animals of the utmost savagery. The reason is this: no man has sufficient natural gifts both to discern what benefits men in their social relationships and to be constantly ready and able to put his knowledge to the best practical use. The first difficulty is to realize that the proper object of true political skill is not the interest of private individuals but the common good. This is what knits a state together, whereas private interests make it disintegrate. If the public interest is well served, rather than the private, then the individual and the community alike are benefited.

The second difficulty is that even if a man did get an adequate theoretical grasp of the truth of all this, he might then attain a position of absolute control over a state, with no one to call him to account. In these circumstances he would never have the courage of his convictions; he would never devote his life to promoting the welfare of the community as his first concern, making his private interests take second place to the public good. His human nature will always drive him to look to his own advantage and the lining of his own pocket. An irrational avoidance of pain and pursuit of pleasure will dominate his character, so that he will prefer these two aims to better and more righteous paths. Blindness, self-imposed, will ultimately lead the man's whole being, and the entire state, into a morass of evil. But if ever by the grace of God some natural genius were born, and had the chance to assume such power, he would have no need of laws to control him. Knowledge is unsurpassed by any law or regulation; reason, if it is genuine and really enjoys its natural freedom, should have universal power: it is not right that it should be under the control of anything else, as though it were some sort of slave. But as it is, such a character is nowhere to be found, except a hint of it here and there. That is why we need to choose the second alternative, law and regulation, which embody general principles, but cannot provide for every individual case.

I have pointed this out because we are now going to settle the penalty or fine to be imposed on someone who has wounded or harmed someone else. Anyone could quite easily and properly take us up on any point and ask: ‘What attacker, what wound, what victim do you mean? How was the attack made, and when? The circumstances of these cases differ in a thousand and one different ways.’ Now to leave all these details to the judgment of the courts is impracticable, and equally impracticable to leave them none. In every case, however, one point in particular simply must be left to the courts: in each separate instance, they must decide whether the crime did in fact take place, or not. But on the other hand it is hardly feasible to produce laws oneself to cover every case, serious or trivial; one can scarcely leave the courts no discretion at all about the fine or punishment that ought to be imposed on a criminal of this kind.

Clinias:: Well, then, where do we go from here?

Athenian Stranger:: We conclude that some details ought to be left to the courts, but not others; these should be regulated by the legislator.

Clinias:: Which points, then, ought to be in the legal code, and which ought to be referred to the judgment of the courts?

Athenian Stranger:: In this connection, here’s the next thing to notice: sometimes we find in a state that the juries are useless, dumb things; the individual jurymen keep their opinions a mystery known only to themselves and give their decisions by secret ballot. It’s even more serious when so far from keeping silent when they hear a case they make a tremendous disturbance as though they were in a theatre, and hurl shouts of applause or disapproval at the speaker on either side in turn. All this puts the state at large into an awkward predicament. It is a wretched business to be forced to lay down laws for courts of that type, but if one is forced, the right thing to do is to hand over to them the assessment of penalties only in very trivial cases, providing for the majority in explicit laws of one's own— if, that is, one ever does legislate for a state organized in this way. But in a country where the regulation of the courts is as satisfactory as can be achieved and the jurymen-to-be have received a good education and been examined by all kinds of tests, it is right and proper to grant them complete discretion on all points to do with the punishments or fines that convicted criminals should suffer. In the present case we cannot be blamed if we leave to their discretion the most frequent and important points that arise, because they are points which even inadequately educated jurymen could grasp and apply when they have to give each individual crime a penalty appropriate both to the damage done and to the wickedness which is at the root of the actual deed. We believe, in fact, that the people for whom we are legislating may well turn out quite conspicuously able judges of these matters, so we should leave most decisions to them. Even so, in enacting earlier parts of our legal code, we mentioned the practice of sketching some examples of penalties— models for the judges to imitate, to stop them exceeding the due limits of justice. We suited the action to the word; it was the right course then and it is the right course now, as I once again resume our legislation.

Our law on wounding, then, should be written in the following terms:

If a man deliberately intends to kill a fellow citizen (unless the latter is one of those whose death is sanctioned by the law [(a-e)]), and wounds him without being able to kill him, no pity should be wasted on the man who has inflicted a wound with that sort of intention: he should be treated with no more respect than a killer, and made to stand trial for murder.

But we should have due respect for the luck that has saved him from total ruin, and for his guardian angel too, who in pity for the attacker and the wounded man has stopped the injury of the latter from proving fatal, and prevented the disastrous ill luck of the former from bringing a curse down upon his head. We should duly thank his guardian spirit and not obstruct its wishes:

He who has inflicted the wound shall be spared the death penalty, but he must suffer life-long banishment to some neighboring state, with full freedom to enjoy all the income from his property; he must pay full compensation for whatever injury he has done the wounded man, the sum to be assessed by the court that tries the case. (The court will consist of the same people who would have tried him for murder if his victim had died of the wounds sustained.)

If with similar premeditation a child wounds his parents, or a slave wounds his master, death is to be the penalty.

If similarly a brother wounds a brother or a sister, or a sister wounds a brother or a sister, and is convicted of wounding with premeditation, death is to be the penalty.

If with intent to kill a wife wounds her husband, or a husband wounds his wife, he or she must go into permanent exile. If they have sons or daughters who are still in their minority, the trustees must administer their property in trust, and care for the children as though they were orphans. If the offspring are adult, they should themselves take possession of the property, and be under no obligation to support the exile. If anyone who succumbs to such misfortune is childless, the relatives of the exile, as far as the children of the cousins on both the male and female side, must hold a meeting, and in consultation with the Guardians of the Laws appoint an heir for this property, the 5040th in the state.

(They should look at the matter in the following light: none of the 5040 farms belongs to its occupant or his family in general as much as to the state, which is entitled to it not only as a piece of public property but also as its own private possession; and the state ought to do its best to keep its own properties as holy and prosperous as possible.) Therefore:

When one of the properties falls away from this condition of holiness and prosperity to such an extent that the possessor leaves no children to succeed him, being unmarried, or married but childless, and meets his end convicted of deliberate murder, or some other crime against gods or citizens for which the death penalty is specifically laid down by law, or if someone without male issue goes into permanent exile, first of all, this property must be cleansed and purified according to law; then the relatives must hold the meeting we mentioned just now, and in consultation with the Guardians of the Laws pick out a family that has the best reputation for virtue of all the families in the state and is at the same time fortunate enough to have produced several children. One of these they must adopt on behalf of the deceased's father and forebears, who will receive him as their son; from them he will take his name, which should be an omen of good fortune. The relatives should pray that as a result of his adoption he will bring them children, and guard the hearth and look after the family affairs, both sacred and secular, with greater success than his adoptive father enjoyed. In this way they should install him, according to law, as heir to the property.

When such disasters as we have mentioned overwhelm the sinner, they should let him lie nameless in his grave, childless and deprived of his family estate.

We can see that it is not universally true that one district extends right up to the boundary of another. In some cases there is a no man’s land in between, which will extend so as to touch either boundary and occupy an intermediate position between the two. This, we said, was true of an act done in anger: it falls somewhere between voluntary and involuntary. Our regulations concerning wounding inflicted in anger should therefore run as follows:

If a man is found guilty, and the wound turns out to be curable, he must pay double damages; if it is incurable, he must pay quadruple damages.

If he has inflicted a wound which, though curable, makes the wounded man feel acutely embarrassed and ashamed, he must pay triple damages.

If one man wounds another and injures not only his victim but the state, by rendering him unable to defend his fatherland against the enemy, he must, in addition to the other penalties, make restitution to the state for the loss it has sustained, viz. he must perform not only his own military service but that of the incapacitated person as well by serving in the army on his behalf.

If he fails so to serve, he shall be liable under the law to a charge of evading military service, at the hands of anyone who wishes.

The assessment of the damages, double, triple, or quadruple, must be made by the judges who found him guilty.

If one relative wounds another in any of these ways, the fellow clansmen and close relatives, male and female, as far as sons of cousins on both the male and female side, must hold a meeting, and when they have reached their verdict, they must entrust the assessment to the natural parents. If the assessment is challenged, the assessment of the relatives on the male side must be taken as final. If they cannot agree themselves, they must, in the end, hand over the matter to the Guardians of the Laws.

When children inflict this kind of wound on their parents, it is essential for the judges to be parents over sixty years of age who have children of their own and not merely adopted ones. If a man is found guilty, these judges must decide whether a man who could do such a thing as this should die, or whether the penalty should be something even more severe, or perhaps something a trifle less severe. None of the relations of the culprit should act as a judge, not even if he is of the age required by law.

If a slave wounds a free man in anger, the owner must hand him over to the wounded man, who may treat him in whatever way he likes.

If the owner fails to hand him over, he must remedy the damage himself.

If anyone alleges that the affair is the result of collusion between the slave and the wounded party, he must contest the point at law. If he does not win the case, he must pay triple damages.

If he does win, he must prosecute the author of the collusion with the slave on a charge of kidnapping.

If anyone involuntarily wounds someone else, he must pay simple damages. (No legislator is capable of regulating the workings of chance.) The judges are to be the same as those appointed to try children who wound their parents; and they will have the duty of assessing the amount of the damages.

Athenian Stranger:: All the injuries we have so far mentioned involve the use of violence, and so too do the various kinds of assault. In these cases, the point that every man, woman and child should bear in mind is this:

Age is always very much more highly regarded than youth, and this is so both among the gods and among men, if they intend to live in security and happiness. Therefore, the assault of an older man by a younger in public is a disgusting sight, and the gods hate to see it. No young man who is struck by an old man should ever make a fuss, but put up with his bad temper, and so establish a claim to similar respect when he himself grows old.

Our law, then, should run as follows:

Everyone in our community must show, by his words and actions, respect for his senior. A man should avoid crossing any person (male or female) who is twenty years older than himself, regarding him or her in the same way as he would his father or mother. For the sake of the gods of birth, he must always keep himself from striking anyone old enough to have been his parent. Similarly, he must refrain from striking a foreigner, whether the latter is a long-established resident or a recent immigrant. He must never go so far as to punish such a person by hitting him, either by attacking him first, or in self-defense.

If he thinks the foreigner is unruly and insolent in an attack on himself, and needs to be punished, he must arrest him and take him, without hitting him, to the court of the City-Wardens, so that the foreigner may learn to banish all thoughts of ever striking a citizen again. The City-Wardens must take the man and interrogate him, with proper respect for the god who is the protector of foreigners. If in fact the foreigner seems to have been in the wrong in striking the citizen, the City-Wardens must put a stop to this unruliness, so characteristic of a foreigner; they must give him as many strokes of the lash as will equal the number of blows he himself inflicted.

If he is not in the wrong, they must warn and rebuke the man who made the arrest, and dismiss the pair of them.

If one man strikes another who is about the same age, or is older, but has no children, whether the attacker is an old man striking an old man, or a young man striking a young man, the man attacked must defend himself by natural means—with his own bare hands, without a weapon. But if a man over forty years of age has the face to fight someone, whether he strikes the first blow, or fights in self-defense, he will get the reputation of being an uncivilized boor with the manners of a slave, and this ignominious punishment will serve him right.

A man who is easily persuaded by these words of exhortation will give us no trouble; but stubborn people, who ignore the preamble, ought to be ready to take more notice of the following regulations:

If anyone strikes a man twenty years or more his senior, any bystander, if he is neither of the same age nor younger than the combatants, should separate them, or be treated under the law as a wretched coward. If he is of the same age as the person attacked, or younger, he should go to his assistance as if it were his own brother or father being wronged, or some still more senior relative.

In addition, the man who dares to strike his senior as defined must stand trial for assault. If he loses the case, he must be imprisoned for not less than a year. If the court fixes a longer imprisonment, the period it decides on shall stand.

If a foreigner, or a resident alien, strikes a man twenty years or more his senior, the same regulation about assistance from passers-by shall be enforced in the same way as before.

A man found guilty of such a charge, if he is a foreigner not resident in the state, must pay his penalty by spending two years in prison.

If it is a resident alien who is in breach of these regulations, he must go to prison for three years, except that the court may specify a longer period by way of penalty.

The passer-by who comes across any of these cases of assault and does not give assistance as required by law must be fined: a member of the first property-class one hundred drachmas, a member of the second fifty drachmas, a member of the third thirty drachmas, and a member of the fourth twenty drachmas. The court in such cases is to consist of the Generals, Company-Commanders, Tribe-Leaders and Cavalry-Commanders.

Some laws, it seems, are made for the benefit of honest men, to teach them the rules of association that have to be observed if they are to live in friendship; others are made for those who refuse to be instructed and whose naturally tough natures have not been softened enough to stop them turning to absolute vice. It will be they who have prompted the points I am just going to make, and it is for their benefit that the lawgiver will be compelled to produce his laws, although he would wish never to find any occasion to use them. Consider a man who will dare to lay hands on his father or mother or their forebears by way of violent assault. He will fear neither the wrath of the gods above nor the punishments said to await him in the grave; he will hold the ancient and universal tradition in contempt, on the strength of his 'knowledge' in a field where he is in fact a total ignoramus. He will therefore turn criminal, and will stand in need of some extreme deterrent. Death, however, is not an extreme and final penalty; the sufferings said to be in store for these people in the world to come are much more extreme than that. But although the threat of these sufferings is no idle one, it has no deterrent effect at all on souls like these. If it did, we should never have to deal with assaults on mothers, and wicked and presumptuous attacks on other forebears. I conclude, therefore, that the punishments men suffer for these crimes here on earth while they are alive should as far as possible equal the penalties beyond the grave. Our next enactment, then, should run as follows:

If a man who is not in the grip of insanity dares to strike his father or mother, or their father or mother, the first point is that the passerby must render assistance as provided in former cases.

If the resident alien renders assistance, he shall be invited to a front seat at the games; if he does not render assistance, he must go into permanent exile from the land.

If the non-resident alien renders assistance, he shall be commended.

If he does not render assistance, he must be reprimanded.

If a slave renders assistance, he shall be set free.

If he does not render assistance, he must receive a hundred strokes of the lash.

If the crime was committed in the market-place, the whipping should be administered by the Market-Wardens; if in the city but not in the market, by the City Warden in residence; if somewhere in the countryside, by the chief Country-Wardens.

Everyone of citizen birth who passes by, whether man, woman or child, must shout ‘you wicked monster’ at the attacker, and repel him. If the passer-by makes no attempt to repel him, he must be liable under the law to a curse from Zeus, guardian of the family and protector of parents.

If a man is convicted of an assault on his parents, he must be permanently rusticated from the city to some other part of the country, and be banned from all sacred places.

If he returns to the city, he must be punished by death.

If he does not keep away from sacred places, the Country-Wardens must punish him by a whipping, and by any other method at their discretion.

If any free man eats or drinks in company with such a person, or associates with him in some other similar fashion, even by deliberately failing to cut him on meeting, he must not enter any temple, or market-place, or any part of the city, before he has been purified, bearing in mind that he has come into contact with a misfortune that brings a curse upon a man.

If he disobeys the law and in defiance of it pollutes temples and city, any official who discovers the fact and does not take the man to court will find that this is one of the most serious charges against him at his scrutiny.

If a slave strikes a free man, foreigner or citizen, the passer-by who does not render assistance must pay the penalty prescribed for his property-class.

The passers-by in conjunction with the person attacked must bind the slave and hand him over to his victim; the victim must take him, put him in chains, and give him as many strokes of the whip as he likes, provided He does not diminish the value of the slave to his master; he should then hand him over to the latter’s legal ownership. This legal ownership must be subject to the following provision. Any slave who has struck a free man, other than on the orders of the officials, must be tied up; his master must receive him from the assaulted person and not release him before the slave persuades his victim that he deserves to live free of constraint.

The same regulations should apply in all cases of women against each other, of women against men, and of men against women.

## Book 10.

Athenian Stranger:: So much for cases of assault. Now let’s state a single comprehensive rule to cover acts of violence. It will run more or less like this. No one may seize or make off with other people’s property, nor use any of his neighbor’s possessions without getting the permission of the owner. Contempt for this principle has always been (and still is and always will be) the source of all the evils just mentioned. But there are other acts of violence, too, of which the worst are the insolence and outrageous actions of the young. These actions are most serious when they affect sacred objects; and the damage is particularly grave when it is done to sacred property that also belongs to the public, or is held in common by the members of a subdivision of the state, such as a tribe or some similar association. Second, and second in order of gravity, comes wanton damage to sacred objects that are privately owned, particularly tombs; third come attacks (apart from those already dealt with) on parents. A fourth category of outrageous conduct is when someone ignores the wishes of the authorities and seizes or removes or uses something belonging to them without their permission; and any violations of the civil rights of the private citizen which demand legal redress will constitute a fifth class. We have to frame a comprehensive law that will cover each individual case. As for robbery from temples, whether clandestine or open and violent, we have already specified in general terms the appropriate punishment; but our statement of the penalty for offensive remarks about the gods or outrageous actions against their interests should be prefaced by these words of exhortation: No one who believes in gods as the law directs ever voluntarily commits an unholy act or lets any lawless word pass his lips. If he does, it is because of one of three possible misapprehensions: either, as I said, he believes the gods do not exist, or that they exist but take no thought for the human race, or that they are influenced by sacrifices and supplications and can easily be won over.

Clinias:: So what's the right thing for us to do or say to these people?

Athenian Stranger:: My friend, let's listen to the ridicule and scorn with which I imagine they put their case.

Clinias:: What ridicule?

Athenian Stranger:: They'll probably go in for bantering, and address us like this: 'Gentlemen of Athens, of Sparta and of Crete, you are quite right. Some of us are indeed absolute atheists, whereas others do believe in such gods as you describe. So we demand of you what you yourselves demanded of the laws, that before you resort to threats and bullying, you should try to convince us by argument and cogent proofs that gods do exist, and that they are in fact above being seduced by gifts into turning a blind eye to injustice. But you see, it's precisely in these and similar terms that we hear them spoken of by the most highly thought-of poets and orators and prophets and priests and thousands of other people too. That's why most of us make little effort to avoid crime, but commit it first and try to put things right afterwards. So from lawgivers who profess to use the velvet glove rather than the iron fist we claim the right to be tackled by persuasion first. Even if, when you state your case for the existence of gods, your elegance of expression is only marginally superior to your opponents', persuade us that your argument is a better expression of the truth, and then perhaps we'll believe you. Isn't that fair enough? Well then, try to reply to our challenge.'

Clinias:: Well sir, don't you think that the gods' existence is an easy truth to explain?

Athenian Stranger:: How?

Clinias:: Well, just look at the earth and the sun and the stars and the universe in general; look at the wonderful procession of the seasons and its articulation into years and months! Anyway, you know that all Greeks and all foreigners are unanimous in recognizing the existence of gods.

Athenian Stranger:: My dear sir, when I think of the contempt these scoundrels will probably feel for us, I'm overcome with embarrassment—no, I withdraw that word: let's say they 'alarm' me—because you don't appreciate the real grounds of their opposition to you. You think it's just because they can't resist temptation and desire that they are attracted to the godless life.

Clinias:: What other reason could there be, sir?

Athenian Stranger:: A reason which you two, living rather off the beaten track as you do, simply wouldn't appreciate. It will have completely passed you by.

Clinias:: What are you talking about now?

Athenian Stranger:: A form of ignorance that causes no end of trouble, but which passes for the height of wisdom.

Clinias:: How do you mean?

Athenian Stranger:: In Athens a number of written works are current which are not found in your states (which are, I understand, too well run to tolerate them). The subject of these writings (some of which are in verse, others in prose) is theology. The most ancient accounts, after relating how the primitive substances—the sky and so on—came into being, pass rapidly on to a description of the birth of the gods and the details of how once born they subsequently treated each other. On some subjects, the antiquity of these works makes them difficult to criticize, whatever their influence— good or bad—on their audience; but when it comes to the respect and attention due to parents, I for one shall never recommend them either as a good influence or as a statement of the honest truth. Still, there’s no need to bother with this old material: we may freely allow it to be arranged and recounted in any way the gods find amusing. But the principles of our modern pundits do need to be denounced as a pernicious influence. Just look at the effects of their arguments! When you and I present our proofs for the existence of gods and adduce what you adduced—sun, moon, stars and earth—and argue they are gods and divine beings, the proselytes of these clever fellows will say that these things are just earth and stones, and are incapable of caring for human affairs, however much our plausible rhetoric has managed to dress them up.

Clinias:: Even if it were unique, sir, that theory you’ve just described would make trouble. But as similar doctrines in fact exist in their thousands, the situation is even worse.

Athenian Stranger:: What now, then? What’s our reply? What must we do? It’s as though we were on trial before a bench of godless judges, defending ourselves on a charge arising out of our legislation. ‘It’s monstrous,’ they say to us, ‘that you should pass laws asserting that gods exist.’ Shall we defend ourselves? Or shall we ignore them and get back to our legislation, so that the mere preface doesn’t turn out longer than the actual code? You see, if we’re going to postpone passing the appropriate legislation until we’ve proved properly to those with a taste for impiety all the points they insisted we had to cover, so that they feel uneasy and begin to find their views going sour on them, our explanation will be anything but brief.

Clinias:: Even so, sir, as we’ve often said in the comparatively short time we’ve been talking, there’s no reason at the moment to prefer a brief explanation to a full one: after all, no one’s ‘breathing down our neck’ (as they say). It would be an awful farce, if we appeared to be putting brevity first and quality second. It’s vital that somehow or other we should make out a plausible case for supposing that gods do exist, that they are good, and that they respect justice more than men do. Such a demonstration would constitute just about the best and finest preamble our penal code could have. So let’s overcome our reluctance and unhurriedly exert what powers of persuasion we have in this field, devoting ourselves wholeheartedly to a full exposition of our case.

Athenian Stranger:: How keen and insistent you are! I take it you’re suggesting we should now offer up a prayer for the success of our exposition, which we certainly can’t delay any longer.

Well now, how can one argue for the existence of gods without getting angry? You see, one inevitably gets irritable and annoyed with these people who have put us to the trouble, and continue to put us to the trouble, of composing these explanations. If only they believed the stories which they had as babes and sucklings from their nurses and mothers! These almost literally ‘charming’ stories were told partly for amusement, partly in full earnest; the children heard them related in prayer at sacrifices, and saw acted representations of them—a part of the ceremony a child always loves to see and hear; and they saw their own parents praying with the utmost seriousness for themselves and their families in the firm conviction that their prayers and supplications were addressed to gods who really did exist. At the rising and setting of the sun and moon the children saw and heard

Greeks and foreigners, in happiness and misery alike, all prostrate at their devotions; far from supposing gods to be a myth, the worshippers believed their existence to be so sure as to be beyond suspicion. When some people contemptuously brush aside all this evidence without a single good reason to support them (as even a half-wit can see) and oblige us to deliver this address—well, how could one possibly admonish them and at the same time teach them the basic fact about gods, their existence, without using the rough edge of one's tongue? Still, we must make the best of it: we don't want both sides maddened at once, they by their greed for pleasure, we by our anger at their condition. So our address to men with such a depraved outlook should be calm, and run as follows. Let's use honeyed words and abate our anger, and pretend we're addressing just one representative individual.

'Now then, my lad, you're still young, and as time goes on you'll come to adopt opinions diametrically opposed to those you hold now. Why not wait till later on to make up your mind about these important matters? The most important of all, however lightly you take it at the moment, is to get the right ideas about the gods and so live a good life:—otherwise you'll live a bad one. In this connection, I want first to make a crucial and irrefutable point. It's this: you're not unique. Neither you nor your friends are the first to have held this opinion about the gods. It's an illness from which the world is never free, though the number of sufferers varies from time to time. I've met a great many of them, and let me assure you that none of them who have been convinced early in life that gods do not exist have ever retained that belief into old age. However, it is true that some men (but not many) do persist in laboring under the impression either that although the gods exist they are indifferent to human affairs, or alternatively that they are not indifferent but can easily be won over by prayers and sacrifices. Be guided by me: you'll only see this business in its truest light if you wait to gather your information from all sources, particularly the legislator, and then see which theory represents the truth. In the meantime, don't venture any impiety where gods are concerned. You may take it that it will be up to your lawgiver, now and in the future, to try to enlighten you on precisely these topics.'

Clinias:: So far, sir, that's very well said.

Athenian Stranger:: Certainly, Megillus and Clinias, but what an amazing doctrine we've got involved in, without noticing it!

Clinias:: What doctrine do you mean?

Athenian Stranger:: I mean the one which many people regard as the highest truth of all.

Clinias:: Please be more explicit.

Athenian Stranger:: Some people, I believe, account for all things which have come to exist, all things which are coming into existence now, and all things which will do so in the future, by attributing them either to nature, art, or chance.

Clinias:: Isn't that satisfactory?

Athenian Stranger:: Oh, I expect they've got it more or less right—they're clever fellows. Still, let's keep track of them, and see what's really implied in the theories of that school of thought.

Clinias:: By all means.

Athenian Stranger:: The facts show—so they claim—that the greatest and finest things in the world are the products of nature and chance, the creations of art being comparatively trivial. The works of nature, they say, are grand and primary, and constitute a ready-made source for all the minor works constructed and fashioned by art—artifacts, as they’re generally called.

Clinias:: How do you mean?

Athenian Stranger:: I’ll put it more precisely. They maintain that fire, water, earth and air owe their existence to nature and chance, and in no case to art, and that it is by means of these entirely inanimate substances that the secondary physical bodies—the earth, sun, moon and stars—have been produced. These substances moved at random, each impelled by virtue of its own inherent properties, which depended on various suitable amalgamations of hot and cold, dry and wet, soft and hard, and all other haphazard combinations that inevitably resulted when the opposites were mixed. This is the process to which all the heavens and everything that is in them owe their birth, and the consequent establishment of the four seasons led to the appearance of all plants and living creatures. The cause of all this, they say, was neither intelligent planning, nor a deity, nor art, but—as we’ve explained—nature and chance. Art, the brain-child of these living creatures, arose later, the mortal child of mortal beings; it has produced, at a late stage, various amusing trifles that are hardly real at all— mere insubstantial images of the same order as the arts themselves (I mean for instance the productions of the arts of painting and music, and all their ancillary skills). But if there are in fact some techniques that produce worthwhile results, they are those that co-operate with nature, like medicine and farming and physical training. This school of thought maintains that government, in particular, has very little to do with nature, and is largely a matter of art; similarly legislation is never a natural process but is based on technique, and its enactments are quite artificial.

Clinias:: What are you driving at?

Athenian Stranger:: My dear fellow, the first thing these people say about the gods is that they are artificial concepts corresponding to nothing in nature;

they are legal fictions, which moreover vary very widely according to the different conventions people agree on when they produce a legal code. In particular, goodness according to nature and goodness according to the law are two different things, and there is no natural standard of justice at all. On the contrary, men are always wrangling about their moral standards and altering them, and every change introduced becomes binding from the moment it's made, regardless of the fact that it is entirely artificial, and based on convention, not nature in the slightest degree. All this, my friends, is the theme of experts—as our young people regard them—who in their prose and poetry maintain that anything one can get away with by force is absolutely justified. This is why we experience outbreaks of impiety among the young, who assume that the kind of gods the law tells them to believe in do not exist; this is why we get treasonable efforts to convert people to the 'true natural life', which is essentially nothing but a life of conquest over others, not one of service to your neighbor as the law enjoins.

Clinias:: What a pernicious doctrine you've explained, sir! It must be the ruin of the younger generation, both in the state at large and in private families.

Athenian Stranger:: That's very true, Clinias. So what do you think the legislator ought to do, faced with such a long-established thesis as this? Is he simply to stand up in public and threaten all the citizens with punishment if they don't admit the existence of gods and mentally accept the law's description of them? He could make the same threat about their notions of beauty and justice and all such vital concepts, as well as about anything that encourages virtue or vice; he could demand that the citizens' belief and actions should accord with his written instructions, and insist that anyone not showing the proper obedience to the laws must be punished either by death, or by a whipping and imprisonment, deprivation of civic rights, or by being sent into exile a poorer man. But what about persuading them? When he establishes a legal code for his people, shouldn't he try to talk them into being as amenable as he can make them?

Clinias:: Certainly, sir. If even limited persuasion can be applied in this field, no legislator of even moderate ability should shrink from making the effort. On the contrary, he should argue 'till the cows come home', as the saying is, to back up the old doctrine that the gods exist, and to support the other arguments you ran through just now. In particular, he should defend law itself and art as either part of nature or existing by reason of some no less powerful agency—being in fact, to tell the truth, creations of reason. That, I think, is the point you're making, and I agree.

Athenian Stranger:: Really, Clinias, you are enthusiastic! But when these themes are presented as you suggest, in addresses composed for a popular audience, aren't they found rather difficult to understand? And don't the addresses tend to go on for ever?

Clinias:: Well, sir, we put up with one long discussion, about inebriation in the cause of culture, so surely we can tolerate another, about theology and so forth. And of course this helps intelligent legislation tremendously, because legal instructions, once written down, remain fixed and permanent, ready to stand up to scrutiny forever. So there's no reason for alarm if at first they make difficult listening, because your slow learner will be able to go back again and again and examine them. Nor does their length, provided they’re useful, justify any man in committing what seems to me, at least, an impiety: I mean refusing to facilitate these explanations as best he can.

Megillus:: Yes, sir, I entirely approve of what Clinias says.

Athenian Stranger:: As well you may, Megillus, and we must do as he suggests. Of course, if this sort of argument had not been disseminated so widely over pretty well the entire human race, there would be no call for arguments to prove the existence of gods. But in present circumstances we’ve no choice. When the most important laws are being trampled under foot by scoundrels, whose duty is it to rush to their defense, if not the legislator’s?

Megillus:: Nobody’s.

Athenian Stranger:: Now then, Clinias, you must take your share in the explanation, so tell me your opinion again. I assume the upholder of this doctrine thinks of fire and water, earth and air as being the first of all substances, and this is precisely what he means by the term ‘nature’; soul, he thinks, was derived from them, at a later stage. No, I do more than ‘assume’: I'd say he argues the point explicitly.

Clinias:: True.

Athenian Stranger:: Now then, by heaven, haven’t we discovered the fountain-head, so to speak, of the senseless opinions of all those who have ever undertaken investigation into nature? Scrutinize carefully every stage in their argument, because it will be crucial if we can show that these people who have embraced impious doctrines and lead others on are using fallacious arguments rather than cogent ones—which I think is in fact the case.

Clinias:: You’re right, but try to explain their error.

Athenian Stranger:: Well, it looks as if we have to embark on a rather unfamiliar line of argument.

Clinias:: Don’t hesitate, sir. I realize you think we’ll be straying outside legislation if we attempt such an explanation, but if this is the only way to reach agreement that the beings currently described as gods in our law are properly so described, then this, my dear sir, is the kind of explanation we must give.

Athenian Stranger:: So it looks as if I must now argue along rather unfamiliar lines. Well then, the doctrine which produces an impious soul also ‘produces’, in a sense, the soul itself, in that it denies the priority of what was in fact the first cause of the birth and destruction of all things, and regards it as a later creation. Conversely, it asserts that what actually came later, came first. That’s the source of the mistake these people have made about the real nature of the gods.

Clinias:: So far, the point escapes me.

Athenian Stranger:: It’s the soul, my good friend, that nearly everybody seems to have misunderstood, not realizing its nature and power. Quite apart from the other points about it, people are particularly ignorant about its birth. It is one of the first creations, born long before all physical things, and is the chief cause of all their alterations and transformations. Now if that’s true, anything closely related to soul will necessarily have been created before material things, won’t it, since soul itself is older than matter?

Clinias:: Necessarily.

Athenian Stranger:: Opinion, diligence, reason, art and law will be prior to roughness and smoothness, heaviness and lightness. In particular, the grand and primary works and creations, precisely because they come in the category ‘primary’, will be attributable to art. Natural things, and nature herself— to use the mistaken terminology of our opponents—will be secondary products from art and reason.

Clinias:: Why do you say ‘mistaken’?

Athenian Stranger:: When they use the term ‘nature’, they mean the process by which the primary substances were created. But if it can be shown that soul came first, not fire or air, and that it was one of the first things to be created, it will be quite correct to say that soul is preeminently natural. This is true, provided you can demonstrate that soul is older than matter, but not otherwise.

Clinias:: Very true.

Athenian Stranger:: So this is precisely the point we have to tackle next?

Clinias:: Of course.

Athenian Stranger:: It’s an extremely tricky argument, and we old men must be careful not to be taken in by its freshness and novelty, so that it eludes our grasp and makes us look like ridiculous fools whose ambitious ideas lead to failure even in little things. Just consider. Imagine the three of us had to cross a river in spate, and I were the younger and had plenty of experience of currents. Suppose I said, ‘I ought to try first on my own account, and leave you two in safety while I see if the river is fordable for you two older men as well, or if not, just how bad it is. If it turns out to be fordable, I’ll then call you and put my experience at your disposal in helping you to cross; but if in the event it cannot be crossed by old men like yourselves, then the only risk has been mine.’ Wouldn’t that strike you as fair enough? The situation is the same now: the argument ahead runs too deep, and men as weak as you will probably get out of your depth. I want to prevent you novices in answering from being dazed and dizzied by a stream of questions, which would put you in an undignified and humiliating position you'd find most unpleasant. So this is what I think I'd better do now: first I’ll ask questions of myself, while you listen in safety; then I’ll go over the answers again and in this way work through the whole argument until the soul has been thoroughly dealt with and its priority to matter proved.

Clinias:: We think that’s a splendid idea, sir. Please act on your suggestion.

Athenian Stranger:: Come then, if ever we needed to call upon the help of God, it’s now. Let’s take it the gods have been most pressingly invoked to assist the proof of their own existence, and let’s rely on their help as if it were a rope steadying us as we enter the deep waters of our present theme. Now when I’m under interrogation on this sort of topic, and such questions as the following are put to me, the safest replies seem to be these. Suppose someone asks ‘Sir, do all things stand still, and does nothing move? Or is precisely the opposite true? Or do some things move, while others are motionless?’ My reply will be ‘I suppose some move and others remain at rest.’ ‘So surely there must be some space in which the stationary objects remain at rest, and those in motion move?’ ‘Of course.’ ‘Some of them, presumably, will do so in one location, others in several?’ ‘Do you mean’, we shall reply, ‘that “moving in one location” is the action of objects which are able to keep their centers immobile? For instance, there are circles which are said to “stay put” even though as a whole they are revolving.’ ‘Yes.’ ‘And we appreciate that when a disk revolves like that, points near and far from the center describe circles of different radii in the same time; their motion varies according to these radii and is proportionately quick or slow. This motion gives rise to all sorts of wonderful phenomena, because these points simultaneously traverse circles of large and small circumference at proportionately high or low speeds—an effect one might have expected to be impossible.' 'You're quite right.' 'When you speak of motion in many locations I suppose you're referring to objects that are always leaving one spot and moving on to another. Sometimes their motion involves only one point of contact with their successive situations, sometimes several, as in rolling.

'From time to time objects meet; a moving one colliding with a stationary one disintegrates, but if it meets other objects traveling in the opposite direction they coalesce into a single intermediate substance, half one and half the other.' 'Yes, I agree to your statement of the case.' 'Further, such combination leads to an increase in bulk, while their separation leads to diminution—so long as the existing states of the objects remain unimpaired; but if either combination or separation entails the abolition of the existing state, the objects concerned are destroyed.

'Now, what conditions are always present when anything is produced? Clearly, an initial impulse grows and reaches the second stage and then the third stage out of the second, finally (at the third stage) presenting percipient beings with something to perceive. This then is the process of change and alteration to which everything owes its birth. A thing exists as such so long as it is stable, but when it changes its essential state it is completely destroyed.'

So, my friends, haven't we now classified and numbered all forms of motion, except two?

Clinias:: Which two?

Athenian Stranger:: My dear chap, they are the two which constitute the real purpose of every question we've asked.

Clinias:: Try to be more explicit.

Athenian Stranger:: What we really had in view was soul, wasn't it?

Clinias:: Certainly.

Athenian Stranger:: The one kind of motion is that which is permanently capable of moving other things but not itself; the other is permanently capable of moving both itself and other things by processes of combination and separation, increase and diminution, generation and destruction. Let these stand as two further distinct types in our complete list of motions.

Clinias:: Agreed.

Athenian Stranger:: So we shall put ninth the kind which always imparts motion to something else and is itself changed by another thing. Then there's the motion that moves both itself and other things, suitable for all active and passive processes and accurately termed the source of change and motion in all things that exist. I suppose we'll call that the tenth.

Clinias:: Certainly.

Athenian Stranger:: Now which of our (roughly) ten motions should we be justified in singling out as the most powerful and radically effective?

Clinias:: We can't resist the conclusion that the motion which can generate itself is infinitely superior, and all the others are inferior to it.

Athenian Stranger:: Well said! So shouldn't we correct one or two inaccuracies in the points we've just made?

Clinias:: What sort of inaccuracy do you mean?

Athenian Stranger:: It wasn't quite right to call that motion the 'tenth'.

Clinias:: Why not?

Athenian Stranger:: It can be shown to be first, in ancestry as well as in power; the next kind—although oddly enough a moment ago we called it 'ninth'— we'll put second.

Clinias:: What are you getting at?

Athenian Stranger:: This: when we find one thing producing a change in another, and that in turn affecting something else, and so forth, will there ever be, in such a sequence, an original cause of change? How could anything whose motion is transmitted to it from something else be the first thing to effect an alteration? It's impossible. In reality, when something which has set itself moving effects an alteration in something, and that in turn effects something else, so that the motion is transmitted to thousands upon thousands of things one after another, the entire sequence of their movements must surely spring from some initial principle, which can hardly be anything except the change effected by self-generated motion.

Clinias:: You've put it admirably, and your point must be allowed.

Athenian Stranger:: Now let's put the point in a different way, and once again answer our own questions: 'Suppose the whole universe were somehow to coalesce and come to a standstill—the theory which most of our philosopher-fellows are actually bold enough to maintain—which of the motions we have enumerated would inevitably be the first to arise in it?' 'Self-generating motion, surely, because no antecedent impulse can ever be transmitted from something else in a situation where no antecedent impulse exists. Self-generating motion, then, is the source of all motions, and the primary force in both stationary and moving objects, and we shan't be able to avoid the conclusion that it is the most ancient and the most potent of all changes, whereas the change which is produced by something else and is in turn transmitted to other objects, comes second.'

Clinias:: You're absolutely right.

Athenian Stranger:: So now we've reached this point in our discussion, here's another question we should answer.

Clinias:: What?

Athenian Stranger:: If we ever saw this phenomenon— self-generating motion— arise in an object made of earth, water or fire (alone or in combination) how should we describe that object's condition?

Clinias:: Of course, what you're really asking me is this: when an object moves itself, are we to say that it is 'alive'?

Athenian Stranger:: That's right.

Clinias:: It emphatically is alive.

Athenian Stranger:: Well then, when we see that a thing has a soul, the situation is exactly the same, isn't it? We have to admit that it is alive.

Clinias:: Yes, exactly the same.

Athenian Stranger:: Now, for heaven's sake, hold on a minute. I suppose you'd be prepared to recognize three elements in any given thing?

Clinias:: What do you mean?

Athenian Stranger:: The first point is what the object actually is, the second is the definition of this, and the third is the name. And in addition there are two questions to be asked about every existing thing.

Clinias:: Two?

Athenian Stranger:: Sometimes we put forward the mere name and want to know the definition, and sometimes we put forward the definition and ask for the name.

Clinias:: I take it the point we want to make at the moment is this.

Athenian Stranger:: What?

Clinias:: In general, things can be divided into two, and this is true of some numbers as well. Such a number has the name ‘even’ and its definition is ‘a number divisible into two equal parts’.

Athenian Stranger:: Yes, that’s the sort of thing I mean. So surely, in either case— whether we provide the name and ask for the definition or give the definition and ask for the name—we’re referring to the same object? When we call it ‘even’ and define it as ‘a number divisible into two’, it’s the same thing we’re talking about.

Clinias:: It certainly is.

Athenian Stranger:: So what’s the definition of the thing we call the soul? Surely we can do nothing but use our formula of a moment ago: ‘motion capable of moving itself’.

Clinias:: Do you mean that the entity which we all call ‘soul’ is precisely that which is defined by the expression ‘self-generating motion’?

Athenian Stranger:: I do. And if this is true, are we still dissatisfied? Haven’t we got ourselves a satisfactory proof that soul is identical with the original source of the generation and motion of all past, present and future things and their contraries? After all, it has been shown to be the cause of all change and motion in everything.

Clinias:: Dissatisfied? No! On the contrary, it has been proved up to the hilt that soul, being the source of motion, is the most ancient thing there is.

Athenian Stranger:: But when one thing is put in motion by another, it is never thereby endowed with the power of independent self-movement. Such derived motion will therefore come second, or as far down the list as you fancy relegating it, being a mere change in matter that quite literally ‘has no soul’.

Clinias:: Correctly argued.

Athenian Stranger:: So it was an equally correct, final and complete statement of the truth, when we said that soul is prior to matter, and that matter came later and takes second place. Soul is the master, and matter its natural subject.

Clinias:: That is indeed absolutely true.

Athenian Stranger:: The next step is to remember our earlier admission that if soul were shown to be older than matter, the spiritual order of things would be older than the material.

Clinias:: Certainly.

Athenian Stranger:: So habits, customs, will, calculation, right opinion, diligence and memory will be prior creations to material length, breadth, depth and strength, if (as is true) soul is prior to matter.

Clinias:: Unavoidably.

Athenian Stranger:: And the next unavoidable admission, seeing that we are going to posit soul as the cause of all things, will be that it is the cause of good and evil, beauty and ugliness, justice and injustice and all the opposites.

Clinias:: Of course.

Athenian Stranger:: And surely it’s necessary to assert that as soul resides and keeps control anywhere where anything is moved, it controls the heavens as well.

Clinias:: Naturally.

Athenian Stranger:: One soul, or more than one? I'll answer for you both: more than one. At any rate, we must not assume fewer than two: that which does good, and that which has the opposite capacity.

Clinias:: That's absolutely right.

Athenian Stranger:: Very well, then. So soul, by virtue of its own motions, stirs into movement everything in the heavens and on earth and in the sea. The names of the motions of soul are: wish, reflection, diligence, counsel, opinion true and false, joy and grief, cheerfulness and fear, love and hate. Soul also uses all related or initiating motions which take over the secondary movements of matter and stimulate everything to increase or diminish, separate or combine, with the accompanying heat and cold, heaviness and lightness, roughness and smoothness, white and black, bitter and sweet.

These are the instruments soul uses, whether it cleaves to divine reason (soul itself being, if the truth were told, a divinity), and guides everything to an appropriate and successful conclusion, or allies itself with unreason and produces completely opposite results. Shall we agree this is the case, or do we still suspect that the truth may be different?

Clinias:: By no means.

Athenian Stranger:: Well then, what kind of soul may we say has gained control of the heavens and earth and their entire cycle of movement? Is it the rational and supremely virtuous kind, or that which has neither advantage? Would you like our reply to run like this?

Clinias:: How?

Athenian Stranger:: 'If, my fine fellow' (we should say) 'the whole course and movement of the heavens and all that is in them reflect the motion and revolution and calculation of reason, and operate in a corresponding fashion, then clearly we have to admit that it is the best kind of soul that cares for the entire universe and directs it along the best path.’

Clinias:: True.

Athenian Stranger:: ‘If however these things move in an unbalanced and disorganized way, we must say the evil kind of soul is in charge of them.’

Clinias:: That too is true.

Athenian Stranger:: ‘So what is the nature of rational motion?’ Now this, my friends, is a question to which it is difficult to give an answer that will make sense, so you’re justified here in calling me in to help with your reply.

Clinias:: Good.

Athenian Stranger:: Still, in answering this question we mustn’t assume that mortal eyes will ever be able to look upon reason and get to know it adequately: let’s not produce darkness at noon, so to speak, by looking at the sun direct. We can save our sight by looking at an image of the object we’re asking about.

Clinias:: How do you mean?

Athenian Stranger:: What about selecting from our list of ten motions the one which reason resembles, and taking that as our image? I’ll join you in recalling it, and then we’ll give a joint answer to the question.

Clinias:: Yes, that’s probably your best method of explanation.

Athenian Stranger:: Do we still remember at any rate this from the list of points we made earlier, that all things are either in motion or at rest?

Clinias:: Yes, we do.

Athenian Stranger:: And some of those in motion move in a single location, others in a succession of locations?

Clinias:: That is so.

Athenian Stranger:: Of these two motions, that taking place in a single location necessarily implies continuous revolution round a central point, just like wheels being turned on a lathe; and this kind of motion bears the closest possible affinity and likeness to the cyclical movement of reason.

Clinias:: What do you mean?

Athenian Stranger:: Take reason on the one hand, and motion in a single location on the other. If we were to point out that in both cases the motion was determined by a single plan and procedure and that it was regular, uniform, always at the same point in space, around a fixed center, in the same position relative to other objects, and were to illustrate both by the example of a sphere being turned on a lathe, then no one could ever show us up for incompetent makers of verbal images.

Clinias:: You’re quite right.

Athenian Stranger:: Now consider the motion that is never uniform or regular or at the same point in space or round the same center or in the same relative position or in a single location, and is neither planned nor organized nor systematic. Won’t that motion be associated with every kind of unreason?

Clinias:: Absolutely true, it will.

Athenian Stranger:: So now there’s no difficulty in saying right out that since we find that the entire cycle of events is to be attributed to soul, the heavens that we see revolving must necessarily be driven round—we have to say— because they are arranged and directed either by the best kind of soul or by the other sort.

Clinias:: Well, sir, judging from what has been said, I think it would be rank blasphemy to deny that their revolution is produced by one or more souls blessed with perfect virtue.

Athenian Stranger:: You’ve proved a most attentive listener, Clinias. Now attend to this further point.

Clinias:: What?

Athenian Stranger:: If, in principle, soul drives round the sun, moon and the other heavenly bodies, does it not impel each individually?

Clinias:: Of course.

Athenian Stranger:: Let’s take a single example: our results will then obviously apply to all the other heavenly bodies.

Clinias:: And your example is…?

Athenian Stranger:: …the sun. Everyone can see its body, but no one can see its soul—not that you could see the soul of any other creature, living or dying. Nevertheless, there are good grounds for believing that we are in fact held in the embrace of some such thing though it is totally below the level of our bodily senses, and is perceptible by reason alone. So by reason and understanding let’s get hold of a new point about the soul.

Clinias:: What?

Athenian Stranger:: If soul drives the sun, we shan’t go far wrong if we say that it operates in one of three ways.

Clinias:: And what are they?

Athenian Stranger:: Either the soul resides within this visible spherical body and carries it wherever it goes, just as our soul takes us around from one place to another, or it acquires its own body of fire or air of some kind (as certain people maintain), and impels the sun by the external contact of body with body, or it is entirely immaterial, but guides the sun along its path by virtue of possessing some other prodigious and wonderful powers.

Clinias:: Yes, it must necessarily be by one of these methods that the soul manages the universe.

Athenian Stranger:: Now, just wait a minute. Whether we find that it is by stationing itself in the sun and driving it like a chariot, or by moving it from outside, or by some other means, that this soul provides us all with light, every single one of us is bound to regard it as a god. Isn't that right?

Clinias:: Yes, one would be absolutely stupid not to.

Athenian Stranger:: Now consider all the stars and the moon and the years and the months and all the seasons: what can we do except repeat the same story? A soul or souls—and perfectly virtuous souls at that—have been shown to be the cause of all these phenomena, and whether it is by their living presence in matter that they direct all the heavens, or by some other means, we shall insist that these souls are gods. Can anybody admit all this and still put up with people who deny that 'everything is full of gods'?

Clinias:: No sir, nobody could be so mad.

Athenian Stranger:: Now then, Megillus and Clinias, let's delimit the courses of action open to anyone who has so far refused to believe in gods, and get rid of him.

Clinias:: You mean…

Athenian Stranger:: …either he should demonstrate to us that we're wrong to posit soul as the first cause to which everything owes its birth, and that our subsequent deductions were equally mistaken, or, if he can't put a better case than ours, he should let himself be persuaded by us and live the rest of his life a believer in gods. So let's review the thesis we argued for the existence of gods against the non-believers: was it cogent or feeble?

Clinias:: Feeble, sir? Not in the least.

Athenian Stranger:: Very well. So far as atheists are concerned, we may regard our case as complete. Next we have to use some gentle persuasion on the man who believes in gods but thinks they are unconcerned about human affairs. ‘My splendid fellow,’ we’ll say, ‘your belief in the existence of gods probably springs from a kind of family tie between you and the gods that draws you to your natural kin and makes you honor them and recognize their existence. What drives you to impiety is the good fortune of scoundrels and criminals in private and public life—which in reality is not good fortune at all, although it is highly admired as such by popular opinion and its misplaced enthusiasms: poetry and literature of every kind invest it with a pernicious glamour. Or perhaps you observe men reaching the end of their lives, full of years and honor, leaving behind them their children’s children, and your present disquiet is because you’ve discovered (either from hearsay or personal observation) a few of the many ghastly acts of impiety which (you notice) are the very means by which some of these people have risen from humble beginnings to supreme power and dictatorships. The result is that although by virtue of your kinship with the gods you'd clearly be reluctant to lay such things at their door, your mental confusion and your inability to find fault with them has brought you to your present predicament where you believe they exist, but despise and neglect human affairs. Now, we want to prevent your thoughts from becoming more impious than they are already: let’s see if argument will ward off the disease while it is still in its early stages. We must also try to make use of the original thesis we argued so exhaustively against the absolute atheist, by linking the next step in the exposition on to it.' So you, Clinias and Megillus, must do what you did before: take the young man's place and answer on his behalf. If any difficulty crops up in the argument, I'll take over from you two as I did just now, and conduct you across the river.

Clinias:: Good idea. You play your part, and we'll carry out your suggestions to the best of our ability.

Athenian Stranger:: Still, perhaps it won't be too difficult to show our friend that gods are just as attentive to details as to important matters—more so, in fact. You see, he was here a moment ago and heard that their special job— an expression of their perfect virtue—is to watch over the universe.

Clinias:: Yes, he certainly did hear that said.

Athenian Stranger:: The next thing is for our opponents to join us in asking this question: what particular virtue have we in mind when we agree that the gods are good? Now then: don't we regard moderation and the possession of reason as a mark of virtue, and their opposites as marks of vice?

Clinias:: We do.

Athenian Stranger:: What about courage and cowardice? Are we agreed they come under virtue and vice respectively?

Clinias:: Certainly.

Athenian Stranger:: And we'll label the one set of qualities 'disgraceful' and the other 'admirable'?

Clinias:: Yes, we must.

Athenian Stranger:: And if the base qualities are characteristic of anyone, they are characteristic of us; the gods, we shall say, are not affected by them, either radically or slightly.

Clinias:: No one would disagree with that either.

Athenian Stranger:: Well, then, shall we regard neglect and idleness and riotous living as part of the soul's virtue? Or what's your view?

Clinias:: Really!

Athenian Stranger:: As part of vice, then?

Clinias:: Yes.

Athenian Stranger:: So it's the opposite qualities that will be ascribed to virtue?

Clinias:: Right.

Athenian Stranger:: Very well then. In our view all idle and thoughtless bons vivants will be just the kind of people the poet said were 'like nothing so much as stingless drones'.

Clinias:: Very apt, that.

Athenian Stranger:: So we mustn't say that God has precisely the sort of character he himself detests, and we mustn't allow any attempt to maintain such a view.

Clinias:: Of course not; it would be intolerable.

Athenian Stranger:: Take someone who has the special job of looking after some particular sphere of action, and who is preoccupied with his major duties to the neglect of the small. Could we possibly commend him, except for reasons that would ring quite hollow? Let's consider the point in this light: doesn't this sort of conduct—divine or human—fall into two categories?

Clinias:: Two categories, do we say?

Athenian Stranger:: Either a man thinks it makes no difference to his job as a whole if he neglects the details, or important though they are, he nevertheless lives in idleness and self-indulgence and neglects them. Or is there some other possible reason for his neglecting them? (Of course, if it is simply impossible to look after everything, and a god or some poor mortal fails to take care of something when he has not the strength and therefore the ability, no question of positive neglect of either major or minor duties will arise.)

Clinias:: No, of course not.

Athenian Stranger:: Now let our two opponents answer the questions of the three of us. They both admit gods exist, but one thinks they can be bought off, the other that they are careless about details. 'First of all, do you both admit that the gods know and see and hear everything, and that nothing within the range of our senses or intellect can escape them? Is this your position, or what?

Clinias:: 'It is.'

Athenian Stranger:: 'And also, that they can do anything which is within the power of mortals and immortals?'

Clinias:: Yes, of course they'll agree to that too.

Athenian Stranger:: Further, the five of us have already agreed that the gods are good—supremely so, in fact.

Clinias:: Emphatically.

Athenian Stranger:: So surely, given they're the sort of beings we've admitted, it's absolutely impossible to agree that they do anything out of sloth and self-indulgence. Among us mortals, you see, laziness springs from cowardice, and sloth from laziness and self-indulgence.

Clinias:: That's very true.

Athenian Stranger:: Then no god neglects anything because of sloth and laziness, because no god, presumably, suffers from cowardice.

Clinias:: You're quite right.

Athenian Stranger:: Now if in fact they do neglect the tiny details of the universe, the remaining possibilities are surely these: either they neglect them because they know that no such detail needs their attention, or—well, what other explanation could there be, except a lack of knowledge?

Clinias:: None.

Athenian Stranger:: So, my dearest sir, are we to interpret you as saying that the gods are ignorant, and display negligence where it is necessary to be solicitous, because they don't know? Or alternatively that they realize the necessity, but do what the most wretched of men are said to do, namely fail in their duty because they are somehow overcome by temptation or pain, even though they know that there are better options than the one they've in fact chosen?

Clinias:: Indeed not.

Athenian Stranger:: Now surely human life has something to do with the world of the soul, and man himself is the most god-fearing of all living creatures, isn't he?

Clinias:: I dare say.

Athenian Stranger:: And we regard all mortal creatures as possessions of gods, like the universe as a whole.

Clinias:: Of course.

Athenian Stranger:: So whether you argue these possessions count for little or much in the sight of the gods, in neither case would it be proper for our owners to neglect us, seeing how very solicitous and good they are. You see, there's another point we ought to consider here.

Clinias:: What?

Athenian Stranger:: It’s a point about perception and physical strength. Aren’t they essentially at opposite poles, so far as ease and difficulty are concerned?

Clinias:: What do you mean?

Athenian Stranger:: Although little things are more difficult to see or hear than big, they are much easier, when there are only a few of them, to carry or control or look after.

Clinias:: Yes, much easier.

Athenian Stranger:: Take a doctor who has been given the entire body to treat. Will he ever get good results if he neglects the individual limbs and tiny parts, in spite of being willing and able to look after the major organs?

Clinias:: No, never.

Athenian Stranger:: Nor yet will helmsmen or generals or householders, nor ‘statesmen’ or anybody of that ilk, succeed in major day-to-day matters if they neglect occasional details. You know how even masons say the big stones don’t lie well without the small ones.

Clinias:: Of course.

Athenian Stranger:: So let’s not treat God as less skilled than a mortal craftsman, who applies the same expertise to all the jobs in his own line whether they’re big or small, and gets more finished and perfect results the better he is at his work. We must not suppose that God, who is supremely wise, and willing and able to superintend the world, looks to major matters but—like a faint-hearted lazybones who throws up his hands at hard work—neglects the minor, which we established were in fact easier to look after.

Clinias:: No sir, we should never entertain such notions about gods. It’s a point of view that would be absolutely impious and untrue.

Athenian Stranger:: Well, it looks to me as if we've given a pretty complete answer to this fellow who's always going on about the negligence of heaven.

Clinias:: Yes, we have.

Athenian Stranger:: At any rate, our thesis has forced him to admit he was wrong. But I still think we need to find a form of words to charm him into agreement.

Clinias:: Well, my friend, what do you suggest?

Athenian Stranger:: What we say to the young man should serve to convince him of this thesis: The supervisor of the universe has arranged everything with an eye to its preservation and excellence, and its individual parts play appropriate active or passive roles according to their various capacities. These parts, down to the smallest details of their active and passive functions, have each been put under the control of ruling powers that have perfected the minutest constituents of the universe. Now then, you perverse fellow, one such part—a mere speck that nevertheless constantly contributes to the good of the whole—is you, you who have forgotten that nothing is created except to provide the entire universe with a life of prosperity. You forget that creation is not for your benefit: you exist for the sake of the universe. Every doctor, you see, and every skilled craftsman always works for the sake of some end-product as a whole; he handles his materials so that they will give the best results in general, and makes the parts contribute to the good of the whole, not vice versa. But you're grumbling because you don't appreciate that your position is best not only for the universe but for you too, thanks to your common origin. And since a soul is allied with different bodies at different times, and perpetually undergoes all sorts of changes, either self-imposed or produced by some other soul, the divine checkers-player has nothing else to do except promote a soul with a promising character to a better situation, and relegate one that is deteriorating to an inferior, as is appropriate in each case, so that they all meet the fate they deserve.’

Clinias:: How do you mean?

Athenian Stranger:: I fancy I could explain how easy it could be for gods to control the universe. Suppose that in one’s constant efforts to serve its interests one were to mold all that is in it by transforming everything (by turning fire into water permeated by soul, for instance), instead of producing variety from a basic unity or unity from variety, then after the first or second or third stage of creation everything would be arranged in an infinite number of perpetually changing patterns. But in fact the supervisor of the universe finds his task remarkably easy.

Clinias:: Again, what do you mean?

Athenian Stranger:: This. Our King saw that all actions are a function of soul and involve a great deal of virtue and a great deal of vice, that the combination of body and soul, while not an eternal creation like the gods sanctioned by law, is nevertheless indestructible (because living beings could never have been created if one of these two constituent factors had been destroyed), that one of them—the good element in soul—is naturally beneficial, while the bad element naturally does harm. Seeing all this he contrived a place for each constituent where it would most easily and effectively ensure the triumph of virtue and the defeat of vice throughout the universe. With this grand purpose in view he has worked out what sort of position, in what regions, should be assigned to a soul to match its changes of character; but he left it to the individual’s acts of will to determine the direction of these changes. You see, the way we react to particular circumstances is almost invariably determined by our desires and our psychological state.

Clinias:: Likely enough.

Athenian Stranger:: So all things that contain soul change, the cause of their change lying within themselves, and as they change they move according to the ordinance and law of destiny. Small changes in unimportant aspects of character entail small horizontal changes of position in space, while a substantial decline into injustice sets the soul on the path to the depths of the so-called “under” world, which men call “Hades” and similar names, and which haunts and terrifies them both during their lives and when they have been sundered from their bodies. Take a soul that becomes particularly full of vice or virtue as a result of its own acts of will and the powerful influence of social intercourse. If companionship with divine virtue has made it exceptionally divine, it experiences an exceptional change of location, being conducted by a holy path to some superior place elsewhere. Alternatively, opposite characteristics will send it off to live in the opposite region. And in spite of your belief that the gods neglect you, my lad, or rather young man;

> This is the sentence of the gods that dwell upon
> Olympus.

—to go to join worse souls as you grow worse and better souls as you grow better, and alike in life and all the deaths you suffer to do and be done by according to the standards that birds of a feather naturally apply among themselves. Neither you nor anyone else who has got into trouble will ever be able to run fast enough to boast that he has escaped this sentence—a sentence to which the judges have attached special importance, and which should take every possible care to avoid. Make yourself ever so small and hide in the depths of the earth, or soar high into the sky: this sentence will be ever at your heels, and either while you're still alive on earth or after you've descended into Hades or been taken to some even more remote place, you'll pay the proper penalty of your crimes. You'll find the same is true of those whom you imagine have emerged from misery to happiness because you've seen them rise from a humble position to high estate by acts of impiety, or some similar wickedness. These actions, it seemed to you, were like a mirror which reflected the gods' total lack of concern. But you didn't appreciate how the role of the gods contributes to the total scheme of things. What a bold fellow you must be, if you think you've no need of such knowledge! Yet without it no one will ever catch so much as a glimmer of the truth or be able to offer a reasoned account of happiness or misery in life. So if Clinias here and this whole group of old men convince you that you don't really understand what you're saying about the gods, then the divine assistance will be with you. But it may be that you need some further explanation, so if you have any sense you'll listen while we address our third opponent.

Now as far as I'm concerned, we've proved, not too inadequately, that gods exist and care for mankind. However, there remains the view that they can be bought off by the gifts of sinners. No one should ever assent to this thesis, and we must fight to the last ditch to refute it.

Clinias:: Well said. Let's do as you suggest.

Athenian Stranger:: Look—in the name of the gods themselves!—how would they be bought off, supposing they ever were? What would they have to be? What sort of being would do this? Well, if they are going to run the entire universe forever, presumably they'll have to be rulers.

Clinias:: True.

Athenian Stranger:: Now then, what sort of ruler do the gods in fact resemble? Or rather, what rulers resemble them? Let's compare small instances with great, and see what rulers will serve our purpose. What about drivers of competing teams of horses, or steersmen of boats in a race? Would they be suitable parallels? Or we might compare the gods to commanders of armies. Again, it could be that they're analogous to doctors concerned to defend the body in the war against disease, or to farmers anxiously anticipating the seasons that usually discourage the growth of their crops, or to shepherds. Now since we've agreed among ourselves that the universe is full of many good things and many bad as well, and that the latter outnumber the former, we maintain that the battle we have on our hands is never finished, and demands tremendous vigilance. However, gods and spirits are fighting on our side, the gods and spirits whose chattels we are. What ruins us is injustice and senseless aggression; what protects us is justice and sensible moderation—virtues that are part of the spiritual characteristics of the gods, although one can find them quite clearly residing among us too, albeit on a small scale. Now there are some souls living on earth in possession of ill-gotten gains, who in their obviously brutish way throw themselves before the souls of their guardians (whether watch-dogs, shepherds, or masters of the utmost grandeur) and by wheedling words and winning entreaties try to persuade them of the truth of the line put about by scoundrels—that they have the right to feather their nest with impunity at mankind's expense. But I suppose our view is that this vice we've named—acquisitiveness—is what is called 'disease' when it appears in flesh and blood, and 'plague' when brought by the seasons or at intervals of years; while if it occurs in the state and society, the same vice turns up under yet another name: ‘injustice’.

Clinias:: Certainly.

Athenian Stranger:: Thus anyone who argues that gods are always indulgent to the unjust man and the criminal, provided they’re given a share in the loot, must in effect be prepared to say that if wolves, for instance, were to give watch-dogs a small part of their prey, the dogs would be appeased by the gift and turn a blind eye to the plundering of the flock. Isn’t this what people are really suggesting when they say that gods can be squared?

Clinias:: It certainly is.

Athenian Stranger:: So consider all those guardians we instanced a moment ago. Can one compare gods to any of them, without making oneself ridiculous? What about steersmen who are turned from their course ‘by libations and burnt offerings’, and wreck both the ship and its crew?

Clinias:: Of course not.

Athenian Stranger:: And presumably they are not to be compared to a charioteer lined up at the starting point who has been bribed by a gift to throw the race and let others win.

Clinias:: No sir, to describe the gods like that would be a scandalous comparison.

Athenian Stranger:: Nor, of course, do they stand comparison with generals or doctors or farmers, or herdsmen, or dogs beguiled by wolves.

Clinias:: What blasphemy! The very idea!

Athenian Stranger:: Now aren’t all the gods the most supreme guardians of all, and don’t they look after our supreme interests?

Clinias:: Very much so.

Athenian Stranger:: So are we really going to say that these guardians of the most valuable interests, distinguished as they are for their personal skill in guarding, are inferior to dogs, or the mere man in the street, who'll never abandon justice, in spite of the gifts that the unjust immorally press upon him?

Clinias:: Of course not. That's an intolerable thing to say. There's no sort of impiety that men won't commit, but anyone who persists in this doctrine bids fair to be condemned—and with every justification—as the worst and most impious of the impious.

Athenian Stranger:: Can we now say that our three theses—that the gods exist, that they are concerned for us, and that they are absolutely above being corrupted into flouting justice—have been adequately proved?

Clinias:: Certainly, and we endorse these arguments of yours.

Athenian Stranger:: Still, I fancy that being so anxious to get the better of these scoundrels, we've put our case rather polemically. But what prompted this desire to come out on top, my dear Clinias, was a fear that the rogues should think that victory in argument was a license to do as they please and act on any and every theological belief they happen to hold. Hence our anxiety to speak with some force. However, if we've made even a small contribution to persuading those fellows to hate themselves and cherish the opposite kind of character, then this preface of ours to the law of impiety will have been well worth composing.

Clinias:: Well, there is that hope. But even without those results, the lawgiver will not be at fault for having discussed such a topic.

Athenian Stranger:: Now then, after the preface we'll have a form of words that convey the purpose of our laws—

a general promulgation to all the ungodly that they should abandon their present habits in favor of a life of piety. Then in cases of disobedience the following law of impiety should apply: Anyone who comes across a case of impiety of word or deed should go to the aid of the law by alerting the authorities. The first officials to be notified should bring the matter, in due legal form, before the court appointed to try this category of case.

If an official who hears of the incident fails to perform this duty, he must himself be liable to a charge of impiety at the hands of anyone who wishes to champion the cause of the laws.

When verdicts of ‘guilty’ are returned, the court is to assess a separate penalty for each impious act of each offender. Imprisonment is to apply in all cases. (The state will have three prisons: a public one near the market-place for the general run of offenders, where large numbers may be kept in safe custody, one called the ‘reform center’, near the place where the Nocturnal Council assembles, and another in the heart of the countryside, in a solitary spot where the terrain is at its wildest; and the title of this prison is somehow to convey the notion of ‘punishment’.)

Now since impiety has three causes, which we’ve already described, and each is divided into two kinds, there will be six categories of religious offenders worth distinguishing; and the punishment imposed on each should vary in kind and degree. Consider first a complete atheist: he may have a naturally just character and be the sort of person who hates scoundrels, and because of his loathing of injustice is not tempted to commit it; he may flee the unjust and feel fondness for the just. Alternatively, besides believing that all things are ‘empty of’ gods, he may be a prey to an uncontrollable urge to experience pleasure and avoid pain, and he may have a retentive memory and be capable of shrewd insights. Both these people suffer from a common failing, atheism, but in terms of the harm they do to others the former is much less dangerous than the latter.

The former will talk with a complete lack of inhibition about gods and sacrifices and oaths, and by poking fun at other people will probably, if he continues unpunished, make converts to his own views. The latter holds the same opinions but has what are called ‘natural gifts’: full of cunning and guile, he’s the sort of fellow who’ll make a diviner and go in for all sorts of legerdemain; sometimes he’ll turn into a dictator or a demagogue or a general, or a plotter in secret rites; and he’s the man who invents the tricks of the so-called ‘sophists’. So there can be many different types of atheist, but for the purpose of legislation they need to be divided into two groups. The dissembling atheist deserves to die for his sins not just once or twice but many times, whereas the other kind needs simply admonition combined with incarceration. The idea that gods take no notice of the world similarly produces two more categories, and the belief that they can be squared another two. So much for our distinctions.

Those who have simply fallen victim to foolishness and who do not have a bad character and disposition should be sent to the reform center by the judge in accordance with the law for a term of not less than five years, and during this period no citizen must come into contact with them except the members of the Nocturnal Council, who should pay visits to admonish them and ensure their spiritual salvation.

When his imprisonment is over, a prisoner who appears to be enjoying mental health should go and live with sensible people; but if appearances turn out to have been deceptive, and he is reconvicted on a similar charge, he should be punished by death.

There are others, however, who in addition to not recognizing the existence of gods, or believing they are unconcerned about the world or can be bought off, become subhuman. They take everybody for fools, and many a man they delude during his life; and then by saying after his death that they can conjure up his spirit, and by promising to influence the gods through the alleged magic powers of sacrifices and prayers and charms, they try to wreck completely whole homes and states for filthy lucre.

If one of these people is found guilty, the court must sentence him to imprisonment as prescribed by law in the prison in the center of the country; no free man is to visit him at any time, and slaves must hand him his ration of food fixed by the Guardians of the Laws. When he dies the body must be cast out over the borders of the state unburied.

If any free man lends a hand in burying him, he must be liable to a charge of impiety at the hands of anyone who cares to prosecute.

If the prisoner leaves children suitable for citizenship, the guardians of orphans must look after them too, from the day of their father's conviction, no less than ordinary orphans.

All these offenders must be covered by one general law, which by forbidding illegal religious practices will cause most of them to sin less in word and deed against religion, and which in particular will do something to enlighten them. The following comprehensive law should be enacted to deal with all these cases.

No one is to possess a shrine in his own private home. When a man takes it into his head to offer sacrifice, he is to go to the public shrines in order to do so, and he should hand over his offerings to the priests and priestesses responsible for consecrating them; then he, and anyone else he may wish to participate, should join in the prayers. The grounds for these stipulations are as follows. To establish gods and temples is not easy; it’s a job that needs to be very carefully pondered if it is to be done properly. Yet look at what people usually do—all women in particular, invalids of every sort, men in danger or any kind of distress, or conversely when they have just won a measure of prosperity: they dedicate the first thing that comes to hand, they swear to offer sacrifice, and promise to found shrines for gods and spirits and children of gods. And the terror they feel when they see apparitions, either in dreams or awake—a terror which recurs later when they recollect a whole series of visions—drives them to seek a remedy for each individually, with the result that on open spaces or any other spot where such an incident has occurred they found the altars and shrines that fill every home and village. The law now stated must be observed not only for all these reasons but also in order to deter the impious from managing to conduct these activities too in secret, by establishing shrines and altars in private houses, calculating to win the favor of the gods on the quiet by sacrifices and prayers. This would make their wickedness infinitely worse, and bring the reproach of heaven both on themselves and on the virtuous people who tolerate them, so that, by a sort of rough justice, the whole state would catch the infection of their impiety. Still, God won’t blame the legislator, because this is the law to be enacted:

The possession of shrines in private houses is forbidden. If a man is proved to possess and worship at shrines other than the public ones, and the injustice committed is not an act of serious impiety (whether the possessor is a man or a woman), anyone who notices the fact must lay information before the Guardians of the Laws, who should give orders for the removal of the private shrines to public temples.

If the culprits disobey, they must be punished until they carry out the removal.

But if a man is proved guilty of a serious act of impiety typical of an adult, and not just the peccadillo of a child, either by establishing a shrine on private land or by sacrificing on public land to gods not included in the pantheon of the state, he must be punished by death for sacrificing with impure hands.

The Guardians of the Laws, after deciding whether the crime was a childish peccadillo or not, must then take the matter straight to court, and exact from the culprits the penalty for their impiety.

## Book 11.

Athenian Stranger:: The next subject needing to be reduced to due order will be our transactions with each other. I suppose something like this will serve as a general rule. Ideally, no one should touch my property or tamper with it, unless I have given him some sort of permission; and if I am sensible I shall treat the property of others with the same respect.

Let’s take as our first example treasure which someone who was not one of my ancestors stored away for himself and his family. I should never pray to the gods to come across such a thing; and if I do, I must not disturb it nor tell the diviners, as they are called, who (I shall find) can always invent some reason for advising one to remove something deposited in the ground. The financial benefit I'd get from removing it could never rival what I'd gain by way of virtue and moral rectitude by leaving it alone; by preferring to have justice in my soul rather than money in my pocket, I'd get—treasure for treasure—the better bargain, and for a better part of myself, too.

‘Hands off immovables’ is aptly applied to a great many situations, and this is one of them. And we should put our trust in the traditional view of such conduct—that it injures our descendants. Suppose a man takes no thought for his children and becomes indifferent to the legislator, and removes what neither he himself nor his father nor any of his fathers before him deposited, without the consent of the depositor; suppose he thus undermines the finest law there is, that simple rule of thumb, formulated as it was by a man of great nobility, ‘Don’t pick up what you didn’t put down’—well, when a man treats these two legislators so contemptuously and picks up something he had not put down (and sometimes no bagatelle, either, but a huge treasure trove), what penalty should he suffer? God knows the penalty of heaven; but the first person to notice such an occurrence in the city should report it to the City-Wardens; if somewhere in the city's market, to the Market-Wardens; and if in some place in the country, he should inform the Country-Wardens and their Chiefs. On receiving the information the state should send to Delphi and in submission to the oracles of the god do whatever he ordains about the objects and the person who removed them. If the informant is a free man, he should acquire a reputation for virtue, but if a free man fails to inform, he must get a reputation for vice.

If the informant is a slave, then as a reward he will deservedly be presented with freedom by the state, which will give his master what he is worth, but if a slave fails to inform, he must be punished by death.

The natural thing to do next is to apply this same rule to all objects, important or trivial. If a man leaves some piece of his own property somewhere, deliberately or inadvertently, anyone who finds it should let it be, on the assumption that such things are under the protection of the goddess of the wayside, to whom they are consecrated by law.

If in defiance of this rule someone picks up an object of no great value and takes it home, and he is a slave, he should be soundly beaten by any passer-by who is not less than thirty years of age; if he is a free man, in addition to being thought ungentlemanly and lawless, he must pay the person who left the article ten times its value.

If one man accuses another of being in possession of some piece of his own property, whether valuable or not, and the accused person admits he has it but denies that it belongs to the complainant, the latter should— if the object has been registered with the authorities according to law—summon the person in possession of it before the authorities, and the possessor must produce it; then if on being presented for inspection it proves to have been recorded in the registers as the property of one of the disputants, the owner must take it and depart; but if it belongs to some other party not present, then whichever disputant furnishes a credit-worthy guarantor should exercise the absent party's right of removal and take the article away on his behalf for delivery into his possession. If on the other hand the article in dispute has not been registered with the authorities, it must be left with the three oldest officials pending settlement of the case; and if it is an animal that is thus kept in safe custody, the loser of the suit must pay the officials for its keep. The officials are to settle the case within three days.

Anyone who wishes—provided he's in his right mind—may seize his own slave, and (within the permitted limits) treat him as he likes. He may also arrest a runaway slave, in order to stop him escaping, on behalf of a relative or friend. If anyone demands the release of someone who is being taken for a slave and arrested, the captor must let him go, but the releaser must furnish three credit-worthy sureties. On these terms and on no other the man may be released.

If a man secures a release except on these conditions, he must be liable to a charge of violence and if convicted, he must pay to the captor twice the damages claimed in the suit.

Freedmen too may be arrested if they fail to perform their services to their manumittor, or perform them inadequately. (The services are these: three times a month a freedman must proceed to the home of his manumittor and offer to do anything lawful and practicable; and as regards marrying he must do whatever his former master thinks right.) He must not grow more wealthy than his manumittor; if he does, the excess must become the property of the master. The freedman must not stay in the state longer than twenty years, but like the other aliens he must then take all his property and leave, unless he has gained permission from the authorities and his manumittor to remain. If a freedman or one of the other aliens acquires property in excess of the limit allowed the third property-class, then within thirty days of this event he must pack up and be off, without any right to ask the authorities to extend his stay.

If a freedman disobeys these regulations and is taken to court and convicted, he must be punished by death and his property confiscated by the state.

Such cases should be tried in the tribal courts, unless the litigants have previously settled their charges against each other before their neighbors—that is, judges they have chosen themselves.

If a man formally seizes as his own any animal or some other piece of property of any other man the person in possession must return it to the warrantor or donor, provided the latter is suable and solvent, or to the person who validly transferred it to him by some other procedure. If he received it from a citizen or a resident alien, he must do so within thirty days; but if he took delivery from a complete alien, he must return it within the five months of which the third shall be the month in which the summer solstice occurs.

When one person makes an exchange with another by buying or selling, the transfer must be made by handing over the article in the appointed part of the market-place (and nowhere else), and by receiving the price on the nail; no payment for delivery later or sale on credit is to be allowed. If a man exchanges one thing for another in any other place or under any other arrangement, trusting to the honesty of the other party to the exchange, he must do so on the understanding that when sales are made other than under the rules now stated the law does not permit him to sue. (Anyone may collect contributions to clubs on a friendly basis, but if some disagreement arises over the collection he must do so on the understanding that in this business no one under any circumstances will be allowed to go to law.)

A seller of an article who receives a price of fifty drachmas or more must be obliged to remain in the state for ten days, and the buyer (in view of the complaints that people are apt to make in this connection, and so that, if necessary, restitution may be made according to law) must be informed of his address. Here are the rules under which legal restitution may be demanded or refused. If someone sells a slave suffering from consumption or stone or strangury or the so-called ‘sacred’ disease or some other mental or physical complaint that is chronic and difficult to cure and which the ordinary man could not diagnose, and if the purchase was made by a doctor or trainer, or if the facts were pointed out before the time of sale, the buyer shall have no right to return him to the vendor. But if a layman is sold such a slave by a professional, the purchaser may return him within six months, except in the case of the ‘sacred’ disease, when the period for restitution is to be extended to a year. The case should be heard before a bench of three doctors appointed by joint nomination of the parties, and if the vendor loses he must pay twice the selling price. If a layman sells to a layman there should be a right of restitution and a hearing as in the previous instance, but the loser should pay only the simple price. If the slave is a murderer, and both buyer and seller are aware of the fact, there shall be no right of restitution for the purchase; but if the buyer acted in ignorance he shall have a right of restitution as soon as he realizes the situation, and the case should be tried before the five youngest Guardians of the Laws; if the vendor is judged to have known the facts, he must purify the house of the buyer under the Expounders’ rules and pay him three times the price.

Anyone exchanging money for money or for anything else, animate or inanimate, should always give and receive full value as the law directs. Let’s do as we did in other parts of our legislation and allow ourselves a preface dealing with the whole range of crimes that arise in this connection.

Everyone should think of adulteration as essentially the same sort of thing as lying and deceit—which in fact people commonly describe as quite respectable. But they are wrong to defend this sort of conduct as ‘frequently justified, on appropriate occasions’, because what they mean by the ‘appropriate’ place and occasion they leave vague and indefinite, and their dictum does nothing but harm both to themselves and to others. Now a legislator cannot afford to leave this vague: he must always lay down precise limits, however wide or narrow they may be. So let’s define some limits now: a man must tell no lie, commit no deceit, and do no fraud in word or deed when he calls upon the gods, unless he wants to be thoroughly loathed by them—as anyone is who snaps his fingers at them and swears false oaths, or (though they find this less offensive) tells lies in the presence of his superior. Now the ‘superiors’ of bad men are the good, and of the young their elders (usually)—which means that parents are the superiors of their offspring, men are (of course) the superiors of women and children, and rulers of their subjects. All these people in positions of authority deserve the respect of us all, and the authorities of the state deserve it in particular. This is in fact what prompted these remarks. Anyone who is so lacking in respect for men and reverence for the gods as to pull off some swindle of the market-place by swearing oaths and calling heaven to witness (even though the rules and warnings of the Market-Wardens stare him in the face), is a liar and a cheat. So in view of the low level of religious purity and holiness most of us generally achieve, let me emphasize what a good habit it is to think twice before taking the names of the gods in vain.

If any cases of disobedience arise, the following law should be invoked: the seller of any article in the market must never name two prices for his goods, but only one, and if he doesn’t get it, he will (quite rightly) remove his wares without raising or lowering his price that day; and he must not push anything he has for sale, or take an oath on its quality.

If a man disobeys these regulations, any citizen passing by, provided he is not less than thirty years of age, should punish the taker of the oath and beat him with impunity.

If the passer-by ignores these instructions and disobeys them, he must be liable to the reproach of having betrayed the laws.

If a man proves to be beyond persuasion by our present address and sells a faulty article, the passer-by who has the knowledge and ability to expose him should prove his case before the authorities, and, if a slave or resident alien, may then take the faulty article for himself; a citizen, however, should dedicate it to the gods of the marketplace.

If a citizen fails to expose the offender, he should be pronounced a rogue, as he has cheated the gods.

Anyone discovered selling such adulterated merchandise, apart from being deprived of it, must be whipped (one lash for every drachma of the asking price of the object he was selling), after a herald has announced in the market-place the reason why the culprit is going to be flogged.

The Market-Wardens and the Guardians of the Laws, having ascertained from experts the details of the adulterations and malpractices of sellers, should record in writing rules which specify what vendors must and must not do; these regulations should then be inscribed on a pillar and displayed in front of the Market-Wardens' office for the information of those who transact business in the market-place. (As for the City-Wardens, we have already given an adequate description of their duties, but if it seems some additional rules are needed, the wardens should consult the Guardians of the Laws, write out what they think missing, and record both the new and the old rules of their office on a pillar in front of their quarters.)

Hard on the heels of tricks of adulteration come the practices of retail trade. First we should give a word of advice on the whole subject, then lay down legislation for it. The natural function in the state of retail trading in general is not to do harm, but quite the opposite. When goods of any kind are distributed disproportionately and unequally, anyone who makes the distribution equal and even cannot fail to do good. It needs to be stated that this redistribution, in which money too plays an effective role, is precisely the purpose the trader is meant to serve. Hired laborers, innkeepers and other workmen of varying degrees of respectability all perform the function of satisfying the needs of the community by ensuring an even distribution of goods. Why then is trading thought to be such a low and disreputable occupation? Why has it come to be so abused? Let’s see if we can discover the reason, so that we can use our legislation to reform at any rate some branches of commerce, even if not the whole institution. This looks like an important task that calls for exceptional resource.

Clinias:: How do you mean?

Athenian Stranger:: My dear Clinias, only a small part of mankind—a few highly-educated men of rare natural talent—is able to steel itself to moderation when assailed by various needs and desires; given the chance to get a lot of money, it’s a rare bird that’s sober enough to prefer a modest competence to wealth. Most people’s inclinations are at the opposite pole: their demands are always violent demands, and they brush aside the opportunity of modest gain in favor of insatiable profiteering. That’s why all branches of retailing, trade and inn-keeping suffer from abuse and extreme unpopularity. Now here’s something I’m determined to mention, ludicrous though it is; it’ll never happen, and Heaven help us if it did. But just picture to yourselves some eminently virtuous men forced for a time to go in for inn-keeping or retailing or some similar occupation, or some eminently virtuous women similarly forced by some stroke of fate to take up that kind of life. We'd soon realize how desirable and pleasing each of these trades really is, and if they were carried on according to honest standards we'd value them all as highly as we do our mother or our nurse. But what happens? A man goes off to some remote point on a road running through the middle of nowhere and sets up his establishment to sell provisions; he receives the weary traveler with welcome lodging—peace and quiet for the victim of violent storms, cool refreshment for the sufferer from stifling heat—but then instead of greeting them as friends and offering them in addition to his hospitality some gifts as a token of goodwill, he treats them like so many enemy prisoners that have fallen into his hands, and holds them up to ransom for a monstrously steep and iniquitous sum. It’s these and similar swindles, which are practiced in all branches of the trade, that have given the occupation of helping the worn-out traveler such a bad name, and in every case the legislator has to find a remedy. The old saying is quite right: it’s difficult to fight against two enemies, especially when they are fundamentally different (as with diseases, for instance, and there are a lot of other examples). Our present battle is a case in point: it is a battle against two foes, wealth and poverty—wealth that corrupts our souls by luxury, poverty that drives us by distress into losing all sense of shame. So what remedy for this disease will be open to an enlightened community? First, it should keep its trading class as small as possible; second, trade should be made over to a class of people whose corruption will not harm the state unduly; third, some means must be found to prevent those engaging in such activities from slipping too easily into an utterly shameless and small-minded way of life.

After these remarks, our law on the subject should run like this, with Heaven’s blessing: God is now re-establishing and re-founding Magnesia, and no inhabitant who holds one of the 5040 hearths must ever, willingly or otherwise, become a retailer or a wholesaler, or perform any service whatever for private individuals who are not his equals in status, with the exception of those services that a free man will naturally render to his father and mother and remoter ancestors, and to all free persons older than himself. Of course, it is not easy to lay down in a law precisely what is consistent with the dignity of a free man and what is not, and the point will have to be determined by those who have won distinctions for their aversion to the latter and devotion to the former. Anyone who by some trick goes in for retail trading in a way forbidden to a gentleman should be indicted by anyone who wishes before a court of judges with a high reputation for virtue, on a charge of disgracing his clan.

If he is judged to be sullying his paternal hearth by following an unworthy calling, he must be imprisoned for a year and so be taught to refrain from such conduct.

If he does not then refrain, he must be imprisoned for two years, and the period of imprisonment must be doubled indefinitely on each subsequent conviction.

Now for a second law: anyone who intends to go in for retail trading must be either a resident alien or a temporary visitor. Thirdly, as a third law, such people must behave with as much virtue and as little vice as possible while they share in the life of the state. To that end, the Guardians of the Laws must not simply be regarded as guardians of those whom it is easy to keep from wickedness and crime thanks to their good birth and education. There are those who do not enjoy such advantages, and need more careful supervision, because they engage in pursuits which are very powerful inducements to vice. So since retail trading is an occupation of great variety and embraces many cognate activities, the Guardians of the Laws must hold a meeting about it, or at any rate about such branches of it as they have concluded are unavoidable and essential to the state, after the others have been eliminated; and just as we ordered in the case of adulteration—a closely connected matter—experts in each branch should be in attendance. The meeting must see what ratio of expenditure to receipts will give the retailer a decent profit, and the ratio arrived at must be recorded in writing, put on display, and then imposed on the various traders by the Market-Wardens, City-Wardens and Country-Wardens.

Perhaps thus retail trade will benefit the population at large and do minimum harm to those members of society who engage in it.

If a man fails to fulfill an agreed contract—unless he had contracted to do something forbidden by law or decree, or gave his consent under some iniquitous pressure, or was involuntarily prevented from fulfilling his contract because of some unlooked-for accident—an action for such an unfulfilled agreement should be brought in the tribal courts, if the parties have not previously been able to reconcile their differences before arbitrators (their neighbors, that is).

The class of craftsmen who have enriched our lives by their arts and skills will have Athena and Hephaestus as its patrons, while Ares and Athena will be patrons of those who protect the products of these craftsmen by skills of a different order—the techniques of defense. (The consecration of this latter class to these gods is perfectly justified, in that both classes are in the continuous service of land and people, the latter by taking the lead in the struggles of war, the former by producing tools and goods in return for pay.) So if they respect their divine ancestors, they will think it a disgrace to break their word in a professional matter.

If one of the craftsmen culpably fails to complete his work within the stipulated time, out of disrespect for the god from whom he wins his bread, fondly thinking that he can count on the indulgence of the divinity with whom he has some personal relationship, first he will pay a penalty to the god, and secondly, under the provisions of the law applicable to his case, he must owe the price of the works of which he has cheated his employer, and perform his task all over again within the stipulated period, free of charge.

And the law will give the contractor for a work the same advice as it gave a seller, not to take advantage by setting too high a price on his services, but to name their actual value without further ado. The contractor has precisely the same duty, because as a craftsman he knows what the job is worth. In a state of gentlemen a workman must never use his craft, which is at bottom accurate and straightforward, to take ‘craft’ advantage of laymen, and anyone who is thus imposed upon shall be able to sue the culprit. But if anyone lets a contract to a workman and fails to pay him the price stipulated in a valid legal agreement, and snaps his fingers at those partners in our social framework, Zeus the patron of the state, and Athena, so that his delight at being in pocket wrecks the fundamental bonds of society, then the following law, with the backing of the gods, must reinforce the cohesion of the state:

If a man takes delivery of a piece of work and fails to pay for it within the agreed time, he must be charged double; if a whole year elapses, then notwithstanding the rule that loans in general do not bear interest, he must pay an obol per drachma for every month in arrear.

Actions in these cases should be brought before the tribal courts.

Now that we have broached the subject of craftsmen in general, we ought in all fairness to glance at those whose job it is to keep us safe in war, such as generals and other experts in military techniques. These persons are just as much craftsmen as ordinary workmen, though of a different kind, so when one of them undertakes some public task, voluntarily or under orders, and performs it well, the law will never tire of praising anyone who pays him the honor he deserves—honor being in effect a military man's pay. But if anyone receives the benefit of some splendid military action and fails to pay that price, the law will censure him. For the benefit of the military, then, let us enact following regulation-cum-commendation, by way of advising rather than compelling the people at large. Those fine men who safeguard the whole state either by exploits of valor or by military expertise must be accorded honor—but honor of the second rank, because the highest honor should be given first and foremost to those who have proved conspicuously conscientious in respecting the written regulations of the good legislator.

Athenian Stranger:: We've now pretty well completed our provisions for the most important agreements that men make with each other, with the exception of those relating to orphans and the care and attention due to them from their guardians. So now we've more or less provided for the first topic, here's the next thing on which we are obliged to impose some sort of order. All our regulations must start from two basic facts: people at the point of death like to settle their affairs by a will, sometimes, by chance, they die intestate. What a difficult and contentious business it is, Clinias! That's what I had in mind when I said we were 'obliged' to deal with it: to leave it unregulated is quite out of the question. If you allow a will unchallengeable validity whatever condition a man near the end of his life may have been in when he drew it up, he might make any number of mutually inconsistent provisions that contradicted not only the spirit of the laws but also the inclinations of those who survive him, and indeed his own earlier intentions before he set out to make his will. After all, most of us, when we think death is at hand, just go to pieces and can't think straight.

Clinias:: How do you mean, sir?

Athenian Stranger:: When a man is about to die, Clinias, he becomes refractory, and keeps harping on a principle that spreads alarm and despondency among legislators.

Clinias:: How's that?

Athenian Stranger:: In his anxiety for complete authority he's apt to express himself with some warmth.

Clinias:: To what effect?

Athenian Stranger:: 'Ye gods!' says he, 'it's a fine thing if I'm not going to be allowed to give—or not give—my own property to anyone I please! Why shouldn't I give more to one man and less to another depending on whether they have shown themselves good or bad friends to me? My illnesses, my old age and all my other various misfortunes have sorted them out well enough.'

Clinias:: Well, sir, don't you think that's well said?

Athenian Stranger:: Clinias, my view is that the ancient lawgivers were too easygoing, and legislated on the basis of a superficial and inadequate appreciation of the human condition.

Clinias:: How do you mean?

Athenian Stranger:: My dear fellow, because they feared the line of argument I have mentioned, they passed the law allowing a man to dispose of his own property in his will exactly as he pleases. But when people have come to death's door in your state, you and I will make a rather more appropriate response:

'Friends, you "creatures of a day" in more senses than one, it's difficult for you in your present circumstances to know the truth about your own property and also "know yourselves,” as the Delphic inscription puts it. Therefore, I, as legislator, rule that neither you nor this property of yours belongs to yourselves, but to your whole clan, ancestors and descendants alike; and your clan and its property in turn belong, even more absolutely, to the state. That being so, I should be reluctant to tolerate someone worming himself into your good graces when you are smitten with illness or old age, and wheedling you into making a will that is not for the best. I shall legislate with a view to nothing except the interest of your clan and the entire state, relegating (as is only right) that of the individual to second place. So as you go on your journey, which is the way of all flesh, show restraint and goodwill towards us: we will look after your affairs for the future and guard your interests with the utmost care, down to the smallest detail.’

Let that stand by way of preamble and consolation for both the living and the dying, Clinias. Here’s the actual law:

Anyone who settles his property by writing a will should first, if he has had children, write down the name of that son who in his opinion deserves to be his heir, and he should also record precisely which, if any, of his other children he offers for adoption by someone else. If, however, he is still left with one of his sons not adopted into an estate, who will presumably be dispatched by law to a colony, the father should be permitted to present him with as much of his property as he likes, apart from the family estate and all its associated equipment; and if there is more than one son in that position, his father is to distribute his property among them—excluding the estate—in whatever proportion he pleases. But he should not distribute any part of his property to any son who has a home. He should treat a daughter analogously: if she is promised in marriage, he should not let her share his goods, but only if she is not promised. If subsequent to the will one of the sons or daughters is discovered to have come into possession of an estate in Magnesia, he or she should abandon his or her legacy to the testator's heir. If the testator is leaving no male offspring but only female, he should select whichever of his daughters he pleases and in his will provide someone to be a husband for her and a son for himself, and record this person as his heir. And here's another disaster a man should allow for when drawing up his will: if his son (his own or adopted) dies in infancy before he can reach man's estate, the will should specify in writing a child who is to take his place—and who, one hopes, will have better luck. When a man who has no children at all writes a will, he may reserve one tenth of his acquired property and give it to anyone he wishes; all the rest he should leave to his adopted heir, so that in making him his son with the blessing of the law he gains his goodwill by treating him fairly. When a man's children need guardians, and the deceased has made a will and stated in writing the number of guardians he wants his children to have and who they should be (provided they are ready and willing to undertake the office), the choice of guardians put on record in this way should be binding. But if a man dies absolutely intestate or without selecting guardians, then the two nearest relatives on the father's side and the two nearest on the mother's, together with one of the deceased's friends, must be authorized to act as guardians; and the Guardians of the Laws should appoint them for any orphan who stands in such need. Everything to do with guardianship and orphans should be the concern of the fifteen eldest Guardians of the Laws, who should divide themselves by seniority into groups of three, one group to act one year and another the next, until the five terms of office have been completed in rotation; and so far as possible there should be no gaps in the sequence.

When a man dies absolutely intestate and leaves children in need of guardians, these same laws must be brought into operation to relieve their distress. But if he meets with some unforeseen accident and leaves just daughters, he must forgive the lawgiver if he arranges the giving of them in marriage with an eye on only two out of three possible considerations: close kinship, and the security of the estate. The third point, which a father would have taken into account—namely to select from among the entire citizen body someone whose character and habits qualify him to be his own son and his daughter's bridegroom—these considerations, I say, will have to be passed over, because it's impracticable to weigh them. So here's how the best law we can manage in such a field should run. If a man fails to make a will, and leaves only daughters, then on his death a brother on his father's side (or, if without an estate of his own, a brother on his mother's side) should take the daughter and the estate of the deceased.

If there is a brother's son available, but no brother, then if the parties are of a similar age the same procedure is to apply. In the absence of all these, a sister's son is to benefit under the same regulations, Next in line is to be the brother of the deceased's father, next (e) that brother's son, and finally (f) the son of the sister of the deceased's father. And in all cases where a man leaves only female offspring, the succession is to pass through the family according to the same rules of kinship, through brothers and brothers' and sisters' sons, the males in any one generation always taking precedence over the females. As for age, the assessor must determine the propriety or otherwise of the marriage by inspection, viewing the males naked and the females stripped down to the navel. If the family suffers from such a dearth of relatives that not even a grandson either of the deceased's brother or of the son of the deceased's grandfather exists, then in consultation with her guardians the girl may single out of her own free choice any other citizen, provided he does not object, who should then become the deceased's heir and the daughter's bridegroom. However, 'flexibility above all': sometimes suitable candidates from within the state itself may be in unusually short supply, so if a girl is hard put to it to find a husband among her compatriots, and has in view someone who has been dispatched to a colony whom she would like to inherit her father's property, then if the man is related to her, he should enter into the estate under the provisions of the law; if he is not of her clan, then provided there are no near kin living in the state, he shall be entitled by virtue of the choice of the daughter of the deceased and that of her guardians to marry her and return to his homeland to take over the establishment of the intestate father.

When a man dies intestate and leaves neither male nor female issue, the situation should in general be met by the foregoing law, and a man and a woman from the clan should 'go in harness' and enter into the deserted establishment with full title to the estate. The order of precedence on the female side is to be: (a) the deceased's sister, (b) his brother's daughter, (c) the sister's son, (d) the sister of the deceased's father, (e) the daughter of the father's brother, and (f) the daughter of the father's sister. A woman from this list should set up home with a man from the other list according to the degrees of kinship and the demands of religion for which we made provision earlier.

But let’s not forget the severity of such laws. It can sometimes be hard for a near relative of the deceased to be instructed to marry his kinswoman, by a law that to all appearances takes no account of the thousands of social difficulties that deter people from obeying such instructions in a willing spirit, so that they invariably prefer to put up with anything rather than comply—I mean difficulties like physical or mental illnesses or defects in the man or woman one is told to marry. I dare say some people imagine the lawgiver is not bothered about these things at all, but they’re wrong.

So in the interests of the lawgiver and those for whom he legislates, let’s compose a sort of impartial preamble begging those who are subject to the legislator’s orders to forgive him if in his concern for the common good he finds it hardly possible to cope with the personal inconvenience experienced by individuals; and the people for whom the lawgiver’s regulations are intended should also be forgiven for their occasional understandable inability to carry out the orders which, in all ignorance, he gives them.

Clinias:: Well then, sir, what would be the most reasonable way of dealing with such cases?

Athenian Stranger:: It is essential, Clinias, to choose people to arbitrate between laws of that sort and the persons affected by their provisions.

Clinias:: How do you mean?

Athenian Stranger:: Sometimes a nephew with a wealthy father might be reluctant to take his uncle’s daughter because he fancies his chances and is bent on making a better marriage; in another case a man would have no choice but to disobey the law because the instructions devised by the lawgiver would lead to untold trouble—as for instance if they tried to compel him to marry someone suffering from lunacy or some other terrible physical or mental defect that would make the life of the partner not worth living. This policy should be embodied in a law with the following provisions:

If in practice people attack the established laws about wills on any point whatever, but especially where a marriage is concerned, and swear that if the legislator were alive and present in person he would never have forced them to either of the courses to which they are in fact being forced (to marry this man or that woman), but one of the relatives or a guardian takes the opposite line, then we must remember that the fifteen Guardians of the Laws have been bequeathed to orphan boys and girls by the legislator to act as their fathers and arbitrate on their behalf; so litigants on any of these matters must go to them to get disputes settled, and carry out their decisions as binding. But if a litigant believes that this is too great an authority to be vested in the Guardians of the Laws, he should take them before the court of the Select Judges and get a decision on the points at issue.

If he loses the day, the lawgiver should visit him with censure and disgrace, a punishment which any sensible person will regard as more severe than a huge fine.

The effect of this will be to give our orphan children a sort of second birth. We have already described the training and education they should all receive after their first; after this second and parentless birth we have to see that these children who have had the ill luck to be bereaved and made orphans are to be pitied as little as possible for their misfortune. In the first place, the Guardians of the Laws—substitute parents at least as good as the original ones—should lay down rules for them; in particular, we instruct the three Guardians on duty for the year to look after them as though they were their own children; and for the guidance of these officials and the guardians we shall compose a suitable preamble on the education of orphans. And luckily enough, I fancy, we have described already how after death the souls of the departed enjoy certain powers which they use to take an interest in human affairs. The stories which tell of these things are true, but long, so one should trust to the ancient and widely disseminated common traditions on the point, and also take the legislator's word for it that the doctrine is true—unless, of course, one believes them to be arrant fools. Now if this is really the way of things, a guardian should fear, in the first place, the gods above, who are aware how deprived orphans are, and secondly the souls of the departed, whose natural instinct is to watch with particular care over their own children, showing benevolence to people who respect them and hostility to those who treat them badly. And he should also fear the reactions of those who, full of years and honor, are still living, because in a state which thrives under good laws their grandchildren will show them glad and tender affection, and old men have sharp eyes and ears for such things: if you do the right thing by an orphan, they'll be kind to you, whereas they'll soon show you their displeasure if you take advantage of an orphan's exposed position, because they regard orphans as a supreme and sacred trust. A guardian or official with even the slightest sense has a duty to give close attention to all these warnings, and take great care over the training and education of orphans, helping them in every possible way, just as if he were contributing to the good of his own self and family.

A man who complies with the preface to the law and refrains from any ill-treatment of an orphan will be spared first-hand experience of the legislator's fury against such actions, but. if a man refuses to comply, and harms a child deprived of its father or mother, he must pay double the damages that he would have to pay for a crime committed against a child with both parents living.

But do we really need precise rules to control a guardian's treatment of an orphan, and an official's supervision of a guardian? They already possess a pattern of how to bring up free-born children, in the education they themselves give up their own, and in the way they manage their private possessions—and of course the rules they have to guide them on those matters are pretty exact. If they were not, it would be reasonable to lay down rules of guardianship as a special and separate category, and make an orphan's life different from that of ordinary children by working out a detailed regime of its own. But in fact in our state being an orphan doesn't differ very much from living under one's own father, although in public esteem, and the amount of attention the children get, orphanhood is usually much less desirable. That is why in dealing with this topic— rules about orphans—the law has gone to such lengths in encouraging and threatening. And here's the sort of threat that will come in very handy indeed. Anyone acting as a guardian of a boy or girl, and any Guardian of the Laws who supervises that guardian by virtue of being appointed to control him, must show this child who has had the misfortune of bereavement no less affection than his own children, and be just as zealously concerned for his ward's property as he is for his own—more so, in fact; and everyone who acts as a guardian will have just that one law to observe on the subject of orphans. But, if this law is contravened in such respects, a guardian should be punished by his official, an official should be summoned before the court of Select Judges by the guardian and punished by a fine of twice the damages as estimated by the court.

If a guardian is suspected by the relatives or indeed by any other citizen of neglect or malpractice, he should be summoned before the same court.

He must be fined four times the sum he is found to have taken, half the fine going to the child and half to the successful prosecutor.

If once he has grown up an orphan concludes that he was badly treated by his guardian, he may bring a suit for incompetent guardianship, provided he does so within five years of its expiry.

If a guardian is found guilty, the court is to estimate what he is to suffer or pay; if an official is found guilty of injuring the orphan through negligence, the court must assess how much he is to pay to the child; by criminal conduct, then in addition to paying the sum assessed, he must be ejected from the office of Guardian of the Laws, and the government must supply the state and country with a fresh Guardian of the Laws to take his place.

The bitterness with which fathers quarrel with their children and children with their fathers is often excessive. A father is apt to think that the legislator ought to give him legal authority, if he wishes, to make a public proclamation through a herald that under the provisions of the law his son is his son no longer; for their part, sons believe that if they have a father whose suffering from disease or old age has become a disgrace, they are entitled to prosecute him on a charge of lunacy. Such disputes are usually found where men's characters are irredeemably corrupt, because when the corruption is confined to one party—as when the son is corrupt but not the father, or the other way round—the bad feeling is not sufficient to lead to trouble. Now in any other state a child repudiated by his father would not necessarily find himself a stateless person, but in the case of Magnesia, to which these laws will apply, a man disowned by his father will be obliged to migrate to another country, because the 5040 homes cannot be increased even by one. Consequently before this punishment can be legally inflicted on him, he must be repudiated not only by his father but by the entire clan. Procedure in such cases is to be governed by some such law as this: anyone who has the extreme misfortune to want—justifiably or not—to expel from the clan the child he has fathered and reared, must not be allowed to do so casually and on the spur of the moment. First of all he must assemble all the relatives on his own side and all the relatives of the son on the mother's side, as far as cousins in each case, and accuse his son before them, explaining why he deserves to be drummed out of the clan by its united action. The son shall have the right of reply, to argue that none of these penalties is called for. If the father carries his point, and wins the vote of more than half the relatives (he himself and the mother and the accused son being excluded from the voting, as well as those males and females who are not yet of adult age), then by this procedure and on these terms he shall be entitled to repudiate his son, but in no other way whatever. If some other citizen wishes to adopt the repudiated son, no law is to stop him (a young man's character is by nature bound to change frequently enough in the course of his life), but if after ten years no one has been moved to adopt the disowned person, the supervisors of surplus children intended for the colony must take him too under their wing so that he may be suitably established in the same colony as the others.

Now suppose illness or old age or a cantankerous temper or all three make a man more wayward than old men usually are, unbeknown to all except his immediate circle; and suppose he squanders the family resources on the grounds that he can do as he likes with his own property, so that his son is driven to distraction but hesitates to bring a charge of lunacy. This is the law the son must observe. First of all he must go to the eldest Guardians of the Laws and explain his father's misfortune, and they, after due investigation, must advise him whether to bring the charge or not. If they advise that he should, they must come forward as witnesses for the prosecution and plead on his behalf.

If the case is proved, the father must lose all authority to manage his own affairs, even in trivialities, and be treated like a child for the rest of his days.

Whenever a man and his wife find it impossible to get on with each other because of an unfortunate incompatibility of temperament, the case must come under the control of ten men—middle-aged Guardians of the Laws— and ten of the women in charge of marriage, of the same age. Any arrangements they make which reconcile the couple should stand, but if feelings are too exacerbated for that they must do their best to find each some other congenial partner. It's quite likely that the existing partners are people of rough temper, so one should try to fit them in harness with mates of a more phlegmatic and gentle disposition. And when the quarreling couple have no children or only a few, the procreation of children must be kept in view in the setting up of the new homes; where sufficient children already exist, the divorce and the remarriages should facilitate companionship and mutual help in the evening of life.

If a wife dies and leaves male and female children, we'll lay down a law advising, though not compelling, the husband to bring up his existing children without importing a stepmother; but if there are no children, he must be obliged to remarry so as to beget sufficient children for his home and for the state. If the husband dies, leaving an adequate number of children, their mother should remain in her position and bring them up; but if it is judged that she is too young to live unmarried without injuring her health, her relatives should report the facts to the women in charge of marriages and do whatever seems advisable to both sides; and if there have been no children born as yet, they should bear that in mind too. (The minimum acceptable number of children is to be fixed by law as one of each sex.)

Whenever there is no dispute about the parentage of a child, but a ruling is required as to which parent it should follow, the offspring of intercourse between a slave woman and a slave or a free man or a freedman should become the absolute property of the woman's owner; if a free woman has intercourse with a slave, the issue should belong to his master. If a free man has a child by his own slave woman, or a free woman by her own slave, and the facts are crystal clear, the female officials are to send the free woman's child along with its father to another country, and the Guardians of the Laws must similarly send away the free man's child with its mother.

No god or any man with his wits about him will ever advise anyone to neglect his parents. On the contrary, we should be quick to appreciate how very relevant the following preface on the subject of worshipping gods will be to the respect or disrespect in which we hold our father and mother.

Time-honored cult observances all over the world fall into two categories. Man exalts some of the gods because he can see them with his own eyes, others he represents, by setting up statues of them, and believes that his worship of these inanimate 'gods' ensures him the abundant gratitude and benevolence of their real and living counterparts. This means that no one who has living in his house his father or mother, or their mothers and fathers, treasures old and frail, must ever forget that so long as he possesses such a 'shrine' at his hearth and looks after it properly, no other objects of worship will ever do him as much good.

Clinias:: What do you mean by 'properly'?

Athenian Stranger:: I'll tell you. After all, my friends, such themes are worth a hearing.

Clinias:: Tell us, then.

Athenian Stranger:: Our version of the story of Oedipus is that when he was insulted by his sons he called down a curse on them—and you know how people have never stopped relating how the gods heard and answered his prayer. And Amyntor fell into a rage with his son Phoenix and cursed him; Theseus did the same to Hippolytus, and there are thousands of similar cases, which all go to show that the gods take the parents' side against the children: no man, you'll find, can curse anyone as effectively as a parent can curse his child; and that's absolutely right. So if it is true that the gods listen to the prayers of fathers or mothers who have been wantonly insulted by their children, isn't it reasonable to suppose that when by contrast the respect we show our parents delights them so much that they pray hard to heaven for a blessing on their children, the gods will be just as ready to listen as before, and grant us it? If not, they' be conferring blessings unjustly—which we maintain is a peculiarly inappropriate thing for a god to do.

Clinias:: Very much so.

Athenian Stranger:: So as we said just now, we must reckon that the most precious object of worship a man can have is his father or grandfather, weak with age, or his mother in a similar condition, because when he honors and respects them God is delighted—if he weren’t, he wouldn’t listen to their prayers. These ‘living shrines’, in the shape of our forefathers, affect us far more wonderfully than lifeless ones, because when we look after them they invariably join their prayers to ours, whereas if we insult them, they oppose us. As ordinary statues do neither of these things, a man who treats his father and grandfather and so on as they deserve will have objects of worship that are much more effective than any others in winning him the favor of heaven.

Clinias:: Excellently put.

Athenian Stranger:: Anyone with his wits about him holds the prayers of his parents in fear and respect, knowing that the cases in which such prayers have been brought to pass have been many and frequent. This being the way of things, a good man will regard his elderly forebears as a veritable god-send, right up till they breathe their last; and when they pass on, they will be sorely missed by the next generation, and be a terror to the wicked. Let everyone be convinced by this argument and do their parents all the honor enjoined by law.

But if even so a man gets the reputation of being deaf to such prefaces, then the right law to pass to deal with him will run as follows.

If anyone in this state of ours looks after his parents less diligently than he should and fails to carry out their wishes in all respects with more indulgence than he shows to those of his sons and descendants in general, and indeed to his own desires too, the neglected parent must report the fact, either in person or by messenger, to the three most senior Guardians of the Laws and three of the women in charge of marriages. These officials must take the matter in hand, and provided the offender is still a young man under the age of thirty, chastise him with a whipping and imprisonment. (In the case of a woman, the same chastisement may be inflicted until she is forty.) Older persons, if they persist in neglecting (and perhaps actually ill-treating) their parents, should be summoned before a court consisting of the most elderly citizens of the state.

If a man is found guilty, the court is to assess what penalty or fine is to be exacted, and absolutely no fine or penalty that a man can pay must be excluded from consideration.

If ill-treatment prevents a parent from complaining, any free man who discovers the situation should alert the authorities.

If he does not, he must be regarded as a scoundrel and be liable to a suit for damage at the hands of anyone who wishes.

If the informant is a slave, he should be given his freedom; if he belongs to the criminal or his victim, he must be released by the authorities; and if he belongs to some other citizen, the public treasury is to see that the owner is reimbursed. Official action must be taken to stop anyone injuring him in revenge for giving information.

We have already dealt with fatal injuries inflicted by the use of drugs, but we have not yet discussed any of the less harmful cases of voluntary and premeditated injury, inflicted by giving food or drink or by applying ointments. Full treatment of the question is hindered by the fact that so far as human beings are concerned, poisoning is of two kinds. First there is the sort we have just explicitly mentioned: the injury a body suffers from some physical substance by natural processes. The other kind is a matter of spells and charms and ‘enchantments’: not only are the victims persuaded that they are being seriously injured by people with magic influence, but even the perpetrators themselves are convinced that it really is in their power to inflict injury by these methods. It is not easy to know the truth about these and similar practices, and even if one were to find out, it would be difficult to convince others; and it is just not worth the effort to try to persuade people whose heads are full of mutual suspicion, that even if they do sometimes catch sight of a molded waxen figure in a doorway or at a junction of three roads or on their parents' grave, they should ignore it every time, because they cannot be sure these things work. All this means that our law about drugs must be a double law, reflecting the two methods by which poisoning may be attempted. But first, by entreaty, exhortation and advice, we'll explain that no such thing should ever be attempted, that one should not alarm and terrify the common man, like an impressionable child, and that legislators and judges should not be put to the necessity of curing men of such fears. We shall point out for a start that unless the person who tries to use poison happens to be a diviner or soothsayer, he acts in ignorance of how his spells will turn out, and unless he happens to be an expert in medicine, he acts in ignorance of the effect he will have on the body. So the wording of our law about the use of poisons should be as follows:

If a doctor poisons a man without doing either him or any member of his household fatal injury, or injures his cattle or bees (fatally or otherwise), and is found guilty on a charge of poisoning, he must be punished by death.

If the culprit is a layman, the court is to decide the proper penalty or fine to be inflicted in his case.

If a diviner or soothsayer is deemed to be in effect injuring someone, by spells or incantations or charms or any other poison of that kind whatever, he must die.

If someone with no knowledge of divination is found guilty of this kind of poisoning, the same procedure is to be followed as with the other laymen [.(b)]— that is, the court is to decide what it thinks is the appropriate penalty or fine for him to pay.

When one man harms another by theft or violence and the damage is extensive, the indemnity he pays to the injured party should be large, but smaller if the damage is comparatively trivial. The cardinal rule should be that in every case the sum is to vary in proportion to the damage done, so that the loss is made good. And each offender is to pay an additional penalty appropriate to his crime, to encourage him to reform. Thus if a man has been led to do wrong by the folly of someone else, being over-persuaded because of his youth or some similar reason, his penalty should tend to be light; but it is to be heavier when his offense is due to his own folly and inability to control his feelings of pleasure and pain—as when he has fallen victim to cowardice and fear, or some deep-rooted jealousy or lust or fury. This additional penalty is to be inflicted not because of the crime (what’s done can’t be undone), but for the sake of the future: we hope that the offender himself and those that observe his punishment will either be brought to loathe injustice unreservedly or at any rate recover appreciably from this disastrous disease. All these reasons and considerations make it necessary for the law to aim, like a good archer, at a penalty that will both reflect the magnitude of the crime and fully indemnify the victim. The judge has the same aim, and when he is faced by his legal duty of assessing what penalty or fine the defendant must pay, he must follow closely in the legislator’s footsteps; and the latter must turn himself into a sort of artist and sketch some specimen measures consistent with his written prescriptions. That, Clinias and Megillus, is the job to which we must now devote our best efforts; we have to describe what type of penalty is called for in all categories of theft and violence—granted, of course, that the gods and children of gods are prepared to see us legislate in this field.

Lunatics must not be allowed to appear in public; their relations must keep them in custody in private houses by whatever means they can improvise.

If they fail to do so, they must pay a fine: one hundred drachmas for a member of the highest property-class (whether it is a slave or a free man that he fails to keep an eye on), eighty for a member of the second class, sixty for the third, and forty for the lowest.

There are several kinds of madness, brought on by several causes. The cases we have just mentioned are the result of illness, but there are some people with an unfortunate natural irritability, made worse by poor discipline, who in any trivial quarrel will shout their heads off in mutual abuse. Such a thing is highly improper in a well-run state. So this single law should apply to all cases of defamation: no one is to defame anybody. If you are having an argument you should listen to your opponent's case, and put your own to him and the audience, without making any defamatory remarks at all. When men take to damning and cursing each other and to calling one another rude names in the shrill tones of women, these mere words, empty though they are, soon lead to real hatreds and quarrels of the most serious kind. In gratifying his ugly emotion, anger, and in thus disgracefully stoking the fires of his fury, the speaker drives back into primitive savagery a side of his character that was once civilized by education, and such a splenetic life makes him no better than a wild beast; bitter indeed, he finds, are the pleasures of anger. Besides, on such occasions all men are usually quick to resort to ridicule of their opponents, and no one who has indulged that habit has ever acquired the slightest sense of responsibility or remained faithful to many of his principles. That is why no one must ever breathe a word of ridicule in a temple or at a public sacrifice or at the games or in the marketplace or in court or in any public gathering, and the relevant official must always punish such offenses.

If he fails to do so, he must be disqualified from competing for awards of merit, as being a man who disregards the laws and fails to perform the duties imposed upon him by the legislator.

If in other localities someone fails to refrain from abusive language, whether he resorts to it first or by way of reply, the passer-by, provided he is older than the offender, should lend his support to the law and eject by force this fellow who has shown such indulgence to anger, that bad companion.

If the passer-by fails to do so, he must be liable to the appointed penalty.

The view we are putting forward now is that when a man is embroiled in a slanging-match he is incapable of carrying on the dispute without trying to make funny remarks, and when such conduct is motivated by anger we censure it. Well then, what does this imply? That we are prepared to tolerate a comedian’s eagerness to raise a laugh against people, provided that when he sets about ridiculing our citizens in his comedies, he is not inspired by anger? Or shall we divide comedy into two kinds, according to whether it is good-natured or not? Then we could allow the playful comedian to joke about something, without anger, but forbid, as we’ve indicated, anyone whatever to do so if he is in deadly earnest and shows animosity. We must certainly insist on this stipulation about anger; but we still have to lay down by law who ought to receive permission for ridicule and who not. No composer of comedies, or of songs or iambic verse, must ever be allowed to ridicule either by description or by impersonation any citizen whatever, with or without rancor. Anyone who disobeys this rule must be ejected from the country that same day by the presidents of the games.

If the latter fail to take this action, they must be fined three hundred drachmas, to be dedicated to the god in whose honor the festival is being held.

Those who have earlier been licensed to compose verse against each other should be allowed to poke fun at people, not in savage earnest, but in a playful spirit and without rancor. The distinction between the two kinds must be left to the minister with overall responsibility for the education of the young; an author may put before the public anything the minister approves of, but if it is censored, the author must not perform it to anyone personally nor be found to have trained someone else to do so, whether a free man or a slave.

If he does, he must get the reputation of being a scoundrel and an enemy of the laws.

It is not the starving tout court or the similarly afflicted who deserve sympathy, but the man who in spite of his moderation or some other virtue or progress towards it, nevertheless experiences some misfortune. That being so, it will be a matter for surprise if a virtuous person, whether slave or free, even if the state and society he lives in is run with only average skill, is ever so grossly neglected as to be reduced to abject poverty.

So the legislator will be quite safe if he lays down a law running more or less like this. No one is to go begging in the state. Anyone who attempts to do so, and scrounges a living by never-ending importunities, must be expelled from the market by the Market-Wardens, from the city by the City-Wardens, and from the surrounding country conducted by the Country-Wardens across the border, so that the land may rid itself completely of such a creature.

If a slave man or woman damages any piece of someone else's property, then provided the person who suffers the loss was not himself partly to blame because of inexperience or careless conduct, the slave's owner must either make good the damage in full, or hand over the actual offender. But if the owner counter-claims that the prosecution has been brought as a result of the injured person and the culprit putting their heads together to rob him of his slave, he must sue the allegedly injured party on a charge of collusion. If he wins the day, he is to receive twice the value of the slave as assessed by the court.

If he loses, he must both make good the damage and hand over the slave.

If a beast of burden or a horse or dog or some other animal damages a piece of a neighbor's property, its owner is to pay for the damage on the same basis.

If anyone deliberately refuses to appear as a witness, the person who needs his evidence must serve a summons on him; and on being duly summoned the man is to present himself at the trial. If he knows something and is prepared to testify, he should give evidence accordingly; if he claims he knows nothing, he must swear an oath to three gods, Zeus, Apollo and Themis, to the effect that quite definitely he has no information, and thus be dismissed from the proceedings. If a man is summoned to give evidence and fails to answer the summons, he must be liable by law to a suit for damage. No juryman is to vote in a trial in which he has been put up as a witness and given evidence. A free woman is to be allowed to be a witness and to speak in support of a litigant, provided she is over forty years of age, and to bring prosecutions, provided she has no husband; but if she has a husband living, she must be limited to acting as a witness. Slaves (male and female), and children, should be allowed to support a case by giving evidence, but only in a trial for murder and provided a credit-worthy surety is put up to guarantee their appearance at the trial if their evidence is objected to as false. If either disputant claims someone has borne false witness, he should enter an objection to all or part of the testimony before a verdict in the case is decided on. The objections, under the seal of both parties, should be placed in official custody and produced at the trial for perjury. If anyone is convicted twice on this charge, he may not be compelled under any law to bear witness again; if he is convicted a third time, he must never be allowed to be a witness in the future; and if he does have the face to give testimony on a further occasion after a third conviction, anyone who wishes should report him to the authorities, who should haul him before a court.

If he is found guilty, he must be punished by death.

When a court decides to throw out evidence on the ground that the winning side has triumphed because certain witnesses have perjured themselves, and more than half the evidence is condemned, the suit lost on the strength of it should come up for retrial, and after due inquiry a ruling should be given that the false evidence was, or was not, the decisive influence on the verdict; and this ruling, whichever way it goes, will automatically settle the original action.

Although human life is graced by many fine institutions, most of them have their own evil genius, so to speak, which pollutes and corrupts them. Take justice, for instance, which has civilized so much of our behavior: how could it fail to be a blessing to human society? And granted justice is a blessing, can advocacy fail to be a blessing too? But valuable though they are, both these institutions have a bad name. There is a certain kind of immoral practice, grandly masquerading as a 'skill', which proceeds on the assumption that a technique exists—itself, in fact—of conducting one's own suits and pleading those of others, which can win the day regardless of the rights and wrongs of the individual case; and that this skill itself and the speeches composed with its help are available free—free, that is, to anyone offering a consideration in return. Now it is absolutely vital that this skill—if it really is a skill, and not just a knack born of casual trial and error—should not be allowed to grow up in our state if we can prevent it. The lawgiver will have nothing to say to those who obey his command that one should either listen to justice and not contradict her, or leave for some other country; but if anyone disobeys him, the law shall pronounce as follows: if anyone seems to be trying to misrepresent to the judges where the course of justice lies, and to enter one plea after another in support of either his own or someone else's case, when equity would call a halt, then anyone who wishes should indict him on a charge of perverse pleading or criminal advocacy. He should be tried in the court of select judges and if he is found guilty the court should decide whether it thinks his motive is avarice or pugnacity.

If the court believes his motive is pugnacity, it must determine how long he must refrain from prosecuting anyone or helping someone else to do so.

If the motive appears to be avarice, a foreigner must leave the country and never return, on pain of death; a citizen must die, for letting a love of money become the obsession of his life.

If a man is convicted twice of committing such an offense through pugnacity, he must die.

**Book 12.**

Athenian Stranger:: If a man passes himself off as an ambassador or herald of the state and enters into unauthorized negotiations with a foreign power, or, when actually sent on such a mission, delivers a message other than the one with which he was sent—or contrariwise if he is shown to have misreported, in his capacity as an ambassador or herald, the communications which enemy or friendly states have given him, he must be open to prosecution for violating the law by impiety against the pronouncements and instructions of Hermes and Zeus.

If he is convicted, the penalty or fine he must pay will have to be assessed.

Theft of property is uncivilized, and robbery with violence an act of brazen insolence. The sons of Zeus take no pleasure in fraud and force, and none of them has ever committed either of these crimes. So no one who commits such an offense should be seduced into believing the lies of poets or other story-tellers: the thief or thug mustn't think There's no shame in this—after all, the gods do it themselves.' That is neither plausible nor true, and no one who breaks the law by such an act can possibly be a god or child of gods. The lawgiver is in a much better position to understand these things than all the poets in the world. Anyone who is convinced by this doctrine of ours is a happy man, and long may he so continue; but anyone who refuses to listen should have some such law as this to contend with: all theft of public property, great or small, should attract the same punishment. The greed of the pilferer is just as great as any other thief's—it's only his efficiency that's inferior; whereas anyone who makes off with some valuable object he did not deposit indulges his criminal tendencies to the full. In the eyes of the law, the one deserves a lighter penalty than the other not because of the amount of the theft, but because he is probably curable while the other is not. Thus if anyone successfully prosecutes in court a foreigner or slave on a charge of theft of some piece of public property, a decision must be reached as to the fine or penalty he should pay in view of the fact that he can probably be cured.

If a citizen, in spite of the education he will have enjoyed, is convicted of plundering or attacking his fatherland, whether he is caught in the act or not, he must be punished by death, as being virtually beyond cure.

Military service is a subject on which we need to give a great deal of advice and have a large number of regulations. The vital point is that no one, man or woman, must ever be left without someone in charge of him; nobody must get into the habit of acting alone and independently, either in sham fighting or the real thing, and in peace and war alike we must give our constant attention and obedience to our leader, submitting to his guidance even in tiny details. When the order is given we should stand, march, exercise, wash, feed, stay awake at night on duty as guards or messengers, and even in the midst of dangers not pursue the enemy or yield without a sign from our commander. In short, we must condition ourselves to an instinctive rejection of the very notion of doing anything without our companions; we must live a life in which we never do anything, if possible, except by combined and united action as members of a group. No better or more powerful or efficient weapon exists for ensuring safety and final victory in war, and never will. This is what we must practice in peacetime, right from childhood—the exercise of authority over others and submission to them in turn. Freedom from control must be uncompromisingly eliminated from the life of all men, and of all the animals under their domination.

In particular, all choruses should be calculated to encourage prowess in the field, and for the same reason people must learn to put a brave and cheerful face on it when they have to put up with poor food and drink, extreme cold and heat, and rough bedding. Most important, they must not ruin the natural powers of head and feet by wrapping them round with artificial protection, so discouraging the spontaneous growth of the cap and shoes that nature provides. When these two extremities are in sound condition they help to keep the whole body at the peak of efficiency, whereas their ruin is its ruin too. The feet are the most willing servants the body has, and the head is the organ of supreme control, the natural seat of all the principal senses of the body.

That's the praise of military life that ought, in my view, to ring in a young man's ears. Here are the regulations. When a man is called up, or detailed for some special duty, he is obliged to perform his military service. If he is a coward and fails to present himself, without the permission of his commanders, a prosecution for failure to serve should be brought before the military authorities after return from the field. Such cases must be judged by the soldiers who have fought in the campaign; the various categories (infantry, cavalry and the other branches of the armed forces) should meet separately, infantrymen being brought before infantrymen, cavalrymen before cavalrymen, and the others before their own comrades similarly.

If a defendant is found guilty, he must in future be debarred from competing for any kind of military distinction, bringing a charge against anyone else for refusing to perform military service, and the court must assess the additional penalty or fine he is to pay.

Afterwards, when the charges of refusal to serve have been decided, the commanders must reconvene each arm of the forces and in the presence of the candidates' fellow soldiers seek decisions on those applying for awards of distinction. Supporting statements by eye-witnesses and other evidence adduced by the candidates must not relate to any previous campaign, but only to the one they have just fought. The prize in each case is to be a wreath of olive, which the winner should take to the temple of whichever god of war he pleases and dedicate it, suitably inscribed, as life-long evidence that the first, second or third prize was awarded to him.

If a man does go on active service, but returns home before the commanders withdraw the troops, he should be prosecuted on a charge of desertion before the same court as is concerned with refusal of service.

If he is found guilty, the same penalties should apply as before.

Naturally, everyone who brings a prosecution ought to be very wary of inflicting an unjustified punishment, whether in cold blood or by accident. Justice is said—and well said—to be the daughter of Respect, and both are the natural scourges of falsehood. So in general we must be careful not to offend against justice, and particularly as regards the abandonment of weapons in the field: we mustn't reproach an enforced abandonment in mistake for an ignominious one, and so inflict penalties as undeserved as the victims are undeserving of them. Although it is by no means easy to tell the two cases apart, a rough and ready distinction must be attempted in the legal code. We can explain the point with the help of a story. If Patroclus had pulled round after being carried to his tent without his weapons (as has happened in thousands of other cases)—the weapons which the poet tells us were presented to Peleus by the gods as a dowry when he married Thetis, and which had been taken by Hector—then it would have been open to all the scoundrels of the time to reproach the son of Menoetius for abandoning his arms. Again, sometimes men have lost their weapons because of being thrown down from a height, or when at sea, or when suddenly caught up by a tremendous onrush of water during their struggles in a storm. There are countless similar circumstances one could plausibly adduce to excuse and palliate a disaster that positively invites denigration. So we must do our best to distinguish the more serious and reprehensible disasters from the other kind, and in a rough and ready way the distinction can be expressed by varying our expressions of rebuke. Thus 'he abandoned his shield' can sometimes be properly replaced by 'he lost his weapons'. When you are robbed of your shield with some force, you have not 'abandoned' it in the same way as if you had thrown it away deliberately: the two cases are fundamentally different. The distinction should be written into the legal code in the following terms:

If a man finds the enemy at his heels and instead of turning round and defending himself with the weapons he has, deliberately lets them drop or throws them away, preferring a coward's life of shame to the glorious and blessed death of a hero, then there should certainly be a penalty for losing his weapons by abandonment. But when he has lost his weapons in the other way we've described the judge must not fail to take the fact into account. It is the criminal you need to punish, to reform him, not someone who's simply been unlucky—that's useless. So what will be the right penalty when someone has made good his escape by throwing away the weapons that could have protected him? Unfortunately, it's beyond the power of man to do the opposite of what people say some god did to Caeneus of Thessaly—that is, change him from a woman into a man. If only we could inflict the reverse transformation, from man to woman, that would be, in a sense, the most appropriate punishment for a man who has thrown away his shield. But what we can do is to reward him for saving his skin by giving him the closest possible approximation to such a penalty: we can make him spend the rest of his days in utter safety, so that he lives with his ghastly disgrace for as long as possible. Here's the law that will deal with such people:

If a man is convicted on a charge of shamefully dropping his weapons of war; no general or any other army officer must employ him as a soldier again, or appoint him to any position whatever; and in addition to being thus permitted, like the natural coward he is, to avoid the risks that only real men can run, the guilty man must also pay a sum of money: one thousand drachmas if he belongs to the highest property-class, five hundred if to the second, three hundred if to the third, and one hundred if to the lowest.

If an officer disobeys and posts the coward again, the officers Scrutineer is to condemn him to pay the same fine: one thousand drachmas if he belongs to the highest property-class, five hundred if to the second, three hundred if to the third, and one hundred if to the fourth.

Well then, what will be the proper policy for us to adopt on the subject of Scrutineers? So far, we simply have a corps of officials, some appointed for a single year by the luck of the draw, others chosen from a preliminary slate of selected candidates to serve for several years. What if one of them proves so inadequate to the dignity and weight of his office that he gets 'out of true' and does something crooked? Who will be capable of making a man like that go straight again? It is desperately difficult to find someone of high moral standards to exercise authority over the authorities, so to speak, but try we must. So where are our god-like ‘straighteners’ to be found? The point is this: a state has many crucial parts that prevent it from disintegrating, just as a ship has its stays and bracing ropes and a body its tendons and associated sinews. (Features of this kind are a very widespread phenomenon, and in spite of the many different names we give them in different contexts, they are basically the same sort of thing.) Now the office of Scrutineer is the single most crucial factor determining whether a state survives or disintegrates. If the Scrutineers are better men than the officials they scrutinize, and display irreproachable impartiality and integrity, the entire state and country flourishes and prospers. But if their investigation of the officials is conducted badly, then the sense of justice that unites all the interests in the state is destroyed, with the result that all the officials go their different ways and refuse to pull together any longer; they fragment the state into lots of smaller states by filling it with the party-strife that so speedily wrecks it. That is why it is absolutely vital that the moral standards of the Scrutineers should be exemplary. So let’s try to produce these officials by some such procedure as this:

Every year after the summer solstice the entire state should congregate in a precinct dedicated jointly to Apollo and the Sun, in order to present to the god three out of their number. Each citizen is to propose that person, apart from himself, whom he believes to be perfect in every way; the candidate is to be at least fifty years of age. This preliminary list should be divided into two halves (on the assumption that the total is an even number; if not, the person with the fewest votes should be excluded before the division is made), and the half consisting of those with the most votes should be selected to proceed to the next stage after the other half with fewer votes have been eliminated. If some names receive the same number of votes, so that the selected candidates are too numerous, the excess should be removed by eliminating the youngest candidates. The selected candidates that remain should be voted for again until only three are left, each with a different number of votes. If two of them, or all three, attract equal support, then the decision should be left to chance and the gods of good luck: the first, second and third choices must be determined by lot, crowned with olive and given the rewards of their success. Next, a public proclamation must be made to the effect that the state of the Magnesians, now by the grace of God securely re-established, presents to the Sun-god her three best men; and these, her choicest fruits, in accordance with the law of old, she consecrates for the term of their judicial office as a joint gift to Apollo and the Sun. In the first year twelve such Scrutineers are to be appointed, each to retain office till the age of seventy-five; thereafter three more are to be added every year.

The Scrutineers are to divide all the officials into twelve groups and look into their conduct by making all such inquiries as are consistent with the dignity of a gentleman. During their period of office as Scrutineers they are to live in the precinct of Apollo and the Sun where they were elected. When they have sat in judgment, either privately and individually, or in association with colleagues, on those at the end of their term of office in the service of the state, they must make known, by posting written notice in the market-place, what penalty or fine in their opinion each official ought to pay. Any official who refuses to admit that he has been judged impartially should haul the Scrutineers before the Select Judges, and if he is deemed innocent of the accusations he should accuse the Scrutineers themselves, if he so wishes. But, if he is convicted, and the Scrutineers had decided on death as his penalty, he must die (a penalty which in the nature of the case cannot be increased); but if his penalty is one that it is possible to double, then double he must pay.

Now we ought to hear about the scrutiny of the Scrutineers themselves. What will it be, and how will it be organized?

During their lifetime these men, whom the whole state has thought fit to dignify with the highest honors, should sit in the front seat at all the festivals; moreover, when the Greeks assemble to perform sacrifices or see spectacles together, or congregate for other sacred purposes, the leaders of the delegations sent by the state should be chosen from the Scrutineers; and the Scrutineers are to be the only citizens whose heads may be graced by a crown of laurel. They should all be priests of Apollo and the Sun; the chief priesthood should be an annual office, held by the Scrutineer who has come top of the list of those appointed that year—which must be recorded under his name, so as to provide a framework for the calendar for as long as the state endures.

After the death of a Scrutineer, his laying-out, his last journey and his tomb must be on a grander scale than for ordinary citizens. All cloth used must be white, dirges and laments must be banned, and a chorus of fifteen girls and another of fifteen youths must stand one on each side of the bier and sing alternately a kind of hymn of praise to the dead priest, celebrating his glory in song throughout the day. As dawn comes up the following day the bier shall be taken to the tomb escorted by a hundred of the youths who attend the gymnasia, chosen by the relatives of the dead man. In front must go the young men who are as yet unmarried, each rigged out in his own military equipment; the cavalry should bring their horses, the infantry their weapons, and so on. Around the bier itself, towards the front, will be boys chanting the traditional strains, followed by girls, and women who have finished bearing children. The Priests and Priestesses will bring up the rear; they are of course banned from other funerals, but provided the oracle at Delphi also approves, they shall attend this one, as it will not defile them. The Scrutineer's tomb shall be an oblong crypt built of choice stone of the most indestructible kind obtainable; in this, on benches of stone set side by side, they will lay him who has gone to his reward. On top of the tomb they will pile a circular mound, and plant a sacred grove of trees around it— except on one side, to allow for the indefinite extension of the tomb, where more earth will have to be piled up to cover subsequent burials. Every year the citizens will hold competitions in the Scrutineers' honor, one athletic, one equestrian, and one of the arts. All these honors will be bestowed on Scrutineers whose conduct has borne scrutiny.

If a Scrutineer relies on his election to protect him and goes to the bad, thus showing he's only too human after all, the law will order a charge to be brought against him by anyone who feels inclined to prosecute. The trial should be held in court according to the following procedure. Guardians of the Laws, and all the Scrutineers, active or retired, must sit in conjunction with the court of the Select Judges, and the charge brought by the prosecutor against the defendant must be to the effect that 'so-and-so is a disgrace to his distinctions and his office.'

If the defendant is convicted, he must be ejected from his office, denied the special tomb, and stripped of the honors he has already received.

If the prosecutor fails to win one fifth of the votes, he must pay a fine of twelve hundred drachmas if he belongs to the highest property-class, eight hundred if to the second, six hundred if to the third, and two hundred if to the lowest.

Rhadamanthus should be admired for the way in which, according to report, he decided the suits that came before him. He realized that his contemporaries were absolutely convinced of the existence of gods—and not surprisingly, as most people alive then were actually descended from them, and this is traditionally true of Rhadamanthus himself. I suppose it was because he thought that no mere man should be given the task of judging, but only gods, that he managed to make his judgments so swift and straightforward. Whatever the subject of dispute, he made the litigants take an oath, a device which enabled him to get through his list of cases rapidly and without making mistakes. Nowadays, however, some people (as we remarked) don’t believe in gods at all, while others believe they are not concerned about mankind; and there are others—the worst and most numerous category—who hold that in return for a miserable sacrifice here and a little flattery there, the gods will help them to steal enormous sums of money and rescue them from all sorts of heavy penalties. So in the modern world the legal procedure used by Rhadamanthus will hardly do. The climate of opinion about the gods has changed, so the law must change too, and a legislator who knows his business ought to abolish the oaths sworn by each side in a lawsuit. When a man brings a charge against someone, he should put his accusations in writing without taking an oath; the defendant should similarly write out his denial and hand it to the officials unsworn. It would be dreadful, you see, to know quite well, in view of the frequent lawsuits that occur in the state, that although pretty nearly half our citizens have perjured themselves, they go on mixing with each other at common meals and other public and private gatherings without the slightest qualms.

There should therefore be a law requiring a juryman to take an oath before setting about his job. The law should also apply to anyone who votes in the election of officials to public positions: he must do so either under oath or with a ballot-pebble he has obtained from a temple; so too should the judge of a chorus or any other artistic performance, and also the supervisor or umpire of any athletic or equestrian competition—and indeed the judge in any matter where there is nothing to 'gain' (as it seems to human eyes) from perjury. But whenever there is clearly much to be 'gained' from denials and oaths to back them up, then the question at issue between the disputants must be judged at a trial in which oaths are not taken.

And more generally, the presiding officials at a trial are not to give a man a hearing if he tries to win belief by swearing oaths, or imprecating himself or his family, or by grovelling appeals for clemency, or effeminate wailing, but only if he states his lawful claims, and listens to those of the other side, with decency and decorum. Otherwise, the officials will ignore his remarks as irrelevant and instruct him to return to the issue before the court.

However, aliens should be entitled, as at present, to offer and accept binding oaths from each other, if they so wish—after all, they're not going to grow old in the state, nor, as a rule, build a nest in it to produce others entitled to live in the country and behave in the same way as themselves. And whenever an alien prosecutes an alien, the trial should be held under the same rules.

Sometimes a free man may defy the state in something not serious enough to deserve a whipping or imprisonment or death—by refusing to take part in a chorus or procession, for instance, or some public ceremony, or to pay some contribution for such communal purposes as a sacrifice in time of peace, or a special levy in war. The first thing to be done in all these cases is to assess the damages; then the culprit is to give a pledge to those officials who have the duty of exacting it under the law of the land. If he still refuses to obey even after the seizure of the pledge, it should be sold and the proceeds confiscated by the state. If a more severe punishment is called for, the official concerned shall impose the appropriate fine on this stubborn fellow and haul him through the courts until he's prepared to do as he's told.

A state which does not go in for trading and whose only source of wealth is the soil is obliged to have some settled policy regarding the foreign travel of its own citizens and the admission of aliens from abroad. The legislator, who has to give advice on these problems, must start by being as persuasive as he can.

In the nature of the case, contact between state and state produces a medley of all sorts of characters, because the unfamiliar customs of the visitors rub off on to their hosts—and this, in a healthy society living under sound laws, is an absolute disaster. Most states, however, are not well run at all, so it makes no difference to them if their citizens fraternize with foreigners by welcoming them into the state and by going for trips abroad themselves whenever they feel like it and wherever their wanderlust takes them, whatever their age. On the other hand a policy of complete exclusion and complete refusal to go abroad is just not feasible, and in any case the rest of the world would think us churlish and uncivilized: we'd get the reputation of being a truculent and surly people who have 'Deportations of Aliens', as the term is—and a brutal one it is, too. Whether the figure you cut in the eyes of others is good or bad, you should never underestimate its importance. You see, people in general don't fall so far short of real goodness that they can't recognize virtue and vice when they see it in others; even wicked people have an uncanny instinct that usually enables even an absolute villain to understand and describe accurately enough what distinguishes a good man from a bad. That is why most states find it an excellent precept to value their good standing with the rest of the world. But the soundest and most important rule is this: if you mean to be perfect, you should seek to live in good repute only if you are really good in the first place, but not otherwise. And so it will be entirely right and proper if the state we are now founding in Crete wins among men a brilliant and glorious reputation for virtue, and if things go according to plan there is every reason to expect that, out of all the states and countries which look upon the Sun and the other gods, Magnesia will be one of the few that are well administered.

So what should we do about the admission of aliens and our own journeys to places in foreign countries? First of all, no young person under forty is ever to be allowed to travel abroad under any circumstances; nor is anyone to be allowed to go for private reasons, but only on some public business, as a herald or ambassador or as an observer of one sort or another. (Of course, absence abroad on miliary service in wartime doesn't deserve to be mentioned in the same breath: it's not one of those journeys which are 'for diplomatic reasons'!) We must send representatives to take part in the sacrifices and games held at Delphi in honor of Apollo and at Olympia in honor of Zeus, and to Nemea and the Isthmus; and we must send as many representatives as we can, the finest and noblest of our citizens, who will do credit to our state in these sacred gatherings of peace, and win it renown to match that of her armies on the field of battle. And when they return, they will tell the younger generation that the social and political customs of the rest of the world don’t measure up to their own.

But there are other kinds of observers who should be dispatched, provided the Guardians of the Laws give permission. If any citizen would like to spend rather longer surveying at his leisure the life lived by foreigners, no law should prevent him, because no state will ever be able to live at a properly advanced level of civilization if it keeps itself to itself and never comes into contact with all the vices and virtues of mankind; nor will it be able to preserve its laws intact if it just gets used to them without grasping their raison ‘etre. In the mass of mankind you’ll invariably find a number—though only a small number—of geniuses with whom it is worth anything to associate, and they crop up just as often in badly-ruled states as in the well-ruled. So the citizen of a well-run state, provided he’s incorruptible, should go out and range over land and sea to track them down, so that he can see to the strengthening of the customs of his country that are soundly based, and the refurbishing of any that are defective. Without this observation and research a state will never stay at the peak of perfection; nor will it if the observers are incompetent.

Clinias:: So how can we ensure that both these requirements are met?

Athenian Stranger:: Like this. In the first place, anyone who goes observing for us in this fashion must be over fifty; and since the Guardians of the Laws are going to send him abroad as a specimen Magnesian, he must be one of those citizens who have gained a good reputation generally, and particularly in war; and on passing sixty he must go off observing no longer. When he has spent as many of his ten years as he pleases making his observations, he should come home and present himself before the council which muses on legislation. (This council, which should consist partly of young men and partly of old, must have a strict rule to meet daily from dawn until the sun is well up in the sky. Its membership is to be: those Priests who have won high distinction, the ten Guardians of the Laws who are currently the most senior, the Minister of Education for the time being, together with his predecessors in office. No member should attend alone: each is to bring a young man of his own choice, aged between thirty and forty. The discussion at their meetings must always center round their own state, the problems of legislation, and any other important point relevant to such topics that they may discover from external sources. They must be particularly concerned with those studies which promise, if pursued, to further their researches by throwing light on legislative problems that would otherwise remain difficult and obscure. Whichever of these studies are sanctioned by the older members should be pursued with all diligence by the younger. If one of the proteges invited to attend is judged to be inadequate, the whole council is to censure the man who invited him; but any that get a good name should be fostered and watched with particular care by the state at large, and if they do what's wanted of them, they are to be specially honored, but if they turn out worse than most other young men they should suffer correspondingly worse disgrace.) To this council, then, the observer of foreign customs must proceed as soon as he gets back. If he has come across people who were able to give him some information about any problems of legislation or teaching or education, or if he actually comes back with some discoveries of his own, he should make his report to a full meeting of the council. If he seems to be not a whit better or worse for his journey, he should be congratulated at any rate for his energy; if he is thought to have become appreciably better, even higher recognition should be given him during his lifetime, and after his death he must be paid appropriate honors by authority of the assembled council. But if it seems that he has returned corrupted, this self-styled 'expert' must talk to no one, young or old, and provided he obeys the authorities he may live as a private person; but if not, and he is convicted in court of meddling in some educational or legal question, he must die.

If none of the authorities takes him to court when that is what he deserves, it should count as a black mark against them when distinctions are awarded.

So much for the way foreign travel should be undertaken and the sort of persons who should venture on it. But what about our duty to welcome foreign visitors? There are four categories of them worth discussing. Those in the first turn up every year without fail, usually in summer, with the regularity of migrating birds. Most of them are on business trips in search of profit, and throughout the summer they 'wing' their way like so many birds across the sea to foreign parts. They must be received at trading posts and harbors and in public buildings outside but not far from the state by officials appointed for the purpose, who should take good care that none of this category of visitor introduces any novel custom, handle with proper impartiality the lawsuits that affect them, and keep intercourse with them down to the unavoidable minimum. The second type are 'observers' in the most basic sense: they come to see the sights, and to listen, too, at festivals of the arts. All such visitors should be received in hospitable lodgings near temples, by whose priests and custodians they are to be looked after and attended to. Then, when they have stayed for a reasonable length of time, and seen and heard what they came to see and hear, they should take their leave without having inflicted or suffered any harm. If anyone injures them, or they injure anyone else, the Priests are to act as judges, provided no more than fifty drachmas are involved. If the claim is for a greater sum, the trial must be held before the Market-Wardens.

The third type of visitor, who arrives from another country on some matter of state, should be received at public expense, and by no one except Generals, Cavalry-Commanders and Company-Commanders. Together with the executive for the time being, the official by whom he is put up and entertained should have the sole responsibility for him.

Sometimes, though rarely, a fourth kind of visitor arrives. If ever a counterpart to our own observers comes from a foreign country, we shall first of all require that he should be not less than fifty years old, and in addition he should profess to be coming to view something whose excellence surpasses that of anything in the rest of the world, or to report on some such feature to another state. Such a man may dispense with invitations, and present himself at the doors of the wise and rich, because that is the class of man he is himself. In the full confidence that he is the right sort of guest for such a distinguished host, he should go to the home of (say) the Minister of Education, or of someone who has won an award for virtue. He should spend his time in the company of one or other of these, and after an exchange of information take his leave, duly honored as a friend by friends with fitting presents and tokens of esteem.

These are the laws that should govern the reception of all our visitors from abroad, of either sex, and the dispatch of our own people to other countries. We must show respect for Zeus the God of Strangers, and not keep aliens at arm's length by uncongenial food and offensive sacrifices (like the sons of Old Father Nile do nowadays), or by uncivilized proclamations.

Anyone who stands surety should do so in precise terms, by specifying all the details of the agreement in a written contract, before not less than three witnesses if the sum involved is less than one thousand drachmas, and not less than five in the case of greater sums. (Also, a warrantor is surety for a vendor who is insolvent or cannot be sued, and is to have the same liability in law.)

When a man wants to search someone else's premises, he should do so clad in only his tunic, without a belt, and after swearing to the gods specified by law that he really does expect to find what he's looking for. The other party is to open up his home, including all its sealed and unsealed property, to be searched; if he refuses permission to search to anyone requesting it, the party thus hindered must go to law, giving his estimate of the value of the object he is looking for.

If the defendant is convicted, he must pay double the estimated value as damages.

If the owner of the house happens to be away, the residents must make unsealed property available for search; sealed property should be countersealed by the searcher, who should then post anyone he likes to guard it for a period of five days. If the householder stays away for longer than that, the other party should fetch the City-Wardens and make the search, opening up sealed property as well and sealing it up again afterwards in the same way in the presence of the household and the City-Wardens.

Now for cases when title is in dispute. After a certain period has elapsed, it must be no longer possible to challenge the rights of the person in possession. In Magnesia, of course, dispute about land or houses is out of the question. But as for other possessions, if a man has used something openly in town or market-place or temple, and no one has tried to recover it and claimed to have been looking for it all the time the other man has obviously made no attempt at concealment, then provided the ownership of the one party and the search of the other have continued for a year, after the expiry of that period no claim for recovery is to be permitted. If a man uses an object openly, not indeed in town or market-place, but in the countryside, and no one confronts him with a claim to it for five years, then on the expiry of that period no one is to be allowed to attempt repossession. If the article is used in a man's town house, the time limit is to be three years; if it is kept in a building in the country, ten years; and if it is used abroad, then there is to be no time limit for recovery at all, however long the claimant may take to find it.

Sometimes a man may forcibly prevent a litigant or witness from appearing at a trial. If he prevents a slave, his own or another's, the suit should be null and void.

If he prevents a free man, he must be imprisoned for a year and be liable to a suit for kidnapping at the hands of anyone who cares to prosecute, and the suit will be null in any case.

If a man forcibly prevents a rival competitor from participating in an athletic or cultural or any other contest, anyone who wishes should report the fact to the supervisors of the games, who should set the would-be contestant free to enter the competition. If they prove unable to do so, and the man responsible for the competitor's absence wins, the prize should be awarded to the person prevented from competing, and he should be recorded as the winner in any temple he pleases.

The person who has hindered him must not be allowed to make any dedication or record relating to that contest, and he must be liable to a prosecution for damages whether he wins or loses.

If a man receives stolen goods, knowing them to be stolen, he must suffer the same penalty as the thief.

The penalty for harboring an exile should be death.

Everyone is to have the same friends and enemies as the state.

If a man makes a private peace or wages private war with anyone without the backing of the state, he too must be punished by death.

If any sectional interest in the state makes peace or war with any parties on its own account, the Generals must haul those responsible for the affairs before a court.

If the defendants are convicted, death should be the penalty.

Members of the public service should perform their duties without taking bribes. Such a practice must never be extenuated by an approving reference to maxims like 'One good turn deserves another'. It is not easy for an official to reach his decisions impartially and stick to them, and the safest thing he can do is to listen to the law and obey its command to take no gifts for his services.

If a man disobeys and is convicted in court, the only penalty permitted is to be death.

Now to deal with payments to the public treasury. For a variety of reasons, an assessment must be made of each man's property, and the members of the tribes must make a written return of the year's produce to the Country-Wardens. The treasury will thus be able to use whichever of the two methods of exacting payment it finds convenient—that is, every year the authorities will decide to levy a proportion either of the sum total of the individual assessments or of the revenues accruing that particular year. (Payment for the common meals should be excluded from the calculations.)

The offerings a reasonable man makes to the gods should be on a correspondingly reasonable scale. As the earth and every household's hearth are already sacred to all the gods, no one should consecrate them a second time. The gold and silver that you find in temples and private houses in other states encourage jealousy; ivory, taken as it is from a lifeless body, is an unclean offering; and iron and bronze are instruments of war. A man may offer at the public temples any objects he likes made of wood or stone, provided that in either case it consists of no more than a single piece; if he offers woven material, it should not exceed what one woman can produce in a month. In general, and particularly in the case of woven material, white is the color appropriate to the gods; dyes must not be employed, except for military decorations. The gifts the gods find most acceptable are birds and pictures, provided they do not take a painter more than a single day to complete. All this should serve as a pattern for all our other offerings.

Now that we have described the nature and number of the parts into which the whole state is divided, and done what we can to frame laws for all the most important agreements men make, we're left with the question of legal procedure. The court of first resort will consist of judges—arbitrators, in fact, but ‘judges’ is really a more appropriate title—chosen by agreement between prosecutor and defendant. If the case is not settled in the first court, the litigants should go and contest it again before the second (composed of villagers and tribesmen, duly divided into twelve groups), but at the risk of an enhanced penalty: if the defendant loses for the second time, he must be mulcted an additional fifth of the penalty previously assessed and recorded. If he is still aggrieved with his judges and wants to fight the case for the third time, he must take it to the Select Judges, and if he is defeated again, he is to pay one and a half times the original penalty. As for the prosecutor, if he is not prepared to lie down under defeat in the first court, and goes before the second, he should be awarded the extra fifth of the penalty if he wins, but be fined that amount if he loses. If the litigants refuse to acquiesce in the earlier decision and go before the third court, and the defendant loses, he must pay one and a half times the penalty as already stated; if the prosecutor loses, he must be fined one half of it.

But what about the balloting for jurors, and the procedure for making up the juries? What about the appointment of attendants for the various officials, the fixing of times at which the various formalities should be completed, voting methods, adjournments, and all the other similar inescapable details of legal procedure, such as putting cases early or late in the calendar, the enforcement of attendance and of replies to interrogation, and suchlike? Well, we’ve made the point before, but the truth is all the better for being stated two or even three times. All these minor rules are perfectly easy to invent, and the senior legislator may skip them and leave it to his young successor to fill in the gaps. But although that will be reasonable enough in the case of the courts that are appointed privately, the common public courts, and those that the various officials need to use in the performance of their duties, need a rather different approach. Sensible people in several states have framed a good many decent regulations which our Guardians of the Laws should adapt for the state that we are now founding. The Guardians should examine them and touch them up after trying them out in practice, until they think they have licked each single one into shape; then they should finalize them, ratify them as immutable, and render them lifelong obedience. Then there is the question of the silence of the judges, and the restraint or otherwise of their language, as well as all the other details in which our standards of justice and goodness and decorum differ from those you find in such variety in other states. We've already had something to say on this topic, and we shall have more to say towards the end. The judge who wants to act with proper judicial impartiality should bear all these points in mind and get hold of books in which to study the subject. The study of laws, provided they are good laws, is unsurpassed for its power to improve the student. (It can't be an accident that the name of this god-given and wonderful institution, law, is so suggestive of reason.) And other compositions, such as eulogies or censures in verse or prose, in the latter case either taking written form or being simply spoken during our day-to-day contacts when we indulge in contentious argument or (sometimes thoughtlessly) express our agreement—all these will be measured against a clear criterion: the writings of the legislator, which the good judge will treasure as a kind of antidote against the others, so as to ensure his own moral health and that of the state. He will confirm and strengthen the virtuous in the paths of righteousness, and do his best to banish ignorance and incontinence and cowardice and indeed every sort of injustice from the hearts of those criminals whose outlook can be cured. However—and this is a point that deserves constant repetition—when a man's soul is unalterably fixed in that condition by decree of fate, our erudite judges and their advisers will deserve the commendation of the whole state if they cure him by imposing the penalty of death.

When the suits for the year have been finally decided, the following laws must apply to the execution of judgment. First of all, immediately after the voting in each case, and by proclamation of a herald in the hearing of the judges, the official who has pronounced sentence should assign all the property of the convicted party, except the minimum he must retain, to the successful prosecutor. If after the expiry of the month following that in which the case was tried the loser has not settled the business with the victor to the satisfaction of both, the official who gave judgment must at the request of the victorious party hand over the goods of the loser. If the latter lacks the means to pay, and the deficiency amounts to a drachma or more, he must not be allowed to prosecute other people (they however, being entitled to prosecute him), until he has paid his debt in full to his opponent. If someone who has received an adverse verdict obstructs the bench that condemned him, the officials thus obstructed should haul him before the court of the Guardians of the Laws.

If he is convicted on such a charge, he must be punished by death, on the grounds that his conduct is wrecking the entire state and its laws.

Now here's the next point. A man is born and brought up, and begets and rears his own children in turn; he deals fairly in his business transactions, paying the penalty if he has done anyone injury and exacting one if others have wronged him; and finally, as destiny decrees, after an old age spent in obedience to the laws, the course of nature will bring him to the end of his life. So what should we do when a man or woman has died? First, we must bow to the absolute authority of the Expounders’ instructions about the sacred rites to be observed in honor of the nether gods and those of this world. No tomb, whether its mound is large or small, should be constructed anywhere on land that can be farmed; graves must take up space only where nature has made the ground good for nothing except the reception and concealment of the bodies of the dead with minimum detriment to the living, because no one, alive or dead, must ever rob the living of any land which—thanks to the natural fertility of Mother Earth—will grow food for the human race. The soil must not be piled higher than five men can manage by working for five days. Stone slabs must not be made bigger than they need to be to accommodate a eulogy of the deceased’s career of not more than the usual four hexameters. The laying-out at home should not last longer than is necessary to confirm that the person really is dead and not just in a faint; in average cases, it will be reasonable for the body to be taken to the tomb after two days.

We should, of course, trust whatever the legislator tells us, but especially his doctrine that the soul has an absolute superiority over the body, and that while I am alive I have nothing to thank for my individuality except my soul, whereas my body is just the likeness of myself that I carry round with me. This means we are quite right when we say a corpse ‘looks like’ the deceased. Our real self—our immortal soul, as it is called—departs, as the ancestral law declares, to the gods below to give an account of itself. To the wicked, this is a terrifying doctrine, but a good man will welcome it. And once he’s dead, there’s not a great deal we can do to help a man: all his relatives should have helped him while he was still in the land of the living, so that he could have passed his life in all possible justice and holiness; and then after death he could have escaped the penalty visited on evil deeds in the life to come. This all goes to show that we should never squander our last penny, on the fanciful assumption that this lump of flesh being buried really is our own son or brother or whoever it is we mournfully think we are burying. We ought to realize that in fact he has departed in final consummation of his destiny, and that it is our duty to make the best of what we have and spend only a moderate sum on the body, which we may now think of as a kind of altar to the gods below, now deserted by its spirit; and as for what is meant by 'moderate' in this matter, the most respectable ideas will be those of the legislator. The law, then, should specify a reasonable level of expenditure as follows. In the case of a member of the highest property-class, the whole funeral should not cost more than five hundred drachmas; three hundred may be spent on a member of the second class, two hundred on a member of the third, and one hundred on a member of the fourth.

The Guardians of the Laws will have to shoulder a great many burdens and responsibilities, but their overriding duty will be to devote their lives to the care of children and adults and indeed persons of all ages. In particular, when a man is nearing his end his household should invite one Guardian to take charge of him, and if the funeral arrangements pass off decorously and without extravagance, this Guardian-in-charge will get the credit, but if not, then the blame will be at his door. The laying-out and other matters should take place according to usage, but usage must be modified by the following directions of our legislator-statesman. 'Tasteless though it is to forbid or instruct people to weep over the dead, dirges should be forbidden; and cries of mourning should be allowed only inside the house. The mourners must not bring the corpse on to the open street nor make their procession a noisy one, and they must be outside the city by day-break.’ So much for the regulations on the subject. The person who obeys them will never be punished, but, if a man disobeys a single Guardian of the Laws, he must be punished by them all with whatever penalty recommends itself to their united judgment.

The other methods of burying the dead, and the kind of criminals to whom we deny burial, such as parricides, temple-robbers and all similar categories, have already been specified and provided for in the legal code. And that means, I suppose, that we have pretty well come to the end of our legislation.

Athenian Stranger:: However, even when you have achieved or gained or founded something, you have never quite finished. Only when you have ensured complete and perpetual security for your creation can you reckon to have done everything that ought to have been done. Until then, it’s a case of ‘unfinished business’.

Clinias:: Well said, sir—but what’s the particular point you had in mind in saying that? Could you be a little clearer?

Athenian Stranger:: Well, you know, Clinias, a lot of old expressions are extraordinarily apt. I’m thinking particularly of the names of the Fates.

Clinias:: What names?

Athenian Stranger:: Lachesis for the first, Clotho for the second, and Atropos for the third fulfiller of destiny—the last so called from her likeness to a woman making the threads on her spindle irreversible. That is precisely the situation we want to see in our state and its citizens—not merely physical health and soundness, but the rule of law in their souls and (more important than all that) the preservation of the laws themselves. In fact, it seems to me that the service we've still not done for the laws is to discover how to build into them a resistance to being reversed.

Clinias:: That's serious, because I don't suppose there's a way of giving anything that sort of property.

Athenian Stranger:: But there is. I see that quite clearly now.

Clinias:: Well then, we mustn't abandon our task till we've achieved this for the legal code we've expounded. It would be silly to waste our labor on something by failing to construct it on a firm foundation.

Athenian Stranger:: You're right to encourage me, and you'll find me as keen as you are.

Clinias:: Splendid! So what is this safety device for our political system and legal code going to be, according to you? And how can we construct it?

Athenian Stranger:: We said that we ought to have in the state a council with the following range of membership. The ten Guardians of the Laws who are currently the eldest were to convene together with all persons who had won awards of distinction and the travelers who had gone abroad to see if they could discover any special method of keeping a legal code intact. When these observers got back safe and sound, they were to be accepted as suitable associates of the council, provided they had first passed the scrutiny of its members. In addition, each member had to bring a young man of at least thirty years of age, but only after selecting him as particularly well qualified by natural abilities and education; on these terms the young man was to be introduced to the other members of the council, and if they approved of him, he was to join them; if not, they were not to breathe a word to anyone about the fact that he was considered, least of all to the rejected candidate himself. The council was to meet before dawn, when people are least beset by other business, public or private. That was more or less the description we gave earlier, wasn't it?

Clinias:: Certainly it was.

Athenian Stranger:: So I'm going to resume the subject of this council, and here's the point I want to make about it. I maintain that if one were to lower it as a sort of 'anchor' for the whole state, then provided conditions were suitable, it would keep safe everything we wanted it to.

Clinias:: How so?

Athenian Stranger:: Now at this crucial moment, we must strain every muscle to get things right.

Clinias:: That's a fine sentiment. Now do what you have in mind.

Athenian Stranger:: The question we have to ask about anything, Clinias, is this: what is it that has the special power of keeping it safe in each of its activities? In a living creature, for instance, this is the natural function of the soul and the head, in particular.

Clinias:: Again, what's your point?

Athenian Stranger:: Well, when these two are functioning satisfactorily, they ensure the animal's safety, don't they?

Clinias:: How so?

Athenian Stranger:: Because no matter what else is true of either, the soul is the seat of reason and the head enjoys the faculties of sight and hearing. In short, the combination of reason with the highest senses constitutes a single faculty that would have every right to be called the salvation of the animal concerned.

Clinias:: That's likely enough, I suppose.

Athenian Stranger:: Of course it is. But how do reason and the senses combine to ensure the safety of a ship, in fair weather or foul? Isn't it because captain and crew interpret sense-data by reason, as embodied in the expertise captains have, that they keep themselves and the whole ship safe?

Clinias:: Naturally.

Athenian Stranger:: We've no need to multiply examples, but take a general in command of his army, or any doctor tending a human body. What will they each aim at, on the assumption that they intend, as they should, to preserve their charges safe and sound? Won't the general aim at victory and control over the enemy, and won't doctors and their attendants aim to keep the body in a healthy condition?

Clinias:: Of course.

Athenian Stranger:: Now consider a doctor who can't recognize the state of the body we've just called 'health', or a general who doesn't know what's meant by 'victory' and the other terms we reviewed. Could either of them possibly be judged to have a rational knowledge of his field?

Clinias:: Of course not.

Athenian Stranger:: And if the ruler of a state were obviously ignorant of the target at which a statesman should aim, would he really deserve his title 'ruler'? Would he be capable of ensuring the safety of an institution whose purpose he entirely failed to appreciate?

Clinias:: Certainly not.

Athenian Stranger:: Well then, in the present circumstances, if our settlement of this territory is to be finished off properly, it looks as if we shall have to provide it with some constituent that understands this target we have mentioned—the target, whatever we find it is, of the statesman, how to hit it, and which laws (above all) and which persons have helpful advice to give and which not. If a state lacks some such constituent, no one will be surprised to see it staggering from one irrational and senseless expedient to another in all its affairs.

Clinias:: That's true.

Athenian Stranger:: So is there any institution or constituent part of our state qualified and prepared to function as an organ of protection? Can we name one?

Clinias:: No, sir, not with much assurance, anyway. But if guess I must, I think your remarks point to the Council you said just now had to convene during the night.

Athenian Stranger:: You've caught my meaning splendidly, Clinias. As the drift of our present argument shows, that body must possess virtue in all its completeness, which means above all that it will not take erratic aim at one target after another but keep its eye on one single target and shoot all its arrows at that.

Clinias:: Certainly.

Athenian Stranger:: Now we can see why it is hardly surprising that rules and regulations fluctuate so much from state to state: it is because legislation has a different aim in each. Nor is it surprising that in most cases you find that some people think of justice as nothing but the subjection of the state to the rule of this or that type of person without regard to their vice or virtue, while others think of it as the opportunity to become rich, no matter whether they are thereby enslaved or not; others again are bent hell for leather on a life of ‘freedom’. Some legislators keep both ends in view, and their laws have the dual purpose of securing control over other states and freedom for their own. The cleverest legislators of all (as they like to think of themselves), so far from aiming at one single end, look not only to these but all others like them, simply because they cannot identify any supremely valuable end to which all others ought, in their view, to contribute.

Clinias:: Well then, sir, the line we took so long ago was the right one. We said that every detail of our legislation ought to have a single end in view, and the proper name to call it was, I think we agreed, Virtue’.

Athenian Stranger:: Yes.

Clinias:: And I think we maintained that the virtues were four.

Athenian Stranger:: Indeed we did.

Clinias:: The leading one, to which not only the other three but everything else should be orientated, was reason.

Athenian Stranger:: You take the point admirably, Clinias. Now follow the rest of the argument. As far as the captain, doctor and general are concerned, we have already indicated that their intellect aims at some appropriate single end. Now it is the turn of the statesman’s reason to be investigated. Let’s personify it and ask it the following question: “My good sir, what aim do you have in view? What’s your single overriding purpose? The intelligent doctor can identify his accurately enough, so can’t you, with all your superior wisdom (as I suppose you'd claim), identify yours?” Or can you two, Clinias and Megillus, answer for him and tell me precisely what your notion of his aim is, just as I’ve often given you detailed accounts of the notions of many other people on their behalf?

Clinias:: No, sir, we certainly cannot.

Athenian Stranger:: What about replying, 'I think he should make every effort to get an overall understanding of his aim, as well as see it in its various contexts'?

Clinias:: What contexts, for example?

Athenian Stranger:: Well, when we said there were four species of virtue, obviously the very fact that there were four meant that each had to be thought of as somehow distinct from the others.

Clinias:: Surely.

Athenian Stranger:: Yet in fact we call them all by a single name. We say courage is virtue, wisdom is virtue, and the other two similarly, on the ground that really they are not several things but just one—virtue.

Clinias:: Very true.

Athenian Stranger:: It's not hard to explain how these two 'virtues' and the rest differ from each other and how each has acquired a different name. The real problem is this: why, precisely, have we described both of them (as well as the others) by this common term 'virtue'?

Clinias:: What do you mean?

Athenian Stranger:: My point is perfectly easy to explain. Shall we let one of us ask the questions, and the other answer them?

Clinias:: Again, what do you mean?

Athenian Stranger:: Here's the question for you to put to me: "Why is it that after calling both by the single term 'virtue', in the next breath we speak of two 'virtues', courage and wisdom?" I'll tell you why. One of them, courage, copes with fear, and is found in wild animals as well as human beings, notably in the characters of very young children. The soul, you see, becomes courageous by a purely natural process, without the aid of reason. By contrast, in this absence of reason a wise and sensible soul is out of the question. That is true now, has always been true, and always will be true; the two processes are fundamentally different.

Clinias:: That's true.

Athenian Stranger:: So there's your explanation of why there are two different virtues. Now it's your turn: you tell me why they are one and the same thing. Your job, you understand, is to tell me why the four of them nevertheless form a unity; and when you have demonstrated that unity, ask me to show you again in what sense they are four.

Next after that we ought to ask ourselves what constitutes adequate knowledge of any object that has a name and a definition: is it enough to know only the name and not the definition? On the contrary, if a man is worth his salt, wouldn't it be a disgrace in him not to understand all these points about a topic so grand and so important?

Clinias:: Presumably it would.

Athenian Stranger:: And as for a giver or guardian of laws, and indeed anyone who thinks of his own virtue as superior to the rest of the world's, and has won awards for his achievement, is there anything more important than the qualities we are now discussing—courage, restraint, justice and wisdom?

Clinias:: Of course not.

Athenian Stranger:: So in such circumstances what role should the expounders, teachers and lawgivers—the guardians of the rest of the community— play when a criminal needs enlightenment and instruction, or perhaps correction and punishment? Should they not prove better than anyone else at giving him a full explanation and description of the effects of virtue and vice? Or is some poet-visitor to the state, or some self-styled 'educationalist', going to put up a better show than the winner of the palm for every kind of virtue? Where there are no efficient and articulate guardians with an adequate understanding of virtue, it will be hardly surprising if the state, precisely because it is unguarded, meets the fate of so many states nowadays.

Clinias:: No, hardly surprising at all, I suppose.

Athenian Stranger:: Well then, shall we carry out these proposals, or what? Shall we make sure our guardians are more highly qualified than the man in the street to explain what virtue is, and to put it into practice? How else could our state function like the head and sense of a wise man, now that it possesses within itself something analogous to protect it?

Clinias:: Where is this resemblance, sir? How do we draw such a comparison?

Athenian Stranger:: Obviously the state itself corresponds to the trunk, and the junior guardians, chosen for their natural gifts and the acuteness of their mental vision, live as it were at the summit and survey the whole state; they store up in their memory all the sensations they receive while on guard, and act as reporters for their elder colleagues of everything that takes place in the state; and the old men—we could compare them to the intellect, for their high wisdom in so many vital questions—take advantage of the assistance and advice of their juniors in debating policy, so that the joint efforts of both ranks effectively ensure the safety of the entire state. Now is this the sort of organization we want to see, or some other? Should the state, in fact, keep all its citizens on the same level, without giving some a more specialized training and education than others?

Clinias:: My dear sir! That’s quite impracticable.

Athenian Stranger:: Then we have to pass on to a more advanced education than the one we described earlier.

Clinias:: Perhaps so.

Athenian Stranger:: What about the education we touched on a moment ago? Would that answer our needs?

Clinias:: Certainly it would.

Athenian Stranger:: Didn’t we say that a really skilled craftsman or guardian in any field must be able not merely to see the many individual instances of a thing, but also to win through to a knowledge of the single central concept, and when he’s understood that, put the various details in their proper place in the overall picture?

Clinias:: We did, and rightly.

Athenian Stranger:: So what better tool can there be for a penetrating investigation of a concept than an ability to look beyond the many dissimilar instances to the single notion?

Clinias:: Probably none.

Athenian Stranger:: ‘Probably!’ No, my dear fellow, this is most certainly the surest method we can follow, no matter who we are.

Clinias:: I trust you, sir, and I agree, so let’s carry on with the discussion on that basis.

Athenian Stranger:: So it looks as if we have to compel the guardians of our divine foundation to get an exact idea of the common element in all the four virtues—that factor which, though single, is to be found in courage, restraint, justice and wisdom, and thus in our view deserves the general title ‘virtue’. This element, my friends, if only we have the will, is what we must grip until we can explain adequately the essence of what we have to contemplate, whether it is a single entity, a composite whole, or both, or whatever. If this point eludes us, can we ever expect to attain virtue—when we can’t say whether it comprises a great number of things or just four, or whether it is a unity? Never—not if we believe our own advice, anyway, and we’ll have to ensure the growth of virtue in the state by some other means. But if in the circumstances we decide we ought to abandon the attempt entirely, abandon it we must.

Clinias:: No, sir, in the name of the gods of hospitality, we must never abandon such a project: you seem to us to be absolutely right. So now then: how is one to tackle the problem?

Athenian Stranger:: Let’s postpone the question of method. The first thing we have to settle and decide among ourselves is whether the attempt should be made at all.

Clinias:: Indeed it should, if possible.

Athenian Stranger:: Well then, do we take the same line about goodness and beauty? Should the guardians know no more than that both these terms are a plurality, or should they understand the senses in which they are unities?

Clinias:: It looks as if they are more or less obliged to comprehend that too—how they are unities.

Athenian Stranger:: But what if they understood the point, but couldn’t find the words to demonstrate it?

Clinias:: How absurd! That’s the condition of a slave.

Athenian Stranger:: Well then, isn’t our doctrine going to be the same about all serious questions? If our guardians are going to be genuine guardians of the laws they must have genuine knowledge of their real nature; they must be articulate enough to explain the real difference between good actions and bad, and capable of sticking to the distinction in practice.

Clinias:: Naturally.

Athenian Stranger:: And surely one of the finest fields of knowledge is theology, on which we've already lavished a great deal of attention. It's supremely important to appreciate—so far as it's given to man to know these things—the existence of the gods and the obvious extent of their power. The man in the street may be forgiven if he simply follows the voice of the law, but if any intended guardian fails to work hard to master every theological proof there is, we must certainly not grant him the same indulgence; in other words, we must never choose as a Guardian of the Laws anyone who is not preternaturally gifted or has not worked hard at theology, or allow him to be awarded distinctions for virtue.

Clinias:: It's fair enough, as you say, that the idle or incompetent in this business should never be allowed to get anywhere near such honors.

Athenian Stranger:: Now we know, don't we, that among the arguments we've already discussed, there are two in particular which encourage belief in the gods?

Clinias:: Which two are they?

Athenian Stranger:: One is the point we made about the soul, when we argued that it is far older and far more divine than all those things whose movements have sprung up and provided the impulse which has plunged it into a perpetual stream of existence. Another argument was based on the systematic motion of the heavenly bodies and the other objects under the control of reason, which is responsible for the order in the universe. No one who has contemplated all this with a careful and expert eye has in fact ever degenerated into such ungodliness as to reach the position that most people would expect him to reach. They suppose that if a man goes in for such things as astronomy and the essential associated disciplines, and sees events apparently happening by necessity rather than because they are directed by the intention of a benevolent will, he'll turn into an atheist.

Clinias:: Well, what would happen, in fact?

Athenian Stranger:: Today, as I said, the situation is quite different from the time when thinkers regarded these bodies as inanimate. Even then, men were overcome with wonder at them, and those who studied them really closely got an inkling of the accepted doctrines of today, that such remarkably accurate predictions about their behavior would never have been possible if they were inanimate, and therefore irrational; and even in those days there were some who had the hardihood to stick their neck out and assert it was reason that imposed regularity and order on the heavens. However, these same thinkers went sadly astray over the soul's natural priority to matter: regarding soul as a recent creation, they turned the universe upside down, so to speak, and their own theories to boot. They concluded from the evidence of their eyes that all the bodies that move across the heavens were mere collections of stone and earth and many other kinds of inanimate matter—inanimate matter which nevertheless initiated a chain of causation responsible for all the order in the universe. These views brought down on the philosophers' heads a great many accusations of atheism, and provoked a lot of hostility; poets, in particular, joined in the chorus of abuse and among other inanities compared the philosophers to bitches baying at the moon. But today, as I said, the situation is fundamentally different.

Clinias:: How so?

Athenian Stranger:: No mortal can ever attain a truly religious outlook without risk of relapse unless he grasps the two doctrines we're now discussing: first, that the soul is far older than any created thing, and that it is immortal and controls the entire world of matter; and second (a doctrine we've expounded often enough before) that reason is the supreme power among the heavenly bodies. He also has to master the essential preliminary studies, survey with the eye of a philosopher what they have in common, and use them to frame consistent rules of moral action; and finally, when a reasoned explanation is possible, he must be able to provide it. No one who is unable to acquire these insights and rise above the level of the ordinary virtues will ever be good enough to govern an entire state, but only to assist government carried on by others. And that means, Clinias and Megillus, that we now have to consider whether we are going to add yet another law to the code we've already expounded, to the effect that the Nocturnal Council of the Authorities, duly primed by the course of studies we've described, shall be constituted the legal protector of the safety of the state. Or is there some alternative course for us to take?

Clinias:: Oh, but my dear sir, there's no question of refusing to add this law, if we can manage it, even if our success is only partial.

Athenian Stranger:: Then let's make every effort to win the struggle. I've had a lot of experience of such projects and have studied the field for a long time, so I'll be more than happy to help you—and perhaps I shall find others to join me.

Clinias:: Well, sir, we must certainly stick to the path on which—it is hardly an exaggeration to say—God himself is guiding us. But the question to which we need an answer at the moment is this: what will be the correct procedure on our part?

Athenian Stranger:: Megillus and Clinias, it is impossible to lay down the council's activities until it has been established. Its curriculum must be decided by those who have already mastered the necessary branches of knowledge— and only previous instruction and plenty of intimate discussion will settle such matters as that.

Clinias:: How so? How are we supposed to understand that remark?

Athenian Stranger:: First of all, of course, we shall have to compile a list of candidates qualified for the office of guardian by age, intellectual attainments, moral character and way of life. Then there's the question of what they have to learn. It is difficult to find out this for oneself, and it is not easy either to discover somebody else who has already done so and learn from him. Quite apart from that, it will be a waste of time to produce written regulations about the order in which the various subjects should be tackled and how long should be spent on each, because even the students, until they have thoroughly absorbed a subject, won't realize why it comes at just that point in the curriculum. So although it would be a mistake to treat all these details as inviolable secrets, it would be fair to say that they ought not to be divulged beforehand, because advance disclosure throws no light at all on the questions we're discussing.

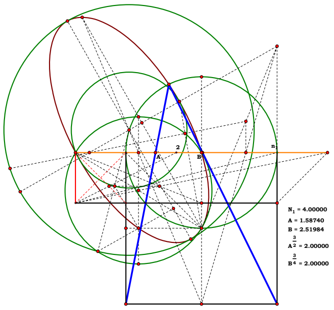
Clinias:: Well then, sir, if that's the case, what are we to do?

Athenian Stranger:: My friends, we must 'chance our arm', as the saying is. If we are prepared to stake the whole constitution on a throw of 'three sixes' or 'three ones', then that's what we'll have to do, and I'll shoulder part of the risk by giving a full explanation of my views on training and education, which we've now started to discuss all over again. However, the risk is enormous and unique. So I bid you, Clinias, take the business in hand: establish the state of the Magnesians (or whatever other name God adopts for it), and if you're successful you'll win enormous fame; at any rate you'll never lose a reputation for courage that will dwarf all your successors'. And if, my good companions, if this wonderful council of ours can be formed, then the state must be entrusted to it, and practically no modern legislator will want to oppose us. We thought of our combined metaphor of head and intellect, which we mentioned a moment ago, as idealistic dreaming—but it will all come true, provided the council members are rigorously selected, properly educated, and after the completion of their studies lodged in the citadel of the country and made into guardians whose powers of protection we have never seen excelled in our lives before.

Megillus:: My dear Clinias, judging from what we've heard said, either we'll have to abandon the project of founding the state or refuse to let our visitor leave us, and by entreaties and every ruse we can think of enroll him as a partner in the foundation of the state.

Clinias:: You're quite right, Megillus. That's what I'm going to do. May I enlist your help too?

Megillus:: You may indeed.



# The Laws.

## Book 1.

Translated by Taylor, Thomas.

PERSONS OF THE DIALOGUE.

An Athenian Guest,
Clinias the Cretan, and
Megillus the Lacedæmonian.

Athenian Stranger:: Do YOU think, O guests, that a God, or some man, was the cause of the establishment of laws?

Clinias:: A God, O guest, a God, as it is most just to assert: with us, indeed, Jupiter; but, with the Lacedæmonians (whence originated this our guest), I think, Apollo dictated the laws. Is it not so?

Megillus:: It is.

Athenian Stranger:: Whether, therefore, do you speak according to Homer, viz. that Minos every year, for the space of nine years, went to converse, with his father, and established laws for your cities, according to his conceptions?

Clinias:: It is so said by us: and, likewise, that his brother Rhadamanthus (you have heard the name) was most just. We Cretans, therefore, say that he obtained this praise, from his distributing, at that time, things pertaining to justice in a proper manner.

Athenian Stranger:: His renown is indeed beautiful, and highly becoming the son of Jupiter. But since both you and this other have been educated in legal institutions of this kind, I persuade myself, it will not be unpleasant to us to speak and hear about the establishment of cities and laws, at the same time that we are proceeding on our journey. But the way from Cnossus to the cavern and temple of

Jupiter is, as we have heard, sufficiently long; and the resting-places along the road are, as it is proper they should be during the present hot weather, shady, from their position under lofty trees. It will likewise be suitable to our age, to rest in them frequently; and thus, by the allurements of discourse, render the whole of our journey easy.

Clinias:: Indeed, O guest, in the course of our journey, we shall meet in the groves with cypress trees of an admirable height and beauty, and meadows in which while we rest we may discourse.

Athenian Stranger:: You speak rightly.

Clinias:: Entirely so. We shall however speak with more confidence when we become spectators of these. But let us now proceed on our journey with good fortune.

Athenian Stranger:: Let it be so. But inform me, why the law instituted for you public feasts, gymnastic exercises, and the custom of using arms.

Clinias:: I think, O guest, that these particulars respecting us may be apprehended with perfect ease. For you see that the nature of the whole region of Crete is not plain, like that of Thessaly. On this account, with them, horses are more used, and, with us, courses on foot. For this, irregularity of the ground is more adapted to the exercise of pedestrial races. Hence, for this purpose, it is necessary that the arms should be lighter, that they may not hinder the race by their weight. But lightness of bows and arrows seems to be adapted to this purpose. All these particulars, therefore, are subservient to our use in war; and the legislator, as it appears to me, looking to this, established every thing. For he seems to have instituted public banquets, in consequence of perceiving that all men, when they engaged in war, were compelled by the thing itself, for the sake of their own defense, to feast at that time together. But he appears to me to be charged with folly by the multitude, in consequence of their not having learnt that cities are perpetually at war with each other. But if during the time of war it is necessary to feast together for the sake of defense, and that certain governors and men governed should be the armed defenders of them, this also should be done in the time of peace. For that which most men call peace, is only a name; but, in reality, war is perpetually proclaimed according to nature, by all cities; against all. And thus considering, you will nearly find that the Cretan legislator established for us all the laws, both public and private, as if looking to war; and ordered them to defend these laws in such a manner as if nothing else was useful, either of possessions or studies, unless a man became victorious in war; and as considering that all the goods of the vanquished become the property of the victors.

Athenian Stranger:: You appear to me, O guest, to be well exercised for the purpose of explaining the Cretan laws. But explain this yet more clearly to me. For you seem to me to say that a city is then well established when it is so constituted as to be able to vanquish other cities in war. Is it not so?

Clinias:: It is perfectly so; and I think that this our other guest will be of the same opinion.

Megillus:: How can a Lacedæmonian. O divine man, answer otherwise?

Athenian Stranger:: Whether, therefore, is this right from cities towards cities, but not from one village towards another?

Clinias:: By no means.

Athenian Stranger:: Is it therefore the same?

Clinias:: It is.

Athenian Stranger:: But what then? Is it likewise the same from one house to another in the same village, and from one man to another?

Clinias:: The same.

Athenian Stranger:: But what shall we say of one man towards himself? Shall we consider the relation as that of an enemy to an enemy? Or, how shall we say?

Clinias:: O Athenian guest! for I am not willing to call you Attic, because you appear to me rather to deserve to be called by the surname of the Goddess Minerva. For, rightly reducing the discourse to its principle, you render it more clear; and, by this mean, are able to find with facility that which has now been rightly asserted,—I mean, that all men are enemies to all, both publicly and privately, and likewise, that each individual is an enemy to himself.

Athenian Stranger:: How do you say, O wonderful man?

Clinias:: This, O guest; that for a man to vanquish himself is the first and best of all victories, but to be vanquished by himself is a thing the most shameful and vile. For these things signify that there is war in each of us against ourselves.

Athenian Stranger:: Again, therefore, let us resume the discourse. For, since each of us is either better or worse than himself, whether shall we say that a house, a village, and a city, have this same thing in them, or not?

Clinias:: Do you mean that one is better, and the other worse than itself?

Athenian Stranger:: I do.

Clinias:: Concerning this also you have rightly inquired. For this does not less happen to cities, but in the highest degree. For, in those in which the better vanquish the multitude and the worse, such a city is with propriety said to be better than itself, and may with the greatest justice be praised for such a victory. But the contrary must be the case with a contrary city.

Athenian Stranger:: Whether, therefore, here, the worse is at any time more excellent than the better, must be left uninvestigated; (For it would require a prolix discussion;) but I understand what is at present asserted by you, thus: That sometimes citizens who are allied to each other, and of the same city, being unjust and numerous, will forcibly attack the just, being fewer in number, that they may subject them to slavery; and that, when they conquer, the city may be justly said to be inferior to itself, and at the same time depraved, but, when they are conquered, better than itself, and good.

Clinias:: What is now said, O guest, is wonderful in the extreme; but, at the same time, thus to confess is most necessary.

Athenian Stranger:: Come then, let us again consider this. Many brothers may be born from one father, and from one mother. Nor is it at all wonderful that the greater part of them should be unjust, and the lesser just.

Clinias:: It is not wonderful.

Athenian Stranger:: Nor will it be proper for me and you to investigate this, that when the base vanquish, both the house and every kind of alliance may be called inferior to themselves, but better than themselves when the base are vanquished. For we do not investigate these things at present for the sake of an elegant or inelegant arrangement of words, according to the manner of many, but for the sake of discovering what is natural rectitude and error concerning laws.

Clinias:: You speak most truly, O guest.

Megillus:: It appears to me, too, that what has hitherto been said is beautiful.

Athenian Stranger:: Let us besides consider this: Can any one become a judge of such brothers as we have just spoken of?

Clinias:: Doubtless.

Athenian Stranger:: Which therefore will be the better judge? he who cuts off those that are unworthy, and orders the worthy to govern themselves? or he who causes the worthy to govern, but suffers the unworthy to live, when they are willing to be governed? But we will say that a third is a judge with respect to virtue, if such a one can be found, who, receiving one discordant alliance, will not destroy any one, but, reconciling the disagreeing parties, will establish for them laws by which they may be enabled to preserve friendship towards each other.

Clinias:: Such a judge and legislator will be by far the best.

Athenian Stranger:: And he will frame laws for them, by acting in a manner contrary to looking at war.

Clinias:: This indeed is true.

Athenian Stranger:: But what—Whether does he who aptly constitutes a city look to external war, and by this mean principally adorn the lives of the citizens, or to the war produced within the city, which is called sedition, which every one would particularly wish not to arise in his city; and that, when, it arises, the city may be liberated from it with the utmost celerity?

Clinias:: It is evident that he would look to the latter.

Athenian Stranger:: Whether would any one choose that peace should be the result of sedition, in consequence of one part of the citizens being destroyed, and the other part being victorious, or rather that peace and friendship should be the consequence of reconciliation, and thus the mind of the citizens be necessarily directed to external wars?

Clinias:: Every one would rather wish that the latter should happen to his city, than the former.

Athenian Stranger:: Would not a legislator in a similar manner?

Clinias:: He would.

Athenian Stranger:: Does not every one establish all laws for the sake of that which is best?

Clinias:: How should he not?

Athenian Stranger:: But neither war nor sedition is the best of things (for to be in want of these is execrable), but mutual peace and benevolence. Nor is that victory by which a city vanquishes itself, one of the best of things, but it ranks among things necessary. But to think that the best state of a city consists in fighting and conquering, is just as if any one should think that a wearied body, when undergoing medicinal purification, then acted in the best manner, but should pay no attention to a body which was not at all indigent of medical assistance. And if any one thinks in a similar manner, either of the felicity of a city or of a private man, he will never become a politician, while he thus alone and primarily looks to external war; nor will he be an accurate legislator, unless he establishes laws respecting war for the sake of peace, rather than laws respecting peace for the sake of war.

Clinias:: These things, O guest, appear in a certain respect to be rightly said. But I should wonder to find any one contending that our laws, and likewise those of the Lacedæmonians, were not with all possible attention framed for the sake of war.

Athenian Stranger:: Perhaps this is the case. We ought not, however, to investigate the present affair in a contentious but in a quiet manner; the greatest diligence being employed, both by us and them, about things of this kind. Attend therefore to my discourse. In the first place, we shall adduce Tyrtaeus, who was by birth an Athenian, but afterwards a citizen of Lacedæmonia, and who most of all men applied himself to these particulars: “I shall not then (says he) consider that man as worthy of being mentioned, or of any consequence, though he should be the most wealthy of all men, and should possess abundance of goods (and he enumerates almost all goods), who does not always conduct himself in the most excellent manner in warlike affairs.” These poems perhaps you also have heard. For this other associate of ours is, I think, satiated with them.

Megillus:: Entirely so.

Clinias:: And these also have reached us, being brought from Lacedæmonia.

Athenian Stranger:: Let us, therefore, in common interrogate this poet thus: O most divine poet, Tyrtæus! for you appear to us to be wise and good, because you have in the highest degree celebrated those who in the highest degree excel in war. I, therefore, and this Clinias the Cnossian, appear very much to agree with you in this particular. But we wish clearly to know, whether or not we speak about the same men. Inform us, therefore, whether you also as well as we are clearly of opinion, that there are two kinds of war? Or how do you say? For I think that a man much worse than Tyrtæus would answer that there are two kinds; one, which we all denominate sedition, and which we consider as the most grievous of all wars; but the other kind, I think, is that which we all consider as milder than the former, and which we employ against those who do not belong to the city, and who are of a different tribe.

Clinias:: How is it possible he should answer otherwise?

Athenian Stranger:: Inform us, therefore, who were the men, and what the kind of war, in which you have so transcendently praised some, and blamed others. For you appear to have praised those that fought in external wars. Thus, you say in your poems, that you can by no means endure those who are not hardy enough to behold bloody slaughter, and to aspire after fierce battle, hand to hand. From this, O Tyrtæus, we should infer, that you praise those who have been eminently illustrious in waging external war. Shall we say that Tyrtæus would grant this?

Clinias:: Certainly.

Athenian Stranger:: But we, since these are good, shall assert that those are far better who evidently excel in the greatest war. We have too the poet Theognis a witness in our favor, who was a citizen of the Megarensians in Sicily.

For he says:

Who faithful in insane sedition keeps,
With silver and with ruddy gold may vie.

We say, therefore, that such a one will conduct himself in the most difficult war in a manner nearly as much superior to the other, as justice, temperance, and prudence, when conjoined with fortitude, are superior to fortitude alone. For no one can be found faithful and found in seditions, without the whole of virtue. But, as Tyrtæus says, there are a great number of mercenaries who fight intrepidly and die willingly in battle, most of whom are ferocious, injurious, reproachful, and, with a very few exceptions, are the most stupid of all men. But to what does all this tend? And what did he perspicuously intend to signify by these assertions? It is evidently this, that both he who framed laws here from Jupiter, and every other legislator who profits cities in the smallest degree, establishes laws by always looking as much as possible to the greatest virtue. But it is, as

Theognis says, confidence in dire events, which may be denominated perfect justice. But that which Tyrtæus so highly praises is indeed beautiful, and opportunely celebrated by the poet; yet it may most rightly he said to be honorable, the fourth in number, and in power.

Clinias:: Shall we, therefore, O guest, rank our legislator among remote legislators?

Athenian Stranger:: Not him indeed, most excellent man, but ourselves, since we are of opinion, that both Lycurgus and Minos established all the laws in Lacedæmon, and here, in consequence of especially directing their attention to war.

Clinias:: In what manner then ought we to speak?

Athenian Stranger:: As truth and justice, I think, require those should speak who discourse about a divine republic; for such ought not to be considered, as looking to a certain part of virtue, and that the most abject, but as regarding the whole of virtue, and inquiring after laws, according to the species of virtue;—not, indeed, investigating those species which many at present propose; for, at present, every one proposes to inquire after that which he is principally in want of. Thus, one inquires about an inheritance, another about women who are left the only heirs, another about an injury, and others about ten thousand things of a similar kind. But we say that inquiries about laws rank among good inquiries, when they are such as we have just now begun. And, indeed, I in every respect approve of the manner in which you have entered on the discussion of laws. For you are certainly right in beginning from virtue, and asserting that for its sake laws are framed. But you do not appear to me to be right in saying, that the legislator framed all his laws by regarding a part of virtue, and this the least; and this has been the cause of all that was afterwards said by me. Are you, however, willing I should tell you in what manner I wish you to distinguish in this affair?

Clinias:: Entirely so.

Athenian Stranger:: It is proper, O guest, to assert that the laws of the Cretans are not rashly approved by all men, and particularly by all the Greeks. For they are rightly framed, since they render those who use them happy; and this because they impart every good. But there are two kinds of goods, one human, and the other divine; and the former is suspended from the latter. And if any city receives the greater goods, it also possesses the lesser; but if not, it is deprived of both. But the lesser goods are those of which health is the leader, beauty the second in order, and strength for the course, and all the other motions pertaining to the body, the third. But riches rank in the fourth place, which are not blind, but perceive acutely, if they follow prudence. However, that which is the first leader of all divine goods is prudence. That which ranks in the second place after intellect is a temperate habit of the soul. From these mingled with fortitude, the third in order will be justice. And the fourth will be fortitude. All which are to be placed, according to nature before those human goods. A legislator, therefore, ought to follow this order, and should command the citizens to look to these divine goods in all their actions. But, of these, human should be referred to divine goods, and all divine goods to their leader intellect. After these things he ought to pay attention to the marriages of the citizens, and to the procreation and education of children, both male and female, and likewise to the young, and those who are advancing to old-age. Such too, among these, as behave well, he should honour as they deserve, but should reprobate in all the conversations of these, their pains, pleasures, and desires.

He should likewise consider, and act as a guardian over, the studies of all lovers; and, through the laws, praise such as are worthy, and blame the contraries to these. With respect to anger and fear, too, he will show what in each of these is laudable, and what to be avoided; likewise what perturbations are produced in the soul through misfortune, and what the means by which these are avoided in prosperity. Lastly, he will show what passions men are subject to, through disease, war, poverty, or the contraries to these; and in all such things he will teach and desire what is beautiful, or otherwise, in the disposition of each. After this, it is necessary that the legislator should pay attention to the possessions and expenses of the citizens, so as to know how they are conducted, together with societies, and their dissolutions, whether voluntarily or involuntarily instituted; where justice is found among these, and where it is wanting; that by these means he may distribute honors to those that obey the laws, and punish those who cannot be persuaded to obey them. In the last place, having instituted every thing as far as to the end of every polity, it is necessary he should establish the manner in which the monuments of the dead should be raised, and what honors are to be paid to them. The legislator, having established all these particulars, should place over them guardians, some of whom conduct public affairs according to prudence, but others according to true opinion; so that intellect, binding all these together, may evince that the city follows temperance and justice, and not riches or ambition. After this manner, O guests, I have wished, and am now desirous, you would explain how all these particulars are to be found in those laws which are called the laws of Jupiter, in those of Pythian Apollo, and in those which Minos and Lycurgus established; and how, being assumed in a certain order, they may become evident to one who is skilled in the legislative science, either by art or from certain customs, though to us they are by no means apparent.

Clinias:: How then, O guest, ought we to discuss what follows?

Athenian Stranger:: It appears to me that we ought to commence our discussion from the beginning (as we began to do); considering in the first place the pursuits of fortitude, and afterwards discussing another and another species of virtue, if you are willing: and that we may discuss the first object of our inquiry, we will endeavor to establish a paradigm, and refer to it the other particulars, that by mutual converse of this kind we may beguile the tediousness of the way. But afterwards we will consider the pursuits of the whole of virtue, and evince that our present discussion, if divinity is willing, looks thitherward.

Clinias:: You speak well. Endeavor therefore, in the first place, to judge for us respecting this praiser of Jupiter.

Athenian Stranger:: I will endeavor to do this, both for you and myself. For the discourse is common.

Clinias:: Speak therefore.

Athenian Stranger:: Shall we say that common banquets and gymnastic exercises were invented by the legislator, for the purposes of war?

Clinias:: They were.

Athenian Stranger:: And is this the case with a third or fourth thing? For, perhaps, it is proper thus to enumerate in the things pertaining to another virtue, whether it is right to call them parts, or any thing else, for the sake of perspicuity.

Megillus:: I, therefore, as well as every Lacedæmonian, should say that hunting was invented as the third thing. But we should endeavor, if possible, to discover the fourth or fifth thing. I therefore shall endeavor to evince that the fourth thing consists in the endurance of pain. For we are much exercised in this, in fighting with each other with our hands, and in certain violent seizures, each of these being attended with a multitude of wounds. Besides this we have an exercise, which is called a certain concealment, which is wonderfully laborious, and is undertaken for the purpose of strengthening our endurance. Besides, in winter, without shoes, without any covering to our body, and without servants, waiting indeed on ourselves, we wander both night and day through every region. Further still: in the exercises of naked young men, severe endurances take place among us, when we contend with the strength of suffocating heat; and there are many other things of this kind among us, which it would not be easy to enumerate.

Athenian Stranger:: You speak well, O Lacedæmonian guest. But whether or not shall we place fortitude as simply confirming in a contest alone with fears and pains? or, shall we say that it likewise consists in opposing desires and pleasures, and certain vehement flatteries, which soften the minds of those who are considered as venerable persons, and besides this render them like wax?

Megillus:: I think it likewise consists in opposing all these.

Athenian Stranger:: If, therefore, we call to mind what was advanced above, this our other guest said, that some city was inferior to itself, and some man to himself. Was it not so, O Cnossian guest?

Clinias:: Entirely so.

Athenian Stranger:: Now, then, which ought we to call the inferior,—he who is subdued by pain, or he who is subdued by pleasure?

Clinias:: It appears to me, he who is subdued by pleasure. And, in every respect, we should rather say that he who is vanquished by pleasures is disgracefully inferior to himself, and, prior to this, to him who is vanquished by pains.

Athenian Stranger:: Did therefore the legislators of Jupiter and Apollo establish by law fortitude as lame, and consider it as alone able to oppose things on its left hand, but incapable of resisting elegancies and flatteries on its right hand? or, did they consider it as able to oppose both?

Clinias:: Both, I think.

Athenian Stranger:: Let us, therefore, again relate what those pursuits are, in both your cities, which taste of pleasures, and do not avoid them, in the same manner as they do not avoid pain, but bring them into the midst, and cause the citizens to vanquish them, partly by force, and partly by the allurements of honour. But, inform me where the same thing is ordained in your laws respecting pleasures, as respecting pains; and what that is which renders you similarly brave both with respect to pain and pleasures; which renders you victorious over those things which you ought to vanquish, and by no means suffers you to be inferior to your neighboring and most grievous enemies?

Megillus:: I cannot, O guest, so easily adduce a multitude of laws opposite to pleasures, as I can a multitude opposite to pains. Nor perhaps is it easy to speak of pleasures according to great and apparent parts, but only according to such as are small.

Clinias:: Nor am I able in a similar manner to render the same apparent in the Cretan laws.

Athenian Stranger:: This, O best of guests, is by no means wonderful. If any one, therefore, who is desirous of perceiving that which is true and at the same time most excellent, should find something to reprehend in the laws of our respective countries, we should behave towards each other with mildness, and not with severity.

Clinias:: You speak well, O Athenian guest; and therefore we ought to follow your advice.

Athenian Stranger:: Indeed, Clinias, a conduct of this kind becomes men of your age.

Clinias:: Certainly.

Athenian Stranger:: The next question, therefore, will be, whether or not the Laconian and Cretan polity is reprehensible. Perhaps, indeed, I can better relate what is said by the multitude on this occasion, than either of you. As to your laws, though they should be but of a moderate degree of excellence, yet you certainly have one most beautiful law, which forbids any youth from inquiring whether the laws are well or ill established, but orders them all to accord, with one voice, and with one mouth, that they are all beautifully constituted, as if they had been established by the Gods; and that, if any young man asserts the contrary, no one shall by any means listen to his discourse: but that an old man, if he has any thing to urge against them, shall relate his objections to the rulers, and his equals in age, yet not in the presence of any young man.

Clinias:: You speak most properly, O guest: and though at the time this law was established you was absent from the thought of the founder, yet you appear to me to conjecture his intention sufficiently, as if you were a prophet, and to speak the truth in the most eminent degree.

Athenian Stranger:: At present, therefore, let us be free from young men, but we, on account of our old-age, are permitted by the legislator to speak about the laws among ourselves, without committing any offence.

Clinias:: We are so. Do not spare, therefore, but freely reprove our laws. For it is not dishonorable to know if any thing is not beautifully established; but, by this mean, a remedy is applied, when what is asserted is received with a benevolent, and not an envious mind.

Athenian Stranger:: You speak well. I shall not, however, reprehend the laws till I have diligently considered them to the utmost of my ability; or rather, I shall proceed in this affair by doubting. For you alone, of all the Greeks and Barbarians with whom we are acquainted, the legislator has ordered to abstain from the greatest pleasures and sports, and not to taste them. But with respect to pains and fears, which we have lately discussed, he was of opinion, that if any one avoided them from his infancy, when he came to endure necessary pains, fears, and labors, he would avoid those who are exercised in them, and would become their slave. This legislator ought, in my opinion, to have thought the same respecting pleasures, and to have said to himself: If the citizens should from childhood be unexperienced in the greatest pleasures, and never be taught how to sustain the attacks of pleasure, or informed that they should never be compelled to do any thing base for the sake of the sweetness with which pleasure is attended, they would be induced to act in the same manner as those who are vanquished by fear, and would become servile in a different and yet baser manner than those who are able to endure the assaults of pleasure, but yet procure pleasures for themselves, and are sometimes the worst of men. The soul of such, likewise, is partly a slave, and partly free; and they do not deserve to be called simply brave, and free. Consider, therefore, whether any thing that has been now said appears to you to be proper.

Clinias:: It does. But immediately and readily to assent to things of such great importance would be the province of young men, or rather of stupid men.

Athenian Stranger:: Shall we then, O Clinias and Lacedæmonian guest, after this, discuss what we at first proposed; (for after fortitude we shall speak of temperance,) I mean, what difference there is between these polities and those which are governed by chance, in the same manner as we have now spoken about war?

Megillus:: This is not very easy to accomplish.

Clinias:: Yet it appears that the common banquets, and gymnastic exercises, were beautifully invented by both polities.

Athenian Stranger:: It appears, O guests, to be a difficult undertaking to introduce, in reality as well as in discourse, the indubitable, respecting polities. For it seems that, as in bodies it is not possible to accommodate any one pursuit to any one body, because the same thing is seen to injure some and benefit others, the like takes place in cities. For gymnastic exercises, public banquets, and a multitude of other things, at one time are beneficial to cities, but in seditions they are hurtful. The truth of this is evinced by the Milesians, Bœotians, and Thurians. But this ancient, legal, and natural pursuit appears to have perverted the venereal pleasures, not only of men, but of beasts. And your cities may be first accused of this, and such others as have particularly applied themselves to gymnastic exercises. And whether things of this kind ought to be considered jocosely, or seriously, still we must be convinced that, when the male and female unite for the purpose of producing offspring, the pleasure attending such a conjunction appears to be imparted according to nature; but, that the conjunction of males with males, or of females with females, is contrary to nature. We must likewise assert, that he who first dared to act in this manner was induced by the incontinence of pleasure. We all of us, indeed, blame the fable of the Cretans about Ganymedes, as discoursing about these particulars. For, as they believe that their laws were given by Jupiter, they have devised this fable against Jupiter, that they may give themselves up to this pleasure, following the example of the God. But let us bid farewell to the fable. Again, with respect to those who make the laws the subject of their speculation, almost all their attention should be directed to pleasures and pains, both in the manners of cities and of individuals. For these two fountains are permitted to flow by nature; of which, he who draws whence, when, and as much as he ought, is happy; and this is equally true of a city, an individual, and of every animal: but he who draws unscientifically, and at an improper time, will, on the contrary, live unhappy.

Megillus:: These things, O guest, are so beautifully said, as to render us incapable of urging any thing against them. But, at the same time, the Lacedæmonian legislator appears to me to have very properly forbidden the avoiding of pleasure. But this our other guest can, if he pleases, assist us with respect to the Cnossian laws. For it appears to me that the institutions in Sparta about pleasures are the most beautiful of all institutions; since that through which men principally fall into the greatest pleasures, the most injurious conduct, and every kind of folly, our law exterminates from the whole of our country, nor will you see in the fields, nor in any of the Spartan cities, banquets, nor such other particulars attendant on these, as excite, according to their power, every kind of pleasure. Nor is there any one who, happening, to meet with a person wanton through intoxication, would not immediately inflict on him the greatest punishment. Nor would the pretext of celebrating the festival of Bacchus absolve him from chastisement, as I once saw was the case with your people in carriages. And in Tarentum, with those of our colony, I have seen all the city intoxicated during the Bacchic festival. With us, however, there is nothing of the kind.

Athenian Stranger:: O Lacedæmonian guest, all such things as these are laudable where they are attended with certain endurances; but, where they are permitted, they are of a most slothful nature. For some one, defending, our institutions, would very readily reprove you by showing the licentiousness of your women. But one answer appears to liberate all such particulars, in Tarentum, with us, and with you, from not being base, but upright. For every one who answers may say to an admiring stranger on his beholding things unusual in his own country: Wonder not, O guest, that this law is established among us, but with you a different law, perhaps about the same things. At present, however, O friends, our discourse is not about different men, but about the vice and virtue of the legislators. But let us speak more fully about all intoxication. For it is not a thing of a trifling nature; nor is the knowledge of it the province of a depraved legislator. I do not mean to inquire, whether wine ought to be drunk or not, but about intoxication itself,—whether it is to be used, as the Scythians and Persians use it, and besides these the Carthaginians, Celtæ, Iberians, and Thracians, who all of them are warlike nations; or, as it is used by you; for you (as you say) entirely abstain from it. But the Scythians and Thracians use it unmingled with water, women as well as men, and pour it on their garments, thinking that thus they are engaged in a beautiful and blessed pursuit. But the Persians are very much given to other luxuries, which you reject; yet, O best of men, they are more orderly in these than the Scythians and Thracians.

Megillus:: All these, however, we shall put to flight, when we take up arms.

Athenian Stranger:: O best of men, do not speak in this manner. For many flights and pursuings have taken place, and will take place, of which it is impossible to form any conjecture; on which account, we cannot at any time give an evident definition, but are involved in doubts about beautiful and base pursuits, when we speak of victory and flight in war; especially since the greater vanquish in battle, and enslave the lesser cities. Thus, the Locrians were vanquished and enslaved by the Syracusans, who appear to have possessed the best laws of all the neighboring nations; and the Cei by the Athenians; and innumerable instances of the same kind may be found. Neglecting, therefore, the consideration of victory and being vanquished, we will endeavor to speak and persuade ourselves about every pursuit; and to show how this thing is beautiful, and that is not so. But, first of all, hear me, how we ought to consider what is good or bad in things of this kind.

Megillus:: How do you say?

Athenian Stranger:: All those who introduce any dispute in their discourse, and immediately propose to praise or blame it, appear to me to act by no means in a proper manner, but to do just the same as if, any one praising a piece of bread as good, another should immediately discommend it, without either understanding its operation or utility, and, without knowing after what manner, by whom, and with whom it was prepared, and the past and present habit of the bodies to whom it ought to be offered.

But we appear to act in the very same manner, at present, in our discourses. For, upon only hearing intoxication mentioned, some of us immediately blamed, and others praised it; and this very absurdly. For, employing witnesses and those who praise, we likewise praised; and some of us thought that we advanced something seasonable, because we adduced a multitude of witnesses; but others, because those who make no use of wine conquer in battle. This, however, is to us ambiguous. If then we proceed in this manner in the discussion of other particulars pertaining to laws, we shall not in my opinion proceed rationally. But adducing intoxication as an instance, I will endeavor to the utmost of my ability to point out a right method for us, about all such subjects of inquiry; since innumerable nations, who are doubtful about these particulars, will verbally contend with your two cities.

Megillus:: We must not through sluggishness refuse to hear, whether we possess any right consideration about these affairs.

Athenian Stranger:: Let us, therefore, thus consider. If any one should praise the employment of nurturing goats, and the possession of that species of animals, as a beautiful thing, but another should blame it, in consequence of seeing that goats are fed in cultivated places without a shepherd, and that every kind of cattle is either without a shepherd, or is under the direction of bad shepherds; should we consider the accusation of such a one as sane, or not?

Megillus:: How is it possible we could?

Athenian Stranger:: But, whether will a pilot be useful in a ship, if he alone possesses the nautical science, whether he is troubled with sea sickness or not? or how shall we say?

Megillus:: This passion which you speak of is not in any respect connected with the nautical art.

Athenian Stranger:: But what shall we say of the general of an army? Is he to be considered as sufficient to the purposes of commanding, if he possesses the warlike science, though, being timid in dangers, yet through intoxication he should loath fear?

Megillus:: How can he?

Athenian Stranger:: But what shall we say, if he does not possess art, and is timid?

Megillus:: You speak of one in every respect depraved, and who is by no means a ruler of men, but of some extremely weak women.

Athenian Stranger:: But he who praises or blames a community, which is naturally capable of being governed, and which with a proper governor is a useful a society, but, at the same time, has either never seen it well governed, or has always beheld it without governors, can he with propriety ever praise or blame such a community?

Megillus:: How is it possible he can, who has never beheld a society well governed?

Athenian Stranger:: Attend then: Do we not consider guests and banquets as one certain association out of many communities?

Megillus:: We do in the highest degree.

Athenian Stranger:: Has no one, therefore, ever beheld this subsisting in a proper manner? But it is easy for you to answer, that this has never in any respect been beheld (for this is neither according to the manner of your country nor your laws). But I have met with many, and in many places, and have diligently inquired, as I may say, about all of them. And, indeed, I have scarcely seen or heard of one whole community that has been established in a proper manner; but I have seen that this has been the case with certain few and small parts, while many have, as I may say, been entirely faulty.

Clinias:: How do you say, O guest? Speak still more perspicuously. For we, as you say, being unskilled in such things, and perhaps not having met with them, cannot immediately know what in them is right or wrong.

Athenian Stranger:: You speak probably: but, while I speak, endeavor to learn. Do you then acknowledge, that, in all associations and communions of actions whatever, it is proper for each to have a governor?

Clinias:: How is it possible I should not?

Athenian Stranger:: But we have already said, that the governor of warlike affairs ought to be brave.

Clinias:: We have.

Athenian Stranger:: But the brave will be less disturbed by fear than the timid man.

Clinias:: And this also will be the case.

Athenian Stranger:: If any method could be devised by which a general of an army might be rendered neither timid, nor subject to perturbation, should we not accomplish this by all possible means?

Clinias:: In the greatest degree.

Athenian Stranger:: But now we do not speak of an army which is governed in the inimical associations of inimical men, in war, but of the benevolence of friends communicating with each other in peace.

Clinias:: Right.

Athenian Stranger:: But an association of this kind, if it is attended with intoxication, will not be without perturbation. Or, do you think it will?

Clinias:: How should it be without?

Athenian Stranger:: In the first place, therefore, these have need of a governor.

Clinias:: Most of all.

Athenian Stranger:: Whether, therefore, is it proper to choose for them, if possible, a governor who is free from perturbation?

Clinias:: How can it be otherwise?

Athenian Stranger:: And, indeed, as it appears, he ought to be prudent with respect to association. For he should be the guardian of their friendship, and should take care that it may be increased through this their association.

Clinias:: You speak most truly.

Athenian Stranger:: It is proper, therefore, to place over the intoxicated a sober and wise governor, and not the contrary. For, if the governor of the intoxicated is himself intoxicated, young, and not wise, he must be abundantly fortunate if he does not accomplish some mighty evil.

Clinias:: Abundantly indeed.

Athenian Stranger:: If, therefore, any one should blame drinking associations, though they should be as well instituted as possible in cities, while he accuses the thing itself, he will perhaps very properly blame them. But if he should blame all drinking associations, merely because he had seen one defective; in the first place, it is evident he is ignorant that this was not well instituted; and, in the next place, every thing after this manner will appear base, although the master and governor should be sober. Or, do you not perceive, that when the pilot is intoxicated, or any other governor, he will subvert every thing, whether it is a ship, or a chariot, or an army, or any thing else that is governed by him?

Clinias:: You speak, O guest, in every respect, true. But inform me what advantage can be derived from drinking associations when they are well conducted. As that which we just now asserted, that an army well commanded would procure victory in war, which is no small good: and in the same manner we must judge of other things. But what great advantage will accrue either to individuals, or cities, from drinking associations being properly instituted?

Athenian Stranger:: What great advantage can a city derive from one boy, or one company being properly educated? or shall we not reply to him who asks this question, that the city derives but very little advantage from the education of an individual, or a company? But, if you inquire universally about the education of youth, of what great advantage it is to a city, it is not difficult to reply, that, when boys are well educated, they will become good men; and that, in consequence of becoming good men, they will both act in other respects in a beautiful manner, and will vanquish their enemies in battle. Discipline, therefore, will give victory, but victory sometimes produces ignorance. For many becoming insolent through victory in war are filled, in consequence of their insolence, with a thousand other evils. And discipline indeed has never at any time been Cadmeian; but there have been, and will be, many victories of this kind among men.

Clinias:: You seem to say, O friend, that associations for the purpose of drinking wine form a great part of discipline, if they are properly conducted.

Athenian Stranger:: Certainly.

Clinias:: Will you after this be able to prove that your assertion is true?

Athenian Stranger:: To contend, O guest, that these things are true, since many doubt about them, is alone the province of divinity; but, if it be requisite to assert what appears to me, I think no one will be envious, since our intention, at present, is to discourse about laws and a polity.

Clinias:: We will therefore endeavor to learn what is your opinion with respect to these ambiguities.

Athenian Stranger:: It is proper to do so; and, besides this, that you should endeavor to learn, and I to teach, and that this should be the whole business of our discourse. But, first of all, hear what follows. All the Greeks consider this city of ours as philological, and abounding in words. But with respect to Lacedæmon and Crete, the former is considered as sparing of words, but the latter, as more remarkable for abundance of sagacity than abundance of words. But I am afraid I shall appear to you to speak much about a small affair,—I mean intoxication. An emendation of it, indeed, according to nature cannot be accomplished with perspicuity, without musical rectitude, nor be sufficiently handled in discourse. But music cannot be discussed without the whole of erudition. And all this requires a multitude of words. Consider, therefore, what we shall do: whether we shall omit these things at present, and pass on to some other question about laws.

Megillus:: Perhaps you do not know, O Athenian guest, that our family is the public guest of your city. Perhaps, therefore, a certain benevolence will immediately enter into the minds of all boys towards a city, when they hear that they are the public guests of that city; and they will consider it as another native country, which ranks in the second place after their own. And this is the case with myself at present. For I have heard the Lacedæmonian youth, as often as they praised or blamed any thing belonging to the Athenians, say, Your city, O Megillus, has been the cause of this evil, or that good. But, on hearing this, I have fought against those who blamed your city, in consequence of possessing all possible benevolence towards it. And now, indeed, your voice is grateful to me; and that which is said by many, that such of the Athenians as are good are so in a remarkable degree, appears to be most truly asserted. For they alone, without necessity, spontaneously, and from a divine allotment, are truly and not fictitiously good. Therefore, for my sake, my friend, you may boldly say whatever you please.

Clinias:: And hearing and receiving, O guest, what I have to advance, you may confidently speak what you please. For you have perhaps heard, that Epimenides was a divine man, who was of our family, and who ten years prior to the Persian war came to your city through the admonition of an oracle, and performed certain sacrifices which the God had enjoined. And besides this, he told the Athenians, who were terrified at the Persian expedition, that the Persians would not come for the space of ten years; and that, when they came, they would depart without accomplishing any thing which they hoped to accomplish, and would suffer greater evils than they caused. At that time our ancestors hospitably received yours; and, in consequence of this, both myself and our parents are benevolently disposed towards you.

Athenian Stranger:: You therefore, as it appears, are prepared to hear; but I am indeed prepared so far as relates to my will, but not altogether with respect to my ability. I shall however endeavor to gratify your request. In the first place then, as preparatory to our discourse, let us desire what discipline is, and what power it possesses. For we say that through this the discourse proposed by us at present must proceed, until it arrives at divinity.

Clinias:: We ought entirely to act in this manner, if agreeable to you.

Athenian Stranger:: While, therefore, I assert what it is proper to say discipline is, do you consider whether my assertion accords with your opinion.

Clinias:: You may begin when you please.

Athenian Stranger:: I say, then, that those who are hereafter to become great men ought from their very childhood to meditate both in sport, and when acting seriously, things accommodated to the objects of their pursuit. Thus, if any one is to become a good husbandman or architect, he ought from childhood, even in play, either to till the ground, or build certain puerile houses. And he who is entrusted with the education of both these should provide each of them with small instruments, which are imitations of the true ones. And besides this, he should learn such disciplines as are necessary to be previously learned. Thus, a workman should learn how to measure, or use a rule. He who is destined to be a warrior should in sport ride on horse-back, or do something else of a similar kind. And the master of the children should endeavor, by sports, to turn the pleasures and desires of the children thither, where when arrived, it is proper they should receive their consummation. But we say that the head or summit of discipline is a right education, which especially leads the soul of him who sports to a love of that which it will be requisite for him to do when he has arrived at manhood, and has acquired perfection in the virtue of his art. Consider therefore, now, whether (as I said) what has been thus far asserted pleases you.

Clinias:: How is it possible it should not?

Athenian Stranger:: Neither, therefore, should that which we have said discipline is, be left indefinite. For now, when we blame or praise the education of particular persons, we say that such a one is endued with discipline, but another is undisciplined, although he may possess the greatest skill in cooking, or navigation, and other things of this kind. For we do not, as it appears, consider these to be discipline, but that which causes a citizen from his childhood to desire and love virtue, and through which acquiring perfection, he may know how to govern and be governed with justice. This is what our discourse defines to be education; from which it appears, that this alone ought to be called discipline, according to our sentiments; but that the education which tends to the acquisition of wealth, or bodily strength, or any other particular wisdom, without intellect and justice, is mechanical and illiberal, and does not in any respect deserve to be called, discipline. We shall not, however, contend about a word. But let what we have just now assented to remain, that those who are properly disciplined become nearly all of them good. So that it is by no means proper to despise discipline, because it is present to the most excellent men, the first of all beautiful things. And if at any time one properly disciplined should depart from right conduct, he is capable of being put in the right way; and this he may always accomplish according to his ability, through the whole of life.

Clinias:: Right: and we assent to what you say.

Athenian Stranger:: But we formerly granted, that those are good who are capable of governing themselves, but those bad, who do not possess this ability.

Clinias:: You speak most rightly.

Athenian Stranger:: We will therefore resume this assertion, that what we say may become more clear. And receive me through an image, if in any respect I may be able to manifest to you a thing of this kind.

Clinias:: Only speak.

Athenian Stranger:: Do we not consider each of us as one?

Clinias:: We do.

Athenian Stranger:: But that we contain in ourselves two counselors, contrary to each other, and foolish, which we denominate pleasure and pain?

Clinias:: This also we admit.

Athenian Stranger:: With these are connected the opinions of things future, the common name of which is hope. But, properly speaking, the hope prior to pain is fear, but that which is prior to its contrary is confidence. But in all these there is a reasoning process, determining which of them is better or worse; and which, when it becomes the common dogma of the city, is denominated law.

Clinias:: I can scarcely follow you. However, proceed with what remains, as if I were able to follow you.

Megillus:: I likewise am affected in the same manner.

Athenian Stranger:: But we should thus think about these things. We should consider that each of us is reckoned a prodigy by divine animals, whether we were produced as their sport, or as the result of a serious operation: for of this we are ignorant. This however we know, that these passions are inherent in our nature like nerves or ropes, that they draw contrary to each other, being themselves contrary, and that they draw us to contrary actions, where virtue and vice are situated apart from each other. For reason says, that we ought always to follow one of the drawings, and should never abandon it, but through this draw in a contrary direction to the other nerves; and that this is the golden and sacred guidance of the reasoning energy, which is called the common law of the city. It adds, that the other drawings are hard, and of an iron nature; but that this is soft, as being golden. That it is besides uniform, but that the others are similar to all-various forms. It is necessary, therefore, that we should always follow the most beautiful guidance of law. For, since the energy of reasoning is beautiful and gentle, but not violent, servants have need of its guidance, that the golden race, in us may vanquish the genera of a different kind. And thus the fable, since we are beings of a wonderful nature, will be preservative of virtue; and we shall be able to understand more clearly how any one may be said to be superior and inferior to himself: and both cities and individuals, apprehending the true reason respecting these drawings, ought to live conformable to it. We shall likewise be convinced that a city, whether it receives reason from some one of the Gods, or from him who knows these particulars, will establish it as law, and employ it in its own transactions, and in its transactions with other cities. For thus vice and virtue will appear to us more clearly distinct; and this distinction becoming more conspicuous, both discipline and other studies will perhaps be rendered more apparent. This will likewise be the case with respect to the custom of drinking societies, about which it might appear despicable to discourse any further.

Clinias::, Perhaps it will appear not to be unworthy of a long discourse.

Athenian Stranger:: You speak well. We will therefore endeavor to relate what appears to be praise-worthy in a custom of this kind.

Clinias:: Speak then.

Athenian Stranger:: If to this wonderful thing we should add intoxication, what sort of a thing shall we fashion him?

Clinias:: What thing do you look to in asking this question?

Athenian Stranger:: To nothing particular. But if this prodigy or wonderful thing should become connected with intoxication, what would happen to be the result? But I will endeavor to explain more clearly what I mean. For this is what I ask: Does the drinking of wine more vehemently excite pleasure, pain, anger, and love?

Clinias:: It does very much so.

Athenian Stranger:: Does it in a similar manner render the senses, memory, opinion, and prudence, more vehement? or does it entirely extinguish these, when any one has drunk of it to intoxication?

Clinias:: It entirely extinguishes these.

Athenian Stranger:: Such a one, therefore, returns to that habit of soul which he possessed when he was a boy.

Clinias:: Entirely so.

Athenian Stranger:: Hence such a one has at that time the least possible command of himself.

Clinias:: The least.

Athenian Stranger:: Shall we, therefore, call such a one most depraved?

Clinias:: Very much so.

Athenian Stranger:: Not only then, as it appears, does an old man become twice a boy, but this is likewise the case with a man when intoxicated.

Clinias:: You speak, O guest, in a most excellent manner.

Athenian Stranger:: Is there any reason which can persuade us that we ought to taste this liquor, and not to the utmost of our power avoid it?

Clinias::, It appears that there is; and you just now said you was prepared to show it.

Athenian Stranger:: You have very properly reminded me; and I am now prepared, since you have both said that you are willing to hear me with alacrity.

Clinias:: How is it possible we should not hear you, if on no other account, yet for the sake of the wonderful and the absurd which it contains, if it is necessary that a man should at any time voluntarily hurl himself into every kind of depravity?

Athenian Stranger:: Do you speak of the soul?

Clinias:: I do.

Athenian Stranger:: But what? Shall we wonder, my friend, if at any time some one should voluntarily arrive at depravity of body,—I mean leanness, deformity, and imbecility?

Clinias:: How is it possible we should not?

Athenian Stranger:: Shall we, therefore, think that those who go to a dispensary for the sake of obtaining medicines, are ignorant that, in a short-time after they have taken the medicines, their body will for many days be so affected, that, if they were to remain in that condition to the end of life, they would not wish to live? or, Do we not know that those who undergo gymnastic exercises and labors are immediately rendered weak?

Clinias:: All this we know.

Athenian Stranger:: And that they willingly tend to these things, for the sake of consequent utility?

Clinias:: Most beautifully said.

Athenian Stranger:: Is it not, therefore, necessary to think after, the same manner about other pursuits?

Clinias:: Entirely so.

Athenian Stranger:: In the same manner, therefore, we ought to think about the employment of drinking wine, if it is admitted that this among other employments may be considered in a proper light.

Clinias:: Certainly.

Athenian Stranger:: If it should, therefore, appear to us to possess any utility, which is not inferior to corporeal exercise,—in the first place, it will vanquish this, because corporeal exercise is attended with pain, but the employment of drinking wine is without pain.

Clinias:: You speak very properly. But I should wonder if we were able to perceive any such thing in it.

Athenian Stranger:: This, therefore, as it appears, I must now endeavor to explain to you. Tell me then, are we able to understand two species of fear, which are nearly contrary to each other?

Clinias:: Of what kind are they?

Athenian Stranger:: They are such as these. We are afraid of things evil, when we expect they will arrive.

Clinias:: We are.

Athenian Stranger:: And we are often afraid of opinion, thinking we shall be considered by others as depraved characters, when we do or say any thing which is not becoming; which fear, I think, both we and all others denominate shame.

Clinias:: Doubtless.

Athenian Stranger:: These are the two fears I spoke of,—one of which is contrary to pain, and other fears, and is also contrary to the greater part and the greatest of pleasures.

Clinias:: You speak most rightly.

Athenian Stranger:: Will not therefore a legislator, and every one who is in the least degree useful, reverence this fear with the greatest honour, and call it shame,—but denominate confidence the contrary to this, impudence, and consider it as the greatest evil that can befall men, both in public and private?

Clinias:: You speak rightly.

Athenian Stranger:: This fear, therefore, will preserve us in many other and great concerns, and nothing will so much procure for us victory and safety in war, one being opposed to one, as this. For there are two things which procure victory, confidence of the enemy, and the dread of friends with respect to base infamy.

Clinias:: It is so.

Athenian Stranger:: It is necessary, therefore, that each of us should become intrepid, and, at the same time, timid. But we shall show, by division, on what account we ought to become each of these.

Clinias:: By all means.

Athenian Stranger:: When we wish to render any one intrepid, we shall accomplish this by leading him, according to law, to the dread of many terrible things.

Clinias:: It appears so.

Athenian Stranger:: But, what,—when we endeavor to render any one justly terrified, ought we not, by exercising him in impudence, to cause him to be victorious in contending with pleasures? Or, by contending with and vanquishing his usual mode of living, ought he not thus to obtain perfection in fortitude? And will not he who is unexperienced and unexercised in contests of this kind remain, as to one half of himself, destitute of virtue? But how can any one be perfectly temperate, who has not contended with and vanquished, by reason, labor and art, in sport and in earned, many pleasures and desires, which urge him to act impudently and unjustly; but who is impassive with respect to all such things?

Clinias:: It is by no means probable that he can.

Athenian Stranger:: But what,—has divinity given men any medicine of fear, so that by how much more desirous any one is of drinking it, by so much the more unhappy will he think himself from every draught; so that he will dread every thing, both present and future, and will at length, though he should be the bravest of men, be filled with every kind of dread; and, after having slept, and being freed from the potion, will again every day be equally terrified?

Clinias:: And what potion of this kind, shall we say, O guest, is found among men?

Athenian Stranger:: None. Yet if such a potion should be found, would it be useful to the legislator with respect to fortitude, so that we might thus speak to him respecting it: O legislator, whether you have given laws to the Cretans, or to any other nation, are you willing to make trial of your citizens with respect to fortitude and timidity?

Clinias:: He would doubtless say, that he was willing.

Athenian Stranger:: But what,—are you willing to do this with safety, and without great danger; or the contrary?

Clinias:: Every one must acknowledge, he would wish to do this with security.

Athenian Stranger:: Would you use this potion, leading them to terrors, and accusing them during their perturbation, so as to compel them to become intrepid, by exhortations and honors; disgracing him who will not be persuaded to become in all things such a one as you wish; and dismissing him with impunity who exercises himself in a proper and valiant manner, but punishing him who acts other wise? or, Would you by no means use this potion, though you could find nothing else in it to accuse?

Clinias:: Why should he not use it, O guest?

Athenian Stranger:: An exercise, therefore, O friend, different from those at present, will possess a wonderful facility, both with respect to one person and a few, and as many as you shall always wish to be exercised. And whether any one, being alone in solitude, should place ignominy before his eyes, thinking that he ought not to be seen till he has made sufficient advances in virtue, and should thus exercise himself against fear, preparing this potion alone, in preference to ten thousand other things, he would do something proper: or whether some one, consisting in his own nature, and being properly prepared by meditation, should not refuse to exercise himself with many drinking associates, and should evince, in the necessary consumption of the liquor, a power so transcendent and strong, as neither greatly to err through impudence, nor to be changed through virtue, but towards the end of the liquor should depart without being intoxicated, fearing any human potion the least of all things;—in this case, he would do something well.

Clinias:: Certainly. For such a, one, by thus acting, would conduct himself with temperance and modesty.

Athenian Stranger:: Again, let us thus address the legislator: Neither, O legislator, has any God given to mankind such a medicine, nor have we devised such a one: (for I do not consider witches at a banquet) but whether or not, is there a potion capable of producing intrepidity, together with vehement and unseasonable confidence? Or how shall we say?

Clinias:: There is, and he would say that it is wine.

Athenian Stranger:: But this produces contrary effects to the potion of which we have just now spoken. For, when a man drinks of it, it makes him at first immediately more cheerful than he was before; and by how much more he drinks of it, by so much more is he filled with good hope, and an opinion of his own power; till at length, as if he were a wise man, he becomes replete with all possible freedom of speech and behavior, and intrepidly both says and does whatever he pleases.

Clinias:: I think every one will admit this.

Megillus:: Certainly.

Athenian Stranger:: But do we recollect that we said there were two things in our souls which ought to be cultivated;—the one, that we may possess confidence in the highest degree; but the other, which is the very contrary, that we may be afraid in the highest degree?

Clinias:: I think you said this of shame.

Athenian Stranger:: You very properly remember. But since it is necessary that fortitude and intrepidity in fear should be the subjects of meditation, let us consider whether it will be proper that the contrary should be cultivated in the contrary to fear.

Clinias:: It is probable.

Athenian Stranger:: In those things, therefore, in which, naturally suffering, we are remarkably confident and audacious, in these it will be proper, as it appears, to meditate how we may become in the least degree impudent and audacious, but timid with respect to daring to speak, or suffer, or do any thing base.

Clinias:: It appears so.

Athenian Stranger:: Are not all these, therefore, the things in which we are thus affected, viz. anger, love, petulance, ignorance, the love of gain, and timidity; and besides these, riches, beauty, strength, and all such things as, intoxicating men through pleasure, render them delirious? In order to make an easy and innocent trial of all these, and afterwards meditate upon them, what pleasure have we more convenient than that which explores the disposition of men by means of wine, when it is attended with prudent caution? For, let us consider: whether ought we to make trial of a morose and rustic soul, from which a thousand injuries germinate, in his contracts with others, or from his being present at the shows of Bacchus, or from his soul being vanquished in venereal affairs, so as to behold the manners of his soul when his sons, daughter, and wife, are exposed to danger? In short, among ten thousand things, you will not find any thing in which in jest, and without any danger, you can so well contemplate the disposition of any one, as by wine. We ought, therefore, to think that neither the Cretans, nor any other nation, would ever doubt but that this trial of the disposition of each other is convenient, and above all others safe and easy.

Clinias:: You speak truly.

Athenian Stranger:: This, then, will be one of the most useful things, to know the natures and habits of souls by that art whose province it is to procure a remedy for these. But this, as I think, is the province of the politic art. Or is it not?

Clinias:: It is entirely so.

THE END OF THE FIRST BOOK.

## Book 2.

Athenian Stranger:: After this, as it appears, we should consider respecting these particulars, whether this alone is beneficial, to contemplate after what manner we possess certain natures, or whether also some great advantage which deserves much attention is inherent in the proper use of drinking wine in conjunction with others. What then shall we say? Our discourse would seem to insinuate that it is inherent. But when, and after what manner, let us attentively hear, lest we should be impeded in our inquiry by this affair.

Clinias:: Speak then.

Athenian Stranger:: I am desirous, therefore, of again recalling to our memory our definition of proper discipline. For the safety of this, as I conjecture at present, consists in the employment we are now speaking of, when well conducted.

Clinias:: You speak largely.

Athenian Stranger:: I say then, that the first puerile sense of boys is pleasure and pain; and that these are first inherent in the soul, in which vice and virtue subsist. But he is happy who in old-age acquires the firm possession of prudence and true opinions. And that man is perfect who possesses these, and all the goods they contain. But I call discipline that virtue which first accedes to boys. When pleasure, love, pain, and hatred, are properly produced in the soul, before it is able to receive these attended with reason; if, when they are attended with reason, they accord with it in consequence of being properly accustomed by well adapted manners, then this content is the whole of virtue. But the proper nurture of the soul, with respect to pleasure and pain, so as that it may hate what it ought to hate, immediately from the beginning to the end, and love what it ought to love,—this, if it is considered separately, and is denominated discipline, will, according to my opinion, be properly denominated.

Clinias:: What you have said, O guest, formerly and at present, about discipline, appears to be well said.

Athenian Stranger:: It is well, therefore. For these pleasures and pains, which when; properly nurtured are disciplines, are often loosened and corrupted by men in the business of life. But the Gods, commiserating the naturally laborious race of men, ordained for them remissions of labors, and gave them the vicissitudes of festivals in honour of the Gods, together with the Muses, Apollo the leader of the Muses, and Bacchus, as their associates in these celebrations; that in these festivals they might rectify the education of youth, in conjunction with the Gods. Consider, therefore, whether it is proper to say, that our discourse at present is celebrated as true according to nature, or how shall we say? But it asserts, in short, that every youth is incapable of being at rest, either in body or voice, but that he always seeks to be moved and to speak; sometimes exulting and leaping, dancing and sporting as it were with pleasure, but at other times uttering sounds with every kind of voice. Other animals, indeed, have no sensation either of order or disorder in motions, which order is denominated rhythm and harmony; but those Gods whom we call associates in the choir have bestowed upon us a rhythmical and harmonic sense, which might agitate us with pleasure, by connecting us with each other through singing and dancing. But the word choir was denominated from joy, as its natural name. In the first place, however, it is necessary to ask, whether we admit that discipline first subsists through the Muses and Apollo? or how shall we say?

Clinias:: That it does.

Athenian Stranger:: He, therefore, who is void of discipline, is with us one who has never joined a choir; but he who is disciplined is to be considered as one who has sufficiently engaged in a choir.

Clinias:: Certainly.

Athenian Stranger:: But the whole of a choir consists in dancing and singing.

Clinias:: It is necessary it should.

Athenian Stranger:: He, therefore, who is properly disciplined will be able to sing and dance in a becoming manner.

Clinias:: It appears so.

Athenian Stranger:: But let us consider what it is that we have now asserted.

Clinias:: What is that?

Athenian Stranger:: We have spoken of singing and dancing in a becoming manner. But whether or not is it proper to add, that things beautiful ought to be the subjects of singing and dancing?

Clinias:: This ought to be added.

Athenian Stranger:: But what,—will he who considers things beautiful, as beautiful, and things base, as base, and who uses them as such,—will such a one be better disciplined for us, with respect to the choir and music, than he who is sufficiently able to become subservient to that which he considers as beautiful in body and voice, but yet does not rejoice in things beautiful, nor hate such as are void of beauty? Or he, who, though he is not altogether able to act or think rightly, with respect to his voice and body, yet acts rightly with respect to pleasure and pain; embracing such things as are beautiful, and hating such as are base?

Clinias:: You speak, O guest, of a mighty difference of discipline.

Athenian Stranger:: If, therefore, we three possess a knowledge of the beautiful in singing and dancing, we also know when any one is properly or improperly disciplined: but, if we are ignorant of this, we shall not be able to know what is the defense of discipline, and where it is to be found. Is not this the case?
